The Nation.

NEW YORK, THURSDAY, JANUARY 1, 1880.

The Week.

THE leading incident in the Maine controversy during the week was a calm and cogent letter from Mr. Lot M. Morrill, the ex-senator, to Governor Garcelon, urging him to submit the question of the legality of his course to the judges for their opinion, which the Constitution empowers him to do. To this the Governor returned a somewhat guarded answer, offering to submit any point not already adjudicated—an unnecessary reservation, as the court would of course adhere in its reply to previous adjudications on any point. He, however, asked Mr. Morrill to furnish the questions of which he desired the submission. Mr. Morrill has done so, and they cover the whole ground of the controversy, and the judgment of the court upon them would undoubtedly either put the Governor in the right or very much in the wrong, and if the latter, would give him and the Council an opportunity for honorable escape from their present very unfortunate position. In the meantime the public excitement, if anything, seems to increase, and talk of an appeal to arms is very common; much of it, we regret to say, coming from ministers in their pulpits. For this there is absolutely no excuse. Governor Garcelon's action is, at best or worst, simply preliminary. He summons to the Legislature those whom he thinks *primâ facie* entitled to seats, or, in other words, who in his judgment appear to be elected. The Legislature thus assembled passes on the qualifications of its members, and all objections to the members summoned by the Governor can then be produced and examined in detail. So that legal redress is not exhausted until the majority of the *primâ facie* Legislature refuses to admit the Republican members to their seats. Even then the time for civil war has not come. Should there be resistance to the State government thus constituted, the President would be called on to put it down with troops, and he it is, or Congress, which would decide whether the government of Maine was a lawful government, and any blood shed in the matter would be shed vainly. There is no room made for civil war in a State, on any question whatever, under the United States Constitution. Any man, therefore, who countenances, or calls for it, or brings it on, whether lay or clerical, incurs the guilt of bloodshed. There is, under these circumstances, something shocking in the appeals of Christian ministers in houses of worship for the decision by force of quarrels which can be, and are sure to be, decided by legal machinery.

A great many throughout the country besides our correspondent last week have been asking themselves how it has happened that the present crisis in Maine has not arisen before now. The town and city officers are, on Governor Garcelon's undisputed showing, very careless in making up the election returns, and must for a good while have been careless about following minutely the provisions of the law, and the questions now before the public cannot be new. We believe that the answer to this is that these irregularities occur every year, and that returns have every year been thrown out for defects of form by Republicans as well as Democrats, but never before enough to change the result of the election, and give the majority in the Legislature to the party defeated at the polls. The reason, probably, why the Fusionists apply the screws with such severity this year is that the failure of either party to obtain a majority has thrown the election of the Governor into the Legislature, and the reason why the Republicans were excited and alarmed about the matter, almost before the returns had reached the Governor, is that this is the Presidential year, and Maine sends a Favorite Son to the Convention, and it will not do to send him there without his State behind him. Some uncharitable people are attributing to this latter cause Mr. Blaine's extraordinary violence of language. He, too, is threatening bloodshed, his enemies say, not only because he is really angry, but because he wants to show the party that he too can be a "Strong Man" on a pinch.

The Maine trouble is doing the country and the world one valuable service in showing how much alike human nature is under all circumstances and in all latitudes. A reader of the Maine papers, and especially of Mr. Blaine's "home organ," during the last ten years, would suppose that it was only in South Carolina and Louisiana that people threatened armed resistance when they didn't like the goings-on of their State government; but it seems that the Maine people resort readily to the same baneful practice. We could hardly believe our eyes when we saw that a load of State arms, in charge of a State officer, was stopped by a mob in the streets of Bangor on Christmas day and forcibly returned to the arsenal, and when we read the Mayor's written defence of it, on the ground that "our people" were "excited," and had to act in this way when they "got mad"—for all the world like the wicked, turbulent "ex-rebels" down in Louisiana. We supposed, too, that it was only in the poor, barbarous, benighted South that people were threatened with assassination and assault when their political action was displeasing to "the citizens"; but it appears Governor Garcelon receives dozens of such threats every day. We supposed that social and business "ostracism" of obnoxious politicians was unknown outside the cotton States; but it seems that people in Maine are withdrawing their custom from the members of the Council, cutting them in the street, and refusing to invite them to their houses. To crown all, it is not Southern pastors only who recommend battle, murder, and sudden death as a remedy for political grievances. The Maine pastors have been engaged in the same holy work. They want, as one of them has said, no "mob violence," but "systematic war," just to see which side the God of Peace likes best. Of course we know all these things are wrong when done by Brigadiers and ex-rebels, and right when done by law-abiding Maine people; but is it not singular that the bad and good when they get angry show it in so nearly the same manner? By the way, why are not "troops" called for in Maine? Isn't Governor Garcelon an excellent subject for "troops"?

It is generally admitted that Ouray will be unable to fulfil his engagement to deliver up the White River Utes who murdered Agent Meeker and attacked Thornburgh's party. Secretary Schurz, it is asserted, still entertains hopes that this will be done, but the War Department has already instructed General Sherman to direct all military detachments in the neighborhood of the Ute country to be on the alert, and a war is considered imminent. Meantime, the latest reports from General Hatch place him in a position of some danger, and the troops nearest the Ouray agency have been ordered forward for his protection. Until he has been heard from again, however, the Interior Department will continue in its control of the matter. If a war should ensue, it cannot be said that anything has been lost by the delay due to the Commission's negotiations; providing, of course, General Hatch's safety is secured. The weather is less favorable than it was at the time of the attack on Thornburgh's command, but the army is much better prepared now to "settle this whole Ute business," in the words of General Sherman's report, than it was then, according to his admissions; and the experiment of the Commission was certainly worth making, even if it should be found to have led to nothing but a postponement of hostilities. For one thing, it saved the lives of the white women, even if, as now appears, they suffered a treatment commonly regarded as worse than death itself. A question has been raised as to whether the Government should assume that the White River Utes have forfeited their treaty rights and deal with them as if no treaty had ever been made with them, or whether it should regard

the entire tribe as a unit and assume all the Utes to be as guilty as the White River murderers whom they decline or are unable to surrender. In order to settle this point, mooted by Representative Belford, of Colorado, Secretary Schurz is engaged on "a careful study of the treaty."

In Boston, on Sunday night, a great fire recalled by the date and site of its outbreak the wholesale destruction of 1872, and for a time created a feeling of anxiety that might easily have been turned into a panic. Within the space of three hours four or five stores in one square were consumed, at a loss of something like a million of dollars. The district, on Franklin and Federal Streets and Winthrop Square, being in the heart of the paper, wool, and dry-goods commission businesses, is highly combustible, and was wholly burnt over in 1872. The restriction of the fire in the present instance was due partly to the greater efficiency of the fire department, and partly, no doubt, to the solider construction of the restored buildings. In fact, a huge corner structure, occupied mainly by a printing establishment, though surrounded by the progress of the flames, was saved by its fire-proof walls and stand-pipes, aided, to be sure, by an admirable fire service from within. Still, it is clear that fortune more than prudence was the goddess of the occasion, and that several attainable safeguards were neglected—namely, automatic fire-signals for reporting a fire in its earliest stage; fire-proof floors, to confine the fire as much as possible to the story in which it originates; and fire-proof shutters which shall practically make the rear of a building like one side of a chimney. One of the consequences of the shrinkage in prices since 1872 is that the burnt buildings can more than be replaced for an insurance representing their original cost.

The specie imports for the week were confined to driblets, aggregating $111,000, the rates for foreign exchange having ruled against importing specie. Since January 1 the total imports have been $83,854,128, of which $77,600,019 arrived in the last five months of the year. Except for the "bull" speculation here in breadstuffs, provisions, and cotton, probably $15,000,000 to $20,000,000 more specie would have been received; but the prices of the principal exportable commodities have been so advanced in our markets as to carry them above even the necessities of the foreign markets. Not only this; but the amount of bank facilities needed to support the speculation has taxed the domestic money markets to their fullest extent, and had it not been that the Treasury came to their relief by beginning on the 29th ult. to prepay without rebate the January interest (about $17,500,000), it is likely that the last week of the year would have witnessed such a stringency in the New York loan market as has not been experienced during the year. The banks entered upon that week with only $212,000 above the legal reserve. The anticipatory Treasury disbursements, however, kept the loan market from being more than active at about 7 per cent. At the Stock Exchange the early part of the week was characterized by depression, and the latter part by advancing prices, in anticipation of the rise which usually takes place in January, when the half yearly income of holders of securities is reinvested. It is estimated that, inclusive of the United States Treasury disbursements, the amount of January income to be reinvested this year will reach, if it does not exceed, $50,000,000, the profits of all kinds of corporations during the year having been large. The high prices for Western and Southern staple products have given producers unusual profits, and these they retain for the present in their personal possession. This is one reason why currency has not returned to New York this season as in previous years. In course of time this residue of profit will be spent and the money come back to the commercial centres. The London market has been featureless, with money at 2½ to 3 per cent. and securities firm. The market for silver bullion has been stagnant. The bullion value here of the 412½-grain silver dollar at the close of the week was $0.8778. It is said that silver certificates are to be pushed into circulation; if so, the hoard of idle silver in the Treasury vaults will become practically an active part of the currency, and the inflation which the silver advocates worked for will begin. All that will be wanted then for the practical establishment of a single silver standard will be such a turn in the foreign exchanges as will cause specie to be exported.

At this season of the year the city papers publish copious extracts from country papers expressing high admiration for the paper which reproduces them—its enterprise, its fairness, the completeness of its news, the vigor and brilliancy and high moral tone of its editorial articles, and the magnitude of its influence on this day and generation. Each paper in quoting eulogies on itself is, however, preaching to the converted. Its own readers believe all this, or some of it, already, so that the space devoted to it is, to a large extent, wasted. We would suggest, therefore, that each should exchange eulogies with its city contemporaries, so that the readers of the *Tribune* should see what some of the country papers think of the *Times*, and those of the *Times* what some of the country papers think of the *Tribune*, and so on round the circle. In this way a knowledge of the real value of the newspaper press would be diffused, which is now confined to a comparatively small circle. As a general rule each man thinks his own paper is the only one worth reading, whereas there is within easy reach evidence that there are four or five other papers of as great, if not greater, power and goodness. By this plan, too, we may add, the reputation of editors for modesty, which is now much obscured, would be vindicated and made plain.

A man named Howard stole some plumbers' material the other day, and when caught pleaded a desire to get food for a hungry wife far gone in consumption. The attention of the charitable was attracted to the case. Several ladies and gentlemen went to see the wife and found she was far gone in consumption, and thereupon rushed to the conclusion that no further enquiry about the husband was necessary. They supplied both his wants and those of his family profusely, and found him well paid employment, and then discovered that he was a well-known thief and swindler, and that there was not a word of truth in his story except that his wife was dying of consumption. The lesson of this affair—that it is essential in all these cases to act through charitable organizations and not to trust to appearances—has been illustrated and preached *ad nauseam*, and yet every now and then cases like Howard's seem to show that we have a large body of benevolent people among us who have never heard of it.

One of the worst railway disasters of recent times occurred on Sunday evening in Scotland, a passenger train from Edinburgh for Dundee breaking through the famous bridge of the North British Railway Company across the Tay estuary. The number of lives lost was at first reported to be three hundred, but later accounts agree in placing it at about ninety. The singular thing about the accident is that there were no survivors, and consequently the loss of life can only be estimated, as yet. There was a gale blowing and a high sea running at the time of the disaster, and the citizens of Dundee, who very bravely made every possible effort, were unable to find any further trace of the unhappy victims than the débris of the wrecked train and bridge. Since then one body has been washed ashore badly mutilated, and it is probable that most of the rest, certainly the passengers, perished before they could extricate themselves from their locked carriages. There is to be an official enquiry, of course, into the causes of the accident, which, at present, can only be guessed at. The train fell eighty-eight feet to the river, which is forty-five feet deep at that point, and is probably by this time imbedded in the quicksands at the bottom. It is possible that these quicksands, aided by the strong winds and tides of the Tay, had weakened the piers of the bridge, of which thirteen girders of the longest spans (eleven of 245 feet each) are gone, and possible, on the other hand, that the wind blew the train from the track, and that it carried away the truss-work of the bridge with it.

The bridge was one of the monuments of English engineering, two miles in length, and with the longest spans of any structure of the kind in the world. It was begun in 1871 and finished in 1878, and its construction was supposed to be an extraordinary triumph of the skill of Sir Thomas Bouch, the engineer. "Nevertheless," a singular article in the New York *Times* observes, "that bridge is a fatal wreck," and it proceeds to satirize in a plaintive but bitter strain what it mockingly calls "unerring science." The moral it draws from the disaster is, apparently, that any one who fancies himself "secure in the hands of science" is a kind of simpleton. To what travellers are to trust if engineering proves untrustworthy is not specified. Possibly, however, the Government investigation of the Tay accident may discover some fault of engineering remediable in future, and thus maintain the general confidence that, as a rule, properly-built bridges do not break down. Otherwise there seems nothing for it but to stay at home.

General Roberts reports from Afghanistan a complete victory over Mahmoud Jan's force, which seems to have lost a good deal of time making merry over its first success and did not attempt an attack on the cantonment at Shirpur until Tuesday last, and then made it in slovenly style. Roberts appears to have waited until they had clearly revealed their point of real assault and massed a column for the purpose soon after daybreak, and he then shot out a force of cavalry and artillery, which took them in flank and utterly routed them in a few minutes. Since then they have dispersed in every direction, and he has reoccupied Kabul and seized on Yakub Khan's female relatives, who, it appears, have done much to encourage the enemy. He has also reopened communications with General Gough, who was advancing to his relief, and also with Jalalabad. The ease with which these victories over the Afghans is achieved is well shown in the ridiculously small losses of the British force. There appear to have been just seventy-seven killed, and not much over two hundred wounded, in all the late operations. In repelling the attack on the cantonment and dispersing the hostile army the British appear to have had two men killed in fight and three by an explosion. This makes the merciless severity shown towards the Afghans in the burning of villages and wholesale hanging of prisoners all the more unaccountable and indefensible.

This severity is exciting rapidly-increasing indignation among the English Liberals, as the details of the "punishment," as it is called, begin to crop out in spite of the military censorship. It found strong, even violent, expression in an article of Mr. Frederic Harrison's in the last *Fortnightly Review*, in which he exposes the unsoundness of the theory on which General Roberts is hanging his captured enemies. The prisoners taken in arms are hanged as "rebels" or "mutineers," although the only person, on the English showing, entitled to their allegiance is Yakub Khan, who is now in custody as a public enemy, and must, therefore, if the charges against him are true, have approved of the conduct of his troops. The Mollahs, too, or Mohammedan priests, have been hanged for preaching resistance to the invader, as if this was not their business and as if the ministers of all denominations did not do it in all wars. The fact is that no Indian officer ought to be trusted among conquered "niggers" without being followed by public opinion in the shape of newspaper correspondents. The Afghan mode of resistance is, of course, exasperating, but it is the only mode they have, and it is difficult to see how they ever lost their right to defend their soil against invasion. The sham treaty of Gundamuck certainly cannot have deprived them of it, and if they retain it they are entitled when taken in fair fight to the privileges and immunities of prisoners of war. General Roberts reports that he has been prevented by a heavy fall of snow from following the "rebels" towards Kohistan to "punish" them for coming to attack him—that is, of course, to burn their villages and turn their women and children out on the snow. One can readily see what a store of endless hate all this is laying up.

M. Freycinet has succeeded in forming a Ministry, in which he himself takes M. Waddington's place as President of the Council and Minister of Foreign Affairs; and M. Mangin, M. Léon Say's as Minister of Finance, and General Farre, General Gresley's as Minister of War. Jules Ferry remains in the Ministry of Public Instruction, and Admiral Jauréguiberry in that of the Marine. It cannot be said that the combination is a strong one, or much more likely to last than the previous one, but it is more moderate than the Conservatives feared it might be, and will for a short period appease the Radicals simply as a change. It has the fatal defect of its predecessor of not being the real seat of power in the Chamber; but some observers, the London *Economist* for one, are inclined to believe that the subordination of the Cabinet to some other body or set in the legislature may be evolved as a normal feature of the French Government, though a novelty in the parliamentary system.

The situation in Spain has not sensibly changed. The Canovas Ministry, the advices by mail seem to show, occupies somewhat the same position as the De Broglie-Fourtou combination in France, and is probably not destined to a much longer duration. It represents the conservative, monarchical, protectionist, and pro-slavery element, which was most largely instrumental in restoring the Monarchy, but did not venture on attempting to maintain it single-handed. The programme on which the Martinez-Campos Ministry fell included the abolition of slavery in Cuba and the deliverance of the island, as part of a plan of conciliation, from the old Colonial régime, which gives Spain the monopoly of supplying Cuba with Spanish products by differential duties, both in their favor and in that of Spanish bottoms. This, for instance, completely shuts out American wheat. The arguments by which the Conservatives defend this oppressive régime give Spanish politics a very hopeless look.

Another attempt has been made to assassinate King Alfonso within a few weeks of his second marriage. This cannot but shake his nerves and those of his wife seriously. There is, under the influence of the late ministerial changes, said to be a good deal of revival of strong Radical excitement, and this nowadays seems pretty sure to find expression in a shot at a king. The people and the army are with Campos. Queen Marguerite, of Italy, is said to be broken down in health owing to witnessing the attempt on Humbert a year ago in Florence, and the Czar must certainly have been terribly shaken by the two last attempts on his life. These attempts to assassinate sovereigns rarely succeed, mainly owing to the agitation of those who perpetrate them; but it is easy to see that if fanatics or desperadoes could be found in sufficient numbers to make them often, the profession of king might be made so distasteful that few would follow it.

The news from Russia grows worse and worse. The Nihilists, who have thus far made no impression on the peasantry, have, it would seem, at last succeeded in spreading the report that the Czar had directed a division among the peasants of the estates of the landed proprietors. Those living in the neighborhood of Count Shuvaloff's property, therefore, it is reported, finding he was not making the division, sacked his house. They were expelled by troops, but they resisted, and have been joined by others in keeping up the disturbance. Most Russian troubles hitherto have arisen out of the spread of some delusion among the peasantry, and if the Nihilists could add this to their arsenal on any extensive scale they would enormously increase the perplexities of the Government. They have issued a manifesto, since the late attempt to blow up the Czar at Moscow, in which they exult in the attempt and denounce him in the most ferocious language, and declare his extinction and that of his Government to be their aim; and they propose that he should be replaced by a National Assembly freely elected by universal suffrage. This is the nearest they have come yet to proposing anything constructive, but the plan does not indicate much thoughtfulness or fertility of resource. In practice it would, of course, mean anarchy on an immense scale.

THE OLD YEAR.

THE year which has just closed has, of course, supplied the same material as all years for reflections on the uncertainty of human affairs and on the probability of the unforeseen. These will doubtless be made in the usual profusion by hosts of writers and speakers during the present week. They will, however, probably be of a less melancholy cast than those of the past six years, owing to the revival of business in the two nations in which most moralizing is done by the press, America and England, and will contain fewer commendations of frugality and simplicity of living as the true source of happiness. Business prosperity does, in fact, seem to have returned, but, we regret to say, in a way which sheds little or no light on the causes of the late widespread and long-continued depression. The discussion of the subject has naturally ceased in the presence of renewed industrial activity, but it has left behind no lesson or warning with which the world was not already familiar. As regards this country, the events of the year have justified neither the tariff-men nor the free-traders, although the tariff-men are as jubilant as if the panic had occurred and continued under a low tariff, and prosperity had come back with a restoration of high duties. The only financial prophets whom the year has plainly discredited are the silver men and the paper-money men. The former predicted great gain from the recoinage of silver, with the same boldness with which they ascribed the fall in the price to our demonetization of it in 1873, when there was none of it in circulation, and have been plainly confounded by its remaining stored in the Treasury vaults while every branch of industry has begun to feel the pulses of a new life. The latter were quite certain that bringing paper to par in gold was not possible without completing the ruin of the country, and that, even if specie payments were resumed, the resumption could not last for more than a few days, owing to the rush for gold on the part of the holders of paper which would surely take place. The facility with which this class has hidden itself since resumption under the mantle of silence, is a striking illustration of the small impression which any one, or even any hundred, voices make on the public mind, owing to the tumultuous manner in which discussion is carried on. When so many people are talking, one can almost venture to say anything without exposing himself to the shame or inconvenience of subsequent refutation by the course of events.

The gain of the year in politics is not so apparent as in business. The folly of the majority which obtained possession of Congress in 1874 and 1876, worked up most ingeniously and successfully into an appearance of preparation for "a new rebellion" by the Republican press, resulted in a revival of "Stalwartism," or the cultivation of hostility to the South, as the great and sole aim of the Republican party, early in the spring. Its natural consequence was the diversion of the attention of the party almost wholly from questions of legislation, and a very marked restoration of influence and activity on the part of politicians who had been discredited, and some of them relegated to private life, in consequence of their complicity with the scandals of the Grant régime. Several of the most prominent, such as Messrs. Carpenter, Logan, and Chandler, reappeared in the Senate, with aims and standards apparently entirely unchanged, and Mr. Conkling, from this State, was re-elected without opposition, and resumed the working of his Machine with increased power, in spite of a defeat from the Administration regarding the management of his Custom-house. Abuse of the South rapidly became the principal material of party oratory and of party platforms. The prospects of those who had been looking for a new departure in politics would have been gloomy indeed if a very gross abuse of power in this State, in the nomination of a "henchman" for the Governorship, had not roused a small body of young and comparatively unknown men into active and organized opposition. This opposition, although not sufficient to attain all its objects, revealed the fact that New York could not be depended on to support the nomination of a pronounced Stalwart or "Strong Man" for the Presidency; and the support of New York being necessary to both sides, this apparently insignificant movement turned out the most pregnant political fact of the year. It promises to disarrange the plans of those who hoped to conduct the campaign on a platform of hostility to the South, and undoubtedly is a source of more or less embarrassment to those who have undertaken to bring General Grant into the field for a third term.

At the same time striking evidences of the increased desperation of the struggle for the Presidency, and of the injurious effects on Northern political morals of the spectacle afforded by Southern disorders during the past ten years, have been revealed in the exposure of an attempt to bribe the electors of South Carolina in 1876 for the benefit of Mr. Tilden, and more recently in the attempt of the Governor and Council of Maine to secure the control of the incoming State Legislature for their party by the device of suddenly enforcing the minutest forms of the law in the examination of the returns, and thus reversing the result of the election as declared at the polls. This has been followed by the production, with more or less probability of its adoption in case the programme of the Maine Democrats is carried out, of a scheme either for the election of the Presidential electors by districts, which would make sure of part of the vote of this State for the Republicans, or their election by the Legislature, which would make sure of the whole of it. In fact, both parties seem to have reached a state of mind in which almost anything seems fair in order to get or keep power, and to have reached the end of the year bent rather on getting the better of the enemy, by fair means or foul, than on any correction of their manners and excesses. The moral sense of the bulk of the party would be healthy enough to put a stop to this increasing resort to trickery if it were not so deeply impressed with the wickedness of the other side. The Grant movement is, on the other hand, apparently somewhat on the wane, and it now seems as if he had come home too early, and that if he cannot be nominated within a month or two his chances will be slender.

Abroad the year has been much more changeful than at home. The most striking fact in European politics is the tenacity with which Socialism, or that nondescript form of social and political discontent called Nihilism, holds its ground in Russia. The repeated assassinations or attempted assassinations of high functionaries, from the Emperor down, and the successful distribution of incendiary documents, seem to indicate beyond question a condition of moral and intellectual anarchy, if not among the peasantry, among the wholly-educated or half-educated class, so deep and widespread that the most savage means of repression are not sufficient to prevent its showing itself. The relegation of Russia, which even ten years ago was looked on as a sort of bulwark against the disorganizing social theories of the West, to the category of revolutionary states, is a political fact of immense moment, and promises to have a profound influence on the march of events during the coming ten years. Germany, too, has undergone a change little short of another revolution. The National-Liberal party, which may be said to have accomplished the work of establishing the national unity, has lost its hold on the executive and on the march of affairs, and is in danger of total extinction. Prince Bismarck has, mainly for the sake of revenue, but partly through fear of the Socialists, flung himself into the arms of the reactionary party, and a law is at this moment before the Federal Council, under his auspices, which, by restricting the sessions of Parliament to every second year, and making the taxes votable for two years at a time, will substantially restore the régime which existed before 1866, and take Germany out of the list of parliamentary countries. The outlook there would indeed be dark if it were not almost certain that this policy is dependent for its permanence on the life of the Emperor and his Chancellor. But then it must be said, too, that the future of the Empire after the Chancellor's death is by no means clear.

In England the popularity of the Beaconsfield Ministry has steadily declined under the sobering influence of events everywhere. The campaigns set on foot in Africa and India, either under direct instructions from home, or under the influence of the "Imperial" spirit infused into the viceroys and high commissioners

and military men abroad, have proved costly and inglorious. That in Afghanistan has turned out a small affair in a military way, but full of prolonged trouble in every other. The Turkish question, too, is evidently far from being settled by the Treaty of Berlin, and the task of reforming Asia Minor assumes more formidable proportions as the years roll on. Popular pride is humbled by the discovery that the great "place of arms" in Cyprus, from which Russia was to be watched and held in check at Kars, is a piece of leased ground too malarious for a garrison. The prolonged depression in business, combined with the serious attack made on the agricultural interest by American competition, have once more brought domestic questions into the foreground, and when the popular mind begins to be fixed on these the Liberals are looked to to deal with them as naturally as the Tories are looked to for the promotion of adventures in foreign politics. Liberal fortunes, too, have within a few weeks received some assistance from the revelation of Mr. Gladstone's amazing popularity in the provinces, made by his journey to Scotland, and by the uncommon vigor of mind and body displayed in his speeches. Men of all parties are disposed to be proud of a statesman who, at the age of seventy, after forty years of public service, is capable of such an amount of oratory within so short a space of time, and probably would be, even if the oratory were not of a very high order, if not of the highest order, of excellence.

Over the whole of Europe, however, in spite of the undeniable advances made everywhere in science and literature and arts, in security for person and for property, and in the comforts and graces of life, there hangs a great cloud in the shape of standing armies of a size never before witnessed or thought of. The drafts they make on the material resources of the country, great as these are, are, however, only a part, and the smaller part, of the evil they cause. Their worst effects are seen in the drafts they make on the talent and inventiveness and ambition of its ablest men. The amount of thought and research and intellectual industry bestowed at this moment by a large body of carefully-trained men of the highest capacity, on the production of improvements in the means of destroying human life, is a draft on civilization itself the extent of which it is, of course, impossible to calculate, but which must be set down as one of the greatest hindrances to the world's progress, both moral and material, in our day. Nor is it possible to consider the training in habits of order and discipline which young men receive in the ranks as offsetting the complete suppression of the spirit of initiative and of habit of thoughtful self-reliance, to which they are exposed during the most important period of their lives. Italy is probably the only country to-day in which the army is rendering undeniable service to the nation as an instrument of education.

THE ANALOGY BETWEEN MAINE AND LOUISIANA.

SOME of the Republican papers are trying to persuade themselves that there is no analogy between the case of counting-out which is now pending in Maine and that which took place in Louisiana in 1876; but they will cease to do so if they look into the matter more closely. The wrath of Republicans in Maine is not roused simply because so many of their representatives have been displaced on technical grounds to make way for Fusionists. If the courts should decide that the Governor and Council have acted legally, and could not have acted otherwise without violating the law, the hostility to them would cease at once, for the reason that it is not the loss of the Legislature which troubles the Republicans, but the feeling that they have lost it through corrupt action on the part of the Returning Board. They will accept the very same results from the hands of a court of law without a murmur. Now, why do they suspect the Governor and Council of corrupt action? Not because they are men of known bad character, or because they have ever done anything of the kind before, but simply and solely because their action causes great gain to their own party, and corresponding loss to the opposing party. If the Board had so counted the returns as to give the Republicans the majority, and had unseated Democrats only or Democrats mainly, the Republicans would not have accused them of dishonesty. On the contrary, they would have seen in their action a strong indication of their integrity, as going against the interest of their own party. The Republican esteemed contemporaries will thus perceive that the essence of the Maine affair, through which it must be compared with the Louisiana affair, is not the question which side really had the majority, but the question, Under what motives did the Returning Board do its work? It is to this, therefore, that they must direct their attention.

The Louisiana law, it is true, gave the Returning Board the power to throw out the returns of any parish in which there had been in their opinion sufficient disorder and intimidation to prevent a fair vote, and the evidence of this disorder or intimidation was to be furnished by affidavits attached to the returns by the officers conducting the election on the spot. There was nothing objectionable in this law *per se*. If there was sufficient intimidation and disorder to prevent a fair vote, it was perhaps right that the returns of any parish in which these things occurred should be thrown out. Had this been done by a proper tribunal after sufficient investigation, the Democrats would not have had a word to say against it. That there was *some* intimidation in 1876 we think nobody denies; but was there enough properly-proved intimidation—and just enough—to furnish reason for throwing out the eight thousand majority of votes cast for Tilden and the resulting award of the Presidency of the United States to his competitor? The answer to this depends on the answer to some other questions: Was the tribunal which tried the fact of intimidation and determined its amount, and measured the effect it should have on the total vote cast, a tribunal offering the ordinary guarantees of character and capacity? Were the men composing it persons whose antecedents, both political and private, ought to have inspired confidence? Did it conduct the enquiry in such manner as to disarm suspicion? Did it rigidly follow the law, and, finally, was its decision profitable to its members personally and to the party to which they belonged? These questions, it will be readily seen, place the Louisiana case in precisely the same category as that of Maine. In both everything turns on the character and motives of the Returning Board. If the Louisiana Returning Board was a tribunal of high character and recognized capacity, if its members were men of good standing in the community, if no doubt had previously been cast on the integrity of any one of them, if the enquiry was conducted according to the established procedure of courts of law, if the Board rigidly obeyed the law, and if the decision rendered did not profit, and when rendered was not likely to profit, those who rendered it, then the Democrats were utterly unreasonable in complaining of it, and have not a leg to stand on when they compare the case to that of Maine.

But if an unfavorable answer must be returned to every one of the foregoing questions—as it must—then the Louisiana case only differs from that of Maine in being considerably worse; and it is difficult to characterize in temperate language the conduct of those leading Republicans who went down to Louisiana, not to hold this Returning Board to rigid integrity, but to encourage it in disregarding the reasonable suspicions of the Democrats; not to make sure that no injustice was done, but to make sure that their own man got the Presidency, and who, when they came back, wrote an elaborate eulogy on the members of the Board, on the strength of an acquaintance of two or three weeks. It is also difficult to compare the course of the Republican press in whitewashing the Louisiana Board and its doings, with great violence of language, with the attitude of the Democratic press at this moment towards the Maine affair without being driven to conclusions extremely unfavorable to the former. The only excuse that can be made for the Republican press is that it behaved no worse than most of the active moralists of the Republican party. Too many of those who make most noise about morals in politics were either silent and looked the other way, or else openly winked and smiled while this great wrong was being perpetrated.

We return to the subject because we would fain warn the people who only take an interest in politics under the influence of great

excitement that we are in imminent danger of seeing party contests degenerate into a series of tricks perpetrated by each party alternately. We have no doubt whatever that if the Louisiana fraud did not directly suggest the sharp practice in Maine—we will give it no stronger name now until we hear what the judges say about the law—it stimulated the unscrupulousness in which that sharp practice originated. We think, too, that there is much reason to fear that the Maine affair will, especially if successful, lead either to the gerrymandering of this State in preparation for the Presidential election, or else to the appointment of electors by the Legislature, so as to secure it for the Republicans beyond doubt. If this is done—and it is now seriously talked of—Democratic States will retort in kind, we may be sure, and the unscrupulous and reckless of both parties will throw off the restraints which they still feel, and do their utmost to convert the Presidential election into a mere game of thimble-rigging. The time to stop this tendency and to bring the tricksters on both sides to their senses is now, but it is impossible not to see how much the force of the criticism of the Republican press, or of Republican moralists, especially ministers, on the Maine transaction is weakened by their attitude towards the Louisiana fraud in 1876.

"NON-SECTARIAN THEOLOGY."

PROFESSOR EVERETT has an article in the first number of the new *Harvard Register* (a medium of communication between the College officers and the rest of the world), which, as he has himself indulged in freedom of speech with regard to the motives of those who have argued against the connection of the College with the Divinity School, we shall take the liberty of pronouncing somewhat sophistical for a Doctor of Divinity. He says: "It has been somewhat absurdly suggested in some quarters that in an unsectarian school a teacher of theology would not be at liberty to utter his own views." We can hardly be mistaken in supposing that by "some quarters" he means the *Nation*. Nothing of the kind has been, to our knowledge, suggested in any quarter. What *we*, at all events, said was that a teacher in such a school would *have* to be at liberty to utter his own views, and therefore, there being many teachers, the theology taught would be in no proper sense unsectarian, and would excite the distrust and hostility of the greater part of the Christian world. He also says: "It has been urged that a school of theology cannot be wholly unsectarian because the teachers must incline to the views of one denomination or another." What we said was, that if "unsectarian theology" included Christian theology, the teachers must take up some position with regard to such leading Christian doctrines as the Atonement—that is, must either affirm or deny their truth; and that, whichever they did, their theology would be, *ipso facto*, sectarian. We have heard nothing to change our belief on this subject. Professor Everett further adds:

"But it is said that there is this great difference between theological and other studies: that no person believes that a young man's eternal salvation is imperilled by false views of political economy, of philosophy, or of science, while this danger is felt in regard to theology. The truth is, however, that the Roman Catholic Church and a large portion of the Protestant Church do believe that a false system of philosophy, or even a system of science which they deem to be false—that of evolution by natural selection, for instance—may imperil the safety of a soul, while political antagonisms are as violent as religious antagonisms. From these facts it follows, not that these subjects should not be taught, but that they should not be taught by bigots and partisans. It should be further noted that those who offer the argument just considered do not urge it seriously. They do not themselves believe that any system of science, philosophy, or theology puts in peril the soul's welfare. They simply place themselves for the moment on the side of a blind prejudice, such as the higher education has had to contend against at every step of its advance."

We can hardly be mistaken in supposing that what he has here in mind is the following passage in the *Nation* of July 31, 1879, replying to a correspondent:

"It is 'non-sectarian theology' which the Harvard Divinity School is, we are told, going to teach, and, as well as we can make out, 'E. H. H.' sees no more difficulty in teaching it than in teaching political economy or agriculture. This is something rather odd, coming from a minister, for he knows that the great majority of the Christian world hold not only that certain theological beliefs are essential to a man's eternal happiness, but that they contain the sources of his morality in this life. Unitarians and Universalists may not hold this, but then it is admitted that Harvard University is not intended for the exclusive use of Unitarians and Universalists, so that their readiness to accept 'non-sectarian theology' does not meet the emergency. He knows also that this is not true of economical or agricultural opinions. No father thinks his son will be damned eternally or suffer in character if he does not believe in free-trade, or in a high tariff, or entertains singular views about manures or the rotation of crops."

Professor Everett has, therefore, not only misrepresented the position he was assailing, and ascribed to us the use of two illustrations (science and philosophy) which we did not use and on which we made no observation whatever, but has also suggested a thoroughly sophistical analogy between the methods by which science is taught in a scientific school and those by which theology is taught in a divinity school. He has, however, gone further than this, by asserting that our objection to the analogy between theology and political economy and agriculture was put forward as an expression of personal belief that certain "systems of science, philosophy, or theology put in peril the soul's welfare," and then that this personal belief does not exist, and therefore the argument was "not urged seriously." When we find this sort of thing in a daily newspaper we call it "journalism," but we confess we hardly know what name to give it when we find it in an article by a Doctor of Divinity and a Professor of Non-Sectarian Theology. We do not need to remind our lay readers that we were, in the passage we have quoted above, plainly endeavoring to show that a non-sectarian divinity school would not attract those who valued divinity schools, but repel the great bulk of them, and that therefore its sphere of usefulness, if it had any usefulness at all, would be very limited, and that it was a great pity to raise money for it which was sorely needed in the academic department, to which all sects resort, and which is now undermanned and underpaid. Professor Everett's imputation is, therefore, both impertinent and baseless, and is calculated to prejudice people in advance against "unsectarian theology."

If anybody wishes to subscribe money to establish a school in which professors learned in the history of theological opinions and fond of theological speculation themselves would lecture to persons interested in such themes, we see no reason in the world why he should not do so. But there ought to be in raising money for such a scheme perfect candor in describing it to the world without. In doing so no old phrases or terms should be used in a new sense. If it is proposed to teach "unsectarian theology," for instance, this theology ought to be defined beyond the possibility of misunderstanding, because it is an absolutely new and to most people unknown thing. Persons asked to subscribe or approve ought to be informed whether this theology is Natural Theology or Christian Theology, and, if Christian, in what manner the doctrines of the Atonement and of Future Punishment and the Inspiration of the Scriptures will be dealt with by the professors, and what the "unsectarian" view of such subjects is, and whether the cultivation of the unsectarian view is likely to make of the students believers or critics merely. There ought to be no vagueness or fog in the programme of the institution, which will in many ways be a very remarkable one. There is no other like it in the world. It ought to announce boldly that theology will be taught in it in the same spirit and by the same methods that chemistry, biology, and astronomy are taught in the scientific schools—and with the same complete indifference to the spiritual and moral effects of the teaching.

We have given already what we consider several weighty reasons why Harvard College should not embark in any such enterprise, or further it in any degree whatever. President Eliot's suggestion last summer that such an institution would promote interest among the students at large in "God and immortality" was, we are sure, thrown out hastily and would not be seriously defended. The school would exert no influence whatever on anybody in the College beyond the small number who resorted to it for the pursuit of theological speculation. The present Cambridge Divinity School, whatever the aims of its founders or of its present conductors, has thus far practically served the purpose of a training-school for Unitarian ministers. As long as it preserves this character it should have no more connection with the College than the Episcopal Seminary. In the present condition of the academical and scientific departments of the University it is much to be regretted that any power the College authorities possess of raising money should not be employed exclusively for their benefit. They are both suffering from lack of funds. They are doing a work which everybody understands, and for the benefit of which thousands are eager. It would be a great pity under the circumstances to see the energy which is due to them expended on the cultivation of "unsectarian theology," concerning the nature of which, we will here add, we have questioned promi-

nent theologians of various schools and have invariably found the enquiry treated as a humorous one.

MR. GLADSTONE'S POLITICAL POSITION.

LONDON, December 15, 1879.

MR. GLADSTONE has accomplished what Lord Beaconsfield calls his pilgrimage of passion. The Irish peasant, in one of Carleton's stories, impressed with awe as to the numbers and strength of the "Black Presbyterians," describes them as extending all the way right from Belfast to Enniskillen, and all the way back again from Enniskillen to Belfast. The enthusiasm which Mr. Gladstone has evoked has extended, in like manner, all the way from Chester to Glasgow, and all the way back again from Glasgow to Chester. It has pursued him like a prairie fire. He might seem to have been fleeing from the flames which his presence and speeches kindled. Never was there such a *tour de force*. As a mere exhibition of physical strength it was wonderful. Mr. Gladstone, like the spider in Pope's verse, lived along the line ; and, excelling the spider, spoke along it too. Wherever the train stopped for ten minutes, and he could find a perch and a standing-place, at carriage windows or on railway bridges, he poured out words to listening and excited crowds. Railway bells, and the signals of station-masters, and the moving of the train stopped him in the middle of sentences—inventing a new form of that rhetorical figure which is known as *aposiopesis*. There has seldom been a better illustration of his own definition of the orator, as one who gives back to his audience in a shower that which he received from them in vapor. All these were speeches by the wayside. They were so many voluntaries thrown in as preliminaries, or as sequels, or as interludes, in the performances regularly arranged for. Probably no man has ever lived through a period of more continuous and intense physical and mental exaltation. The men who lift hundred-weights of iron in their teeth or hold them up by their little fingers must yield to Mr. Gladstone in physical prowess. He has fairly earned the designation of "the strongest man in the world." The intervals of these exploits have not been intervals of rest. The fatiguing labors of society have been interspersed between them. Mr. Gladstone has had to play the part of lion at country houses, as the guest of great nobles and squires, before the notables of half a county. One day of seclusion was devoted to the composition of his address as Lord Rector of the University of Glasgow. Whatever its intrinsic merits, Mr. Gladstone's fortnight of speaking and travelling was as wonderful a performance as the world has ever seen. It is unique, and is likely to remain so, unless Mr. Gladstone supplies a parallel to his own achievement or makes an advance upon it. The showman in the *Spectator* (the *Spectator* of Addison and Steele, not of Wellington Street, Strand) described his beast as "the largest elephant in the world except himself." Mr. Gladstone's claims to pre-eminence as a popular orator admit only of a similar qualification.

So much as to the performance itself. What as to its results ? Is the enthusiasm which he has kindled, a fierce flame which burnt itself out in his presence, and which will smoulder for a few weeks and then expire, leaving only dust and ashes behind it ? This is not probable so far as Scotland is concerned. The Scotch nature seems to have been in Mr. Gladstone's hands wax to receive; by its intrinsic qualities it is marble to retain. Behind the thousands and tens of thousands who heard him are hundreds of thousands who are now reading him. In farm-houses and in the back-parlors of town shop-keepers cheap editions of his speeches are being pored over for the time as only Burns and the Bible are conned. But Scotland was safe already. The reaction of 1874 extended to but few counties and boroughs, and those would have been won back without the transcendent effort which Mr. Gladstone has put forth. On the northern side of the Tweed he was preaching to the converted. But his speeches, though made in Scotland, were really made to the whole United Kingdom, and their effect there is a matter more doubtful. Mr. Gladstone's influence is largely an affair of classes, though there are, of course, numerous exceptions of disapproval and admiration in every class. Among what we call here the higher orders—among the aristocracy, the permanent officials, and the wealthier middle classes bordering upon the aristocracy—Mr. Gladstone's Scotch speeches have worked alienation and repulsion. Among the Nonconformists, a certain portion of the High-Church party, the shop-keepers, and the working classes they have stirred a hero-worship something akin to the devotion of the Irish to O'Connell in his palmy days. Curiously, and yet naturally enough considering Mr. Gladstone's early training and career and the conditions of official and political life in this country, it is with the former classes alone that he has any sort of habitual communication. An official statesman belongs to the aristocracy, or is adopted by them, and Mr. Bright, who some years ago was as ignorant as Cetewayo of the use and meaning of a dress coat, is now the guest of Walmer Castle and of Chatsworth. The classes whom Mr. Gladstone has somewhat repelled were the classes which needed to be won over ; the classes whose ardor and energy he has stimulated were his already. To the former, the course which he has followed of late years has exhibited the conversion of the statesman into the demagogue. To the latter, it has seemed like the elevation of the statesman into the prophet. Mr. Gladstone, to a large portion of the people of England, is a preacher of political righteousness. They regard him as being essentially a Christian statesman. There is, of course, the exaggeration of a Puritan and Bible-reading enthusiasm in this view ; but it is truer than the opposite one. Mr. Gladstone is the moralizer of politics. This is the function which he has deliberately chosen since his retirement from the leadership of the Liberal party ; and it is one to which, with the inconsistency of a merely personal devotion and attachment, his less discreet followers complain that he is restricted.

In many provincial newspapers, and in one or two London journals, Mr. Gladstone has been acclaimed as the necessary leader of the Liberal party in the coming electioneering struggle. He has been bidden to resume his old functions in the House of Commons, and to hold himself ready for the Premiership in the event of a Liberal majority being secured. Lord Granville and Lord Hartington are invited somewhat peremptorily to withdraw from posts in which they have only been tolerated as stop-gaps, to make confession of incapacity, and to entreat Mr. Gladstone to come back to the position which he renounced in 1875. One thing is now certain, that Mr. Gladstone will either be the head of the next Liberal Administration or he will not be in it at all. The suggestion thrown out by Sir Wilfrid Lawson, Mr. Otway, Mr. Chamberlain, and others, that he possibly might consent to act as Chancellor of the Exchequer in a Granville-Hartington ministry, does not find favor at Hawarden Castle. The subject of this speculation treats it as wholly inadmissible. In a private letter, not designed to be wholly private, he has described it as putting him back thirty years in political life. Mr. Gladstone declares that in 1875 he not only retired from party and Parliamentary leadership, but renounced an official career for the future. Unhappily, perhaps, for his own tranquillity, and for the public acquiescence in his resolution, this renunciation is not accepted by those nearest to Mr. Gladstone. The closest and most intimate influences are brought to bear upon him, and upon others who it is thought may be able to sway him, to reconsider his determination. In these little schemes of management and intrigue the leadership of the Liberal party is spoken of as if it were for Mr. Gladstone to take it up and to lay it down at his pleasure. It is assumed that his name as the future Prime Minister is necessary in order to secure a Liberal majority in the next Parliament. The assumption is more than doubtful. It is probable that the effect will be of the opposite kind. The success of either party at the next general election depends in a great degree upon its acquisition or retention of that mass of floating opinion which sways now to this side, now to that, and turns the scale in the direction in which it moves. Frightened Liberals and men neutral as between the two parties were of late gradually dropping into the Liberal ranks. The discontent with the present Government was growing. But there is reason to believe that Mr. Gladstone's Mid-Lothian speeches, accompanied by the designation of him in certain quarters as the next Prime Minister, is driving them back again. A short time ago political managers, central and local, were sanguine and even certain about the coming elections at Sheffield and at Barnstaple. Now they are shaking their heads very gloomily over their prospects. Mr. Gladstone, it is feared, has frightened off the half-Liberals who were coming back, and whose votes cannot be dispensed with. They would have accepted him as one of the influences in the Liberal party, the most powerful influence, but an influence acting through the more cautious and deliberate temper of Lord Granville and Lord Hartington. But they dread him as a political dictator. The Sheffield election will probably have been decided before these words appear in print, but the certainty of a Liberal triumph has disappeared within the last few days. Mr. Gladstone's acceptance of the leadership is not, therefore, by any means a certain way to victory. If Lord Granville and Lord Hartington were set aside, their removal would be resented not only as an affront to them personally, but as an insult to the whole of their class and of their section of the Liberal party. It would throw a great social force into the hands of the Conservatives, or at any rate neutralize it for Liberal purposes. Suppose that Mr. Gladstone is named leader ; and the

consequence is a Liberal minority in the new House of Commons. Will he undertake the work of leader of the Opposition through the whole of another Parliament? or will he throw it up and require the party to choose new chiefs? If so, who will consent to serve after the lesson of Lord Granville and Lord Hartington's experience? Mr. Gladstone was willing to be Prime Minister if the election of 1874 had given him a majority; he declined to lead the Liberal party when, mainly through his doings, it found itself in a minority. The same rule might guide his conduct in 1880 or in 1881. There are Liberals to whom the honorable understanding entered into between the present leaders and the party counts for nothing, but even they may shrink from the dilemma of finding themselves left in the lurch by Mr. Gladstone after cavalierly dismissing Lord Granville and Lord Hartington. † † †

RENAN'S CHRISTIAN CHURCH.

PARIS, December 12, 1879.

AMIDST the confusing noise of our political parties Renan continues his great philosophical work on the origin of Christianity. Sometimes he gives a word of advice to his contemporaries, as he did in the 'Moral and Intellectual Reform of France' and in his 'Sequel to the Tempest, or Caliban'; then he returns to his favorite studies. His long series already comprised the 'Life of Jesus,' 'The Apostles,' 'Saint Paul,' 'The Antichrist,' 'The Gospels'; he has just added to it a sixth volume, under the name of 'The Christian Church.' The seventh and last volume will be called 'Marcus Aurelius.'

This new volume extends from 117 to 161 A.D., and covers the two reigns of Hadrian and Antoninus Pius. From a merely mercantile point of view it is not surprising that the success of the work has been constantly diminishing. The 'Life of Jesus' was one of the most extraordinary successes of the time; it was in everybody's hand, as if a sort of religious novel; it became the occasion of the most ardent polemics. Since that time M. Renan has abandoned the fields of conjecture, the exegete has more and more given place to the historian; but public opinion has not followed the historian as it did the exegete. The only people who buy these later volumes are those who wish to complete their collection; the 'Life of Jesus' is almost forgotten, and the current of popular favor has taken other directions. In my opinion, the new volumes of M. Renan are perhaps more interesting than the first; they are more solid in their construction, they are less arbitrary, less artificial; they deserve a place in the library of all historians and of all philosophers. If you wish to write the life of Jesus you can, after all, do nothing but paraphrase more or less the Gospels, and a true artistic mind will always prefer the original texts to any commentary. Where are all the commentaries of Dante, once so much praised? They are despised and forgotten; but we all read the 'Inferno,' and we try ourselves to find our way in its sublime obscurity. The historical part of the 'Beginnings of Christianity' forms, on the contrary, a subject eminently fit for a writer like Renan, familiar with the Oriental churches and with the Latin civilization. It is the contact of two worlds, of two intellectual worlds.

Trajan died at Selinus, on the coast of Cilicia, on the 11th of August, 117, and the Empire was given to Hadrian.

"He was," says Renan, "a man of doubtful morality, but he was a great sovereign. Clever, intelligent, curious, he had more largeness of mind than any other Cæsar. From Augustus to Diocletian he was the most organizing emperor. His administrative capacity was extraordinary. According to our ideas he administered too much, but he administered well. He was the definitive organizer of the Imperial government; he marks a capital epoch in the history of the Roman law. Hitherto the house of the Prince had been the house of the first personage of the state—a house like any other, composed of servants, of freedmen, of private secretaries. Hadrian organized the Palace; to attain to the palatial offices it became necessary to be a knight; the domestics of the house of Cæsar became functionaries. A permanent council of the Prince, composed chiefly of lawyers, took on special functions; the senators attached to the Government became *comites* (counts); everything was done in the bureaux; . . . it is despotism, but a despotism similar to the old French monarchy, tempered by councils, courts, and independent magistrates. The social reforms are still greater; a good and great spirit of true liberalism and humanity is manifested everywhere—the position of the slave is surrounded with guarantees; the condition of women rises; the excesses of paternal authority are limited; what remains of human sacrifices is suppressed."

Hadrian was fond of Epictetus; his mind was inquisitive, he took pleasure in the Eastern religions, impostures, oracles. Like Nero, he was an artist, a literary man, on the throne. He wrote verses; everything with him ended with a smile, even those verses which he murmured before dying: "Animula vagula, blandula . . ." Such a mind could not be intolerant. He did not suppress the restrictive laws against the Christians, but he personally never tried to enforce them. His reign was a continual journey through the empire. He abandoned, on mounting the throne, the newly-conquered provinces, Armenia, Mesopotamia, and Assyria, returned to Rome, visited Gaul, the Rhine, Spain, Mauritania, Carthage, as an *amateur* as well as an emperor, ordering everywhere great public works. Then he revisited the East, wishing to see everything, with a court of architects, of rhetoricians, of philosophers. He wanted to rebuild everything; what he did was really prodigious. "The world had never hoped so much. The barbarians beyond the Rhine and the Danube were hardly felt. The liberalism of the Emperor diffused everywhere a sort of contentment." The Jews themselves hoped that Hadrian would rebuild Jerusalem. The Emperor had visited its ruins. "For fifty-two years the city had sat in its desolation, offering nothing to the eye but immense blocks thrown on each other. A few poor houses only, chiefly Christian, stood detached on the top of Mount Zion. The place where the Temple stood was full of jackals." Hadrian conversed with some famous rabbis, but the Jews would not, could not, bear toleration. Hadrian, who was an eclectic, conversed also with the Christians of Palestine, and the Christians would not see the Temple rebuilt. Still, some works were ordered, but the new temples of Jerusalem were dedicated to Jupiter Capitolinus and to Venus. This last temple was not far from Golgotha.

Hadrian seems to have been sometimes drawn toward the ideas of Christianity. He had some churches built which remained undedicated, and were called *hadrianæ*. To be sure, he also deified Antinous; but, as Renan says, even his follies with Antinous became an element of Christian apologetics. "Such a monstrosity seemed the culminating point of the reign. This new god, whom everybody knew, became a weapon against the old gods more difficult to seize. The Church triumphed." It was at this time that the first mention was made of a new Gospel, of the Gospel of John, the beloved disciple of Jesus. The new book came from Ephesus. M. Renan accepts the system which places John in his old days in this town. He does not think that the Gospel was written by John himself, and attributes it to some disciples of his. "We incline to think that the fourth Gospel represents the traditions of a certain *Presbyteros* and of Aristion, traditions which possibly go back to John himself." He thus sums up the spirit of the fourth Gospel: "To prove Jesus to those who do not believe in him, but especially to enforce a new conception of Christianity—these are the author's two objects. The miracles being essentially the proof of a divine mission, he abounds even more than the primitive Gospels in stories of prodigies." He says also:

"The fourth Gospel is a writing of no value if you wish to know how Jesus spoke, but it is superior to the synoptical Gospels in what relates to the order of facts. The sojourns of Jesus in Jerusalem; the institution of the Eucharist (which, according to our author, results from a habit of Jesus and not from a word pronounced at a precise moment); the anticipated agony of Christ, not spoken of the day before the Passion; a number of circumstances concerning the Passion; the resurrection and the post-mortem life of Christ; many particulars such as those which concern Cana, the Apostle Philip, the brothers of Jesus, the mention of Cleophas as a member of the family of Jesus, are so many features which assure to the pseudo-John a historical superiority over Mark and over the pseudo-Matthew."

John is very often in accordance with Luke, whom Renan considers as the most exact of all, historically speaking. "What," he says, "is really artificial and devoid of traditional truth are the speeches placed in the mouth of Jesus. Critics ought to place these speeches in the same category as the conversations which Plato attributes to Socrates. Two omissions are characteristic: there is no parable mentioned, nor a single apocalyptic speech on the end of the world and the Messianic appearance. The hope of a coming light in the clouds had, it would seem, lost a part of its strength." I must cite this also; after accusing John of being too obscure and metaphysical, Renan says:

"These defects were a consequence of the exaggerated attitude given by the author to Jesus. Such an attitude excluded simplicity. Jesus proclaims himself the Truth and the Life; he declares himself God; it is only through him that the Father can be approached. Such heavy and solemn affirmations cannot be made without the air of a shocking presumption. In the synoptical Gospels God does not affirm himself; he reveals himself by the charm of his impersonal speeches. Here God argues in order to prove his divinity. It is the rose arguing to prove its own perfume."

This is Renan all over, the Renan of the 'Life of Jesus,' who put so many people almost beside themselves by the very peculiar way in which he was capable of treating religious emotions and religious subjects.

This fourth Gospel, inspired with Greek ideas, had a signal success, after fifty years of indifference or opposition. Books did not make their way then as they do now; they were written for a few people, and only shown with much reserve. At the end of the second century, however, we find that the fourth Gospel has beaten the synoptical out of the field. It was much more in harmony with the Greek genius. The belief in the end of the world had been excluded; Judaism was forgotten in it, with its millennium, its Messiah, its apparitions; the Jews are positively condemned; they are looked upon as murderers. "This Gospel disembarrasses Christianity of a number of original encumbrances; allowing it the thing that is chiefly necessary to the creations which want to live, namely, ingratitude towards what has preceded them." Christianity became a sort of new religion and philosophy, unknown to Peter and to Paul, full of antipathy against the Jews and Judaism, ignoring the doctrine of justification by faith; it became idealistic.

"The idealist," says Renan, "is always the strongest of revolutionists. The definite rupture with Judaism was the indispensable condition of a new religion. Christianity could not succeed if it did not become a pure religion, independent of any material symbol. 'God is a spirit, and those who worship him must worship him in spirit and in truth.' Thus understood, Jesus ceases to be a prophet; Christianity is no longer a branch of Judaism: it is the religion of reason. The fourth Gospel gave to the apostolic work consistency and duration. Its author, whoever he was, was the cleverest of all the apologists."

While the Christian Church finished, as it were, its dogmas, it organized also its discipline and its hierarchy. The church of Jerusalem and those founded by St. Paul had received no organization; they were mere conventicles of latter-day saints making ready for the apparition of God. By degrees the Church felt that it must organize itself for life and reconcile itself with the Empire It became a regulated society. It lost its democratic character and became episcopal. Each class of persons, women included, received a place, a function in the Church. Orthodoxy made its appearance as well as the episcopate. Heresy became a crime. You will find the natural development of all these novelties in the Epistles to Timothy and to Titus. The "New Testament" was formed out of the Gospels and the Epistles, and became the "holy book" of Christianity. A senseless rebellion of the Jews ended in a fearful massacre and in the disappearance of the Jews as a nation. Two hundred thousand Jews were killed; still, Pausanias writes quietly: "In my time ruled this Hadrian, who showed so much respect for all gods, and who had the happiness of his subjects so much at heart. He undertook no war without being obliged to do so. As for the Hebrews who dwell near Syria, it was only because they revolted that he crushed them."

Correspondence.

THE BALTIMORE ELECTION.

To the Editor of The Nation:

Sir: For "Second Legislative District," in my recent communication anent "Maryland Bull-dozing," please read "Third Legislative District." I find that the error was that of a copyist in the office of my newspaper.

I confess that I am somewhat startled at the doubt as to my own existence which is sprung by an individual signing himself "Charles J. Bonaparte" in your last issue. I admit that I have never given this question the attention which it perhaps deserves, and, as my own evidence on the point does not seem to be convincing to the party who makes use of that name, I respectfully call attention to the enclosed clipping, from the issue of the *Evening Bulletin* of Baltimore which appeared on the day your last reached this city, and also to an editorial note in reference to the alleged "Charles J. Bonaparte" in the *Telegram* of to-day—which you will find on your exchange-table. I trust you will consider the two items as at least contributing towards the elucidation of what is (to me) a matter of some importance—namely, the question whether there is or is not such an objective reality as

J. T. Ringgold.

Baltimore, Dec 27, 1879.

THE NEGRO VOTER—A PROGNOSTICATION.

To the Editor of The Nation:

Sir: The results of the fall elections in different parts of the South have thrown additional light upon the negro's position as a voter, and the part he is likely to play in the future political history of the country. It may be that race prejudice had much to do with the opposition of the Conservative element at the South to placing the ballot in the hands of the negro; but it is certain that many of the Southern leaders, who were able to divest themselves of this prejudice, were opposed to it on principle, because they foresaw evil to come. And evil did come of it, first in the shape of "carpet-bag" governments; and now it threatens disastrous results in another direction. For a long time the "carpet-bagger" played upon the ignorance of the negro with promises of untold benefits to accrue to him if he voted the Republican ticket, and he was led to the polls and voted for—he knew not what. With the non-fulfilment of these promises the eyes of the negro were slowly opened to the fact that he was being used as a pliant tool to foist into office men wholly unfit for responsible official positions. This awakening was followed by a political lethargy on the part of the colored voters, which was misconstrued by the people North, but which was fully understood here. It was hard for Northern men to realize that States like Alabama, Mississippi, and Louisiana, which had been largely Republican, could be so suddenly converted into Democratic strongholds without the use of unfair means, and the result was attributed to wholesale "bull-dozing" and ballot-box-stuffing. While there may have been isolated cases where unjustifiable means were resorted to by the taxpayers of the South to wrest their local governments from the hands of the thieves who were plundering them, it is very certain that, with the fewest exceptions, the negro has been free to vote as he pleased and has had his ballot counted as it was cast. The falling off in the Republican vote South is due to the fact that the negroes have lost, to a very great extent, their interest in national politics, and cannot be brought to the polls except in an election involving matters of *local interest*. And herein lies a danger to which the attention of the Southern people is now being directed; and that is, an alliance of the negro voters with the worst element of white voters in the control of our local politics.

The "race issue" is year by year growing weaker. Neither the whites nor the blacks can any longer be rallied on the "color line." With the breaking up of this issue the negro vote has come to be a thing to be bargained with, and some of the very men who a few years since were the bitterest opponents of negro suffrage are now ready to use it as a means of accomplishing their personal and political designs. Thus far in the country and in small towns and villages the negro vote has been controlled, in the majority of cases, in the interest of the better classes of people; but in the larger towns and cities, and notably in the recent State election of Virginia, it has been used to further the designs of political adventurers and malcontents, who are always ready to foist themselves into position and power by some campaign catchword or some plausible appeal to popular prejudice. The question which confronts us in the near future is not whether the negro will vote with the Democratic party or with the Republican party; but whether in local questions, involving the honor and well-being of State and municipal governments, his vote can be controlled by the conservative, taxpaying element or by adventurers and malcontents.

The *Nation* of December 11, commenting upon the letter of a "Virginia Democrat," says: "The alliance of the negroes with the Republicans, and of the Southern whites with the Democrats, is purely artificial, accidental, temporary—a defensive measure on both sides, which will be abandoned just as soon as the two races establish their just relations on the spot where they were born and must live." When the prediction of the *Nation* is fulfilled—when the breaking up of the present political organizations is accomplished—two parties will emerge from the politics of the future: the one, a *conservative* party embracing in its membership the better classes of Democrats and Republicans in the North, and the "Brigadiers," with a majority of their constituents, in the South—embracing, in fact, all citizens of both sections who desire to see a peaceful and prosperous country, and who are willing to pay honest debts with honest money; the other, a *radical* party containing Greenbackism, Hoodlumism, Nationalism, Negroism, and all other *isms* which, having nothing to lose and everything to gain by internal commotions, are ready to embark in any revolutionary scheme, social, financial, or political.

McC.

Tuscaloosa, Ala., Dec. 20, 1879.

THE REWARDS OF COUNTING-IN.

To the Editor of The Nation:

Sir: Will you be kind enough to state in your columns the names of the men connected with the "counting-in" of President Hayes who have been rewarded with Federal offices; also the posts they enjoy? A friend

of mine denies that those men were thus rewarded, and I cannot prove it to him.—Respectfully, Y. Y.

Boston, Dec. 28, 1879.

[We believe the following list, taken from the public records, to be correct. It is part of a much longer one which appeared in the New York *Sun* of March 5, 1879.—Ed. Nation.]

Names.	Political employment in 1876.	Office held now.	Salary
J. Madison Wells...	President Returning Board...	Surveyor Port of New Orleans....	$4,500
Thos. C. Anderson.	Member Returning Board.....	Deputy-Collector Port of N. O....	3,000

COLLEGES AND COLLEGES.

To the Editor of The Nation :

Sir : Allow me to trespass upon your space to the extent of a few lines to explain and justify the use of the statistics in regard to the colleges of Massachusetts and Georgia.

No matter what was the rule of classification adopted by the census-taker, it must be supposed that it was applied fairly to each State. This resulted in a showing greatly in favor of the two Southern States given. Three-fourths of those claimed as colleges in Georgia might be stricken out and yet leave it upon an equality *numerically* with Massachusetts. Of course I do not pretend that the colleges of the former can compare with those of the latter in what we may call "quality." But this does not destroy the value of the figures. The number and distribution of institutions of polite learning indicate the general esteem in which it is held, while the perfection to which they are carried may be a question of age, geographical position, or of material wealth. Except to one studying to become a teacher, it is of little consequence whether or not he reads an additional ode or goes a little deeper into transversals. A certain curriculum, extending through from three to four years, has generally been followed with more or less fidelity by all institutions claiming the title of college, and a local demand for such may safely be taken as indicating some degree of substantial culture.

Florida.

[Our correspondent's point was as to "real culture and refinement." If this is to be proved by a comparison of institutions for the higher education, "quality" is of the first importance, as "Florida" now concedes. But unless we know exactly how far the "colleges" of Georgia differ from and surpass the high-schools and academies of Massachusetts, even the numerical comparison becomes worthless. We will not insist on the patent defects of the census of 1860, but we may be sure the census-taker's rule of classification involved no nice distinction between names and things. We remark that the census of 1870 does not contain the division "Colleges," but includes these institutions under "Schools—Classical, Professional, and Technical."—Ed. Nation.]

Notes.

Macmillan & Co. have issued the second part of Mr. Skeat's 'Etymological Dictionary of the English Language,' the general character of which we discussed in No. 735 of the *Nation*. The third part is announced for July 1, 1880. A fourth concludes the work.——By the Boston fire on Sunday last Messrs. Houghton, Osgood & Co., we regret to record, suffered severely, losing so much of their stock as remained after the heavier sales of the season, and the whole of their heliotype plant. The Riverside Press, happily, is remote from the Boston office, and the production of books will be uninterrupted.——Mr. Frederick Prime, jr., has reprinted from the Transactions of the American Institute of Mining Engineers his "Catalogue of Official Reports upon Geological Surveys of the United States and Territories, and of British North America." It forms a pamphlet of 71 pages, of which 21 are devoted to the Rocky Mountain region. The arrangement is chronological. Outside of the Territories the earliest document cited is a survey of Albany County, N. Y. (1810); the earliest State survey that of North Carolina (1824).——Henry Holt & Co. publish immediately T. H. S. Escott's 'England : her People, Polity, and Pursuits'; 'Popular Romances of the Middle Ages,' by George W. Cox and Eustace H. Jones ; and 'The Child's Catechism of Common Things,' by J. D. Champlin, jr., author of the meritorious 'Young Folks' Cyclopædia,' which has reached a third edition.——The Superintendent of Schools in Cincinnati has begun the practice of celebrating at the school-houses the birthdays of famous poets and prose writers. Whittier was thus first honored. ——J. W. Bouton will be the American agent of Mr. Edward Walford's new monthly magazine, the *Antiquary*, an elegant quarto which will take cognizance of almost everything that is time-honored and capable of being made a relic of. The list of contributors is imposing.——Director Draper's report for the past year of the New York Meteorological Observatory at Central Park, being the tenth since the establishment of that institution, indulges in a summary of its history and of the several annual reports, and describes, with the aid of woodcuts, the ingenious self-recording instruments made and for the most part invented at the Observatory. The usual tables for 1878 are appended. From these it appears that the hours of sunshine were nearly seven-tenths of the possible number, and that during 77 days no cloud passed over the sun. Twelve of these were in October.——An enlarged French translation of Prof. Thurston's 'History of the Steam-Engine' has just been issued in Paris, in two volumes. It appeared here as one volume of the International Scientific Series.——In the present turning towards etching, especially in France, it may be well to remember that etchings are sometimes as bad as the crudest "process"-work. Even France now and then puts forth a set of most worthless plates. As bad as any we have ever seen are the thirty-five plates of "Les Théâtres de Paris," etched by M. P. Loiseau-Rousseau, which are poor in printing as well as in drawing. This is especially to be regretted, since the theatres of Paris are architecturally well worthy of the needle of a good etcher, as M. Gaucherel showed in his plate of the Comédie-Française, printed at the head of M. Sarcey's 'Comédiens et Comédiennes.'——Milton's face, when he was at his best, was a face of power and resolution such as wait upon an iron will. The nose is long and fleshy, the jaw square and full, and there is no waste of forehead. In the print just revived by Mr. Snare from the etching by Jonathan Richardson, sen., in 1734, and which is commended by the poet's last surviving daughter as a strong likeness of her father, the head looks like one of the statesmen or warriors of the following of William III. of England. Doubtless the reception which welcomed Munkácsy's noble picture, "Milton dictating 'Paradise Lost' to his Daughters," on its arrival at the Lenox Library, has drawn attention to the surest way of securing the one authenticated portrait of the great English poet, and hence the photogravure of Richardson's etching is timely and likely to prove of general acceptability (M. T. Wynne, 75 East Thirteenth Street, New York).——Dr. Kiepert has followed his admirable 'Manual of Ancient Geography,' published last year in two volumes, with a shorter 'Leitfaden' for use in high-schools (Berlin : D. Reimer ; New York : L. W. Schmidt). The work commends itself not only on account of the high authority of its compiler, but because it has been purposely cast in a readable form, instead of being a mere catalogue of names like the "Register" at the end. It is accompanied by a school-atlas comprising twelve maps of ancient history by Dr. Kiepert, twelve of mediæval and as many of modern history by Dr. Carl Wolff, not to mention a large number of side-maps; all of which are neatly executed, but when it comes to the lettering are somewhat trying to the eyes.

—We should think there could not be two opinions as to the originality of Mr. Moses King's monthly *Harvard Register*, or as to its interest and value to all graduates and friends of the University, or, finally, as to the tastefulness of its mechanical execution. The *cadres* in the first number are not all filled, but no one will complain of the paucity of information conveyed in these sixteen pages. The articles are naturally not only commendatory and even laudatory of Harvard in its several departments, but assume on occasion a defensive tone, as in Professor C. C. Everett's rejoinder to the *Nation's* criticism of a University Divinity School (on which we have commented on another page), and Professor Winsor's argument for liberal cataloguing. Still, the main object is to report progress, with incidental appeals for a larger endowment here and there. Views are given of the new gymnasium, the

Bussey Institution, and of the Quincy and Sumner statues, together with a good likeness of the late Walter Hastings, whose bequest of half a million to the University has had no parallel in magnitude, although the giver (departing from the example of three generations of ancestors) was not a graduate of the college. Under the heading, "Statues and Other Memorials," is printed a circular soliciting contributions to a permanent memorial to the late William M. Hunt. "New Books by Harvard Graduates" is another title. Under "Notes" and "The Graduates" there is a general conspectus of Harvard men and their doings, and place is even found for marriages, births, and deaths, which are, of course, announced gratuitously. The form of the *Register* is quarto, and paper and press-work are of the best.

—A correspondent writes:

"In your issue of December 4 you say of the so-called 'second edition' of 'Our Early Emigrant Ancestors,' published in New York by J. W. Bouton, with the date of 1880, 'that it does not profess to be revised.' This is a mild statement of the facts. I have seen a copy of the edition of 1874 transformed into a 'second edition' by means of a new title-page tipped in. The latter edition sells for six dollars and is bad enough, but the present one, which bound in cloth sells for five dollars, is simply a mass of miserable blunders. A comparison of the two volumes leads to the conclusion that the so-called 'second edition' was printed *first*, having been discarded as worthless until now. Indeed, the accompanying index was not made for it, while the introduction to this *new* edition bears the date of 'May, 1873.' For the credit of the trade this disgraceful publication should be withdrawn."

—At last is published the long-promised memoir of Charles Méryon and the catalogue of his engraved work by M Philippe Burty. It appears in English dress only—a translation by Mr. Marcus B. Huish from the manuscript. It was in 1863 that M. Burty's papers on Méryon were published in the *Gazette des Beaux Arts*. The great artist was then alive and capable of work. In that year and the next he engraved several plates, and his friend's papers were intended to aid him as much as to serve the general cause of art. For Méryon's comfort and for his life they came too late. His mind was hopelessly diseased, and three years later he became for the second time an inmate of an asylum for the insane, where he died in 1868. But for his fame they have done good service. They were the first public announcement of the importance of his engraved work, and for sixteen years they have afforded the only catalogue of reference, and the only guide to students and collectors of the few and rare prints which are practically all that remain of him. Of late the demand for these prints has increased rapidly. Several articles about them and their author have appeared in English journals, and one of them, by Mr. Wedmore, afforded us a text for a paper a few months ago. But the same Mr. Wedmore has just now issued a little book, consisting of the article just alluded to, with what is called a "descriptive catalogue of the artist's work," an edition "limited to 113 copies," very select, very pretty in its get-up, very dear, but certainly not creditable to its author, being most inadequate. Moreover, the book has all the appearance of having been hurried into the world just in time to antedate the Burty-Huish book, which, as we have said, has long been expected and for some time positively announced.

—Of this larger and more complete work we have now only the French preface signed by M. Burty to deal with. It is curious in its statements:

"This work . . . has been ready for several years," he says. "I no longer hoped to meet with anything that would modify it. . . . I had been solicited to publish it. But France is still the prey of the Academic school. The critics and amateurs who assail that impregnable Bastille are not numerous. Their influence is insufficient to prevail, in our centralized country, against the protection exclusively accorded to the Academic doctrines by ministers, directors of museums and libraries, writers of reviews, and the rest. . . . Méryon never received a single official honor. Our national establishments have allowed his most important works to leave France. Justice is only now beginning to be done to him."

But, he goes on, in England the case is different, and Méryon's works are eagerly sought; therefore when Mr. Huish asked for the publication of his work he was unable to say no. All this strikes us oddly. We fondly supposed that, strong as the "Academic school" is in France, the innovators had some chance. In 1859, indeed, when the *Gazette* commenced, it is easy to believe that M. Burty found few listeners when he talked of Méryon. He was told that he "encouraged openly the abandonment of tradition." And, four years later, after the second article [on Méryon, *Gazette* for July, 1863], there was in the office of the *Revue* [*sic*, does he mean the *Gazette?*] a very lively scene. One of the directors asked, ironically, "how many numbers would be given to Raphael, since two were allowed to a living etcher?" This reads as if related of the eighteenth century.

—Professor Geikie's "Geology" is, considering both extent and value, the great article of volume x. of the new 'Encyclopædia Britannica' (Little, Brown & Co) Separately printed, it would form an octavo volume of four or five hundred pages. "Geography," of which the physical portion is also by Professor Geikie, and "Geometry," by Professors Henrici and Cayley, are of much more moderate dimensions. "Germany," the history and literature of which are the contributions of James Sime, occupies a hundred pages, that is, little more than half the space allotted to "France" in the preceding volume; but, if the sections which we have examined in both articles may be taken to indicate their respective merits as wholes, the article before us is vastly superior to the other. The entirely new historical and literary matter in it—that which refers to the last two decades—is very pleasant reading, and marked by sound judgment. The dates are not numerous, and not entirely without errors. France did not declare war against Prussia "on the 15th July, 1870," but on the 19th—though Ollivier's declarations in the Corps Législatif on the 15th left no doubt that war was determined upon—nor was the peace which terminated the struggle concluded at Frankfort "on the 6th May," 1871, but on the 10th. That the "seven weeks' war" of 1866 is told without an allusion to the fact that Italy was a party to it—which virtually decided the issue by dividing the forces of Austria—cannot be excused on the ground that the 'Encyclopædia' treats (or will treat) the same subject also under "Austria," "Italy," and "Prussia," for no cross-reference reminds us of these articles. Neither in the history of the war of 1866 nor in that of 1870–71 is the name Moltke mentioned. Less important omissions are easily discoverable in the literature of "Germany," which, on the other hand, deserves praise for the strict correctness of its titles.

—The revision of the foreign words, including Hebrew, marks, on the whole, a continued improvement in the editorial management of the work, though single minor articles are occasionally still disfigured by frequent inaccuracies. Thus, the notice of Austrian Galicia has "Stanisl*awow*" and also "Stanisl*au*" for Stanislaw, "Rzesz*now*" for "Rzesz*ow*," and other misspellings. The dates of the notice show equal carelessness: Louis the Great of Hungary is stated to have succeeded Casimir the Great in Poland, in 1377, and his daughter to have married the grand-prince of Lithuania (Ladislas II. of Poland) in 1382; in fact, however, the former event took place in 1370 and the latter in 1386. Spanish Galicia is entirely forgotten. The biography of the volume embraces a considerable number of interesting lives, among them those of Galileo, Gallatin (by H. Cabot Lodge), Garrick, Garrison (by Oliver Johnson), Gassendi, Gay-Lussac, Gentz, Gervinus, Ghirlandajo, Gibbon, Gluck, Goethe, and Goldsmith. The appreciation of the merits of Gibbon, even as the author of "the famous fifteenth and sixteenth chapters" of the 'Decline and Fall,' shows a commendable spirit of toleration, and the very extensive article "Gospels," by Dr. E. A. Abbot, the most learned production in this field which has as yet appeared in the 'Britannica,' is ample evidence that the editors are determined to keep the pages of their work open to untrammelled research in every branch of knowledge, provided the customary decencies are strictly observed. In other Scriptural articles we have noticed a few slight slips—among others, in "Gog," the statement that the great Scythian invasion of western Asia, of which Herodotus speaks (i. 103 *et seq.*), took place "about the time of Isaiah." It occurred nearly a century later, in the time of King Josiah, for which name "Isaiah" stands, perhaps, by misprint.

—The Italian Opera has begun its provincial tour. The noticeable event of the past week was the performance of Handel's "Messiah," on Saturday, by the Oratorio Society. It was, particularly as regards the work of the chorus, by far the best which has been given here by the same Society and under the same leader (Dr. Damrosch). Some of the familiar choruses, such as "For unto us a Child is born," "All we like sheep have gone astray," the triumphant phrases of "Lift up your heads," and the ever young "Hallelujah," were given with unusual power and splendid spirit. The solo parts were not all in good hands. Miss Thursby cannot sing Handel: she lacks everything to qualify her for such work—fulness and breadth of voice, and dignity of style. Mr. Simpson has a very pretty, sympathetic tenor voice, but his delivery is exceedingly dull and uninteresting. His first bright, joyful song, "Every valley shall be exalted," was given in a very gloomy and dismal manner. Mr. Remmertz, on the other hand, rendered the celebrated bass air, "Why do the nations so furiously rage together?" with great vigor and spirit. Miss

Drasdil is never more at home than in the majestic, solemn strains of the sacred compositions by the old masters. The great alto aria, "He was despised and rejected"—the magnificent second part of which, "He gave his back to the smiters," was unfortunately omitted by Dr. Damrosch—she sang with a subdued fervor and elegiac pathos truly admirable. Steinway Hall, both at the rehearsal and at the concert, was crowded to overflowing, hundreds of people being unable to find seats. The chorus was considerably stronger than on former occasions, the orchestra selected from the best forces New York can muster. The stage was beautifully decorated with flowers.

—Some of the religious newspapers are engaged in an exciting discussion, into which they were plunged by a remark of the *Independent* to the effect that "our best schools" teach the doctrine that "man was, at least so far as his physical structure is concerned, evolved from irrational animals." The *Observer* at once challenged this, and wrote to the presidents of nine of "our best schools," namely: Yale, Princeton, Amherst, Williams, Brown, Lafayette, Union, Hamilton, and Rochester; omitting Harvard for what it possibly regarded as obvious reasons. All these gentlemen, with one consent, made reply scouting the statement of the unlucky *Independent*. President McCosh may perhaps be excepted; at least the *Independent* infers as much from his reply, that he does not "oppose development, but an atheistic development," and from his remark before the Evangelical Alliance, that "it is useless to tell the younger naturalists that there is no truth in the doctrine of development; for they know that there is truth which is not to be set aside by denunciation." But most of the rest are better represented by President Seelye's reply, which is in these terms: "This college does not yet teach groundless guesses for ascertained truths of science. So long as the notion that man is evolved from the monkey has not a single fact to rest upon, and is in flat contradiction to all the facts of history (*sic*), I think we may leave it with the sciolists." This is rather grotesquely rhetorical, and, considering that its author is at the head of an educational institution, exception may be taken to it on grounds of taste; we question if at Amherst the nebular hypothesis is referred to as a "notion," although it is a guess of the same kind as the development theory, and for aught we know may be in as "flat contradiction to all the facts of history." But it appears that neither at Amherst nor elsewhere are the students thus taught, and this is the instructive and suggestive part of the whole matter. The *Independent* points out that the Amherst professor of geology is "an unreserved theistic evolutionist," and, similarly, that at most of the other colleges in question the specific instruction in biology, palæontology, zoölogy, and so on is in harmony with the doctrine of evolution. From one point of view this is satisfactory, since—between "infidel" parents who would not send their sons to an institution that elevated the book of Genesis above the results of scientific research as science, and Christian parents who would object to the implication inseparable from such language as that of President Seelye, that there is anything seriously hostile to Christianity in any scientific theory—the opportunities for good of several colleges of the country would be appreciably diminished. On the other hand, it is certainly advisable that its president should be the mouthpiece of a college, and should both know what it teaches, and have the frankness—Christian or other—to declare it.

—The dead of 1879 include many men of action, and not a few whose labors have eminently contributed to the welfare of the race; but on the whole the list is not a shining one. The one ruler whose taking off was significant was Shir Ali, the luckless Amir of Afghanistan. An imperial pretender, the young Prince Napoleon, and an ex-queen *in petto*, Madam Patterson-Bonaparte, marked by their careers the beginning and the end of a dynasty. In Jacob Staempfli the Swiss Confederacy lost an ex-President—one of the Geneva Arbitration Commission, it will be remembered. Espartero lacked the name of sovereign, but more than once had held in his patriotic hands the destiny of his country. He ranks equally among the great statesmen and commanders. In the latter category stands first, for organizing ability, General Von Roon. A number of meritorious generals in our civil war, on both sides, Joseph Hooker, John B. Hood, John A. Dix, T. W. Sherman, Jeff. C. Davis, James Shields (a Mexican veteran also), and Dick Taylor, are among the missing; and Suleiman Pasha and Major Cavagnari may both be set down as victims of British Russophobia. Statesmen or politicians other than those already mentioned were Pierre Magne, of financial fame; John Arthur Roebuck, now buried under a Liberal successor; Isaac Butt, the Home-Ruler; Caleb Cushing, and Zachariah Chandler. A useful legislator was lost to Congress in the person of Gustav Schleicher, the Texan Representative. Mr. Delane, of the *Times*, had a more than parliamentary scope and power. He survived by a few months his fellow-journalist James Grant, of the *Morning Advertiser*, as well as Jean Hippolyte de Villemessant, editor of *Figaro*, Charles Appleton, editor and founder of the *Academy*, and Morton McMichael, editor of the Philadelphia *North American*. In this same city Dr. Isaac Hays edited for fifty-two years the *American Journal of Medical Science*, and Mrs. Sarah Josepha Hale, who was born with the Republic, was for fifty years editor of the *Lady's Book* and of the *Ladies' Magazine*, which she merged in the former.

—Literature proper loses William Howitt; Charles J. Wells, a rehabilitated poet; G. W. M. Reynolds, the novelist; Hepworth Dixon, who may stand between the romancers and the historians; George Long, the historian and editor of the 'Penny Cyclopædia'; George S. Hillard, who might also have been mentioned among the journalists: Col. Brantz Mayer, who wrote of Mexico's past and present, and of the slave-trade in his 'Captain Canot,' and was the founder of the Maryland Historical Society; Eliza Meteyard, the biographer of Wedgwood; Mrs. Adelaide Sartoris; Annie Keary, an historian and writer for children; John Weiss; Dr. Joseph P. Thompson; Jacob Abbott, the creator of the "Rollo" literature; Solovieff, author of a 'History of Russia' (unfinished) in thirty volumes; and Octave Delepierre, an antiquarian scholar. Voluminous writers, of course, were the political economists, Henry C. Carey and Michel Chevalier. The most famous of contemporary librarians, Sir Anthony Panizzi, of the British Museum, deserves the next place to authors. Among publishers conspicuous were Thomas Longman, whose own pen helped swell the book-list of his firm; John Blackwood, the last surviving son of the founder of his house; and John Blair Scribner.

—Science experienced its greatest loss in the premature death of Prof. W. K. Clifford and Prof. James Clerk Maxwell, both remarkable as mathematical and speculative geniuses. Prof. H. W. Dove, who has been called the Father of Meteorology; Bernhard von Cotta, the geologist; and Sir Thomas Maclear, astronomer, are the chief remaining names of distinction. Keith Johnston, whose devotion to the science of geography led him to risk his life in the heart of Africa; and George Chaworth Musters, the Patagonian explorer, come next in order. Art regrets Thomas Couture, the French painter, and his sometime pupil, William Morris Hunt; Sir Wm. Boxall, the English portraitist; John Adams Jackson, a Maine sculptor, who died in Italy; Dr. William Rimmer, sculptor and teacher; Honoré Daumier and Amédée de Noé ("Cham"), excellent caricaturists; Charles Henry Jeens, a remarkable engraver; and especially Viollet-le-Duc, architect, antiquarian, and critic. Charles Fechter is the only actor of prominence who has passed away within the twelvemonth. Among the deceased philanthropists and benefactors are found Sir Rowland Hill, the champion of cheap postage; William Lloyd Garrison; Elihu Burritt, an apostle of peace; E. C. Wines, the prison reformer; and Dr. Jacob Bigelow, a botanical author, whose chief monument is Mt. Auburn Cemetery, which he founded, and its host of imitators. We might also add to these Erastus B. Bigelow, the inventor of the carpet-loom and of so many improvements in manufacturing machinery, but for a doubt whether we did right in omitting him from the class of politicians and statesmen, he being the virtual author of our unequal and pernicious tariff on wool. A certain tie—that of "millionaire"—connects Lionel Nathan de Rothschild, the first Jew who ever sat in Parliament; Asa Packer; and Daniel Drew, unless one prefers to connect the two latter as "self-made men." Theology figures but little in the necrology of 1879, even if we include the founder of Drew Theological Seminary; Immanuel Hermann von Fichte, son of the great Fichte, is almost the solitary name of any consequence.

—The life and character of the late John Blackwood are summed up in the December number of the magazine he edited by "the humblest of the band of authors whom he gathered around him and maintained loyal to their allegiance." The article is naturally in the nature of a eulogium, and is written in a somewhat heightened manner, which, however, is in itself evidence of the writer's feeling of inability to do full justice to the dignity of his subject. Mr. Blackwood's life was apparently placidity itself; if it was at all eventful, it was not in any way which concerns the public, to which he was always hardly more than a name. He was one of the younger children of William Blackwood, the founder of the *Magazine*, and was born in Edinburgh December 7, 1818. He was graduated from Edinburgh University, and went abroad to travel and reside on the Continent for a term of three years. In 1839 he entered the house of Whittaker & Co., of London, to learn what was to be the business of his life,

and after a short probation he was placed in charge of a branch of the Edinburgh house which was at that time opened in Pall Mall. During the six years that he held this position his successes were marked. "As one of the first magnitude," his securing of the late Lord Lytton as a contributor to the *Magazine* is mentioned. Among his intimate friends were Thackeray (who, by the way, never contributed to *Blackwood*) and the late John Delane. In 1845 he returned to Edinburgh, and on the death of his older brother, Alexander, succeeded in the following year to the editorship of the *Magazine*—a position for which he may be said to have been all his life in training, and which he admirably filled. His knowledge of English *belles-lettres*, of modern English and Continental politics, and an intimacy "with what may be called the 'inner life' of the Conservative party from the days of Catholic emancipation downwards," are specified as a portion of his equipment. His memory was excellent, though it did not prevent him from being "anxiously sensitive" and exact in regard to all matters of fact; in his literary judgment he was "absolutely self-reliant," and once told the redoubtable Christopher North politely but firmly to mind his own business; "the rapidity with which he got at the gist of a book or an article" is, of course, referred to; he had the faculty of accomplishing much in a short time; his sense of humor gave him great tact in editorial management, though he was always a firm disciplinarian; in politics his well-known Conservatism, "if strong, was enlightened and progressive," we are assured, and it in no way affected his literary alliances. In 1852 the death of his brother Robert put him at the head of the publishing house, and he married two years later.

—The recent expression of English indignation at the proposal to "restore" the façade of St. Mark's has called out a report from the Italian Ministry of Public Instruction—which has been transmitted by the Minister of Foreign Affairs to General Menabrea, the Italian Ambassador in London—to the effect that, in the judgment of the Ministry, "the meetings in England had no *raison d'être*, inasmuch as the necessary instructions to secure the integrity of the Basilica had already been given some time ago." The report admits that it had been intended to rebuild the principal façade in the same way in which the northern front had been reconstructed by the Austrian Government, and the southern, more recently, by the Italian authorities. But this intention has now been changed; the "Ministry, having been legally authorized to provide directly, let no time be lost, but wrote in the month of May last to the Prefect of Venice to summon the Commission for the Preservation of Ancient Monuments to examine what had been done up to the present time and determine clearly what might be necessary, studying well the questions of preservation and restoration, and laying down exact regulations as to the course to be followed for the future." A thorough inspection having been made which showed that "errors had been committed in the restorations," an "order was given, which was instantly obeyed, and is still in force, that no further works should be executed by the *fabbriciere*, either in the reconstruction of the mosaics or in any of the decorative parts of the Basilica." This seems to make it plain that the total destruction of the principal façade by rebuilding is not any longer contemplated. But just what conclusions the Ministry will arrive at, as the result of their study of the "questions of preservation and restoration," and what "exact regulations as to the course to be followed in the future" they will be likely to lay down, remains to be seen. Judging from the ruthless and needless havoc which has been already made, and is still making, of the most precious monuments of mediæval art, under the name of restoration, almost everywhere in Italy, without any interference on the part of the Government, those who value the finest works of past art cannot feel much security in the results of their deliberations. Still, it is to be hoped that the newly-awakened sense of the seriousness of their responsibilities in this regard may have some salutary effect, and that at least those needless and truly shameful forms of so-called restoration—such as the tooling over of sculptures, the scraping down or unnecessary rebuilding of walls, and the repainting of pictures—may be in some measure stopped. Meanwhile the English protest has done good in rousing an angry feeling among the Italians against the meddlesome and patronizing spirit of the British public, a feeling which will naturally by degrees react against the public functionaries who expose them to the humiliation of having to confess that foreigners care more than Italians themselves for the integrity of the monuments of Italian glory.

—In Norway some comment has been caused by the differences which have arisen between King Oscar and Björnson, the author. The latter does not bear the King any malice, as has been frequently asserted; but he is a republican in his political views, and recently made an attack on monarchy in a poem entitled "The King." Shortly afterwards Björnson published a drama, "Leonarda," which, owing to its radical political tendencies, created intense excitement in Norway. Björnson offered the piece to the directors of the theatres in Christiania, Stockholm, and Copenhagen, but it was rejected. In Norway there is still a dramatic censorship. The present incumbent is Professor Molbech, who does not regard modern literature with much favor and is particularly prejudiced against the realistic direction of Björnson's writings. Molbech not only rejected "Leonarda," but, worse than that, recommended a sentimental production of his own. Then arose a perfect storm in the Scandinavian press, and even Danish newspapers called for an explanation. Everybody expected Molbech's dismissal; but, instead of this, the King decorated him with a medal of high order, a course which has been openly condemned by the press. By a singular coincidence the dramatic censor in Berlin has refused to allow Ristori to perform in Giacometti's "Maria Antonietta," for fear lest one or two scenes might have an exciting effect upon some of the audience. In a debate on this subject in the Landtag it was freely asserted that acts like this on the part of the Government would seriously injure the dramatic and literary reputation of Berlin.

FARRAGUT.*

THE Pacific Ocean, belying its name, seems to foster naval battles of peculiar violence. In November last the news came of the capture of the Peruvian *Huascar* by the Chilian *Blanco Encalada* and *Admiral Cochrane*, after a bloody resistance, in which the attempts of modern naval architecture to secure invulnerability seem to have been powerless to save life. This recalls another action in the same waters which came much nearer home to us. Sixty-six years ago, in the bay of Valparaiso, some seven hundred miles south of the scene of this Chilian fight, the *Essex*, under Captain Porter, a Boston boy, was captured by the *Phœbe* and *Cherub* of the British Navy. There is some analogy between the two engagements. The *Essex*, like the *Huascar*, had had a successful and destructive career; like her, she was caught in harbor; and, like her, she defended herself against heavy odds to the last extremity and with unusual loss of life.

On board the *Essex* was a young lad of twelve years, who had received a midshipman's warrant when he was only nine, and who had already, at the age of eleven, had command of a ship as prize-master. From the journal of this lad, written out after he had become the greatest sailor of his generation, we learn of the feeling of awe with which he saw the hostile ships approach, and read with his quick boyish perceptions in the faces around him the hopelessness of the case; of the sickening horror with which he saw the first man torn to pieces by a ball; and of the steadiness of nerve which action at once drew out from a bravery in the gristle that in the bone was to be the pattern and the praise of the world. During the fight he was actively employed carrying messages, serving at the guns, and taking a hand at anything. He was knocked down a companionway by the dead body of a man, but escaped with some bruises. He called to a sailor to dodge a ball he saw coming, and pulled him towards himself, but not in time to save the sailor's leg. A report was brought to the captain that a quarter-gunner had deserted his post. "The only reply of the captain," addressed to the boy, "was, 'Do your duty, sir'; whereupon he seized a pistol and went in pursuit of the fellow, but did not find him." The next morning he went on board the *Phœbe* "so mortified at our capture that he could not refrain from tears." In this condition he discovered the pet pig of the *Essex* in possession of a young reefer. He claimed him, and was told he could have him if he could whip his captor. A ring was formed and at it he went, beating his enemy handsomely. "So I took Master Murphy under my arm, feeling that I had, in some degree, wiped out the disgrace of our defeat." "I was sent for by Captain Hillyar (of the *Phœbe*) to come into his cabin, where Captain Porter was, and asked to take some breakfast, when, seeing my discomfiture, he remarked in a very kind manner, 'Never mind, my little fellow; it will be your turn next, perhaps.' I said I hoped so, and left the cabin to hide my emotion."

After this experience of the most stirring scenes of life, the young Farragut went North on parole, and used his leisure to go to school. He was prompt to improve similar chances for education during his youth, but they were few, short, and disconnected. He showed fair ability in

* 'Life and Letters of Admiral D. G. Farragut. By his son, Loyall Farragut.' New York: D. Appleton & Co. 1879.

his studies and had a facility for modern languages, speaking French, Spanish, and Italian fluently, and picking up some knowledge of Arabic and Turkish at Tunis. His principal school was the best of all for a sailor, an old-fashioned sailing man-of-war. His intelligence was good, his observation keen, and his zeal and ambition unflagging to master every detail of his profession. When, at twenty-two, he obtained his first command, he was a consummate sailor. His father was for a short time a sailing-master in the Navy, with a fondness for salt water; the exploit of his life on which he prided himself most was sailing an open pirogue from New Orleans to Havana. His father's father was a Spaniard of Minorca. His mother's mother was a Scotchwoman named McIven. To her blood, rather than to his connection with the nation of Columbus, Anglo-Saxons will be prone to attribute his aptness for the sea.

Farragut was an industrious officer, passing an unusual portion of his life afloat, and winning a high but not pre-eminent reputation for soundness of judgment, character, courage, and efficiency. From a boy he had been peculiar for a natural command of men. On two occasions in particular he was in merchantmen threatened by pirates. Assuming the command which nature alone had given him, he infused his spirit into the dismayed crews, made dispositions for defence, and came off safe. His own relatives and those of his two wives were Southern, and his feelings were naturally with them. But his loyalty and his judgment never wavered. One morning at Norfolk the choice presented itself to him, and with characteristic decision that same afternoon he sailed with his wife for the North and the Northern cause. He was at first put on a retiring board. When the expedition against New Orleans was resolved upon, three men were under consideration to lead it. Mr. Welles selected Farragut, and the history of his uninterrupted career of success and fame from that time is well known. At the beginning of the war he was a hale, active man of sixty, of well-built and powerful figure, keen eye, quick and resolute step, kindly face, and the easy, winning manners that come of large intercourse with men. As he sat in an arm-chair on the quarter deck of the *Hartford* in Mobile Bay, with a chart on his knee and some of his favorite young officers leaning on the back of his chair, looking over his shoulder, and as he talked with them with his animated face and pleasant voice, he suggested more the idea of an elegant, hospitable planter than the typical god of war. He was fond of society, enjoying it whenever occasion offered; of implicit and undoubting self-reliance; with a pleasant appreciation of his own abilities and attainments; and an intense and reverent devoutness. The impression he gave was especially one of character, frankness, and manliness.

It is instructive to see how the training of Farragut's life prepared his success. Not that the training or the occasion for its use were exceptional, so much as that the training was so thorough that it was equal to any emergency that could arise in a ship. He notices the excellence of the fire department in the *Essex* when he was a boy, and the advantage of it. The excellence of his own fire department saved the *Hartford* when she was set on fire in front of Fort St. Philip. In the *Essex* also he observes that many "fine fellows bled to death for want of tourniquets." When about to pass Port Hudson he brought to his only son, who was on board, a tourniquet, and showed him how to use it in case of need. When landing in New York after the *Essex* fight the vessel he was in was fired at by mistake for some time by a battery. He made up his mind then that "it was not such an awful thing to lie under a battery"—the opinion he acted on some fifty years after. In the *Washington*, "a crack ship" in 1816, the misery of the men made him determined never to have a "crack" ship if it was only to be attained by severity. In the war he was so far from being a martinet as to call for additional strictness on the part of his fleet-captain.

His victories were victories of character rather than of intellect. His expeditions were prescribed for him by the Navy Department, and other men might have been assigned to them with fair hope of success. He used the regulation crews, ships, and guns. He owed no advantage to juggling device or shrewd ingenuity. His tactics were simple and without novelty. His favorite theory was that "the best way to save yourself is to injure your adversary." He used to maintain that he would pass forts with anything that would float his guns. His preparation for every attack was most thorough, minute, and painstaking. Nothing was left to chance that could be anticipated. When the time for action came his composure, quickness of perception, resolution, and command of his fleet proved invincible. The lesson of his life is that his success was no accident. The growth of sixty years burst into blossom in the six hours' actual fighting that covered his career. In his attacks on forts he re-established the principles held by military engineers, that fleets even of sailing vessels, with leading wind and tide, can pass by forts with considerable confidence; and that guns afloat are powerless to inflict much damage on elevated earthworks. His contests with vessels marked the close of the old era and the beginning of the new. They showed how much and how little reliance is to be placed on unarmored vessels in great superiority of force, highly efficient, and perfectly fought, when opposed to the modern inventions of torpedoes and armored vessels.

The poverty of the article in the 'Encyclopædia Britannica' on Admiral Farragut shows how scanty the knowledge of him apart from his exploits has been. This want has at length been most happily supplied by the life just written, at his request, by his only child. It is largely composed of the journal kept by the Admiral himself and of his letters, with an occasional explanatory commentary by the author. There is little that is new after the beginning of the war. The reports had been published before, and the history of his exploits has long been familiar. The latter part is rather tedious with its guide-book descriptions, repeating the voyage of the *Franklin* printed some years ago. But the story of Farragut's early life, the letters to his family, and the revelations of character make the book a marked addition to literature. His son has performed his pious duty with excellent taste and modesty, and justified to the world the affection which such a father naturally won.

RECENT POETRY.

THE sisters Elaine and Dora Read Goodale have followed 'Apple Blossoms' with another volume of short poems entitled 'In Berkshire with the Wild Flowers' (Putnam), which indicates that the authors are a year older, we think, though it seems possible that several of the verses were written some time ago. They are, however, so far the most attractive upon our list that consideration of the age of the writers in the way of making allowances, or looking at them as promises rather than performances, seems quite out of place. The Goodale sisters have, moreover, a distinct note of their own, which is more than can be said for many writers of verses who have nevertheless won popular recognition as "poets," and we do not see any evidence that time is changing its character or doing anything but developing it, as it does the genius of every young writer before he reaches his full power of expression. This note was as perceptible in the first published verses of these young girls as it is in those before us, though it has naturally grown maturer. It is still thoroughly simple, and, what is more, still distinctly poetic; it still seems almost without effort. We are obliged to say "almost" because the conditions of the task attempted prevent its being wholly spontaneous, perhaps. To characterize twenty-nine different wild flowers so as to make a book called 'In Berkshire with the Wild Flowers,' and to characterize them poetically—that is to say, to avoid botanizing—is a piece of literary work in which a far more practised hand, given the same poetical force, would be unlikely to conceal all traces of effort. And yet it is done here so successfully in the main that we are inclined to think that most of the poems were written, or wrote themselves, so to speak, before the book was thought of. In those written by the younger writer especially there is no strain whatever discoverable. The genius of the two is strikingly similar, but we confess that just at this stage, if we may so express ourselves, we find the pieces of Miss Dora a trifle more attractive, because, evidently, she does not feel that any burden of responsibility rests upon her shoulders. To make matters even, however, we may add that her sister's work is a trifle the maturer, and that at the age of Miss Elaine she will probably be paying the same penalty, and finding it difficult to make her tongue utter the thoughts that arise in her. We ought not to imply that the older sister has lost any of the facility of expression which has been so marked in both, but it is evident that she is getting beyond mere imagery into the domain of sentiment, and her reflection seems, for the present at least, a little less spontaneous than her observation. Nevertheless, although it may at times appear too much pondered, or even labored, it manages to maintain its poetic quality, and so to avoid the commonplace which, minus its poetry, the idea might sometimes become. One of the best, if not the best, of her poems is that on "Indian Pipe," and it illustrates this exactly. There is a hint of ambitiousness about the verses, indicating that to the writer "a primrose by the river's brim" is by no means only a yellow primrose any longer, but embodies a sentiment or suggests an idea. It is a very pretty idea here, too, no one can gainsay:

> "The wonder by her was formed
> Who stands supreme in her power;
> To show that life by the spirit comes
> She gave us a soulless flower!"

But as a whole the verses display a determination to find a significance in simple things which is only quite satisfactory when it seems to disclose itself. The same may be said of the verses on "The Thistle," in which the conceit is more than fanciful and is really grotesque; though in both instances it is poetic, it should be borne in mind. What we like best, and what will for some time yet, probably, continue to be most attractive in the poetry of the sisters, is such purely pictorial verses as those of the younger on "The Daisy." There is so much vividness and such a pretty movement in these that we must find room for a stanza or two:

"The air is sweet with a strange perfume
That comes from the depths of the woodland places;
The fields are hid in a wealth of bloom,
And white with the sweep of the ox-eye daisies!

. . . . . .

"And then when the wind across it blows,
And the wavering lines of silver follow,
We catch the gleam of her heart of gold,
While over her skims the fleet-winged swallow."

It is clear that *she* is not yet full of thoughts that do lie too deep for tears.

Mrs. Mary Mapes Dodge has made a book of a number of her poems that have already appeared in various magazines, supplemented by enough that are now for the first time published to make a little volume of 135 pages, called 'Along the Way' (Scribner). They are of a "homely" character, it may be said, if by that somewhat vague term be understood that which is not only domestic, but in any way familiar, intimate, sensible, and, though not wholly superficial, at least the reverse of recondite. Some of them recount little incidents of a pathetic or other nature, such as that entitled "Motherless," in which his little girl first brings the tears to her father's eyes by allusion to her dead mother, and then kisses them dry with many childish endearments—an incident which, if told in rhythm, cannot but be touching however ill done, and here it is well done. Others are short poems on such subjects as "Faith," "Trust," "Death in Life," "Long Ago," "Once Before," the character of which will not be inferred amiss from the several titles. Each was undoubtedly the result of a genuine impulse, is entirely straightforward and unaffected, and displays a good ear and practised hand at rhyme and metre.

'Idylls and Poems' (Putnam) is the title of a rather more ambitious volume, by Anna Maria Fay. For example, the first poem, 'The Pilgrim Pair," though called an idyll, has a moral, or rather philosophical, purpose, which is to allegorize Plato's idea that "the true lover and not the counterfeit must be loved by his love." Accordingly, from a height above a charming landscape the youth at first looks out over the world, then descends to enter the cool groves, when suddenly he beholds the maiden pondering

"What has been said by the dear Master sage:
When heaven a soul has there dissevered,
The parted mates meet here on this rude stage,
That Love may win the plumes for their home pilgrimage."

She looks up, and the two recognize each other as their respective affinities. They become separated, and the youth is partially enthralled by the Siren, whose spell, however, is of brief duration, and when the shipwreck comes he is the only one of the revellers who survives. He is cast ashore, and since he repented before the danger threatened, the maiden appears to him again, and, after a meeting of "rapturous pain," the "Pilgrim Pair" are translated. We do no justice to the poem by such a bald epitome. It is written in Spenserian verse, and with a full enough vocabulary and a sufficient amount of skill to make the frequent use as dissyllables of such words as "grievèd," "closèd," "bruisèd," "soothèd," and so on, inexcusable; unless they are designed to give an archaic flavor to the poem, which, in other respects, certainly it does not possess. We note also an obscurity needless for the same reasons To the writer's expertness in versification various rondeaus, rondels, ballads, songs, and sonnets testify.

Of 'Risk, and Other Poems,' by Charlotte Fiske Bates (A. Williams & Co.), and of 'Out of the Shadows: A Song with Variations,' by James B. Kenyon (Lippincott), we do not need to speak at any length. In the former there is to be remarked an extraordinary variety of subject, together with considerable identity of treatment; in many of the poems a heroic vein is hum-ored at the expense, now and then, of poetic feeling, as, for example, in an address to Shakspere beginning "Adam of Poets"; in many there is a melancholy note, and we feel that Miss Bates takes life quite as seriously as, upon the whole, any one is called upon to do. Mr. Kenyon's alternative title accurately describes his book; it consists of a succession of short songs and sonnets on such plaintive variations of the theme love as "Gone," "Supplication," "Unrequited," "A Tear," "Desolation," "A Winter Hope," etc. He has a faculty for landscape-painting; some of his verses are sweet and musical, and the fervor with which he treats the tender passion, which is his main subject, is both real and, for the most part, restrained.

'Holy Songs, Carols, and Sacred Ballads' (Roberts Brothers) is a fresh illustration of the difficulty, notwithstanding the assistance generally furnished by the subjects, of writing good hymns and sacred songs. 'Lord Stirling's Stand, and Other Poems' (Lippincott), contains all the poems Mr. W. H. Babcock has ever written that he thinks worth preserving. He wants, he says, "to do some good where I cannot go, and make some friends whom I may never see," and we may wish him all success, while pointing out that this is no spirit in which to approach the muse, and omitting to linger over his rather lively and brisk verses. He is especially stirred up about the wrongs of the Indian.

Appleton's Dictionary of New York and Vicinity. Compiled by Townsend Percy. (New York: D. Appleton & Co.)—Mr. Percy, as in duty bound, gives Mr. Charles Dickens due credit for the invention, in his alphabetic 'Dictionary of London,' of the general plan of the present work; but it may safely be said that the New York Dictionary is better than its model. A careful and thorough reading of it and a random search have failed to reveal any misleading cross-references (which Mr. Dickens did not wholly avoid) or any serious errors of omission or of commission, though the American task was far more difficult than the London. The abundant labors of antiquaries and of popularizers like the late Walter Thornbury and Mr. Edward Walford had smoothed the path of those seeking for knowledge of old and new London. More, indeed, has been done for New York's antiquities than Mr. Percy has taken cognizance of: still, if the stranger within our gates wishes to know where Mackerelville is, or the Swamp, or Murray Hill, or any of the other places known to the oldest inhabitant, but rarely set down as such on the map, he can find out by consulting the 'Dictionary of New York,' along with particulars of all the leading churches, societies, hospitals, libraries, theatres, clubs, art-galleries and art-dealers, banks, restaurants, hotels and apartment-houses, public offices, railroad and steamboat lines, newspapers, etc., etc. All the suburbs and places in the neighborhood of New York are to be found, each under its name, with information as to the ways and means of getting there. All the prominent places in the city, squares, and special regions, are to be found here—Union Square, the Battery, "Africa," and "Germany," although we have been able to find no reference to a quarter smaller than the German or the negro, but still distinct and of interest—the French. In general the information given is surprisingly accurate and brought well down to date. Now and then a trifling exception may be noted. The St. Germain Hotel, for instance, is now in process of reconstruction; and in the newspaper list the long-defunct *Britannic* appears, while the change of address on the part of our lively contemporary, *Puck*, is not set down.

In a prefatory note the publishers announce that, although many business names are by the very plan of the work required to be mentioned, there are no advertisements in disguise in the book, and it is evident to any one who reads the Dictionary with even ordinary attention that private interests have been impartially treated by one who has ample knowledge, and is a very good judge of what is best worth seeing in the city and best worth doing. In conclusion, nothing remains to be said but that for nine visitors out of ten to the metropolis this 'Dictionary of New York' is an admirable guide, and that to many a resident of the city it will prove not only entertaining, but useful, and, in some senses, at least, indispensable.

A Lady's Life in the Rocky Mountains. By Isabella L. Bird, author of 'Six Months in the Sandwich Islands,' etc., etc. (New York: G. P. Putnam's Sons. 1879-80. 12mo, pp. xii. 296.)—Miss Bird is an intelligent, refined, and now much-travelled English lady, whose idea of happiness consists not in making merely fatiguing journeys, unprotected, to the ends of the earth, but in such incidents as riding in Rocky Mountain snow all day long and alone, with the mercury from 30° to 50° below the freezing point, in herding cattle with the mountain herdsmen, and in climbing Long's Peak under the escort of the wildest of Rocky Mountain desperadoes. Add that Miss Bird's first adventure consisted in being pitched over her horse's head by the appearance of an enormous bear; that, in spite of this beginning, she rode eight hundred miles (astride) through the wildest and remotest parts of Colorado, and you have the picture of one of those inexplicable northern characters which are the despair of criticism. Happily

we are not called upon in this instance to make a psychological analysis, but simply to accompany the writer in one of the roughest tours that were ever begun and continued, even by an Englishman, for the sake of pleasure. Miss Bird left San Francisco on the 1st of September, 1877, for the Rocky Mountains, and regretfully quitted them about the middle of December, being actually congealed out of the country, the thermometer marking 20° below zero when she reached Cheyenne. Meanwhile she had "stopped over" in the Sierras to see Lake Tahoe and Donner Lake, and had explored the wild region of the foot-hills between the Pacific Railway and Long's Peak, spending great part of her time in Estes Park; to describing the beauty of this high and secluded valley much of her narrative is given. She indulges too much, perhaps, in description of the Rocky Mountain scenery; the reader's last impression of it remains, however, that which she expresses in the first sentences of her book—namely, that it is "not lovable, like the Sandwich Islands, but beautiful in its own way; a strictly North American beauty: snow-splotched mountains, huge pines, red-woods, sugar-pines, silver spruce; a crystalline atmosphere; waves of the richest color." Miss Bird is after all an enthusiast over the Rocky Mountain views, but her enjoyment of them appears to have been due more to the pure atmospheric and sunlight effects of a brilliant climate and a great elevation than to the real charms of mountain forms and color.

As to the observation of Western men and manners, Miss Bird's book suggests Mrs. Trollope's famous 'Domestic Manners,' though it cannot compare for a moment with the careful fulness of those vivacious studies. Miss Bird has lost an opportunity here. She would have made a better book had she told us less about the sunsets and more about the people that she saw. But her notes on manners are frank and interesting as far as they go, and they have a reflected interest in the fact that they depict precisely the same character in which Mrs. Trollope found so much to censure. The same narrowness, intolerance, and bigotry, the same dislike to courtesy of manners—"to say a man is 'polished' here is to give him a bad name"; the same aversion to foreigners, and particularly to the English; the same prevailing dishonesty in business dealings, and the universal discomfort of the settlers' daily lives—all these traits, and others which Mrs. Trollope noted in the "far West" of 1828, Miss Bird notes, with unconscious repetition, forty-five years later; all, according to her testimony, are accurately reproduced in the life of the far West to-day. The habitat of the pioneer character is changed, but the character, as these two observers draw it, remains the same. It is to be regretted that Miss Bird did not take the trouble, as Mrs. Trollope did, to record actual conversations at length. The faults of her book are haste (the whole being composed of rapidly-written and scarcely-edited private letters), and the consequent prolixity and constant repetitiousness of the style. It is not an easy book to read from cover to cover.

The Military Religious Orders of the Middle Ages. By F. C. Woodhouse, M A., Rector of St. Mary's, Hulme, Manchester. (London: Society for Promoting Christian Knowledge; New York: Pott, Young & Co. 1879. 8vo, pp. xvii. 360.)—The title of this book, only a part of which we transcribe, is, as Macaulay said of the title of Nares's Life of Burleigh, "as long as a preface." The preface and each of the chapters are preceded by short extracts, generally from some poet or chronicler, after the manner of Scott's novels. These external indications lead one to expect a somewhat enthusiastically written book. On the contrary, whenever the author himself tells the story it is languid, though the nature of the subject does not permit it to be dull. The history of the crusading knights of the eleventh, twelfth, and thirteenth centuries is in itself so attractive, especially to the younger class of readers, that hardly any one capable of writing passable English could avoid making a readable book. The present volume is "published under the direction of the Tract Committee," which is, perhaps, a sufficient reason for its containing only so much of the history of the principal orders of knighthood as most people of literary tastes would like to know. The style is colorless, the facts are authentic, and the moral reflections are entirely proper. The history of the Knights-Hospitallers, or, as they were variously called at different periods, the Knights of St. John of Jerusalem, Knights of Rhodes, and Knights of Malta, occupies considerably more than one-half the volume. The two most interesting and important events in their history were the siege and final capitulation of Rhodes in 1522, when Philippe Villiers de l'Isle-Adam was Grand Master of the Order, and the siege of Malta in 1565, when the knights, under the command of the Grand Master Jean de la Valette, succeeded in repulsing the Turks. Whoever takes pleasure in reading of what can be accomplished by skill, fortitude, and daring, exerted to the extreme of human ability, will peruse with interest the history of these two sieges. Mr. Woodhouse, however, does not take advantage of his opportunities. He does not court a comparison between himself and the many able writers who have treated the subject. The story of the siege of Rhodes is, in great part, told in the words of an anonymous writer, and the narrative of the most interesting portion of the siege of Malta is taken, with due acknowledgments, from Prescott's 'Philip II.'

The history of the Knights-Templar (Part ii.) and the Knights of the Teutonic Order (Part iii.) is treated much more briefly. Of the fifty-four pages devoted to the Templars, one-half is occupied with the revolting story of their suppression by Philip the Fair in France and Edward II. in England (1307-13). It could not be expected that the book would throw any new light upon the question of the truth or falsity of the charges against the Templars. It does not belong to the class of works which are made after grubbing among faded original documents and mouldy government archives. Mr. Woodhouse wisely abstains from attempting to clear up matters which historians like Hallam and Schlosser have investigated without arriving at any certain result. The matter, however, is of secondary historical importance. The guilt or innocence of the Templars had nothing to do with their fate. They were rich, and the kings wanted money. Hence they were seized and tried by those who were directly or indirectly to profit by their destruction. They were in due course racked and burned at the stake, and the kings confiscated their estates. In that age of the world such methods had become almost commonplace. Part iv. of the work consists of a dozen pages devoted to the Spanish and Portuguese Orders, and Part v. of half as many touching the English Orders. They call for no special notice.

The appendix, which fills forty-four pages, may be of some use for reference, and to most readers will be curious. It gives a brief account of the origin and history of more than two hundred Orders of Chivalry, "Legendary, Honorary, and Modern." There is no index, and neither the number of the part or of the chapter, nor the matters treated, are indicated at the top of the page; but the paper is white, the print large, the margins broad, and the binding neat. It would no doubt prove an acceptable book to those who have graduated in Scott and James and would "like to read some history."

Chequer-Work. By Thomas G. Appleton. (Boston: Roberts Brothers. 1879.)—Mr. Appleton's volume is of the kind which one identifies sufficiently in saying that it affects unpretentiousness. A collection of trifles, having no closer relations to each other than beads strung on a string, each bodying forth some light or pensive mood of the author's mind, or recording some slight adventure, or photographing some memory, and each polished to the degree of refined elegance, is the description which the preface it lacks would have given of it, we may fancy. At least it is the work of a dilettante, and no one is so little likely to exaggerate the import, however he may overestimate the quality, of his work as the dilettante. Not the least attractive of its contents are two photographic reproductions of Tanagra figurines which accompany the paper on "The Artist of Tanagra." This is designed to be an imaginative sketch, of a fleeting perfume and exquisitely light touch, about Athens and Bœotia in the days "before the world was mad with locomotion," when the figurines were modelled; it describes Phidias taking the young Bœotian sculptor by the hand and saying: "Be of good cheer, for I, who encourage you, am Phidias." A romance is interwoven with the web of essay, or *vice versa*. The next paper is on "The Love of the First-Rate," and is the most characteristic, perhaps, in the volume. It is an elaborate parallel between the ancient and "the modern Athens," and its title is suggested by the chief trait of the latter. Indeed, "it is unquestionably this ardent, this passionate quest of excellence which has had much to do with the name it has achieved of 'the modern Athens.'" "The very air in its crystal purity reminds the traveller of the sky of Hellas," and though "the purity is here too great," and, to say nothing of pulmonary troubles, "the distance asserts itself with a startling audacity," still it is enough like the air of Greece to mislead even the inhabitants. The best English in America is written there, "the thunders of the rostrum as well as its music" echo Demosthenes, and though "our Frog-pond certainly is no Ilyssus, we have a *bema* in Faneuil Hall." The topography of the two cities is similar; the gilded dome of the State-House suggests the Parthenon in some occult but sufficient manner; the Rev. Joseph Cook expounding "the ways of God to a ravished auditory" recalls the lectures of the Academy; and Greek

liberalism in religion is typified by the Boston creed which "finds the reasonable God of Unitarianism the natural expression of its sedate maturity." The satirist is always in some degree a libeller, and it is pleasant to observe that Mr. Appleton has no inclination towards satire; he could not otherwise be so minute and, at the same time, so just. The reader feels there must be something in what he says even if it bears against the Athens of to-day, and that, however unconsciously made, the charge involved in such a statement as "our very courtesy is best expressed when tempered with pity" is not wholly groundless. Or this, which is even more subtle: "If our conditions, through race and climate, are less favorable to certain ends than befriended our ancient namesake, still the temper of the town has always been resolute and sleepless to follow in her footsteps"; or this: "There are people here who simply cannot enjoy. They are not mellow and foolish enough for that." Here the parallel begins to be dropped, and, indeed, the feeling left by the rest of the paper is that its title should rather have been "The Desire for the Love of the First-Rate." The remaining sketches are less suggestive. That called "The Gashed Helmet" is an unterrifying ghost story; "May a Monkey possess Genius?" is debated with humorous intention, we fancy, in another; still another discourses of "The Philistine"; another pleads the cause of Protection in a vein which shuns polemics and is so good-natured that the most rabid free-trader will find nothing in it to provoke retort; and there are eight others on various matters, making fourteen trifles in all.

Anderson's Historical Series. A History of Rome. Amply illustrated with maps, plans, and engravings. By R. F Leighton, Ph.D. (Lips.), author of 'Critical History of Cicero's Letters ad Familiares,' 'Latin Lessons,' 'Greek Lessons,' etc. (New York: Clark & Maynard. 1879. 12mo, pp. 515.)—Mr. Leighton's 'History of Rome' is much more than a school text-book; it is an attempt to present in a compendious and consecutive form the results of the latest scholarship in the field of Roman history and antiquities. It is, therefore, designed for college classes rather than for schools; it deserves also to be strongly recommended to all teachers of ancient history as an almost indispensable part of their apparatus; for nowhere else in the English language can be found much of the matter contained in this volume. Mommsen's history is almost the only work of recent German scholarship in this field which has been translated into English, and Mr. Leighton is by no means a slavish follower of Mommsen, having been, indeed, at Leipsic a pupil of Mommsen's great rival, Lange. Moreover, those who would fully understand Mommsen's views upon controverted points must go to his other works, for in his history he seldom takes the pains to set forth his reasons. Now, Mr. Leighton aims not merely to arrive at independent conclusions, but in many cases to weigh opposing views and present the arguments for the one he adopts. This is a very difficult undertaking, and on the whole we may fairly congratulate him on his success in it. He has not always been able to resist the temptation to enter more into detail than is wise; his erudition has sometimes mastered him—for instance, who cares whether the name of Pompey's captain, mentioned on page 353, was Menas or Menodorus? Very properly most of the antiquarian matter has been put in foot-notes or in separate chapters; the text is, on the whole, reasonably free from irrelevant matter, while the notes contain a really surprising amount of valuable and interesting information. We find, however, an occasional lack of proportion, and sometimes even repetitions; and on the whole one would say that Mr. Leighton's aspect was that of the antiquarian rather than the historian. The text abounds in graphic and interesting anecdotes, but there is a lack of elasticity in the narration, and of the vivid presentation of events and of causes in which the highest value of history consists.

It is not that the historical sense is wanting; this is shown most distinctly in the admirable maps, which often contain information that is to all intents and purposes new. We do not remember, for instance, ever to have seen brought out so distinctly as in Map 5 (Gaul in the time of Cæsar) the political condition of the border land separating Cisalpine and Transalpine Gaul—that which was afterwards organized into the two petty provinces of Alpes Maritimæ and Alpes Cottiæ. See also Map 4 for the Mithridatic War. There should, however, also be a map giving the provincial system and the successive divisions of the Empire in the fourth and fifth centuries. Among the many points which deserve especial mention we will note the prominence given to the native (Umbrian) inhabitants of Etruria (conquered by the Rasenna) as an element of the Roman nationality (p. 11), and the recognition of the maritime position of Rome and its liberal laws of trade as one cause of its early rapid growth (p. 14); the chapter on the military organization also contains much new and valuable material. The view of the *patrum auctoritas* here given is based upon Lange's profound and philosophical application to this point of the principles of gentile society; its further development and special relation to the *lex curiata de imperio* seem to us very doubtful. When the second triumvirate is mentioned (p. 348) it ought to be stated that it was a real magistracy, not a mere "ring" like the first. The guilds re-established by Clodius (p. 307) were not the old trade-guilds, but political clubs which ostensibly had a religious foundation.

The Reader's Handbook of the American Revolution. 1761–1783. By Justin Winsor, Librarian of Harvard University, etc. (Boston: Houghton, Osgood & Co. 1880. 12mo.)—This book is defined in the preface as being "like a continuous foot-note to all histories of the American Revolution. It points out sources, but it includes also the second-hand authorities, though not all of them." If this volume prove practically useful it is to be followed by "others covering themes of History, Biography, Travel, Philosophy, Science, Literature, and Art." Of this practical utility we should think there could be no question. Neither does the book consist of notes exclusively, but each division is headed by a very brief sketch of the events in question; so that the student will find, scattered through the volume, what is really an abridged history of the period. To illustrate the method, we open at random at the battle of Camden, Aug. 16, 1780 (p. 229). Here we read: "Gates was confronted by Cornwallis at Camden, and the American army was routed." Then follow "American Accounts," 10 lines; then "De Kalb was mortally wounded," with references; then "British Accounts," 10 lines; "Maps," 4 lines; and at the end a reference to Simms's novel, 'The Partisan.' There is, of course, a good index.

CHEAP GAS.
Gasolene is now selling at 10 cents a gallon. At this price the cost of Gas by our process is only 60 cents per thousand feet—less than one-quarter the usual charge for Coal Gas.
GILBERT & BARKER M'F'G CO.,
Proprietors Springfield Gas-Machine,
(Factory, Springfield, Mass.) 75 Maiden Lane, New York.

A Latin Lexicon,
Abridged by White from White and Riddle's large two-volume edition.
FULL ENOUGH TO MEET THE WANTS OF UNIVERSITY STUDENTS.
From the London *Athenæum.*
"Except for special wants of rare occurrence, we consider it a more useful book of reference than the large and expensive work from which it is abridged, the omitted words being such as are found only in glossaries, fragments of very early writers, ecclesiastical authors, the Vulgate, the Digests, and post-classical works, and the articles being condensed without any sacrifice of essential information. The general plan of arranging the meanings is the same, and in the etymological department there are valuable improvements, suggested by a study of the best and most recent authorities, including Prof. Max Müller. To illustrate philological principles, French and Italian words derived from the Latin are here inserted under each Latin word, instead of being, as before, placed in a separate appendix. The accurate scholarship and careful execution by which the work is distinguished are highly creditable to the editor. It deserves to rank among the best, being adapted to the latest improvements in teaching."
A sample copy will be sent to those *teachers* who have not seen the book, for $1 and postage (15 cents). Introductory price, $1 60.

MEMOIR OF

Henry Armitt Brown,

TOGETHER WITH

FOUR HISTORICAL ORATIONS.

Edited by J. M. HOPPIN, Professor in Yale College.

With Portrait. Crown 8vo, extra cloth, $2 50.

The biography of this brilliant young orator, who rose to eminence so rapidly, and was cut off in the midst of his strength and usefulness so suddenly, embraces an account of his college days at Yale; his early professional career; his European travel; his labors and speeches in the cause of political reform, both in the city of Philadelphia and on the wider field of national politics; and, above all, his historical orations made during the Centennial epoch. These have been declared to be the best addresses which were delivered during that whole period.

☞ For sale by Booksellers, or will be sent by mail, postage prepaid, on receipt of the price by

J. B. LIPPINCOTT & CO., PUBLISHERS,
715 and 717 Market Street, Philadelphia.

LADIES everywhere can get their supplies of dress-materials and adornment from New York City with so great advantage that on learning this fact they will not afterward be content with ordinary facilities. The first step is to write for a catalogue to Lord & Taylor, Broadway and Twentieth Street.

The Week.

THE Maine judges have promptly replied to the twelve questions submitted to them by Governor Garcelon touching the powers and duties of the Governor and Council acting as a canvassing board. The questions cover almost all, if not all, the important points in the controversy, but of course are only interesting, outside the State, through their effect on the composition of the Legislature. The answers go against the Governor and Council on every point, and affirm the great principle that constitutional requirement regarding the form of returns is largely directory, and "does not aim at depriving the people of the right of suffrage or of their right of representation for formal errors, but aims at avoiding such results." The answers of the judges will, it is calculated, if heeded by the Legislature, seat thirty-seven Representatives and nine Senators. What the Governor will or can do seems at this writing not to be known, but if he is wise he will, for his own credit, do whatever he can by way of acquiescence. The affair will be very useful by way of warning to both parties, and we believe it has done much good to many Republicans by bringing home to them the true nature of "counting in," and teaching them the danger even of doing good by processes of this sort. It would often be pleasant and convenient if doubtful means could be reserved for good men in pursuit of noble ends, but unfortunately the wicked are very sharp and learn the tricks of the righteous with deplorable rapidity.

On New Year's Day Governor Robinson vacated his office and Mr. Cornell entered upon it. The former gave his successor a solemn sketch of the nature of the duties he would have to perform, and propounded the somewhat startling theory that "every appropriation of public money not necessary for the proper administration of the government" is a violation of "the Eighth Commandment of the sacred Decalogue." Men's views of what is "proper" administration of the Government differ so widely that we fear this rule would not be of much use in practice. We believe Governor Robinson considers the new State Capitol entirely unnecessary, but he can hardly believe that all concerned in erecting it are a gang of thieves and receivers. Mr. Cornell's address to his predecessor was very complimentary, and gave a very different account of him from that current in Republican newspapers during the late canvass. Who would suppose that this described a miserable old rascal who had been prostituting all the powers of his office to promote the ends of Tilden, whose tool he was, and from whom he was in constant receipt of depraved inspiration?

"Governor Robinson, for twenty years you have occupied an influential position in the councils of the State. Chosen repeatedly to the Legislature, and for several terms elected Comptroller, you served with such steadfast ability as to win promotion to the Executive office by an unprecedented vote. As chief magistrate you have vigorously and fearlessly exercised your official prerogatives, and given your administration high rank with those which have preceded it."

There is a rumor, at this writing, that Governor Cornell, besides doing other bad things, will renominate Smyth as Superintendent of the Insurance Department, an office charged with very important and, indeed, in view of the nature of life insurance, somewhat sacred functions. Smyth has been holding this office, and was impeached last year for gross abuse of his trust. The evidence showed a shocking state of things; but Smyth, being an active and valuable henchman of Senator Conkling's, was acquitted in the teeth of it by a combination between the Tammany and Republican "Machine" Senators. We do not know what there is to warrant the supposition that Mr. Cornell now means to reappoint him for another term, but we do think the *Times's* appeal to him not to do this thing, and to turn over a new leaf in making his appointments generally, is one which he would be fully justified in disregarding. There was no mention of State affairs in the platform on which he was nominated, and no mention was made of them by his supporters in the canvass. He was elected with strict reference to the affairs of Louisiana and Mississippi and South Carolina, and about them we have no doubt his conduct will be irreproachable. He will discountenance murders and the disagreement of jurors in murder trials in those States. He will also set his face like flint against the seizure of the United States Government by the Brigadiers, and the levy of a tax of $1,000,000,000 (or was it $2,000,000,000?) on the people of the North for the payment of "rebel claims." These are the things, apparently, for which he was elected. As regards the Insurance Department, his supporters in remaining silent about it virtually acquiesced in his acting as his antecedents must have led them to suppose he would act—*i. e.*, as a henchman and Machine politician. The *Times* gave him but a poor support, but it helped vigorously to create the state of feeling about the "Solid South" and "State-rights" which, combined with the Kelly bolt, made his election possible.

The Supreme Court has denied Mr. Edmunds's motion to advance the Butler-Chittenden legal-tender case on the calendar, on the ground that it will not hear constitutional cases in the absence of a full bench. Judge Hunt's place is now vacant, and we shall therefore have to wait for it to be filled before the case can come up. This is, perhaps, a wise rule, in view of what happened in the Hepburn *v.* Griswold case; but we hope it is not true that the Court as it now stands is equally divided on this point, and that the new justice will thus have the casting vote, for, if so, the temptation to find out the opinion of the lawyer who is nominated before he gets the nomination will be very strong, if not irresistible.

Mr. Parnell and his coadjutors arrived here on Saturday and addressed a large meeting in Gilmore's Garden on Sunday evening. His audience is said to have numbered seven thousand, and was very noisy and obstreperous, and by no means in a deliberative frame of mind, and applauded all strong language frantically, apparently without caring much what it meant. The speech was a curious one. Mr. Parnell confessed that he had originally intended coming out here to solicit contributions for the Home-Rule organization, of which he is the head, and "which is ultimately to effect the regeneration of Ireland," but the famine coming on before he started he determined to solicit contributions for the relief of distress also, but "the funds for these purposes will be kept distinct." He referred to the comments of the *Herald* on his mission, and to the letters from Irish landlords which have appeared in that paper, and then devoted himself exclusively to the question of reforming the Irish land-laws, taking ground about entail, transfer, titles, and so on which is substantially that of the English land-reformers, and produced a programme which must, of course, be carried out by British legislation, and the discussion of which in detail in New York, before an uproarious crowd, was in the highest degree absurd, and seems to confirm the reports which have long been current about Mr. Parnell's want of humor. His speech showed clearly that his plans had been disarranged by the reception given him by the press, and that he does not well know what tack to take now. The *Times's* suggestion, that when Irish politicians get into trouble of any kind the first thing that occurs to them is "to take up a collection" in America, after the example of the boys caught in a storm in a boat, who proposed this as the only religious exercise they could think of, has a diverting but painful appropriateness to Mr. Parnell's mission.

The momentum of the "hard-cider" campaign which made General Harrison President was acquired by nominating him at

Harrisburg in the December previous to the election of 1840. Action almost as premature seems to have been thought necessary by the present Republican managers, or we may as well say by Senator Don Cameron, who has selected February as a proper time for holding the Pennsylvania Republican convention. There is a general agreement that this selection, which meets with strong condemnation even from Republican organs, has reference to the Grant boom in some way, but it does not seem to settle the question whether the Chairman of the Republican Executive Committee is working for Grant or for Secretary Sherman. The convention will doubtless find resolutions prepared for it indicating its preference for the party candidate at Chicago; it will humbly confirm the appointment of the delegates now being carefully picked for the Chicago convention; and it may with less grace instruct these delegates to the effect that the voice of the majority shall be the voice of the body, in every contingency. In political calculations a unit, of course, causes far less trouble than independent fractions. Now, one view of the situation appears to be this, that Mr. Cameron, having made sure of his majority, will induce the convention to name General Grant plumply as its favorite; and that this will be easy because the boom, although on the wane as is alleged, will still be potent enough in February. By the time the Chicago convention assembles, however, the boom will have dwindled to such an extent that Grant's chances will be good for nothing; and when this becomes apparent, Mr. Cameron's majority will quietly carry over the delegation to Mr. Sherman.

Mr. Sherman's expressed satisfaction with Mr. Cameron's succession to "Zach" Chandler lends some color to this theory. Another circumstance is open to a two-fold interpretation: we mean the fact of Cameron's appointment by a small majority, consisting in the main of members who represented in the Republican Committee the Southern States—in other words, "goods which they cannot deliver," to use a slang phrase. Mr. Sherman was some months ago accused of "fixing" the Federal offices at the South in his own favor, but the pains might have been better, and may actually have been, bestowed on the Southern members of the Committee, seeing that the nomination, at least, is not going to depend on the home-voting weight of the delegates to the Chicago Convention. On the other hand, the Grant men have been tickled by the recent prospect of a boom at the South, and it must be admitted that their candidate promises greater rewards for party fealty in that region than Mr. Sherman holds out. The motives of Mr. Cameron's supporters are thus open to doubt. Meantime, General Grant in his tour through the South excites but little enthusiasm except among the blacks; and Mr. Sherman continues to be the only Republican leader who has distinctly nominated himself for the Presidency.

Mayor Cooper's message to the Common Council is brief and to the point, in both of which respects it differs from ordinary documents of the kind. It calls attention to the recent judicial decisions which, whether or no they are affirmed on appeal, he rightly considers hampering to his proper administration of the city government; counsels prompt consideration of the recommendations of the Department of Public Works; recounts the unsavory record of the last Board of Aldermen in the matter of granting franchises and private privileges in the public streets, and concisely states the proper policy to be pursued in such matters; reports the state of rapid transit and the public interests affected by it at present; points out, as to finances, that if the Legislature will abstain from interference in behalf of special interests, it will only require an impartial execution of the law to bring many overdue assessments into the city treasury, but that there has been no substantial reduction in the expenses of the city government; and concludes by expressing his conviction that, "while in general terms it is true that the best men who will consent to serve should be appointed to office," it is nevertheless both "impracticable to ignore party lines" and wrong to allow the interests of either party to "suffer." This last is the only weak point in the message, but it indicates how far the Mayor is prepared to go in order to "conciliate" and to conform to the necessities of the municipal situation, so to speak. There is, however, as little prospect this year as there was last that the Aldermen will permit him to administer his office himself; the old coalition between Tammany and the Republicans has been renewed, and no appointments which Mr. Kelly does not approve will be confirmed.

Mr. Tilden and all his co-defendants in the suit for the recovery of the Terre Haute Railroad bonds have surrendered and paid up. It will be remembered that after forming a new company they had a surplus of bonds of the old organization in their hands after settling all claims, and kept them as compensation for their labor and risk as a Committee of Reorganization, instead of turning them over to the new corporation. The morality of the transaction depended on the question whether they were entitled to compensation, and whether they were the proper persons to decide this question. About the legality of it lawyers were divided in opinion. It was settled conclusively against Tilden by all the Republican newspapers in the last Presidential canvass, but has nevertheless hung on in the courts until now. His surrender is pretty strong proof that he saw he had little chance of success, though his lawyer is reported as saying it is because he is not equal to the physical strain of the contest. This hardly tallies, however, with the accounts given by the Republican press of his devouring activity in politics.

The Ohio Republicans have done a very wise thing in nominating General Garfield for the Senate over Mr. Stanley Matthews and Judge Taft. Both these last-named gentlemen held out nearly to the end in spite of their somewhat unfortunate experience of public life, the one having made a curious figure as a financier, and the other having supplied the law under which Mr. Zachariah Chandler managed the last election. General Garfield is one of the few Republican statesmen of the day who is a real orator, and whose speeches one cannot easily sketch before he delivers them—that is, he is not a party hack, and has personal opinions and utters them. The Stalwarts swept him away last year, along with the ebullient Mr. Foster; but if they had not he probably would not have got into the Senate. When he is there he will be able to be himself again. The only serious flaw in his record is his having served as a "Visiting Statesman."

The Talmage affair still drags its slow length along in the shape of an angry controversy between Dr. Van Dyke, one of the prosecutors, and Dr. Spear, the defendant's counsel before the ecclesiastical court. Dr. Van Dyke wants another trial of Talmage for slandering him and others by threatening to expose their "moral rottenness," but Dr. Spear firmly objects to anything of the kind. There is no doubt that in an ideal world Talmage would be tried once a week or thereabouts, but the result of the recent proceedings brings up the question which has so often stayed the hand of justice—"What is the use of trying him?" The material of which the ecclesiastical tribunal is composed does not take the Van Dyke view of morality, and without a standard of right and wrong common to the prosecutor and the jury no criminal can be convicted of anything. The Rev. J. M. Sherwood, who was one of the prosecuting counsel in the last trial, has published his speech, which is curious reading, inasmuch as it enforces on the Synod the desirableness of respecting within the Church the prejudices of the outside world on questions of "fundamental morals." He makes some very severe observations, apropos of this, on the religious press, and produces a quotation from one of those religious papers which objects to trying Talmage for falsehood and deceit, not because he is innocent, but because,

"As it is now the golden time of autumn, when city people are coming back from the country, and churches begin to be full, and ministers preach with new zeal and hope, and look for blessed revivals of religion, it would be a thousand pities if this peace and harmony and the brooding influences of the Spirit were all driven away by the reopening of an ecclesiastical trial which has vexed the ears of the Christian public much too long."

These and other things are making a great many people ask whether some of the churches have not got a good way towards the old pagan idea of religion, which assumed that the favor of the gods was won by prayer and praise simply, and was in no way conditioned on the good behavior of the worshippers.

In the financial markets the week has been dull and uneventful. The foreign exchange market ruled above the rates at which gold can be imported and the total imports of this metal were only $8,090, although $399,907 silver arrived. During the year 1879 the total specie imports amounted to $84,260,495, while those for 1878 were only $19,150,973. The largest specie imports in any previous year in the history of the country amounted to $37,088,413, in the year 1861; and the next largest, $26,217,888, in the year 1876. It is notable that of the total imports of specie for the year 1879 ($84,260,495) the large sum of $78,003,839 arrived in the last five months of the year. It should be remarked here that our gold and silver mines produced, during the year 1879, $71,153,732; of which $32,529,920 was gold and $38,623,812 silver. These figures show that the year 1879 furnished an exceptionally favorable opportunity for the substitution of a value currency for one consisting of the credit of the Government. The reserve of the New York banks continues low, but, as everybody knows that the whole tendency will be towards an increase for several weeks to come, the loan market worked easily, closing at about 6 per cent., which since the first day of the year has been the maximum legal rate of interest in this State. The Stock Exchange was very dull during the week, but the disposition appears to be "bullish" for railroad shares and bonds, as all the roads are doing a large business and at paying rates. Silver bullion in London closed at $52\frac{7}{16}d.$ per oz., and the market was steady and dull. The bullion value here of the $412\frac{1}{2}$-grain silver dollar was $0.8778.

The Chicago *Tribune* continues to prophesy and expound vigorously about silver, gold, greenbacks, and other forms of currency, nothing daunted by the sorry character of his past performances. He ascribes the failure of silver to circulate to the machinations of evil-minded persons, the lukewarmness of the Treasury, the coarse attacks of the Eastern press on the silver dollar, and the discrimination of the banks against the same. In fact, according to him, there is a kind of hellish conspiracy against this beautiful coin; but he reports joyfully that, in spite of it all, $4,000,000 have gone into circulation since September 30. But have not these millions been taken out by charitable persons who felt sorry for silver, at seeing it maligned and kept in dark vaults by a cruel Treasury? We maintain they have; that the circulation of silver now going on is a purely humane movement, excited by the *Tribune's* account of the sufferings of silver, and not a commercial one. The *Tribune* is also much alarmed about the proposal to take away the legal-tender character of the greenbacks. He says that if this is done the banks will have to redeem in gold, and there will be "a run, and the prompt suspension of every bank in the country." The remaining horrors of the situation he will point out at some future day. His unabated cheerfulness and courage are, under all the circumstances, very diverting. We should not be surprised to see him get up a hospital for clipped and mutilated silver coins, where they would have the care and nursing of the best silversmiths. We ought to add that he is looking carefully after the balance of trade, and keeps the fugacious gold ready for "the money kings" of Europe. He is firm as a rock against the heresy of his colleague, the Cincinnati *Commercial*, that the people now want a little gold in their pockets, and declines to do anything to provide them with it.

The English report of quiet around Kabul, and open communications through the Khybar, would be reassuring enough in London if the suddenness of the late attack did not reveal clearly that General Roberts has no accurate information of what is going on outside his lines. The state of anxiety, therefore, continues in spite of the late success, and will last through the winter. Fresh combinations of the tribes may be again looked for any day. He cannot patrol the country except in heavy force, and cannot patrol it at all in winter weather; and there is no telling as yet what the effect of the severe cold will be on the native troops. The exclusion of newspaper correspondents, too, in a case in which their letters could not possibly help the enemy, deepens the suspicion which now attaches to all the official despatches. It has gone so far that one of the London press wags predicts a great victory in Afghanistan just before the opening of Parliament in February. Another bad piece of news is the disappearance from Tashkend, where he was enjoying Russian hospitality, of Abdul Rahman Khan, an Afghan pretender and nephew of Shir Ali.

Parliament meets on the 5th of February, and will, it begins to be believed, be dissolved soon after Easter, when the Budget has been adopted. The presentation of the Budget under Gladstone's criticisms will be a sorry job, from which Sir Stafford Northcote would doubtless gladly be released. The signs of the times still seem to be in favor of the Liberals. They have wrested another seat from the Conservatives, this time in Ireland, in the County Donegal, and without any concession to the Home-Rulers. There is no change in the situation in Ireland, but the extent of the distress seems to be more fully ascertained, and large sums are being raised for the relief of it.

The Spanish minority which withdrew from the Cortes when the Minister refused to remain in the House and offer further explanations of the Ministerial crisis, have issued a manifesto complaining of the discourtesy with which they were treated, but of nothing else, and announcing that they will not come back until he makes his peace with them by an apology. There are reports that he is trying to come to terms with them and induce them to resume their places, but he continues to show in other ways the haughty and intractable temper which has always been the curse of the Continental Conservatives. He has given great offence in Madrid by refusing to allow the military bands to participate in a demonstration in honor of the French Ambassador, in recognition of the aid given by French subscriptions to the sufferers from the inundations in Murcia. Worse than this, he has ordered the prosecution of newspapers which found fault with him on this score, and particularly the organ of Marshal Campos. The Marshal has expressed himself with great severity in the Senate on the conduct of the Government in filling the places of generals who had resigned their commands when he resigned the Ministry, but had withdrawn their resignations on his intercession, which the new Ministers asked for. The bitterness on both sides seems to increase. It is not likely to be diminished by the thinly-disguised threat of *La Politica*, the Ministerial organ, that "those who desert their seats cease to represent their constituents," and that "the electoral districts cannot be deprived for any length of time of their right to representation in the Cortes."

The Municipal Council of Paris has just given what the Ministry finds a somewhat embarrassing proof of hostility to the Church by refusing, by a large majority, to make the annual appropriation for the support of the Catholic churches of the city. The debates drew out some very strong denunciation of the clergy and of "superstition," and demands for the separation of church and state. The vote of the money is made obligatory by law, and the action of the Council was therefore promptly annulled by the Minister of the Interior; but the incident is disagreeable as a sign of the attitude of the capital on the religious question, and is one of the things which compel the Ministry to adopt a more forbearing policy towards the Church than they are really disposed to. But they are enforcing the provisions of the Concordat against the bishops with great sternness, and much to the surprise of the latter, who, under the Empire, were allowed their own way so completely that they had all but forgotten that the Concordat existed.

THE MAINE DISTURBANCE AND THE PRESIDENTIAL COUNT.

THERE is nothing more noticeable about the turn which discussion of the Maine "count" has taken in the press and on the stump than the general avoidance by both parties of all serious consideration of the bearing it has upon the national "count" of the Presidential returns of 1880. Of partisan denunciation and partisan defence of the action of the Maine officials there has, of course, been plenty; but we think it may be said without exaggeration that there has not yet appeared, in the press or elsewhere, the slightest evidence of a belief on either side that it would be worth the while of practical politicians to consider what means ought to be taken to prevent the same sort of civil commotion that is now disturbing Maine, from being repeated a year hence on a larger scale throughout the entire country. The danger of this is only too evident. It is, indeed, the great political danger which threatens the immediate future of the country; and while we are approaching it with a full consciousness of its peril, no one pretends to see or to know how the next Presidential "count" is to be made, and no preparations are made for it, and we are slowly drifting on, in full sight of such a very ugly danger-signal as the Maine dispute before our eyes, with what might to a casual observer pass for blind indifference to the consequences.

It is easy, of course, to explain this condition of the public mind. After an enormous amount of talk in Congress about the abstract merits of one and another different method of counting the electoral returns, and the introduction of a large number of bills on the subject, providing for the settlement of all disputed questions by the States themselves, or by the two houses of Congress, in accordance with some prearranged scheme of disposing of single and double returns, no change has been made, because neither party has been found willing in advance to bind itself by fixed rules which might in the end deprive it of the chance of getting its candidate in by some other method of counting. This inaction on the part of Congress, too, far from being unnatural, is exactly what might have been expected. The members of both houses, and particularly the Senate, have the most direct personal interest in the result of a Presidential election, because their patronage depends upon it. This patronage is itself the means by which nominations to the House and Senate are controlled, and to ask a member of either body to agree upon fixed rules for a Presidential "count" is to ask him to abandon a considerable share of his possible control over his own political advancement, which is undoubtedly asking a great deal. Again, it must be admitted that the settlement of any fixed rules on the subject in advance is surrounded with difficulties growing out of the nature of the subject. The framers of the Government themselves found it a difficult matter to deal with, and it has not grown any easier with the growth of the country. With characteristic sagacity, they made the provisions of the Constitution on the subject as simple as possible. They virtually left the appointment of electors to the States, and made the process of counting in the presence of the two houses a simple act of enumeration of the votes of the State appointees. The election provided for by them was undoubtedly an election by States, and the function assigned to Congress was merely that of recording in a solemn way the result of the States' action. There are obvious difficulties in the way of any other solution of the question, and yet the solution in critical cases proves to be of no value at all. The process of centralization which has been going on ever since the formation of the Government, and which is after all nothing more than the absorption of power where it can be most easily exercised, has converted Congress into a regular returning board, clothed with despotic and final authority, but with powers absolutely vague, unsettled, and in its own discretion—such is undeniably the fact, no matter what view we take of its constitutional prerogatives—and the exercise of this discretion presents a difficult alternative as to how far it will leave the control of its vote to the States, and how far it will itself control the result. In constituting the Electoral Commission in 1876 it merely shirked this responsibility in a temporarily convenient way; but this it will never be able to do again.

To determine in advance how the Presidential vote is to be counted is practically to determine what questions shall be left to the States to settle for themselves, and *how* these shall be settled, and what questions shall not be left to the States. In other words, it is assuming an authority over the States which was certainly never contemplated by the framers of the Constitution. To take a single question—that of double returns—it is easy enough in one sense to provide a means of disposing of such returns in advance. A State sending in double returns can be omitted from the count, or the two houses can vote separately on the States sending them in, and the State can be excluded in case of a disagreement; or, on the other hand, double returns can be prevented altogether by making the decision of the State courts on the subject conclusive upon Congress; but it is really extremely difficult to tell what the ultimate effect of such arrangements would be. The whole matter, too, is complicated by the electoral paradox, which every Presidential campaign makes more and more prominent, that while the direct popular vote determines the relative strength of the *parties* throughout the country, it does not necessarily determine the result of the election. This discrepancy is itself productive of constantly increasing jealousy and distrust. To persuade a popular majority to abide by defeat at the hands of a minority is hard enough under the best circumstances. To persuade them to do so when they have ceased to place confidence in the fairness of the method by which the result is attained, is impossible.

Taking all these circumstances into the account, it is not strange that Congress has not yet found any way to predetermine how the next "count" is to be made; but this fact makes the situation all the more serious. The next Presidential "count" will undoubtedly be settled in some way, and how it will be disposed of will depend entirely (in the absence of all fixed rules) on the temper in which it is approached by Congress and the public. The Maine quarrel seems to us chiefly important as an indication of what that temper is likely to be. It has been marked by a degree of heat and violence hitherto unknown except in the most unsettled Southern States, while they were still garrisoned with United States troops which were being used to prop up unpopular and disreputable governments. Insurrection has been openly advised or suggested by leading public men, and even by ministers of the Gospel. The organization of a double State government, for the purpose of making Federal interference necessary, has been seriously proposed. To say in defence of all this that it is produced by outrageous Democratic frauds is entirely beside the point. The frauds are simply part of the "counting" process as carried on by a State returning board, neither more nor less wise and patriotic than other similar bodies throughout the country are likely to prove in a period of excitement. The acts of Governor Garcelon and his Council are not acts of abnormal crime, as the Republican papers are fond of making them, but are the acts of cunning but at the same time weak men, who are not far-seeing enough to know that they are sacrificing their party's ultimate good for a trifling immediate advantage. They are acts of a character which are not only not surprising, but are certainly to be expected, and are the natural result of familiarity with the "counting" process on the minds of the leaders of a party not remarkable for either the intelligence or morality of its following.

It is certainly deplorable that such a state of affairs should be possible as that which Maine politics have presented to public view for the past month; and the bearing which it has on the question of the next Presidential "count" is very evident. The Republican Stalwarts are already talking of the probability of having to seat their candidate by force, in case the Democrats do not "count" in a satisfactory manner. The Democrats are in control of the two Houses, the President of the Senate, Mr. Wheeler, is a Republican, and not a single question with regard to the counting of the Presidential returns is settled. To allow the settlement of the last Presi-

dential dispute by the Electoral Commission to create any illusions as to the possibility of a similar way out of the difficulty this time would be a great mistake. The Electoral Commission scheme was made feasible by the fact that the two Houses in 1876 were in the hands of different parties. This time Congress will, in all probability, remain in Democratic hands in both branches. The proceedings, too, of the Electoral Commission did not satisfy the Democrats as to its fairness, and they entertain convictions as to the duty of the two Houses to do their own counting no less strong than those of the Stalwart Republicans as to the necessity of meeting fraud with violence. Moreover, with every month's delay the chance that Congress will make any provision in advance for the next count becomes more remote, and whether we get through it peacefully and creditably will depend mainly upon the temper with which we prepare ourselves for it. A repetition of the Maine squabble on a national scale would certainly be a pitiful spectacle.

MR. PARNELL'S MISSION.

THE most significant feature in the reception given to Mr. Parnell and his associates in this country is—if they only knew it—the attitude of the daily press towards them. Twenty years ago there were very few editors indeed, and no politician, who would have ventured to avow a want of interest in the efforts of Irish patriots to free Ireland from connection with England, or express doubts as to their eventual success. To-day all the leading journals in the country seem to unite in ridiculing or throwing cold water on the political part of Mr. Parnell's mission, while ungraciously forcing on him, evidently much to his dissatisfaction, the rôle of a collector of contributions for the relief of hungry peasantry. They all declare that he ought to get plenty of money for this latter object, but none at all to help in effecting changes either in the political relations of Ireland to Great Britain or in the Irish land laws. These things, they say, are the affair of Englishmen and Irishmen to settle between themselves, and not the affair of Americans, who do not understand them and are not on the spot. Whether a peasant proprietary would be a good thing for Ireland, and, if so, what are the best means of establishing it, are questions with which Irishmen living in Ireland must be held exclusively competent to deal; if they are not competent, nobody is. Whether, too, the present legislative relations between Ireland and England are advantageous to Ireland or not, and whether, if not, it is possible to change them, are, *par excellence*, Irish and English questions, to be solved by Irishmen and Englishmen. In trying to make them American questions, and induce Americans to express strong and decided opinions about them supplied by Mr. Parnell himself, American editors seem to hold that he is taking a great liberty, and they resent it all the more readily because they are asked to back these opinions with their money.

In fact, the United States have evidently ceased to be a good field for Irish agitation, and this without any diminution of sympathy for all Irish suffering which Americans can see and understand. They know how an Irishman feels who is cold and hungry, and can tell exactly what will relieve him; but they do not know how an Irishman feels who desires a parliament of his own in Dublin and another man's land rent free, and cannot suggest means of satisfying him without an amount of study which very few are willing to give. Most Americans find in our day the demands of home politics on their attention as much as they can possibly meet. They follow striking events of foreign politics, but the number of those who are willing to master disputed questions of foreign politics, such as the English land laws, or the German "Culturkampf," or the Jules Ferry School Law, or Russian Nihilism, or English rule in India, is exceeding small. Even in the United States Senate, which is directly concerned with the foreign relations of the Government, there can hardly be said to be now a single member who is even passably familiar with leading questions of foreign politics. When Mr. Hendricks went abroad, three years ago, he confessed very naïvely on his return that he was greatly surprised to find a parliament in Austria, having supposed, till he got to Vienna, that that Empire was still governed by an absolute monarch. This state of mind about foreign affairs is, we fear, by no means uncommon among prominent politicians of both parties. Mr. Froude fell into an error on this subject, very like Mr. Parnell's, when he came over here a few years ago with the intention, he said, of following O'Donovan Rossa round the country, and refuting the misrepresentations regarding English rule in Ireland in which he assumed that statesman was sure to indulge, being evidently under the impression that Rossa's lectures would be eagerly attended by native Americans, and his dicta swallowed without question.

This permanent indifference to foreign affairs has been deepened of late years by a great variety of experience. The habit of regarding all discontent as capable of being relieved by rebellion was spread among the Radicals of the whole civilized world by the French Revolution, and found a lodgment in this country through the Jeffersonian philosophy, and showed itself down to 1860 in the practice of "hailing" all sorts of revolts, revolutions, and disturbances as positive gains for humanity. It has died out under more extensive observation. People here are not nearly as hopeful as they were thirty years ago about political experiments begun in bloodshed. They have seen scores of them fail, and have seen happiness attained without them. Hungary is content without achieving Kossuth's ideal; Italy is as well off as she could possibly be without achieving Mazzini's. Castelar's Spanish Republic has turned out a sorry farce. Moreover, we have had a rebellion here which half the world thought, when it began, a noble enterprise, but which is universally regarded now as having contributed greatly to the happiness of mankind by its failure. Then the Irish patriots who during the last forty years have fled to these shores from British oppression have played a part in American politics which has naturally modified the views once held by the average American about the Irish Parliament which it is proposed to set up in Dublin. Very few Americans now feel that they would like to live under that legislature themselves, and they are therefore slow about subscribing money to restore it. In fact, they now claim more knowledge with regard to its character and capacity than Englishmen possess. Mr. Parnell addresses a very different public from that which gave Emmet a home, and, we may add, represents a very different cause.

The Irish emissary who went to France the other day, and wrote letters soliciting French sympathy for the Home-Rulers, has been repulsed by the French Republicans, and for much the same reason which prevents Mr. Parnell from securing political sympathy here, viz., the fact that Irish malcontents do not really belong to the Liberal party of the world. They have, ever since Catholic emancipation, been steadily severing their connection with it, and alienating the sympathies which, previous to that event, it bestowed on them. Their performances in the British House of Commons, however much they may have had to complain of, have been calculated not simply to bring parliamentary government into contempt, but to spread doubts as to their own capacity for working parliamentary institutions. On one great question of European politics during the last forty years—the liberation of government from ecclesiastical control—they have steadily sided with the Church against the state. On the still greater question of popular secular education they have supported the priests. They have displayed extraordinarily little interest in the political struggles of any other race or country. Neither Italy, nor Hungary, nor Poland, nor the Turkish Christians, nor any unfortunate race or nation, has received from Irish politicians a word of encouragement or support. Of course this has entailed on Irish patriots an isolation which would be appalling if they only perceived it. It makes the task of securing foreign sympathy in their hostility to England far greater than it used to be, and without foreign sympathy they seem unable to go on with their work. The world, too, has within the last half-century grown unmistakably harder in temper. Success, or signs of capacity for success, are more sternly exacted than they used to be, both of men and nations. There is much less indiscriminate charity

for all kinds of mendicants. Probably no race of politicians but Irish Home-Rulers would have the face nowadays, in search of contributions, to visit a country in which the Fenian Republic was set up within ten years. The history of that organization and of its treasury and revenue is something with which Mr. Parnell can hardly be acquainted, or he would not suppose that the memory of it could be wiped out by his own efforts and those of his colleagues in the House of Commons. "Obstruction" in a legislative assembly, however attractive it may seem to those who engage in it as a means of bringing a tyrannical majority to reason, has one fatal defect for politicians who mean to supplement it by appeals for foreign aid: it inevitably repels all communities which are working parliamentary constitutions, and especially a community like this, which makes use of forty parliaments. It burlesques government by deliberation and makes it look ridiculous, and substitutes for it an appeal to physical force in its most contemptible form. No free state in our day can afford to make a hero of anybody who glories in gaining his ends in a legislative assembly by incessant filibustering. Anybody, as Cavour said, can govern by a state of siege, and anybody can make himself formidable to a majority by incessant perversion of the rules for the interruption of business. But it is not by such acts as these that great statesmen are raised up or oppressed peoples are led out of bondage, or obscure causes commended to the sympathy of mankind.

THE SITUATION IN AFGHANISTAN.

LONDON, December 22, 1879.

THE telegraph wires will have conveyed to America the intelligence of the perilous position of the English troops at Kabul. This intelligence has taken the nation so entirely by surprise that even now only a man here and there apprehends either its character or extent. I need not say that, as a matter of fact, there is nothing unexpected in it. In the letter which I wrote to the *Nation* immediately after the news had been received of the murder of Major Cavagnari and his escort I pointed out the dangers to which a British force wintering in Kabul would be exposed. So great did these appear to me that I ventured upon the opinion that no attempt would be made to occupy Kabul until the spring. "There is," I wrote, "nothing to be gained and much to be hazarded by attempting an earlier advance. The tribes are at present fired by religious zeal, and would be likely to offer an obstinate resistance. A British army, having to pass the winter at Kabul, would be exposed to very considerable danger. It would be in complete isolation, surrounded by hostile tribes, without magazines, and with no crops upon the ground. It would, in fact, find it impossible to subsist, and fall a victim to famine if not to the enemy." Precisely this is General Roberts's situation at the present moment. Unless something almost amounting to a miracle intervenes it is hardly possible that his force should escape becoming a victim to either famine or the enemy.

Until within the last two or three years most Englishmen conceived that their political liberties were founded upon a rock. It was our peculiar privilege to control our destinies directly according to the will of the people. Lord Beaconsfield's Government has shown us that our liberties depend, like those of France or any other nation, solely on the good faith of the people in power. If these are false to their trust, the English nation can be defrauded of their political powers as easily as any other people; and at present, if we were ruled by the Emperor of Russia himself, we could not, as a nation, have less of a voice in the conduct of our foreign policy. The Cabinet concocts its policy in secret, and, secure in the possession of a mechanical majority, discloses its character and objects to the representatives of the nation only when retrogression is all but impossible. It was by a combination of fraud and secrecy that the nation was decoyed into this Afghan war, assuredly one of the most foolish as well as wickedest wars recorded in history. But in nothing has the deterioration of public spirit been so conspicuously exhibited as in the tameness with which the nation has acquiesced in the Ministerial scheme for the suppression of all information regarding the veritable state of things in Afghanistan. At this moment there is not a single independent newspaper correspondent present with our troops. Whatever information reaches the public passes through official channels, and is carefully doctored before it is allowed to be published. It is for this reason that the peril in which General Roberts finds himself has burst upon the nation with the unexpectedness of that proverbial "bolt out of the blue."

It was clear, however, for some time to the more instructed that a storm was gathering in Kabul. This was partly due to the shocking cruelties perpetrated by General Roberts since he occupied the city. Sound policy, not less than justice, required of us that in occupying the city of Kabul we should treat the people with the utmost humanity. Whether we eventually annexed the country, or entered merely into an intimate alliance with its ruler, it was essential to the success of either experiment that we should disarm the hatred and well-founded suspicion with which the Afghans regarded us, by moderate and conciliatory treatment. But the worst evil which the possession of India has wrought upon us is to make us hard and savage in our dealings with the people of the country. An Englishman in India will consider it a sufficient reason for hating a native that the native desires to be emancipated from the chains of an alien domination. Hence, insurrections against our authority have, nearly always, been stamped out with a pitilessness worthy, perhaps, of a Turkish pasha, but unspeakably disgraceful in a civilized people. When Cavagnari was killed the usual cry for vengeance was set up; and General Roberts set to work to give full effect to the prevailing sentiment. No less than forty-nine soldiers were seized in the villages round about Kabul and executed in cold blood, although no charge was alleged against them except that they had fought in the ranks of the enemy at Kharasiab. This proceeding had an effect exactly the reverse of what was intended. It did not intimidate the Afghans; it exasperated them. They determined to make a combined endeavor to expel the ruthless invader of their barren hills. The three days' fighting which has shut up General Roberts in the cantonment at Shirpur is the first result of that determination. The Afghans have not only defeated the English troops, but their leader has completely outgeneralled the English general.

Rumors of the combination had been conveyed to General Roberts, but were treated by him as of no significance. The first fall of snow, he thought, would suffice to make the "malcontents" disperse to their homes. Unhindered, therefore, by any action on the part of the British troops, two considerable Afghan armies moved upon Kabul, the one from Ghazni, on the south, the other from Kohistan, on the north. The serious fighting commenced on Wednesday, December 10. The Ghazni forces fell upon a British detachment, consisting of four guns and three squadrons of cavalry, under Brigadier Massey, and completely defeated it. One troop of the Ninth Lancers was cut to pieces, the four guns had to be spiked and abandoned, and the English cavalry was compelled to retreat with precipitation. Elated by this success, the Ghazni forces took up a strong position on an eminence to the south of the Bala-Hissar. A division of the British army under General Macpherson attempted to take this position, but failed. On the following day, however, Macpherson received reinforcements; a second assault was made and was so far successful that, after an obstinate struggle, the Afghans relinquished the height they occupied and took possession of another. For a brief while the English general cherished the hope that the Afghans would now disperse to their homes; but it was only for a brief while. The Kohistan troops had now arrived on the scene, and the combined forces made a furious attack on the British troops. All through Sunday (December 14) a continuous battle raged round Kabul. The British general was compelled to relinquish to the enemy the city itself, the Bala-Hissar, and all the open country, and to concentrate his troops in the cantonment of Shirpur. This concentration was, of necessity, a movement in retreat, in the course of which the English rear-guard suffered very heavily. The official report of our losses during the three days' fighting states them at twenty officers killed and wounded and one hundred and three men. No one, however, credits this report. Our losses were indubitably a great deal heavier. It is incredible that for every officer killed or wounded there should be only five men. Anyway, one result of the fighting was that General Roberts sustained a defeat not less decisive than that of the Russians at Dengit Tepe, and much more disastrous in its probable consequences. His communications were severed, and he found himself besieged in the depth of winter in a country which it is most difficult for a relieving force to penetrate.

The Ministerial journals are voluble in their endeavors to keep up the spirits of the Tories. According to them the danger is of the most trifling character. General Roberts will speedily be set at liberty and the subjugation of Afghanistan successfully completed. I have already said that I cherish no such pleasant expectation; and, though my prediction may be falsified before this letter meets the eyes of your readers, I will briefly

state the reasons which have led me to the conviction I hold. The question is not one of fighting, but of food, transport, forage, and fuel. At this time of year there is absolutely no food or forage to be got in Afghanistan. A relieving force marching, say from Jalalabad, would have to take everything requisite for itself and for its baggage animals in sufficient quantity not only for the march, but to subsist on when it arrived at Kabul. Thus heavily encumbered it would have to force its way through passes choked with snow, and so narrow in parts that the fall of a single camel would put a stop to the advance of the entire column. To equip and organize a considerable force—say five or six thousand men—for such an expedition would require the labor of weeks. So heavy, indeed, has been the mortality in camels that I doubt if it would be possible at the present time to equip such a force at all. The camels, exposed to the inclement winter of Afghanistan, would die daily by hundreds; while the larger the relieving force was, the greater the difficulty it would experience in finding subsistence. No attempt, therefore, will be made to relieve General Roberts in force until the spring. The alternative is to send through the passes, in light marching order, a flying column of two thousand men, and this is what the Government of India reports that it is intending to do. But even such a force must take with it, at the very least, a fortnight's provisions; and, assuming that it succeeded in forcing a way through the passes, General Roberts would have had to sustain a siege of three weeks before the flying column could reach Kabul. Is he in a position to sustain such a siege? I think not. We were told that immediately on his arrival at Kabul he set to work to collect supplies for five months, and we are now told that he has collected them. But we are not told the locality in which this food was stored. An ominous omission this, for my impression is that much of it was stored in the Bala-Hissar, in which case it is now in possession of the enemy. It is, however, certain that he is most scantily, if at all, supplied with either fuel or forage. During a three weeks' siege, therefore, not only would there be heavy mortality among his native troops and camp-followers—the latter, we may be certain, will perish to a man—but his artillery and cavalry will be entirely ruined. The gathering of the clans round Kabul will exhaust what remnant of food there still is in that part of the country, so that even should General Roberts be relieved he will have no alternative but to attempt in the depth of winter to withdraw with the remnant of his troops to Jalalabad. Without adequate food or transport, heavily encumbered as he would be with sick and wounded men, and harassed by the tribes along the line of march, but a very small portion of his command would reach a place of safety. His artillery he would, of course, be compelled to abandon before he commenced his retreat. To sum up, the situation at Kabul is briefly this: Five thousand English troops, scantily, if at all, supplied with fuel and forage, are beleaguered in the depth of winter by thirty thousand Afghans. The only troops which can advance to their assistance are about two thousand men, at present waiting for supplies at a distance of some seventy miles, and having between them and their destination a series of probably the most difficult passes in the world. Even if they reach Kabul their numbers will only suffice to make good the losses which General Roberts's army will by that time have sustained from cold and battle. There will still be no alternative for General Roberts except to attempt a retreat upon Jalalabad.

The Ministerial journals are attempting to hide this plain issue by setting forth in grandiloquent language the troops we have at Kandahar, in the Kurram valley, and along our trans-Indus frontier. To people ignorant of the geography of the theatre of war these calculations have brought considerable comfort. But they are wholly irrelevant. None of the troops thus enumerated can exercise the very smallest influence on the march of events at Kabul. They are as impotent for that purpose as if they were cantoned in the moon. For the purpose of calculating the perils surrounding General Roberts the only forces which need to be taken into consideration are the 5,000 men in Kabul—exaggerated to 7,000 in the Ministerial journals—and the 2,000 commanded by General Gough at Jugdulluk. But though the troops at Kandahar are powerless to assist General Roberts's army, should that army be destroyed these troops will be in a position of extreme danger. They are not more than 4,000 strong, and without supports or reserves of any kind. An Afghan victory at Kabul would rouse all Afghanistan as one man, and a resolute endeavor would be made to subject the English at Kandahar to a doom similar to that which had befallen their countrymen in the north.

The news which reaches us from India generally continues to be of an increasingly ominous character. I will reserve an account of this until I have occasion to write another letter.

Correspondence.

THE HARVARD DIVINITY SCHOOL DISCUSSION.

To the Editor of The Nation:

Sir: I am very sure that you will allow me space in your columns to explain certain misapprehensions into which you have fallen in regard to my article in the Harvard *Register*, criticised by you in your last issue.

Your fundamental mistake is in supposing that the article was wholly directed against the utterances of the *Nation*. Criticisms had been urged from many sources. In the space offered to me by the editor of the *Register* I wished to answer as many of them as possible. When I spoke of the absurd notion that the professors in an unsectarian divinity school could not utter their own views the *Nation* was not in my mind, nor did I suppose it would be suggested to any one else. I do not understand why you should have supposed the *Nation* to be meant by the phrase "some quarters," when the *Nation* had uttered no opinion similar to the one referred to. I was meeting an objection that had been urged so often that I judged it must spring from a wide-spread error.

The objection that an unsectarian theological school is impossible because the teachers would necessarily incline to one side of every disputed question, had also been pressed from more than one quarter. The meaning of a passage that did refer specially to the *Nation* is wholly mistaken by you. You received the impression that I had accused you of urging that certain systems of science, philosophy, or theology put in peril the soul's welfare as if this were your own belief, whereas you believe nothing of the kind. I doubt if any one else would draw this idea from my words; certainly nothing was further from my thought. What I did understand you to mean was that the University would be exposed to a very intense form of unpopularity if there were taught in the Divinity School theological views held by any to be dangerous to the soul's welfare, and that you advised yielding to the prejudice which you did not share. This was what I meant when I spoke of those "who place themselves for the moment on the side of a blind prejudice, such as the higher education has had to contend against at every step of its advance."

I send this simply as a personal explanation, and refrain from any reference to the general merits of the question.

C. C. Everett.

Cambridge, Mass., January 3, 1880.

[We assumed that Professor Everett had the *Nation* in mind because we knew of no discussion of the subject in any other periodical, in which the teaching of unsectarian theology by Harvard College or under the auspices of Harvard College had been opposed. We have up to this moment heard of none, and we had no doubt that in the absence of specific designation of his antagonist the readers of the *Register* would conclude that it was the *Nation* which Professor Everett accused not only of talking "absurdly," but of using sham arguments in support of opinions which the editor did not hold.—Ed. Nation.]

INTEREST AND INFLATION.

To the Editor of The Nation:

Sir: In No. 756 you say:

"Notwithstanding these large arrivals of foreign gold, the demands for money throughout the country for legitimate purposes and for speculation have been sufficient to keep the rates for money loans fully as high as a year ago."

In this and similar passages that I have noticed in your columns from time to time you seem to differ from the standard writers on political economy, and to agree with the disciples of Greenbackism in the belief that the rate of interest on loans depends upon the volume of currency, or money, in circulation. At least I am not able to reconcile your language with this, which I find in J. S. Mill: "An increase of the currency has in itself no effect, and is incapable of having any effect, on the rate of interest"; or this, from J. B. Say: "It is a great abuse of words to talk about the interest of money; and probably this erroneous impression has led to the false inference that the abundance or scarcity of money regulates the rate of interest."

I might quote from several other standard authors to the effect that, in the language of Prof. Bowen: "To increase the stock of money in the country is not thereby to augment the fund available for loans, or to

diminish the difficulty of borrowing, or to lower the rate of interest." Indeed, so far as I know, no reputable writer has ever undertaken to refute this doctrine, and to defend the theory of the Greenbackers that the rate of interest can be reduced by making money more abundant.

An explanation of your position on this point will greatly oblige at least one CONSTANT READER.

ST. LOUIS, Mo., December 29, 1879.

[There is nothing in the quotations made by our correspondent inconsistent with our position. Mere increase of the volume of the currency will not, *other things remaining the same*, lower the rate of interest. But if there is abundance of money seeking investment, and a comparatively feeble demand for it *on good security*, the rate of interest will fall inevitably. So also if there is much demand on good security the rate of interest will rise, just as for similar reasons the price of goods rises. The scarcity of money of which the Greenbackers have been complaining for the last seven years has not existed under the above conditions. Scarcity of money has not been felt by any one able to offer good security for its use. What the Greenbackers have complained of was the difficulty in borrowing money experienced by those who had no security to offer, and their error lay in supposing that by increasing the volume of the currency this class would find it easy to get money at low rates of interest. This is the delusion at which the economists are striking in the passages our correspondent quotes. That the rate of interest offered draws money from one country to another is one of the commonplaces of finance. But the demand which draws it is not the demand of poor men who can put up no "collaterals," but of men who are sure to repay it on a day named. The greenback craze is the one long known to the French Socialists as "gratuité de crédit," meaning a system by which money would be freely supplied by the banks or the Government to every man who could show that he needed it. The exaction of security for loans is what is called by the same school "the tyranny of capital."—ED. NATION.]

THE MAINE CRISIS.

TO THE EDITOR OF THE NATION:

SIR: The Latin proverb, "No man becomes suddenly base," applies also to States. Maine has not as in a moment fallen. The descent to the plane where violence is threatened has been gradual. Disintegration has been silently proceeding. The political combinations have lost their early virtuous lustre, and now the country is invited to behold a spectacle over which the better angels of the nation may profitably weep.

Three figures are prominent in this scene of confusion and uncertainty. The unfair and illegal procedure has lifted into prominence Alonzo Garcelon, a country physician, who served as a surgeon in the war of the Rebellion, and who made a "black-flag" speech at an early date in the conflict. His "no-quarter" platform has been reconstructed, and serves as a place on which to rest his official feet. He has moved steadily on in his course, and "points with pride" to the steps which the demands of each day make necessary. A second Andrew Jackson he is called on all sides; a second Abraham Lincoln he would fain be, if we may judge from the remarks which he made at a "loyal" meeting, when he declared his willingness to be assassinated rather than surrender his constitutional position. Nominated for the Presidency he has been, as a matter of course, that being the logical issue of every crisis in our generous republic. His reputation has been good; his obstinacy unquestioned; his knowledge of men known to be other than large. That his disposition throughout this difficulty has inclined him to do justly, in a technical and narrow spirit, many of his personal friends, who are political enemies, freely assert. The professional habit would lead him to act coolly and with alertness. Projected into the space filled with angry and resolute men, he has appeared undismayed, and with martyr serenity has gone on his way. His brain is not large enough to survey with an accurate eye the conflagration he has kindled. He does not know how huge a blunder he has perpetrated. Not till quiet succeeds this furious storm will he appreciate that it is a crime to suffer petty lapses in the memory of certain town officials to overthrow the evident intention of the people. He walks through a hailstorm of adjectives, large and pitiless, and is likely to be visited in like manner for long days to come. I will not add to the accretion of strong terms, but will content myself with this brief allusion to a man who will find no difficulty in obtaining space in future histories of the State. "To Garcelonize" will be defined in future political grammars as an active, transitive verb, and "to Gerrymander" will be in friendly proximity.

Senator Blaine appears whenever Maine has an "uprising." The State could not "rise" without him. Its political history would be fragmentary indeed were his name and doings obliterated. All roads lead to his house. The political probabilities are mapped out in his mind, not in large sections, but in minute portions. Undoubtedly, were he asked the name of the second selectman of Plantation No. 13, he would instantly utter it. Invisible lines stretch from every voting precinct to his desk at Augusta. He must be held to strict account for whatever occurs in the State under Republican auspices. He made one speech at the outset, presenting the main charges against the Governor and Council, and then quietly resumed his ordinary home avocations, so far as concerns public observation. Nevertheless, not a move on the part of the Republicans has been made without his supervision, and the relays of Fusion detectives who watch his front door (if the daily journals are not misinformed) are not left without consolation in the form of frequent views of hurrying "statesmen," who consult and report at the senatorial mansion. The weal or the woe which issues from this perturbation will be credited to him. Back of the wintry outlines of Augusta loom the large proportions of the lake city where the National Convention is to sit in judgment on him. He acts with that roll-call sounding in his ears. If he errs it will be no mistake through haste. He counts the cost of each syllable.

But the event may demonstrate that the Governor and the Senator were less prominent in an important sense than an ex-governor, J. L. Chamberlain, President of Bowdoin College. He is Major-General of the State Militia, and his army experience, long and honorable, places him among the leaders, apart from all other considerations. He is a conservative Republican, and has been one of the calmer spirits who in the end frequently direct the storm. He declined to join the first visitors, ex-governors and others, who approached the Governor with a request that the course apparently agreed upon by the State officials be abandoned. He evidently deemed the movement injudicious. But he wrote a strong letter to the Governor, urging him to submit the question at issue to the Supreme Court, and has expressed himself clearly of the opinion that the Returning Board of Maine had erred in their decision. At the same time he has discouraged the continuance of the indignation meetings which the Republicans have organized on all sides, and endeavored to quiet the excited people. All his words and acts have made for peace. He has seen bloodshed; he carries a bullet in testimony of his loyalty; when he advocates peaceable measures he is entitled to a hearing. If the trouble ends without open fighting, Gen. Chamberlain will be recognized as one of the pacificators who helped to save the State from the stain of internal conflict. It is easy to be indignant; to refrain from violence is difficult. The profound feeling of the common people would have expressed itself in forceful methods had not the conservative element restrained those who have been robbed and wronged.

Those not morally perfect occasionally pass through the gates and enter the Republican host. The party has ruled Maine for more than a quarter of a century, and the imperfect element has been kept in but partial obscurity. The "wicked partners" have done things which they ought not to have done. There is no question that carelessness has ruled the preparation of election returns, since friendly eyes were to peruse the documents and steady voting ensure the acceptance of faulty certificates. Thus has been engendered a habit which is now repented of. The hostile and technical judgment of the present incumbents has made haste to cast out, as "fatally defective," returns which in former years would have received no severe criticism. If the authorities had acted only in this direction, and counted out those returned as elected in papers obviously incorrect, the grievance would have been more bearable. As it is, the State has had an "object lesson" that will be of value. The official returns of the next election will be models.

It is not to be denied that the Republicans have suffered their smaller and imperfect members to set an "awful example" to the generation of politicians now in power at Augusta. Broad principles have been laid aside and unworthy ends have been regarded. In private their own party men do not hesitate to recount the shortcomings of the Republicans in rare and relatively unimportant instances. But the severest critic cannot find an aggregate of offences which will equal any one of the series of sins against the State of which the present administration at the capital has been guilty. The eagle eye of the "expert" in the Council sees a faint trail of ink leading from the upper flourish of a "P," and forthwith it is de-

cided that the letter is "B"—and one less Republican remains to be unseated. His opponent receives the certificate of election. The same imperial glance rests upon another return, and it is alleged that one man signed for his two compeers on the Board of Selectmen. Thrown out is the return. The votes in certain ballot-boxes give the full names of two candidates. The men are brothers, and town officers. The Fusionist makes out the return, being careful to write only the initials in certifying the vote of one of the two towns in the district. "Francis W." is defeated, but "F. W." has a plurality, in the estimation of the Council, and the Republican goes to the wall. These are pleasant episodes in the history of the count. It is hard to believe that the honorable men engaged in this microscopic occupation could look each other in the face without smiling. One defence offered by members of the Returning Board consists in quoting from a radical Republican paper in Bangor, and then asking, Do you wonder that such provoking talk made us determined to "count out"? This is the argument of the small boy, who has been assailed by jeers and annoying facial distortions on the part of the "fellow of my size." It illustrates the humorous vein which runs through this story of dishonor.

The unanimity, "solid" on the Republican side and nearly so among the Fusionists, is a marked characteristic of this time of dissension. The forces are arrayed, and few are they who refuse the summons to stand with their party. The Democrats or Greenbackers who dissent would not fill a large hall. I talked with a reliable, reputable business man the other day, and he very calmly told me that he believed in paying off the score on account of Louisiana. "I would count them [the Republicans] out of the Presidential election, too." Seventy thousand men face seventy thousand men; evenly divided, with equal fervor and like readiness to defend the cause of their party. It is depressing to any sober-minded man that three-score-and-ten thousand voters should unite in saying that the "counting out" was fair and legal. The talk of civil war grows to be a serious thing when it is seen to mean that the State would be the theatre of a conflict between forces fairly matched. The worldly wisdom which sends out its note of alarm from exceptional editorial rooms among the Democrats, would cry aloud in the Maine streets and wake but a feeble response. Solidity is the prominent feature on either hand; if collision ensues the blow will be "heard round the world."

This survey of the situation in Maine has avoided the discussion of points which have bristled in the daily journals; it has included what might be less obvious to the ordinary reader. The Fusionists have hoped for a violent termination of these debates; the Republicans will rely on peaceable methods. The danger of an encounter on the day of legislative assembling, January 7, is not great, nor is it unreal. The spark may fall, the explosion will certainly follow. As I write, the Supreme Court is considering the questions propounded by the Governor. Their decision will have only a moral effect, but it may serve to deter honorable men from persisting in a procedure which it cannot fail to represent as unwise, illiberal, illegal. "INDEPENDENT."

MAINE, Jan. 3, 1880.

Notes.

GEORGE ROUTLEDGE & SONS have in press an American edition of the most notable recent contribution to nursery lore and pictorial embellishment, published by the London house too scantily to supply both markets. We refer to Kate Greenaway's charming 'Under the Window.' ——Bangs & Co. will sell at auction at their rooms, No. 739 Broadway, on the 19th inst., Mr. Charles L. Woodward's collection of books, etc., relating to Mormonism. The catalogue is carefully executed, and made very readable by the author's comments, which betray not more facetiousness than intimate knowledge of the subject. The earliest date occurs in connection with the 'Book of Mormon' (1830), but the far rarer and intrinsically more important 'Book of Commandments' bears date of 1833.—— The annual report of the curator of the Cambridge Museum of Comparative Zoölogy shows the accessions for the year 1878–9 to have been of unusual extent and importance, the chief source being the dredgings of the Coast Survey steamer *Blake*. The work of instruction and original investigation has been pursued with the usual activity, and the attendance has become inconveniently large.——The 'Harvard University Catalogue' (Cambridge: C. W. Sever) needs for perfection one more convenience, namely, an index to the names of the whole corps of instructors. The distinguishing feature of this edition is the Chinese department.——We are glad to learn that Mr. Henry J. Morgan's 'Dominion Annual Register and Review,' which was hastily begun last year, has met with the favor it deserved and will be continued hereafter. The volume for 1879 will be ready early in February; in the preparation of it Mr. Morgan has had the co-operation of a large number of competent writers and should improve upon his own example. The price will be $2 50, the publisher's address being P.O. box 285, Ottawa.——B. Westermann & Co. send us the 'Almanach de Gotha' for 1880, the date here being prospective and not retrospective, as in the case of the 'Dominion Register.' The ninth year of the decade is by common consent a lean one as regards statistics, the present year being the world's great census-taking epoch. Nor have political changes of great magnitude marked the twelvemonth just elapsed. Still, the 'Almanach' takes account of the territorial redistributions made in accordance with the Treaty of Berlin, and for the first time the principality of Bulgaria appears upon the scene, albeit still under the sovereignty of the Porte. Its superficial area is 63,865 square kilometres (24,620 square miles), its population 1,859,000. Under Austria-Hungary, Dalmatia is credited with a slight extension of area, but Bosnia, Herzegovina, and Novi-Bazar are still allotted to Turkey with only Austro-Hungarian "occupation"—a territory very nearly as large as Bulgaria, though not so populous in proportion. The population of Spain (census of 1877) is given as 16,053,961, for the peninsula; that of Portugal (1878) as 4,348,551, also for the peninsula; that of Greece (1879) as 1,679,775, archipelago and Ionian Islands included. New York and Indiana in 1870 were as populous as the two latter kingdoms now. President Grévy and Alexander I. of Bulgaria are the most significant of the regulation four portraits.——The *Paper World* is the title of a new monthly journal just founded at Holyoke, Mass. The first number is very readable, and in its external appearance is a handsome specimen of typography. It aims to be something more than a trade-journal.——The *Athenæum* of December 20 states that Prof. A. De Gubernatis has discovered at Paris, at the house of Madame Mohl, the whole of Manzoni's correspondence with the historian Fauriel, and, with Madame Mohl's permission, will publish it in the *Nuova Antologia*, with a copious biographical commentary. ——The *Rassegna Settimanale* for November 30 notices the first *fascicolo* of the important undertaking of Prof. Adolfo Bartoli and his colleagues, which will result in a learned catalogue of the Italian MSS. in the National Library at Florence, some 17,000 in number. The work is divided into two sections, prose and verse. Biographical details and occasional extracts are given, and photographs of the more striking miniatures. The publication is perhaps needlessly luxurious.——In the same paper for December 14, Karl Hillebrand, who, whatever language he writes in, touches nothing that he does not adorn, discourses most agreeably of Mme. de Rémusat, apropos of her newly-published Memoirs; shows, with characteristic impartiality, what caution ought to be observed in accepting them, yet how enjoyable they are; and offers an explanation of the fact that such memoirs are almost peculiar to the French and so far superior to English, German, or Italian attempts.——We understand that a number of gentlemen of this city are making arrangements for the delivery, during the present month, of four of Mr. John Fiske's lectures on American history.

—In our notice (in last week's number) of volume x. of the 'Britannica' we did the author of the article "Germany" a slight injustice by stating that the war of 1866 is there "told without any allusion to the fact that Italy was a party to it." The account of that conflict actually contains no mention whatever of hostile operations in Italy, which surprised us when reading the article; but the preceding narrative mentions the alliance between Prussia and Italy, which had escaped our memory when, before writing our paragraph, we once more examined the section referring to the "Seven Weeks' War."

—Mrs. May Wright Thompson writes to substantiate her assertion made in the *Nation* of November 13, and controverted by Miss Eliza Darling, that the majority of the women students at Michigan University believe in woman suffrage. The point at issue is purely a question of fact, but it seems, nevertheless, to have been somewhat difficult to determine. Miss Darling's statistics related to the Literary Department of the University, and were as follows: two give no opinion; five are undecided; fourteen favor woman suffrage; thirty-two are more or less opposed. These foot up only fifty-three, says Mrs. Thompson, and there are seventy-four women in the Literary Department, so that there are twenty-one unreported. Her own figures relate to all the women in the professional departments. They number fifty-three, of whom thirty-six favor woman suffrage, thirteen are undecided, and four opposed. An important consideration, Mrs. Thompson thinks, is the circumstance that

the women in the Literary Department average twenty-one years only, while those in the professional departments average twenty-seven, so that the opinion of the latter is "of more value." There are thus in all the departments fifty women in favor of the suffrage, thirty-six opposed, and nineteen undecided. Mrs. Thompson also calls President Angell as a witness to disprove the assertion of another of her critics, "E. L. S.," that in history the women at Ann Arbor "have conspicuously failed." President Angell testifies that "a large number of women are now pursuing that study with a success in no way inferior to the success of the men."

—"V. G. B." writes us from Parkersburg, W. Va.:

"In your excellent and graphic account of Prof. Dunstmaier's remarkable experiments in the domain of soul-locating (see No. 754), you seem to have entirely ignored the fact that there is an 'eternal fitness' in names as well as things. By referring to your German dictionary you will find the correct definition of *Dunst* to be 'vapor-gas,' 'exhalation,' etc., and that *Maier* is Old-German for 'reaper' or 'harvester.' Combining these two words we have, of course, 'a harvester of exhalations,' or rather 'exhalation-harvester.' This is eminently proper, of course; but as we Germans believe that the names of Becker, Schuster, Schneider, Schmidt, and Müller were conferred upon our great-grandfathers because they followed these occupations, does it not logically lead us to the terrible suspicion that Prof. Dunstmaier has stolen this wonderful discovery from some of the ancient records of his ancestors?"

—The Bureau of Education is organized for the purpose of collecting statistics showing the progress of education in different parts of the Union, and publishing them with such information as may be valuable to those who are interested in the subject. But the means of performing its work in a satisfactory manner are so meagre that under the most favorable circumstances we could hardly expect results having the slightest statistical value. It does not appear part of the duty of a single institution of learning to give information to the Bureau; the latter is, therefore, dependent entirely upon its own exertions in collecting the required information. To one who reflects how difficult a task it would be, even with unlimited appropriations, to collect exact statistics of all the institutions of learning in the United States, it will not appear at all surprising if the sums appropriated by Congress to the purpose should prove insufficient. The whole annual appropriation for the office last year was only thirty-six thousand dollars. Granting that the information required was all collected, its annual arrangement in the form of a report would be a task of no small difficulty if anything like perspicuity were aimed at. We should not, therefore, expect, even under the most favorable circumstances, to see an entirely satisfactory report emanate from the Bureau. But that no improvement can be made on the miscellaneous jumble which is annually sent out we should be slow to believe. The report of 1877 has but lately appeared, and it may be instructive to give some idea of its contents as showing the direction in which a Government office gravitates when its only duty is to prepare an annual report.

—The report proper of the Commissioner, excluding the statistical addenda, fills two hundred pages. From beginning to end there is not, so far as we have found, any division into chapters or other topical headings, except the small headings of paragraphs common in such documents, (and inserted, we believe, indifferently by the printer or the writer,) and the headings of statistical abstracts. The latter are inserted in the text, with which, however, they have not the slightest apparent connection, except similarity of subject. Were they all taken out the reader would hardly know that anything was missing. Scarcely an explanation is given of these tables, or a result which they contain alluded to or discussed. More remarkable yet is the varied character of the information given. On the opening page commences an essay on the conflict of capital and labor, at the end of which the printer finds a convenient space to insert some educational statistics, including the number of letters and acknowledgments received and sent by the office. Several pages are then devoted to praise of the office. The first sixteen pages contain quotations from "the great Stein," "the famous Fletcher," Bacon, Lecky, Lord Macaulay, "the eminent scientist Dr. Ficker," Napoleon I., and Goethe. A brief summary of the educational status of the States follows, about a dozen lines being devoted on the average to each State. A summary of public-school statistics in States commences on page 46. It is followed not by any discussion or explanation whatever, but by what are supposed to be extracts from Dr. Philbrick's report on the Boston public schools. As with other extracts, we find it hard to discover where this one ends, since, while we suppose we are still reading Dr. Philbrick, we find him quoting himself with praise. If the reader desires to know how much can be included under the subject of education he has simply to turn over the two hundred pages of the report to which we refer, and note the continuous series of extracts from writers on every topic of sociological interest. The six hundred pages of the appendix are devoted to abstracts of information and statistical tables in about equal amounts. In the former we find an attempt at arrangement under special States and under special classes of instruction. Still one cannot feel that he is obtaining anything like a complete view of the case, and the heterogeneous character of the material increases the doubt. We open at random under the State of Delaware, page 34, and the first information which catches our eye is that in the Wilmington High-School for boys Latin, including the 'Æneid,' is studied in connection with a good English course. If similar information were given for every high-school in the country we could feel that some attention was paid to classifying the information. But we cannot find the slightest correspondence between this and what is said of other institutions of learning. Apparently, the whole summary is made up from local reports by putting together such statements as chanced first to catch the eye of the clerk. The three hundred pages of statistical tables with which the report closes should be valuable. The principal drawback is the doubt respecting their completeness and accuracy, which is unavoidable so long as the present system of obtaining them prevails. If the whole report were confined to these tables the Government would be saved the expense of printing five hundred pages of material which would not be accepted by an editor of any magazine in the country.

—The enthusiastic published accounts of Mr. Edison's progress in electric lighting have been derived from Mr. Edison himself or from his assistants at the Menlo Park laboratory, and are by no means judicial or exhaustive in character. Communicating with the public through newspaper reporters has its conveniences, but in this case as in others the public should be prepared to have over-sanguine promises and preposterous claims disavowed as having been made without Mr. Edison's authority. For example, the recent assertion that Mr. Edison has so improved the Sprengel pump that he is able to obtain with it, in twenty-five minutes, a vacuum which physicists had previously required forty-five hours to produce, will excite the amusement if it does not arouse the indignation of Messrs. Mawson & Swan, of Newcastle, England, who have for some years manufactured and sold Sprengel pumps capable of producing high vacua in fifteen minutes. Since Edward A. King, in 1845, patented the idea of electric illumination by means of incandescent carbons in vacuo (English patent 10,919) the scientific world has taken note of all the material features of Mr. Edison's so-called system; and Mr. Edison, in continuing his experiments in the endeavor, as he states, to devise some mode of lessening the cost of his light, is really addressing himself to the only substantial problem relating to the subject which was unsolved before he began.

—The exhibition at Menlo Park does not encourage expectation of an early solution of this problem. Mr. Edison's fifty lamps, of a total capacity of five to seven hundred candles, are operated by power derived from an eighty-horse engine transmitted to an electric generating apparatus by two double five-inch belts, which drive respectively ten and twelve-inch pulleys at the rate of six hundred revolutions per minute. Under such conditions the generating apparatus may employ more than half the power of the engine, or an amount of power which, if applied to the Weston, Siemens, Gramme, or Brush forms of apparatus, would yield from one hundred down to fifty times more illuminating power than Edison's apparatus, according to the mode of application. Mr. Edison asserts that his peculiar carbons are indestructible, and he can therefore afford to expend this excess of power. But it has long been known that the duration of the life of a carbon in vacuo is inversely proportional to the intensity of the electric current employed in rendering it incandescent, and Mr. Edison exercises the utmost care to preserve his carbons in a condition of comparatively low incandescence. His lamps are each connected with the two wires leading respectively from the opposite poles of his generating apparatus. These two wires may be considered as the side-pieces of a ladder, and the lamps as a series of rungs affording parallel paths for the flow of the current from one wire to the other. If a considerable number of these paths should be obliterated, as, for example, by the removal of some of the lamps, the current would all be forced to pass through the remaining paths, and would at once overheat the carbons in the remaining lamps, and with a greater or less rapidity destroy them. To guard against this, during Mr. Edison's exhibitions, one of his assistants, with the aid of a Thompson galvanometer, carefully observes the indications of resistance in the circuit which are manifested whenever a lamp is removed, and immediately shuts off a portion of the current

from the circuit, taking constant care that the quantity of the current supplied to the circuit shall be just that, and no more, which can safely be permitted to flow through the number of lamps which are in operation. The young gentleman who performs this function, although not a prominent object at Menlo Park, is one of Mr. Edison's most important factors in obtaining a result which at present cannot be justly estimated to be anything more than the repetition, upon a somewhat enlarged scale and at great cost, of an old laboratory experiment.

—Mr. Joseffy had only to change the monotony of his programmes during the last few weeks to gain again a most brilliant success. Chickering Hall was crowded to overflowing on Saturday evening with a very select and enthusiastic audience to listen to the artist in one of his best efforts. So far as his part of the programme was concerned, the evening was devoted to Chopin, in whose compositions the young Hungarian is always most at home. We have repeatedly spoken of his admirable interpretation of the E Minor Concerto, with which he first fascinated a New York audience, and we could not pay him a higher compliment than by saying that his rendering of the F Minor Concerto, which he gave here on Saturday for the first time, as well as of the "Andante Spianato and Polonaise," was, in every respect, fully equal to that performance. The scene in the hall at the close of the concert recalled those of the artist's first appearance, the audience being most demonstrative in the expression of their appreciation. The next opportunity of hearing Mr. Joseffy in New York will be at the third Philharmonic Concert, where he will give one of Beethoven's Pianoforte Concertos.

—The season of English opéra bouffe at the Fifth Avenue Theatre, under the management of Mr. D'Oyly Carte, seems destined to prove a great success. The first opera produced was "H. M. S. Pinafore," and to make one more successful "Pinafore" season in New York, even with the original orchestration, of which the public had never before had the benefit in this country, was no small triumph. There is no very noticeable difference, as a matter of fact, between the two scores, and considering that the opera as it was originally produced here was transposed from a piano-score, the very close approach to Mr. Sullivan's own work was perhaps the most remarkable thing about it. "Pinafore" has now been succeeded by the long-promised opera, written and composed especially for production in the United States, and called "The Pirates of Penzance, or the Slave of Duty." It is called a "melodramatic" opera on the bills, but this is, we suppose, a little jest by the way, for it is as pure an extravaganza as anything ever produced on any stage. It has established itself as a success much more speedily than "Pinafore" did. The author and composer have in this case not made the mistake of omitting to preserve their stage-right, so the "Pirates of Penzance" is not published, and anybody who wishes to represent it will have to apply for permission to do so to the proprietors, and probably have to pay a large royalty for the license. The "Pirates of Penzance" resembles and recalls the other operas of the school to which it belongs, "The Sorcerer," "Trial by Jury," and "Pinafore," both in the general arrangement and in particular points of detail. It is impossible not to see a family likeness between *Ruth* and *Buttercup*, between *Major-General Stanley*, *Sir Joseph Porter*, and the *Judge* in "Trial by Jury." Classical operatic forms, too, are followed with great closeness in the music of the new opera, as they were in the music of its predecessors; and the humor of Mr. Gilbert is always the humor of the author of the 'Bab Ballads.' In saying this we do not by any means mean to say that the "Pirates of Penzance" is an imitation, for it is entirely original.

—The idea on which it is founded is that of a young man of extremely conscientious character apprenticed by mistake to a band of pirates, and the complications caused by the irreconcilable opposition between his immoral calling and his inward goodness. In his capital play of "Engaged" Mr. Gilbert showed himself a master of this sort of moral absurdity, and, though to our mind the development of *Frederic's* conscience is not as funny as parts of "Engaged," it is still very funny. The part is injured at the Fifth Avenue by the bad acting of Mr. Talbot, who merely walks through it, and it is utterly impossible to say what might be made of it by a clever actor. Mr. Brocolini as the *Pirate Chief* sings and acts very fairly, while Mr. Furneaux Cook as his lieutenant, *Samuel*, makes as much of a small part, both lyrically and dramatically, as was possible. *Major-General Stanley* is an officer of the modern highly-scientific type, who sings a most ludicrous song, funnier on the whole than *Sir Joseph Porter's* in "Pinafore." Mr. J. H. Ryley, however, is not quite equal to the part, which needs some one like Mr. Whiffen to create it. The leading feminine part is that of *Mabel*, the youngest daughter of *General Stanley*. Miss Blanche Roosevelt sings this, as she sang that of *Josephine* in "Pinafore," very well, and her beauty and refinement are always attractive; but she makes very little attempt at acting. Her sisters, *Kate*, *Edith*, and *Isabel*, were all well taken by Miss Brandram, Miss Bond, and Miss Barlow. There are three choruses, one of pirates, one of *General Stanley's* daughters, and one of policemen, led by *Edward*, their sergeant, a part very well acted and sung by Mr. F. Clifton. The choruses are all very good, the policemen being thoroughly bouffe, the pirates most comically piratical, and *Major Stanley's* daughters everything that the daughters of a general officer should be. The policemen nerving themselves for their meeting with the pirates by winding a call upon their clubs, and protesting against being sent to "death and glory" by the soprano, are as good as any of the numerous gendarmes scenes which French opera has made so familiar. There are, however, many broad distinctions between the operas of Gilbert and Sullivan and those of the Offenbachian school. The music of the English school is not so light, the burlesque of operatic forms is a more essential part of it, and there is nothing indecent. There is no doubt that the impropriety and license of French opera give it a range that is fortunately impossible in English. We always miss, however, in any English opera, the universal French dramatic facility, which no amount of drilling can instil into Anglo-Saxon blood, and the absence of which always tends to make the performance of English choruses more or less depressing. Mr. Gilbert has succeeded better in this respect than we had supposed it possible. *General Stanley's* daughters withdrawing to the sea-shore, for instance, to talk about the weather for the purpose of leaving *Mabel* and *Frederic* to themselves, was thoroughly good. As to dresses and scenery, the "Pirates of Penzance" is brought out with great taste. We have left ourselves no space to speak of the music, which is of Mr. Sullivan's best. There is not a great number of taking airs, as in "Pinafore," but there are some extremely beautiful songs and choruses, which need to be heard several times for their excellence to be appreciated.

—Mr. Bartley Campbell's "Fairfax," at the Park Theatre, is a genuine success, though in some respects it is an absurd play. The scene is laid in what Mr. Campbell likes to call the "sunny South," and very sunny it is to judge by the view of the "Fairfax" estate displayed in the first act. This estate is one of those fine old properties once so common in Florida, where Southern gentlemen of ancient family used to be found living before the war, surrounded by their loving slaves and lapped in luxury. At the head of this establishment is *Mr. Fairfax* himself, a widower in the prime of life and in love with *Miss Clarke*, who is really *Mrs. Marrigold*. In the prologue *Mrs. Marrigold* has very properly refused to surrender to her drunken husband (who has reduced her and her dying child to extreme misery) a bank-note given her for her child's benefit by the benevolent (though in manner cynical) *Dr. Gaylord*. In the struggle which ensues her husband's pistol goes off and kills him. A tramp has witnessed the act and resolves to profit by it. *Fairfax*, of course, falls in love with *Miss Clarke*, who has come into his family as his child's governess, and wishes to marry her; but she is afraid to confess her deception and her past history, though why she is ashamed of it or remorseful about it is not so apparent as a clever dramatist like Mr. Campbell ought to have made it. The situation is made worse by the reappearance of the tramp, who, for purposes of his own, denounces her as a murderess. In the end, of course, true love is triumphant, the tramp meets his deserts, and all ends happily. *Dr. Gaylord*, young *Wagstaff*, and *Diana Dorsie* do the high comedy of the play, and several slaves and the tramp the low comedy. There is nothing very new in it, but it is well put together, and the interest is sustained to the end. The acting of Miss Cowell as *Diana* is unusually good in its way; the part is that of a coquettish but warm-hearted girl, and Miss Cowell makes the most of it. This actress, unless we are greatly mistaken, is steadily improving with every part she takes; what she chiefly needs at present is greater scope for her talents. Mr. Whiting, who takes the part of *Fairfax*, acts with a good deal of spirit, and Mr. Robinson as *Dr. Gaylord* showed all the qualities which make him so reliable a comedian. Mr. Ferguson did the tramp as well as a tramp could be done. The thrilling part of *Mrs. Marrigold* is taken by Mrs. Booth, who has a hold upon New York audiences which defies criticism.

—Among the various essays in applied sanitary science in progress under the auspices of the National Board of Health, not the least important is the investigation of the Memphis water supply. To most minds the phrase "water analysis" conjures up the idea of a tabulated statement of the numerous saline matters which exist in the water in a state

of solution. But of late years all this has been changed. It is true that a tabular statement of this sort is still retained in the case of mineral waters; but in the waters used in our domestic economy the analyst cares little for the salines, unless they exist in unwholesome quantity. To estimate the amount of the subtle and complex organic matters which may be present; to determine whether these are of animal or vegetable derivation; whether they came from a distance, and are more or less changed in quality, or from near by, and retain all their original virulence—these, rather than the former, are the points which engross the attention of the sanitarian. Analyses of this character are by no means common in this country. In England the public analyst is required to be able to conduct such experiments, and many waters, like those of the London water companies, are kept under constant supervision. It is probable, however, that even these examinations will be surpassed in thoroughness and extent by the Memphis work of the analyst detailed by the National Board, Assistant-Surgeon Charles Smart, U.S.A. More than five hundred examinations had been completed at the date of the last report, and as the several processes have been impartially employed the results bid fair to be instructive in more senses than one.

—The late clerical and scholastic quarrel in Belgium and the publication of the Pope's despatches have been eagerly seized upon by the French Liberal journals as weapons in their war against clericalism. One of them having shown from the documents that there was a contradiction between the policy of Leo XIII. and that of his two predecessors, Pius IX. and Gregory XVI., and that the present Pope has been counselling moderation to the Belgian clergy and manifesting his disapprobation of their violence, and that the Belgian clergy have paid hardly any attention to his advice, concludes by wittily remarking that at present an infallible Pope has less authority in the affairs of the Church than popes who were not infallible.

—A committee, of which Victor Hugo and Louis Blanc are honorary presidents, has commenced the publication of a weekly journal, *La Semaine Anticlérica'e*, designed to combat not religion but clericalism, "which, by its ignorance, its gross superstitions, its despotic pretensions, is the enemy of all religious sentiment." It promises to keep its readers informed of the "marvellous movement now going on in France" in promotion of popular education by lay schools, popular libraries, public readings, clubs of the "Ligue de l'Enseignement," and the like. *Polybiblion*, which is strongly clerical, calls this a sign of the times, and gives as another sign the publication of a "Bibliographie clérico-galante; ouvrages galants ou singuliers sur l'amour, les femmes, etc., écrits par des prêtres, religieux, religieuses, évêques, cardinaux, et papes." That a briefly annotated list of such titles should fill 206 pages is a disgrace to the Church on which *Polybiblion* has nothing to say, but it can at least ask whether the remarkably quick sale of works of this class is a sign of the "intellectual and moral restoration" of which the Republican journals are boasting. The latter may reply by suggesting that the edition would have disappeared even more quickly under the Empire.

PATTISON'S MILTON.*

JOHN BRIGHT once asked a friend who was the greatest of Englishmen; and, the friend hesitating, answered his own question by saying, "Milton, because he, above all others, combined the greatness of the writer with the greatness of the citizen." Professor Masson, in his 'Life and Times of Milton,' has embodied the conception of the character indicated by this remark; but he has run into the extreme of incorporating a complete history of the Revolution with the biography of Milton, so that the historical portion of the work overlays instead of illuminating the biographical, and the chapters devoted specially to the life seem to the reader interpolations, and not always welcome interpolations, in a profoundly interesting account of the times. But now comes a biographer in whose eyes the life of Milton the citizen is a mere "episode," and not only a mere episode, but a lamentable and humiliating episode, in the life of Milton the poet. "Milton's life," says Mr. Pattison, "is a drama in three acts. The first discovers him in the calm and peaceful retirement of Horton, of which 'L'Allegro,' 'Il Penseroso,' and 'Lycidas' are the expression. In the second act he is breathing the foul and heated atmosphere of party passion and religious hate, generating the lurid fires which glare in the battailous canticles of his prose pamphlets. The three great poems—'Paradise Lost,' 'Paradise Regained,' and 'Samson Agonistes'—are the utterance of his final period of solitary and Promethean grandeur, when, blind, destitute, friendless, he testified of righteousness, temperance, and judgment to come, alone before a fallen world." As to the struggle to which Milton, with Cromwell, Vane, Pym, Hampden, Selden, and Chillingworth, gave his life, it is, in the eyes of his present biographer, an ignoble "fray," a "biblical brawl," and its fruits in the way of theological discussion are nothing but "garbage." To write his 'Defence of the English People' Milton deliberately sacrificed his eyesight, his doctor having warned him that he would lose his one remaining eye if he persisted in using it for book work. "The choice lay before me," he writes, "between dereliction of a supreme duty and loss of eyesight. In such a case I could not listen to the physician, not if Æsculapius himself had spoken from his sanctuary; I could not but obey that inward monitor, I know not what, that spoke to me from heaven. I considered with myself that many had purchased less good with worse ill, as they who gave their lives to reap only glory, and I thereupon concluded to employ the little remaining eyesight I was to enjoy in doing this, the greatest service to the common weal it was in my power to render." Mr. Pattison has quoted this passage, and no doubt he silently appreciates the heroism which breathes through it; but the "supreme duty" of which it speaks appears to him only a "prostitution of faculties" and a "poor delusion." Milton, he thinks, ought to have kept entirely aloof from the brawl and remained quiet either in the intellectual circles of Italy or in the delicious seclusion of his library at Horton, leaving liberty, truth, and righteousness to drown or be saved from drowning by other hands than his. In "plunging into the fray" the poet miserably derogated from his superior position as a literary man, and the result was a dead loss to him and to the world. We are sure that we do not state Mr. Pattison's view more strongly than it is stated in his own pages.

The views of all of us, including Professor Masson, on such a question are sure to be more or less idiosyncratic, and those of the present biographer have not escaped the general liability. They seem to us, at least, to represent a mood prevalent just now among eminent men, the literary class in England, particularly at the universities. These men have been tossed on the waves of Ritualism, tossed on the waves of the reaction from Ritualism; some of them have been personally battered in both controversies; they have attained no certainty, but rather arrived at the conclusion that no certainty is attainable; they are weary and disgusted; such of them as have been enthusiasts in politics have been stripped of their illusions in that line also, and have fallen back on the conviction that everything must be left to evolve itself, and that there is nothing to be done. They have withdrawn into the sanctuary of critical learning and serene art, abjuring all theology and politics, and, above all, abjuring controversy of all kinds as utterly vulgar and degrading, though, as might be expected, they are sometimes controversial and even rather tart in an indirect way, and without being conscious of it themselves. Mr. Pattison's air when he comes into contact with the politics or theology of Milton's days is like that of a very seasick passenger at the sight of a pork-chop. Nor does he fail to reflect the Necessarianism of his circle. "That in selecting a scriptural subject," he says, "Milton was not, in fact, exercising any choice, but was determined by his circumstances, is only what must be said of all choosing." Criticism fastidiously erudite, a study of art religiously and almost mystically profound, are fruits of this intellectual seclusion of chosen spirits from the coarse and ruffling world for which that world has reason to be grateful. It is not likely that Milton would have chosen a writer of this school as his biographer; but few men would choose their own biographers well.

Milton has, at all events, found in Mr. Pattison a biographer whose narrative is throughout extremely pleasant, interesting, and piquant; the piquancy being enhanced for those who have the key to certain sly hits, such as that at "the peculiar form of credulity which makes perverts (to Roman Catholicism) think that every one is about to follow their example," which carries us back to the time when the head of Tractarianism, having gone over to Rome, was waiting anxiously, but in vain, for its tail to join it. The facts had already been collected by the diligence of Professor Masson, but Mr. Pattison uses them in a style which places beyond a doubt his own familiarity with the subject. Through the moral judgments there runs, as we think, and as we should have expected, a somewhat exaggerated notion of the privileges of intellect and of the value of literary compared with other objects; but with this qualification the reflections will probably be thought sensible and sound. The unfortunate relations between Milton and his first wife are treated, as we think all readers will say, at once with delicacy and justice. The literary criticisms are of a high order, such as only comprehensive learning combined

* 'English Men of Letters Edited by John Morley. Milton. By Mark Pattison, B.D., Rector of Lincoln College, Oxford.' London: Macmillan. New York: Harper & Bros. 1879.

with trained taste could produce; whether you entirely enter into all of them or not (and criticism has not yet been reduced to a certain rule), you cannot fail to gain from them increase of insight and enjoyment. They are often expressed in language of great beauty:

"The rapid purification of Milton's taste will be best perceived by comparing 'L'Allegro' and 'Il Penseroso,' of uncertain date but written after 1632, with the 'Ode on the Nativity,' written 1629. The Ode, notwithstanding its foretaste of Milton's grandeur, abounds in frigid conceits from which the two later pieces are free. The Ode is frosty, as written in winter within the four walls of a college-chamber. The two idyls breathe the free air of spring and summer and of the fields round Horton. They are thoroughly naturalistic; the choicest expression our language has yet found of the first charm of country life, not as that life is lived by the peasant, but as it is felt by a young and lettered student, issuing at early dawn or at sunset into the fields from his chamber and his books. All rural sights and sounds and smells are here blended in that ineffable combination which once or twice perhaps in our lives has saluted our young senses, before their perceptions were blunted by alcohol, by lust or ambition, or diluted by the social distractions of great cities."

This will not be found to be a *purpureus pannus*. Nor does it much detract from the grace of the work that of the "asyntactic disorder" of which Mr. Pattison accuses Milton's prose, examples not a few may be found in his own. Grammatical irregularities in a really good writer, as Mr. Pattison undoubtedly is, only prove that the mind is more intent on the matter than on the form.

'Paradise Lost' is the subject of a learned, luminous, and to us very instructive dissertation. It is truly said that of the adverse criticism which we meet with on the poem "much resolves itself into a refusal on the part of the critic to make that initial abandonment to the conditions which the poet demands: a determination to insist that his heaven, peopled with deities, dominations, principalities, and powers, shall have the same material laws which govern our planetary system." There is one criticism, however, which cannot be so resolved, and on which, as it appears to us the most serious of all, we should have liked very much to hear Mr. Pattison. It is said that Lord Thurlow and another lawyer were crossing Hounslow Heath in a post-chaise when a tremendous thunder-storm came on; that the other lawyer said that it reminded him of the battle in 'Paradise Lost' between the devil and the angels; and that Thurlow roared, with a blasphemous oath, "Yes, and I wish the devil had won." Persons desirous of sustaining the religious reputation of the legal profession add that his companion jumped out of the chaise in the rain and ran away over the heath. For our part, we have never found nearly so much difficulty in any of the incongruities connected with the relations between spirit and matter, or any confusions of the Copernican with the Ptolemaic system, as at the constant wrenching of our moral sympathies which the poet demands for the Powers of Good, but which his own delineation of Satan, as a hero waging a Promethean war with Omnipotence, compels us to give to the Powers of Evil. Perhaps a word or two might have been said about the relations of 'Paradise Lost' to other "epics." It manifestly belongs not to the same class of poems as the 'Iliad' and the 'Odyssey,' or even the 'Æneid.' Dobson's Latin translation of it is about the greatest feat ever performed in modern Latin verse, and it shows by a crucial experiment how little Milton really has in common with Virgil. 'Paradise Lost' seems to us far more akin to the Greek tragedy than to the Homeric poems or the 'Æneid.' In the form of a Greek drama it was first conceived. Its verse is the counterpart of the Greek iambic, not of the Greek or Latin hexameter. Had the laborious Dobson turned it into Greek iambics instead of turning it into Latin hexameters, we suspect the real affinity would have appeared.

Looking upon the life of Milton the politician merely as a disastrous and humiliating episode in the life of Milton the poet, Mr. Pattison cannot be expected to entertain the idea that the poem is in any sense the work of the politician. Yet we cannot help thinking that the tension and elevation which Milton's nature had undergone in the mighty struggle, together with the heroic dedication of his faculties to the most serious objects, must have had not a little to do both with the final choice of his subject and with the tone of his poem. "The great Puritan epic" could hardly have been written by any one but a militant Puritan. Had Milton abjured the service of his cause, as his biographer would have had him do, he might have given us an Arthurian romance or some other poem of amusement. We even think it not impossible that he might have never produced a great poem at all, but have let life slip away in elaborate preparation without being able to fix upon a theme or brace himself to the effort of composition. If Milton's participation in a political battle fought to save at once the political and the spiritual life of England was degrading, Dante's participation in the faction fight between the Guelphs and Ghibellines must have been still more so; yet if Dante had been a mere man of leisure could he have written the 'Divina Commedia'? Who are these sublime artists in poetry that are pinnacled so high above the "frays" and "brawls" of vulgar humanity? The best of them, we suppose (writers for the stage being out of the question), is Goethe. Shelley, Wordsworth, and Byron were all distinctly poets of the Revolution or of the Counter-Revolution, and if you could remove from them the political element, you would rob them of half their force and interest. The great growths of poetry have coincided with the great bursts of national life, and the great bursts of national life have hitherto been generally periods of controversy and struggle. "He that loseth his life shall preserve it." Milton was ready to lose his literary life by sacrificing the remains of his eyesight to a cause which, upon the whole, humanity has accepted as its own; and it was preserved to him in a work which will never die. Mr. Pattison points to a short poem written by Milton when his pen was chiefly employed in serving the Commonwealth as indication that Milton "did not inwardly forfeit the peace which passeth all understanding." Why should a man forfeit that peace when he is doing with his whole soul that which he conscientiously believes to be his highest duty?

Over Milton's pamphlets Mr. Pattison can of course only wring his hands. He is at liberty to wring his hands as much as he pleases over the personalities which sullied the controversy with Salmasius; but these are a small part of the matter, particularly when they are viewed in connection with the habits of a time which was at once much rougher in phrase, though perhaps not less malicious, than ours, and given to servile imitation of Greek and Latin oratory. To point his moral more keenly Mr. Pattison denies that Milton was ever effective as a political writer. Yet the Council of State, who can have looked to nothing but effectiveness, and were pretty good judges of it, specially invited Milton to answer 'Eikon Basilike' and to plead the cause of the Regicide Republic against Salmasius in the court of European opinion. Mr. Pattison himself (p. 125) allows that on the Continent Milton was renowned as the answerer of Salmasius and the vindicator of liberty; and he proceeds to quote the statement of Milton's nephew that learned foreigners could not leave London without seeing his uncle. But the biographer has evidently laid down beforehand in his own mind general laws which are fatal to all pamphlets as pamphlets, without consideration of their particular merits. "There are," he says, "examples of thought having been influenced by books. But such books have been scientific, not rhetorical." If it were not rude to contradict, we should have said that the influence exercised in politics by scientific treatises had been as nothing in the aggregate compared with that exercised by pamphlets, speeches, and, in later times, by the newspaper press. What does Mr. Pattison say to Burke's 'Reflections on the French Revolution,' to Paine's 'Common Sense,' to the tracts written by Halifax and Defoe at the time of the Revolution? "Neither thought nor action" is his epigrammatic condemnation of Milton's political writings; but an appeal which stirs men to action is surely both. Again, of 'Eikonoklastes' we are told that "it is, like *all answers*, worthless as a book." Bentley's 'Phalaris' is an answer; Demosthenes' 'De Corona' is an answer. As a rule, no doubt, the form is a bad one; but an answer may embody principles and knowledge, as well as show literary skill, reasoning power, and courteous self-control, which, after all, are not worthless, though they are worth far less than some other things. These discussions, so odious and contemptible in Mr. Pattison's eyes, what are they but the processes of thought through which a nation or humanity works its way to political truth? Even books scientific in form, such as Hobbes's 'Leviathan' or Harrington's 'Oceana,' are but registered results of a long discussion. 'Eikon Basilike' was doing infinite mischief to the cause of the Commonwealth; and how could it have been met except by a critical reply? 'Eikonoklastes' was thought, though it was not exact science; and so far as it told, it was action, though it was not a pike or a musket.

This portion of Mr. Pattison's work is thickly sown with aphorisms to which no one who does not share his special mood can without qualification assent. "No good man can, with impunity, addict himself to party; and the best men will suffer most because their conviction of the goodness of their cause is deeper. But when one with the sensibility of a poet throws himself into the excitements of a struggle he is certain to lose his balance. The endowment of feeling and imagination which qualifies him to be the ideal interpreter of life, unfits him for participation in that real life through the manœuvres and compromises of which reason is the only guide, and where imagination is as much misplaced as it would be in

a game of chess." In this there is an element of truth, but there is also something to which we are inclined to demur. If by party is meant mere faction, plainly no man can addict himself to it with impunity. But when the English nation was struggling in the grasp of a court and a prelacy which sought to reduce it to the level of Spain, no Englishman, as it seems to us, could with impunity perch himself aloft in a palace of art while peasants were shedding their blood to make him free. Especially do we question the soundness of the sentiment expressed in the last clause. Why is real life to be abandoned by every man of feeling and imagination and given over to manœuvres and compromises? Is not this the sentiment of the monkish ascetic coming back to us in another form? Cromwell, Vane, Hampden, and Pym were not mere manœuvrers and compromisers; they had plenty of feeling and imagination, though in them these qualities gave birth not to poetry, but to high political or religious aspirations and grand social ideals. The theory of Milton's biographer is that an active interest in public affairs is fatal to excellence in other kinds of literature or in art; and this theory seems to be confuted as signally as possible by the facts of Milton's life.

In the same spirit Mr. Pattison continually represents the end of Milton's public life as "the irretrievable discomfiture of all his hopes, aims, and aspirations"; his labor as "being swept away without a trace of it being left"; and the latter part of his life as utter "wretchedness." The failure of selfish schemes often makes men wretched. The failure of unselfish aspirations may make a man sad, but can never make him wretched; and Milton was not wretched when he was writing 'Paradise Lost.' He would not have been wretched even if the discomfiture of his hopes for the Commonwealth had been as final and as irretrievable as his biographer supposes. But Milton knew that, though disastrous, it was not final or irretrievable. He had implicit confidence in the indestructibility of moral force, and he "bated no jot of heart or hope." He would see the limits of the reaction and know that, though great and calamitous in proportion to the errors of the Republican party, it had not changed in a day the character and fundamental tendencies of the nation. He would note that the Star Chamber, the Court of High Commission, the Council of the North, the legislative functions once usurped by the Privy Council, were not restored, and that no attempt was made to govern without a parliament. He found himself, the defender of regicide, not free from peril, indeed, yet protected by public opinion, while, in general, narrow bounds were set to the bloodthirsty vengeance of the Cavaliers. He lived to witness the actual turn of the tide. Six years before his death the Triple Alliance was formed, and in the year of his death the Cabal Ministry fell. At worst, his case would have been that of a soldier killed in an unfortunate crisis of a battle which in the end was won; but he fell, if not with the shout of victory in his ears, with the inspiriting signs of a general advance around him. If we take remoter ages into our view, the triumph of Milton is still more manifest. The cause to which he gave his life and his genius is for ever exalted and dignified by his name. Mr. Pattison, like other culturists, has a strong antipathy to the Puritans and their cause; but his antipathy is shattered on the august figure of John Milton.

The Reign of the Stoics. History, Religion, Maxims of Self-Control, Self-Culture, Benevolence, Justice, Philosophy. With citations of authors quoted from on each page. By Frederic May Holland. (New York: C. P. Somerby.)—This long and rather confused title indicates at once the strength and the weakness of Mr. Holland's volume. It is on the whole the best anthology or *florilegium* of the circle of Stoic authors; it is laborious, faithful, and generally accurate and exhaustive; it contains much material that is valuable and interesting; yet it is impossible to deny that it is a dry book, after all, and far less attractive than the original volumes from which it draws. The racy colloquial versions of Seneca by Sir Roger l'Estrange and of Marcus Aurelius by Jeremy Collier give to their respective meditations an air of sympathetic humanity such as is less strong in these classified selections. Those older books are, to be sure, so loosely translated that they must rather be called paraphrases than versions; and they are now rare—though not quite so rare as Mr. Holland implies—so that we undoubtedly need just such a work as this, so far as its citations are concerned. It is always refreshing to read how Marcus Aurelius declares it "peculiarly human to love even those who do wrong"; and Seneca lays down the rule, "Him who is provoked at you attack with kindnesses, and his wrath will cease"; and Epictetus asserts that the true cynic philosopher "loves those who beat him, and is a father and a brother toward all men." There is hardly a page of the volume which does not show some noble maxim, and the editor seems as a general rule to have carefully verified his citations and revised the translations. We should often dissent from his rendering of the originals, in dealing with which he often takes what we should consider undue liberties in condensing or modifying. This is never done in the interest of any especial opinions, however; and it is, moreover, hard to find two people who agree in their canons of translation. But we should say, for instance, that Epictetus's theory is not accurately represented by translating *τὴν μὲν ὄρεξιν ἦζκεν ἐξ αὐτοῦ εἰς ἅπαν* (Dissert. i. 4, 1) by the languid "keeps down his desires," whereas the vigorous Greek phrase implies a complete and utter mastery of them, even to extinction. It is not worth while, however, to dwell on details like this when the general spirit and execution of a work are so excellent.

When we come to the original portion of the book we must admit it to give, as we have said, an effect of dryness. It is exceedingly condensed, and with all its laborious intention does not put the Stoics before us as Lecky or Farrar would have put them. The book opens with a chapter on their history and ends with one on their philosophy, almost all the rest being made up of citations. We should, of course, agree with the author in his conclusion that Stoicism "was not so much a philosophy as a religion," or at least the practical side of a religion. But Mr. Holland has to strain a point, we should say, in order to bring the Stoic views into line with the utilitarianism of Mill, or to class them with what the *Westminster Review* calls "the derivative school of moralists" (p. 209). In order to find antagonism between them and those whom he calls "the extreme idealists, like Plato and Parker," he is obliged to assume that these idealists denied the possibility of educating conscience or teaching virtue. For this purpose he has to lay very undue stress, we should say, on the closing passage of Plato's 'Meno' and on a youthful expression of opinion by Theodore Parker; and he does not recognize the truth that it is scarcely possible for one who writes or speaks much to avoid conceding at last that conscience is something capable of education. As to the Stoics, it is quite easy to quote passages showing that they regarded virtue as an instinct akin to physical instincts; and the close connection which they alleged between physics and ethics was a part of this same view. But, after all, the practical Roman temperament entered into them all, whether they wrote in Greek or Latin. Their great leader Chrysippus had asserted against Aristotle that the place for the philosopher was not in solitude, but in the world; and Musonius had taught that philosophy was merely the pursuit of a virtuous life—*φιλοσοφία καλοκαγαθίας ἐστὶν ἐπιτήδευσις*. Epictetus and the rest simply worked this out into a series of maxims, so clearly cut that they are of permanent value through all changes of metaphysical method. Mr. Holland's book is of great use as a portable collection of these maxims, but beyond this it cannot be said to add much to literature. He would probably have done himself more justice had he allowed himself a larger canvas; and it is very possible that he may yet expand his essay. We ought not to close without calling attention to the thorough way in which the notes and index are prepared.

History of American Politics. By Alexander Johnston, A.M. Handbook Series. (New York: Henry Holt & Co. 1879.)—This little book is in reality the history of American political parties from the foundation of the Government down to the accession of Mr. Hayes to the Presidency. It is rather an extract of history than history itself—that is, everything which is not absolutely essential to a knowledge of the conditions under which the various parties came into existence, and of the circumstances to which they owed their continuance and power and decline, is omitted. It would not be possible to get at the facts which are here accumulated, arranged in the most orderly manner, in a very clear and absolutely colorless narrative, in a small duodecimo, without turning over at least a dozen larger works. Not the least of its merits, too, is that it brings out clearly and prominently the fact which is so constantly obscured in the writing and speaking of all our political contests, and which it is so important that young men should bear in mind, that party differences are not due, as the newspapers and stump-orators would have us believe, simply to the wickedness of one part of the community and the goodness of another. They have roots in important facts of the national history, and are always, in the long run, the expression of feelings and opinions which, however erroneous, are entitled to respectful examination as containing a greater or less amount of the national force and of the national traditions. Whether as a preface to a more extended course of reading in American history or as a book of reference for the political editor or orator, we cannot commend Mr. Johnston's little book too highly. To its freedom from partisanship we have already alluded.

Cinq mois chez les Français d'Amérique. Par H. de Lamothe. (Paris: Hachette et Cie; New York: F. W. Christern. 1879.)—Lord Dufferin is quoted by the author of this book as saying: "Je ne pense pas que l'homogénéité ethnologique soit un avantage sans mélange pour un pays . . . je considère qu'il est heureux pour le Canada que sa prospérité soit basée sur la co-opération de races différentes, . . . et ce serait une grande maladresse de nos hommes d'état que de vouloir faire disparaître cette variété de tendances." The political wisdom of the last part of this opinion, as applied to Canada under its present conditions, may readily be accepted, since the opposite policy has met with uniform and complete failure; but the soundness of the general proposition may well be doubted, as being opposed to the whole course of history with the solitary exception of Austria-Hungary—an experiment which has yet to stand the crucial test of a great war. This view is, however, evidently in accordance with the strong bias of the author, who—regretting that the lack of foresight of the rulers of France in the seventeenth century prevented the planting of a hundred thousand colonists in America, which "would have assured the domination of this continent to our [French] race and to our language"—now desires that the French people of Canada should develop their own language and their own ideas, to the exclusion of the language and customs of the mother country to which Canada is nominally subject. He therefore starts out to view Canada as the offshoot of France, and travels through the Province of Quebec, up the St. Lawrence, across Ontario, through the upper lakes, along the portages and streams of the "Dawson Route" to the Lake of the Woods, and thence to Manitoba, everywhere observing carefully the habits and mode of life of the French Canadians and half-breeds, and studying incidentally the general political conditions of the Canadian Confederation. The narrative of what he saw and his comments thereon make up a very readable and instructive book. Among other portions we commend the historical summary of the course of political events which led to the confederation, which, although somewhat brief, is extremely lucid; as is also the account of the half-breed troubles of the Red River country. The personal incidents of travel are not introduced in an obtrusive manner, and we are thus saved from the tedium of so many of the English books of travel. M. de Lamothe has striven to give us a fair picture of the French-speaking portion of the community, and the data as to their present political condition and future prospects; and he has succeeded very well.

Of the three and a half millions of people inhabiting Canada in 1871, 30 per cent. were French, 25 per cent. Irish, 20 per cent. English, 15 per cent. Scotch, and 6 per cent. German. While the united British therefore constitute 60 per cent., the pure French element is nearly one-third of the population, and is larger than any other distinct nationality. Nine-tenths of it resides in the Province of Quebec—the old Lower Canada—and in spite of English forms of law and the efforts of various English governors to amalgamate this element, it has for nearly three centuries steadily maintained in remarkable purity its own language and its own family customs. The nature of such a people is most interesting to us. So long as Canada remains in its present condition, or should it develop into an independent nation, it must ever remain a duplex government, in which either race may strive for the mastery. Should it, on the other hand, become part of the United States, the mere million of Frenchmen will, as the author clearly points out, be absorbed wholly and completely in a single generation into the fifty millions of Americans, who have shown remarkable powers of assimilation, and whose nationality becomes every year more and more distinctive, though its language remains that of England.

On only one point is the author completely at fault—that is, in regard to the settlement of the various boundary lines of the United States. He says:

"Mais il faut le reconnaître, la diplomatie anglaise, si clairvoyante et en général si heureuse toutes les fois qu'elle a eu pour adversaires la France, l'Espagne et les autres puissances coloniales de l'Europe, a rencontré plus fin qu'elle par delà l'Atlantique. Pour arracher pacifiquement à leur ancienne métropole quelque lambeau de territoire, les Américains n'ont point reculé devant l'emploi de ces subterfuges peu délicats que les financiers '*smart*,' les malins de la bourse de Wall Street, ont rendus fameux sous le nom de *Yankee tricks*—ce qui pourrait à la rigeur se traduire en français par l'expression faubourienne de 'true Américain.'"

In support of this he speaks of the treaty signed at Versailles in 1782 (*sic*), talks of Senator Webster haranguing the Senate in secret session to ratify the Ashburton Treaty before certain concealed maps could be discovered (Webster being, in fact, at that time Secretary of State); says the naming of the *north*western point of the Lake of the Woods in the treaty of Versailles was a mere *lapsus* for *south*western point and was so acknowledged by every one, whereas, in fact, no such claim was ever advanced by the English, who reaffirmed *north*western point in the convention of 1818, and immediately sent commissioners to mark that point on the ground; and makes various other assertions equally opposed to facts and common sense, finally culminating in the statement that the Oregon boundary question—about which two great nations came to the very verge of war—was finally settled by the prime minister of England withdrawing his claim to the Columbia River on receipt of a letter from his brother, an officer of the navy cruising on the Pacific coast, who, having had bad luck in fishing in the river, wrote home that the country was not worth contending for (!). This may do very well for the gossip of a deputy-surveyor's camp, where it seems to have been picked up, but it is out of place in a book professing to impart serious information.

Morocco: Its People and Places. By Edmondo de Amicis. Translated by C. Rollin-Tilton. (New York: Cassell, Petter, Galpin & Co.)—Signor de Amicis was one of several persons selected to accompany the Italian embassy to Fez some years ago, and this book is the result of his journey. It is a quarto of some four hundred pages, excellently printed and abundantly illustrated with woodcuts from drawings made by Signor Biseo and others of the Italian party. It is thus a gift-book appropriate to the season; but it hardly need be said that it is something more than a holiday volume—the association of such a subject as Morocco with such a writer as Signor de Amicis suggests at once a book that is both charming and instructive. It is what one would infer from his 'Constantinople' and his 'Studies of Paris,' a narrative of the same value as a report by an expert statistician, and possessing the interest to be expected of a brilliant and vivid series of sketches from nature in a romantic and picturesque country. The translation is excellent in the main, and the illustrations are spirited, and, besides adding to the attractiveness of the book, really do service as illustrations of the text. At the end the author exclaims: "We had scarcely put our foot upon the deck of the ship when, oh! how distant in space and time seemed all that phantasmagoria of pashas, and negroes, and tents, and mosques, and battlemented towers. It was not a country, it was an entire world that in a moment vanished from our eyes, and a world that we should never see again." We cannot better express the merit of the book than by saying that it is just this impression of Morocco, its people and places, that it leaves upon the mind—an impression that is very distinct of something that is very distant.

Causerie. From the Boston *Transcript.* (Boston: Roberts Brothers. 1880.)—The Boston *Transcript* has had a column in which the editor, signing himself "Causeur," chatted familiarly and fragmentarily with its readers on all manner of subjects, and from this the contents of this little volume have been selected. The book contains something over two hundred 16mo pages, and the paragraphs of which it is composed average, we should say, one to a page or two pages. Its conditions thus prevent elaborate discussions of profound questions, and its aim is entertainment spiced with sound sense and a little didacticism now and then, such as is no doubt good for and appreciated by "Causeur's" habitual readers. Some of these write him anonymous notes, seeking advice of an intimate nature or asking for a comprehensive deliverance upon some question of ethics or manners, and he courteously complies. Some of the paragraphs have the air of maxims embodying trite but often neglected truths; others contain anecdotes of a humorous character, old and new; others preach little "week-day sermons," as Thackeray called his 'Roundabout Papers.' One reprobates the bent of the press for spreading "before its readers in countless homes the details of crime"; another points out that "virtue is often a negative quality," and that the strength of temptation is its true measure; still another contains a short essay on jealousy, and so on. Save several of the anecdotes, most of the 'Causerie' has a familiar sound, and its adaptability for reproduction in the permanent shape of a bound volume is not as clear as the propriety of its first appearance. *Sed hæ nugæ sunt*—both the chats themselves and any discussion as to their proper sphere. They are at least without pretensions of any kind, and are readable enough for an idle hour.

Primitive Manners and Customs. By James A. Farrer. (New York: Henry Holt & Co. 1879.)—Mr. Farrer's plan is "rather to illustrate than to exhaust the many interesting problems connected with savage life," and in studying his predecessors he has sought "not simply to recapitulate their conclusions," but "rather to aim at such results as the evidence

forced upon him, independently as far as possible, of existing theories or of the authority upon which they rest." Finally, he says: "Should he have succeeded in making any one think better than before, with more interest and sympathy, of these outcasts of the world whom we designate as savage, something at least will have been done to claim for them a kindlier treatment and respect than in popular estimation they either deserve or obtain" (Introduction, p. xxiii.) If we couple the above with the title of Mr. Farrer's work, namely, '*Primitive* Manners and Customs,' it becomes evident that to him savagery appears to be the primitive condition of mankind. But, since he admits of a progress from this state into the higher one of civilization, we are entitled to look for a definite conception, on his part, of what savagery really is. Such a conception he chooses to withhold, if indeed he possess it at all. For, what illustrations does he give us in the shape of groups of mankind regarded by him as savages? (Introd., p. vi.): The Koosa Kaffirs. (Id., p. vii.): "Many of the beliefs attributed to savages are no fair test of their general reasoning capabilities. . . . *When Pelopidas, on the eve of the battle of Leuctra, . . .* there were not wanting soldiers, *even in that army of Bœotians.*" (Id., p. x.): "Strange contradictions abound in savage life, extremes of barbarity sometimes co-existing with habits of some refinement"; by way of example, the Ahts, the Niam-Niam, and (p. xi.) the *Aztecs!* These indications are amply sufficient to show that the author, while he may have a thorough knowledge of savage *traits of character* in any phase of human life and condition, still fails to present a characteristic of savagery as a general stage of human development.

Mr. Farrer's lack of knowledge is most conspicuous in everything concerning the aborigines of America. This is manifested in the chapter on "Savage Political Life," and again in "Early Wedding Customs." It is indeed singular, and not at all gratifying, to notice how persistently foreign students ignore the peculiar organization common to all native American clusters, and that system of relationship out of which their institutions have all sprung. The consequence is that their critical judgment deserts them completely when the subject of American ethnology and archæology is touched. The chapter on "Proverbs" is full of interest, not merely in regard to savage sayings, but especially to civilized ones.

The Alpenstock. A Book about the Alps and Alpine Adventure. Edited by William H. Rideing. (New York: D. Appleton & Co. 1880. 16mo, pp. 203.)—Mr. Rideing's book is a compilation from the narratives of Whymper, Tyndall, Foster, and other Alpine climbers, including the recent account (in *Lippincott's Magazine*) of Mr. C. P. Howard's climb of the Matterhorn. With this material it would be hard to make a dull book, and this is an interesting one. Too little care, however, has been used in the editing of the preliminary chapter on "The Alps in General," as will sufficiently appear from Mr. Rideing's sentence descriptive of a glacier (p. 16): "Constantly pressed forward by an accumulation of snow and ice behind it, it is impelled downward with irresistible force—trees, rocks, and houses being carried forward by it—until it reaches a point where the sun's rays are sufficiently fervid to melt the mass, when it forms a river." With the prefatory chapters of Baedeker's "Suisse" at hand, a concise and intelligent account of "the Alps in general" would seem the easiest of things to make; but it is not to the American makers of handbooks that we can hopefully look for a concise, intelligent, and proportionate account of a subject.

*** Publishers will confer a favor by always marking the price of their books on the wrapper.*

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Almanach de Gotha, 1880	(B. Westermann & Co.)	
De Amicis (E.), Morocco: Its People and Places	(Cassell, Petter & Galpin)	$7 50

Important New Educational Works.

FRENCH.

Bellows (John), French and English Dictionary, for the Pocket. French-and-English and English-and-French. Both divisions on the same page. 32mo, roan tuck, $3; morocco tuck, $3 65.

CYCLOPÆDIA.

Champlin (John D., Jr.), The Young Folks' Cyclopædia of Common Things. Copiously illustrated. 8vo, $3.

HISTORY.

Freeman's Historical Course.

Thompson (Edith), History of England. New Edition, Revised and Enlarged, with six maps. 16mo, $1 40.

Yonge (C. M.), History of France. With twelve maps. 16mo, $1.

PHYSICS.

Guthrie (Frederick), Practical Physics. Molecular Physics and Sound. Illustrated. 16mo (Hand-books for Students and General Readers), 60 cents.

POLITICS.

Johnston (Alex.), History of American Politics. 16mo (Hand-books for Students and General Readers), 75 cents.

ENGLISH LANGUAGE.

Lounsbury (Thomas R.), History of the English Language. 16mo (Hand-books for Students and General Readers), $1.

ASTRONOMY.

Newcomb (Simon) and Holden (Edward S.), Astronomy. With numerous illustrations. Large 12mo (American Science Series), $2 50.

ZOOLOGY.

Packard (A. S., Jr.), Zoölogy. For Students and General Readers. With numerous illustrations. Large 12mo (American Science Series), $3.

GREEK TESTAMENT.

*Scrivener (A. H.), Greek Testa*ment, with Apparatus Critic. 16mo, cloth, red edges, $2 50.

GERMAN.

*Stern (S. M.), Studien und Plau*dereien. 12mo, $1 35.

Whitney (Prof. W. D.), German Texts. Goethe's 'Iphigenie auf Tauris.' Annotated by Prof. Franklin Carter, of Yale College, and Edited by Prof. W. D. Whitney. 12mo, cloth, 95 cents.

HENRY HOLT & CO., Publishers.

DIAMOND HAMS.

S. DAVIS, JR.'S, BRAND, Cincinnati.

THIRTY-NINTH YEAR.

The Centennial Commission in 1876 reported an award to these Hams. "First, The excellent flavor of the meat." "Second, its good keeping quality, demonstrated by the perfect freshness of hams cured in 1873."

Sold by Provision Dealers and Leading Grocers in Principal Cities,

Who have circulars "How to Cook the 'Diamond' Hams."

Heliotype.

Permanent Photographic Book Illustrations.

THE HELIOTYPE PRINTING COMPANY are producers of Book Illustrations by the Heliotype, Photo-lithographic, and Photo-engraving processes. Employed by the United States Government in illustrating Scientific and Medical Reports, by Scientific, Historical, and other learned Societies, by the leading publishers, and for illustrating Town and Family Histories, etc., etc.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings and Sketches, Views and Portraits from Nature, Medical and Scientific objects, Antiquities, etc., etc.

For terms and specimens apply to the

HELIOTYPE PRINTING COMPANY,

220 Devonshire Street, Boston, Mass.

THE ONLY WEEKLY JOURNAL OF ITS CLASS PUBLISHED IN THIS COUNTRY IS

The American Architect and Building News.

It discusses topics of general as well as of professional interest in architecture and related arts, while the four full-page illustrations and the illustrative cuts of each number are valuable to all intelligent persons no less than to architects.

"This excellent periodical leaves nothing to be desired on the part of its conductors."—*The Nation.*

TERMS: Per year, $7 50, or, if paid in advance, $6; for six months, $3 50. Single copies, 15 cents each.

HOUGHTON, OSGOOD & CO.,

Winthrop Square, Boston.

The Sanitary Engineer

Of the January 1st issue contains the announcement of a $1,000 competition for a Food Adulteration Act.

Prof. Henry Morton's opinion of Edison's Last Electric Light.

The National Board of Health. By Dr. John S. Billings, U.S.A.

Mallet's Intensive Gas-Burner. (Illustrated.)

Sanitary School Construction. By Dr. D. F. Lincoln, of Boston.

Correspondence relating to the Drainage of West Point—Double Boiler Plans—Montreal Drainage—Architects' Fees—Test for Air Pressure—Tests for Pure Water.

Hindrances to Sanitary Progress. By Dr. Jos. L. Bodine, of Trenton, N.J.

Published fortnightly at 140 William Street. P. O. Box 3037.

Terms, $2 per year; single copies, 10 cents.

The Nation.

NEW YORK, THURSDAY, JANUARY 15, 1880.

The Week.

THE parallel between Maine and Louisiana has been carried one step further towards completion during the week, by the action of the Republicans, who on Monday evening marched into the State-house in the absence of the Fusionists, and made up a quorum by giving seats to those who claim seats but received no certificates. They thereupon organized in both branches and appointed committees to draft questions for submission to the Supreme Court touching the validity of the organization. Pending the reports of the committees there was a sort of night session. On the morning of the same day the Fusionist Legislature also met in the same place, and counted the votes cast for Governor, and then, in joint convention, swore in Mr. John D. Lamson, the President of the Senate, as Acting Governor of the State. General Chamberlain, however, who has command of the militia and a warrant from the late Governor for the "protection of public property and the institutions of the State until a Governor is legally elected and duly qualified," refuses to acknowledge Lamson's authority, and has directed the militia to receive orders from nobody but himself.

The situation now is a very curious one. There has been no rebellion in Maine, and yet the State finds itself without any executive except the officer commanding the militia, whose authority, except in purely military matters, is derived from a warrant of the late Governor. Under ordinary circumstances the Governor's Council, which holds over, forms an *ad-interim* executive until the qualification of the President of the Senate; but the Council has resigned so as to leave the Republican members elect without anybody competent to swear them in. In the Senate there is a quorum of members who have received certificates, and their President claims to be Governor *ad interim*, but his claim is ignored not only by the officer commanding the militia but by the Democratic State Treasurer, who refuses to honor his warrants. Now, to crown all, there are two legislatures in session—one with a quorum of certificated members in the upper house and less than a quorum in the lower house, another with a quorum in both houses of members with certificates and members claiming seats but without certificates. If the court answers the Republican questions it will be a recognition of their legislature, and if it answers them so as to give a color of legality to their quorum they will doubtless elect a governor. What Lamson will then do it will be hard to say. To enable him to invoke Federal interference there would have to be some sort of tussle between him and his rival, but we trust it will be bloodless. It will probably turn out that the game lies in General Chamberlain's hands.

Governor Cornell's message to the Legislature appeared too late for notice in our last issue. Singularly enough, although addressed to a Legislature overwhelmingly Republican in both branches, it does not contain the slightest allusion to State-rights, or the Solid South, or the Brigadiers, or the murders in Mississippi and Louisiana, although these formed the principal topics treated in the platform on which he was elected, and in the speeches of the orators by whom he was supported. He devotes himself to State affairs, of which there was little or no mention in his canvass, but it cannot be said that the Legislature is likely to derive much assistance from his recommendations, owing to their vagueness. He proposes that the question of assessments for taxation be referred to a commission to "perfect a plan"; that women be admitted to school-boards; that uniformity of freight tariffs on railroads be secured; that discrimination between citizens and localities be prevented by "just and equitable regulations"; and that the excise laws be reformed by "a carefully-matured act, which can be plainly understood and faithfully executed." As a remedy for municipal indebtedness he suggests the refunding of the debts at a lower rate of interest, but justly observes that this "requires an improved credit," and adds, "It is very desirable that some measure be devised, *if possible*, to enable the towns to accomplish this object." Action on this hint will not be easy. About the well-known evils of city government in New York he points out that "the expenses of the city government should be reduced to a frugal and economical basis," and declares boldly that "all measures calculated to simplify the methods and promote the stability of local as well as State administration, or secure efficient and economical discharge of official duty," are entitled to "the favorable consideration and support of the Legislature." It is safe to say that if Mr. Cornell had not displayed greater fertility of mind in managing primaries and making up committees in conventions than he displays in discussing questions of State government, he would never have reached his present high position.

The "bull speculation" in grain and provisions has at last reached such a point that those not directly concerned in the prices of these commodities are forced to give attention to it. For several weeks the domestic markets have been kept above the foreign markets, so that exports have been much interfered with. One result of this is that the money market has been subjected to an unusual strain to "carry" this stuff; another is that there are in New York harbor more vessels waiting for freights than were ever known before; still another, that the storage capacity of the Chicago elevators is full, as well as all the floating storage of that city, and the leading railroads running into Chicago are compelled to refuse grain-freights because they have no place in which to unload them; and, finally, the diminished export movement has reduced the supply of commercial bills, so that foreign exchange has advanced and is firm much above the rates at which gold can be imported. All this mischief is the work of one or two gigantic Wall Street speculators, aided by, if not in partnership with, a leading "grain commission" firm. It is a square contest between this combination, euphemistically called a syndicate, and the consumers, which means the people of western Europe and of this country. It is sincerely to be hoped that the "syndicate" will come out second best in the contest, and from appearances this is not unlikely.

The Stock Exchange has been buoyant during the week. The Treasury bought $5,000,000 of bonds for the Sinking Fund, and thereby a little over $5,000,000 was transferred to the banks; which, with the return of currency from the interior, made an easy money market. Sound railroad investments were bought confidently at prices which yield a 6 per cent. income or more. Speculation in reorganized railroads was active, and the future was "discounted" with great freedom, the fashion for the week having been the stocks of roads in the South and in the Southwest. Government bonds were strong, and prices advanced sharply, notably for the 4 per cents. Mr. Fernando Wood's bill to refund all outstanding bonds which bear more than 4 per cent. into 3½ per cent. bonds, is supposed to have strength enough in Congress to prevent refunding into 4 per cent. bonds. This is one reason why the market price of the 4 per cents has advanced; another is that Mr. W. H. Vanderbilt has been buying these bonds with money received for the New York Central & Hudson stock sold to the syndicate last November, and on account of which he received $5,000,000 during the week. The advance in the price of 4 per cent. bonds induced the Metropolitan National Bank of this city to give up its note circulation on $2,200,000 of these, so as to avail itself of the present high price of the bonds. It should be said of Mr. Wood's bill that it commends itself to the inflationists, because it provides for reducing the cash in the Treasury to $86,500,000 by monthly purchases of $10,000,000 of

5 and 6 per cent. bonds. It also has the political support of all Republicans who are hostile to Secretary Sherman's Presidential aspirations (for he would undoubtedly make Presidential capital by refunding this year nearly $800,000,000 of the public debt), and of all Democrats who are opposed to the Republican Administration getting further credit for good financial management. Silver in London closed at 52¼*d.* per ounce. Here the bullion value of the 412½-grain silver dollar was $0.8759 at the close.

The Greenback Conference at Washington last week accomplished nothing but demonstration of the inherent inability of its members to accomplish anything at any time. There were some 125 delegates, including the thirteen Greenback Congressmen, and the proceedings illustrated pandemonium with tolerable accuracy and completeness. Congressman Murch, of Maine, presided; the Rev. De La Matyr officiated as chaplain, greatly to the disgust, vigorously expressed, of a strong minority; and among the chief participants in the "discussions" was, of course, Kearney. What he had to say was simple and familiar, and consisted merely of expressing a desire to see Republicans, Democrats, and the national banks in hell together and a determination to send them thither presently. He also wanted John Sherman hanged. Resolutions which were introduced approving Hendrick Wright's Land Bill and Weaver's $500,000,000 soldiers' relief-fund project, seem to have been the only ones carried, though everything else in the domain of human thought was debated, and we believe these were juggled through by the chairman, if indeed one of them did not finally fail. A call for a National Convention at Chicago June 9 next was adopted with little opposition; it is in the usual vein of such documents, and contains nothing worth remark. It seems hardly possible that such a body of men should have any considerable constituency among sober people, however ignorant, or at least maintain one in the face of its "Conferences"; which consideration is, of course, the only reason for viewing their procedures with absolute equanimity, but it is certainly a strong one.

The Greenbackers might learn something by a study of Japanese finances at the present moment, with which our example has had so much to do. In spite of great numbers of national banks of issue, and of the utter irredeemability of the paper currency, the depreciation of this currency is now more than one-third of its value as measured in silver. A provincial memorial, which has been highly praised by the Minister of Finance, attributes the depreciation to the "balance of trade"—imports largely in excess of exports—and recommends the disuse, under compulsory prohibition, if need be, of foreign goods. The Government has, in fact, undertaken to correct the mischief by tinkering the tariff, and has proposed to the treaty Powers to tax kerosene oil, the only import of any consequence from the United States, twenty per cent. on the cost landed, instead of, as now, five per cent. on the refiner's price. Yet nearly all the Japanese tea goes to the United States, and is admitted duty free, as is also raw silk, in which a large trade has lately sprung up. The direct importations of kerosene, unknown before 1873, reached 1,759,422 cases in 1878. So far as protecting the native product goes, an American geologist, Mr. B. S. Lyman, has pronounced the Japanese deposits meagre and impracticable.

Mr. Parnell's mission has during the week assumed more and more of a philanthropic character and less and less of a political one. He has issued an address to the "People of America" proposing the establishment of a fund in New York, to be called the "Central Famine Relief Fund," to which contributions from all parts of the country are to be sent, and afterwards distributed in Ireland through the instrumentality of a body called the "National Land League," which is said to have agencies in all the famine districts, but about which contributors of money are entitled to more information than they possess at present. Mr. Parnell had a rousing meeting in Brooklyn on Friday evening, at which he discoursed for some length on the land question, and was reinforced by Mr. Henry Ward Beecher, in the character of a friend of mankind, in a speech in which he poured forth much misinformation and fallacy. He defended the discussion of the Irish land question in America on the ground that Gladstone had interfered in Naples on behalf of King Bomba's prisoners, and England in Turkey on behalf of the Christians and in the United States on behalf of the negro slaves, but he forgot to mention that neither Bomba's prisoners, nor the Turkish Christians, nor the American slaves enjoyed freedom of speech, and sent representatives to a civilized legislature in which they held, or might hold, the balance of power. He gave "the capitalists and monopolists" in this country a severe blow, and also spoke slightingly of the French aristocracy, and of the English monasteries and nunneries which were suppressed by Henry the Eighth, and, in fact, presented a threatening aspect to oppressors of all ages and nations.

Among the unfinished business of the extra session of Congress was a resolution, amending the act establishing a Geological Survey, which passed the House but failed to be acted upon in the Senate. By the terms of the act the Director was charged with "the examination of the geological structure, mineral resources, and products of the National Domain" alone; by the amendment he was authorized to "extend his examination to the States," but without interference with their own geological surveys. Singularly enough—or perhaps we should say inconsistently enough—Southern members like Mr. Atkins, of Tennessee, and Mr. Wilson, of West Virginia, were found ardently advocating this extension, in spite of the well-known fact that the movement which led to the passage of the original act had strictly in view the substitution of a single survey for the wasteful and rival national surveys being carried on at the time in the Territories. Prof. James D. Dana has, in recent numbers of the *American Journal of Science and Arts*, called attention to the fact that the Director, as if confidently anticipating action from the Senate confirmatory of that of the House, has inserted in his estimates for the fiscal year ending June 30, 1881, the sum of $20,000 for "extending observations on coal and iron into old States." We shall not discuss here the questions of legality or expediency or comity which an attempt either to supersede State surveys or to supplement them suggests; but if this attempt succeeds under the régime of the Brigadiers, we might ask them with what grace they can hereafter accuse the Stalwarts of centralization, and the Stalwarts what there is alarming to the Union and the growth of the national sentiment in a Solid South? The amendment, we ought to add, did not receive a full or test vote in the House, and was opposed by Mr. Reagan, of Texas, who, when it is a question of regulating inter-State commerce, himself joins the party of centralization with all the docility of a child of destiny.

A cumbersome and impracticable bill to facilitate, ostensibly, the collection of customs dues on articles sent through the mails, by means of stamps affixed abroad, has been introduced in the House by Mr. Elam, of Louisiana. A bill providing for the abolition of the Court of Claims and an enlarged jurisdiction of the Circuit Court is an "Ohio idea," fathered by Representative Hill. The policy of attacking the tariff in detail, as in the case of quinine, is illustrated by the three bills introduced by Mr. Covert, of New York, putting bichromate of potash on the free-list, repealing the duty on iron ore, and largely reducing that on scrap-iron and on steel rails. The House has begun to investigate the unsatisfactory state of that branch of the postal service known as star-routes, in making and changing the contracts for which there appears to have been gross extravagance, at least, to say nothing of illegality and favoritism. The well-known endeavor of the Commissioner of Agriculture to magnify his Bureau has been rewarded by a resolution in the Senate to enquire into the expediency of creating a Department of Agriculture and Commerce. It is unfortunate that the proposal should be made during the incumbency of a very incompetent officer, and at the present stage of civil-service reform.

On Tuesday a bill was introduced in the Senate, through the chairman of the Committee on Privileges and Elections, declaring telegraphic messages to be the private property of the senders and

receivers, and putting them on the same footing as letters in the mails as regards their exemption from unreasonable search and seizure, and production as evidence in the courts or before legislative bodies. Though the measure proceeds from the Western Union Telegraph Company, it is clearly in the interest of the public at large, and at the present moment there is no reason to expect any opposition to it. Its adoption would put an end not more to scandalous revelations than to scandalous proceedings in the pursuit of private malice or of party advantage; there would be no more general seizures of telegrams by the barrel or boxful, with unlimited power to search for evidence not definitely known to exist, and free play for the imagination in guessing the true behind the alleged hidden meaning. While such a law would impose some restraints on the courts, which have been free enough in compelling telegraph companies to violate their trust, it would have its most salutary effect on Congress and the State legislatures, whose arbitrariness it would keep within proper limits, and to whose self-respect in times of great political excitement it would furnish a powerful and much-needed guarantee.

The stormy week at sea has been a great godsend to the reporters, who have retailed at some length the yarns of the officers of the Atlantic steamers about the fury of the tempest. One of the officers of the *Batavia*, however, seems to have taken undue liberties with a reporter of an esteemed contemporary in informing him that "the steamer seemed to rise to heaven on monster waves one minute, while the next she would plunge downward as though about to seek the bottom of the sea," and "took in tons of water at every plunge," that "the officers had to grasp the railings for support," and the "air was charged to its *fullest capacity* with electricity" (how much electricity can the air hold?), and that, standing on the deck, in the midst of this awful riot of the elements, "you could hear the electricity whistling down the conductors and passing into the water." The same mysterious fluid also got into the officer's whistle, and "so thoroughly charged it" that "it flew up and struck him in the face." He, however, added to the reporter: "This may seem strange to you, but it was an actual fact."

There has probably never been a more high-handed proceeding in a civilized and law-governed community than the appropriation of the streets of this city by the Elevated Railroad Companies for their tracks and stations. The lines run in all the streets on a level with the second or third-story windows—on one line close to the windows. In many places they seriously diminish the light. The noise is incessant, and sufficient, especially in summer, to make conversation in the front rooms of houses difficult. In one street in the upper part of the city, which is narrow and occupied solely by dwelling-houses, the value of the property has been lowered over one-half by the construction of the railroad. The companies, which are enormously profitable, have refused compensation, on the ground that the bed of the streets is not the property of the householders, having been ceded to the city for street purposes, and they contend that the construction of a steam railroad is a legitimate street purpose, whether the original cession to the city contemplated it or not. The case is now before the courts, we do not know with what chance of success, but the amount of money involved is enormous, and if the decision should go against the railroads, it would seriously lower the value of their shares.

Of the magnitude and rapid increase of the distress in Ireland there is unhappily no sort of doubt. About 250,000 persons are now, it is calculated, suffering from extremest want, and the number will, of course, rise every day. The Duchess of Marlborough, the wife of the Lord-Lieutenant, has raised about $90,000, and the Government has consented to use a portion of the surplus proceeds of the Disestablished Church Temporalities—about £250,000—in providing employment. There already exists, on the part of the landlords, ample power of borrowing on easy terms from the Government for drainage and similar purposes, but the agitation against them has assumed such a savage character and spread so much feeling of insecurity that probably few will avail themselves of it. That the best remedy for Irish poverty is to be found in the great multiplication of peasant properties and not by emigration, as many suppose, there is little question. Emigration is good for those who emigrate, but it leaves gaps in the home population which are soon filled by a fresh poverty-stricken mass. A writer in the London *Times*, giving an account of the Island of Guernsey, shows that it supports in marvellous comfort a population of 30,000 by the cultivation of 10,000 acres, while Ireland has a cultivable area of 15,500,000 acres, and would, if as densely peopled as Guernsey, support a population of 45,000,000, instead of 5,000,000. The climate of Guernsey, too, is as moist as that of Ireland, and the island is hardly any nearer the great markets. But nearly every man in it owns his farm, and the law facilitates his getting a farm in fee on easy terms.

Sir Stafford Northcote, the English Chancellor of the Exchequer, seems to have been stung by Mr. Gladstone's Mid-Lothian speeches into making a more than usually vigorous defence of himself and his financial policy in a recent speech. But the most important thing in it was the formal announcement that Afghanistan would not be annexed, but abandoned after some sort of government had been set up. The bad luck of the force at Kabul and the uneasiness caused by the Viceroy's optimistic telegrams have had the effect of causing the abrogation of the late restrictions on the newspaper correspondents. Apologies and excuses, too, begin to be offered, under the influence of home opinion, for the numerous executions at Kabul, the victims being, it is now solemnly affirmed, all persons engaged in the attack on the British embassy. But no explanation has been offered of the practice of calling the Afghan soldiers "insurgents" and "mutineers." There appears to be no change in the situation at Kabul since General Roberts's late victory, but there are rumors of fresh risings and combinations in other quarters, and they will probably take place with more or less frequency through the winter. The Ministers are, on the whole, in luck of late. The two remaining South African hostile chiefs, who have managed for years to defy the forces sent against them by the possession of mountain strongholds, Moirosi and Sukukuni, have been brought to naught. The first was killed when his fortress was stormed, and the last has been captured in the storming of his fortress and is to be locked up with Cetewayo, so that, except for some rumblings of discontent among the Boers of the Transvaal, South Africa is now pacified.

From Continental Europe there is little news of importance. In Spain the Emancipation Bill, which liberates the Cuban slaves by thirds in successive years, and keeps them in an eight-year apprenticeship, with severe penalties on vagabondage, has been passed by the Senate. But it is opposed by the Abolitionists because of the apprenticeship feature, and by the Cubans because it is divorced from the free-trade measure which Martinez Campos had coupled with it, and without which the planters say they cannot make free labor work. They entertain the diabolical design of admitting American products at low rates or duty free, apparently not knowing that this will do them no good as long as the island does not belong to the American Union. In France the new Ministry is trying "to pull itself together," and the Germans are more or less uneasy about their relations with Russia. The official organs say that these relations are perfectly peaceful, but there are, nevertheless, the persistent rumors which usually precede a war about the movements of troops on both sides of the frontier, and there is the also ominous shower of pamphlets from military men on the strategy of a possible campaign. The motive on the Russian side would be a desire to escape from home difficulties, but this did not succeed in the case of the Turkish war. On the German side there is the expectation of being able to cripple Russia while struggling with home difficulties, and before France is fairly ready for the field. But Germany, too, is full of trouble, and her fighting chiefs are pretty old, or very rheumatic, gouty, and neuralgic. Neither the emperor, nor Moltke, nor Bismarck is physically equal to the strain of another great war.

GENERAL GRANT'S PRESIDENTIAL PROSPECTS.

THERE is probably no question in politics which just now excites so much interest as the probability of General Grant's receiving the Republican nomination for the Presidency. It is seldom that a candidate's chances obtain so much attention among persons who ordinarily care little about this kind of speculation. The subject derives its attractiveness from a variety of sources. Nothing in the political field seemed better settled when he left office in 1877 than that his political career was closed. His Administration during his two terms was admitted on all hands, though it had accomplished many good things—the Treaty of Washington was one of them—not to have been a success. It was overwhelmed with scandals which everybody could understand, and of which everybody felt ashamed. The only comfort left to his friends was that no trace of personal participation in the corruption which surrounded him had rested on him; but his integrity was saved at the expense of his perspicacity. Everybody who admired and felt grateful to him for his military services was glad, however, that he had had the two terms of the Presidency, in spite of the scandals. The country owed him the most splendid recognition in its power, and had acquitted itself of the obligation by bestowing on him the reward it had bestowed on Washington, and which Washington pronounced sufficient. A republic is bound to be grateful; but a republic, more than any other form of government, is bound also not to be *too* grateful to a successful soldier, for reasons which are found partly in historical experience and partly in human nature itself. The third-term project was, therefore, all but universally condemned as soon as it made its appearance.

This state of the public mind lasted until he went abroad. He was received in Europe with honors such as had never been bestowed on any American, because no American of similar distinction had ever travelled in Europe. His distinction was of a kind that Europeans understood. Two terms in the Presidency would not have sufficed to create it, because there is no notion about American politics more firmly rooted in the European mind than that American Presidents are apt to be the result of an accident, or that if they win the place they win it by arts which are not considered particularly admirable. The first office below the monarch's in European governments almost always falls to a man who has been for long years conspicuously striving for it by labors in lower departments of administration or legislation, so that when he attains it he is a man well known both in his own country and in others. The frequency with which American parties put comparatively obscure men in the Presidency, rejecting those whom European opinion would have marked out for the place, has prevented the office from furnishing those who have once held it with the claim to honor in foreign lands which is derived from a similar position elsewhere. President Lincoln was the first President since Washington who broke through this indifference or ignorance, and yet even he would probably have only been cordially welcomed by the European Radicals. The aristocracy of nearly every country would undoubtedly have made an effort to ignore him had he gone abroad. General Grant's military fame, however, bore down all fastidiousness, real or feigned. To have successfully handled a million of men in a war of almost unexampled obstinacy was a title to respect which the dullest Junker understood as well as Mr. Gladstone or M. Gambetta, and bowed before respectfully. Moreover, it covered up whatever seemed objectionable in General Grant's civil administration. A great soldier, it was felt in the countries of great armies, has a right to blunder in time of peace, and even to be surrounded by disreputable friends.

The reflex influence of his European reception on American opinion was what might have been expected. The average voter, all over the country, already felt that General Grant was the one remarkable and prominent man of the age with whose career he was thoroughly familiar, or who in any sense came near him. He had been pained or disappointed by the failure of his civil administration, and it was thus an immense relief to find that in the judgment of the rest of the civilized world this made no difference, and the Grant of Appomattox Court-house was, in spite of Babcock and Casey and Shepherd, a great and famous man still. The honors accorded him abroad were taken by every storekeeper and farmer who had ever admired him, from the Atlantic to the Rocky Mountains, as a solemn confirmation by disinterested persons, familiar with heroes, of his own estimate of the American hero. The two terms then began hardly to seem enough; it began almost to seem mean not to have rewarded him also in cash, as Marlborough and Wellington were rewarded.

The renewal of the idea of a third term would probably, however, not have entered the head of the average voter if the large body of active and energetic politicians, who liked General Grant's administration and profited by it, had not been ready to suggest it and "engineer" it; and even they would probably hardly have ventured on it if the Democratic majority in Congress had not played into the hands of the section of the Republican party who were unwilling that the party should pass beyond the stage of hostility toward, and distrust of, the South. This hostility and distrust, which in its new form is known as "Stalwartism," was first started by Mr. Blaine, partly as a demonstration against the new Administration, which had ignored his "claims," and partly in the expectation that it would touch a sleeping chord in the Northern heart and prove an important aid to the political fortunes of the originator of it. The extra session and the foolish attempts to wipe out legislation which had its origin in the war, made the scheme measurably successful. A kind of panic was spread through the Republican party by the efforts of the press, and the impression was diffused that the South had again got possession of Congress and had revived the Calhoun doctrine of State-rights, and would probably try to exercise it. It was at this juncture that the Grant "boom" was started.

It was started, however, very cautiously. His renomination was at first proposed as a painful but probable necessity. Its advocates did not quite like it themselves; they saw the objections to it as well as anybody; but what other course was possible, they asked, in view of the attitude and aims of the Southerners in Congress? The designs of the latter were clearly revolutionary, and they would undoubtedly in their present temper and with their present hold on Congress allow nobody but their own candidate to reach the Presidential chair. Under these circumstances the need of nominating a man who, if he did not like the way Congress counted the vote, would declare himself elected, and would know how to make his claim good, was plain to the meanest patriotic intelligence. That General Grant was the man for such a crisis his career clearly indicated; that he was the man the people would choose for it was easy to prove from the widespread and deep popular interest in his travels, and the eagerness to give him an enthusiastic welcome when he came home. As soon as he landed and the welcome began, the managers of "the boom" went one step further. The argument in his favor on the ground of danger from the "Solid South" had lost much of its weight, from the continued peace and prosperity of the country and the demonstrated harmlessness of Democratic legislation. So they now said, not that General Grant was a necessity of the situation, but that he was so unmistakably the popular choice that his nomination was certain without any reference to the situation. This is about the condition of "the boom" at this moment. The managers still maintain the attitude of private doubt as to the expediency of a third term, but plead the overwhelming necessity imposed by the popular determination; and they prove this determination by pointing to the addresses, processions, and banquets with which he has been received in the great cities. The part of mere admiration for him, simply as a distinguished American who has done his country great service, in these demonstrations is cleverly and successfully covered up under the part played by mere electioneering, and it is impossible to separate them, because, of course, nobody who publicly honors General Grant on any ground is willing to come forward and perform the ungracious task of classifying his own motives, and enumerat-

ing the things in General Grant's career which he is not to be understood as admiring.

That General Grant is a party to the scheme for putting him in office again is now hardly denied. To expect him to refuse such an offer as a third term would be expecting more of him than one has a right to expect of any man of his education and temper. A thoughtful statesman, with clear and carefully-formed views as to the conditions of successful popular government, such as Washington and Lincoln were, would, like them, if a man of the highest type of character, probably refuse it. But General Grant is not such a man. In fact, he is not and never has been a politician at all. He is essentially a soldier in mental constitution and training. His notions about government when he first took office were those of a soldier. During the eight years of his Presidency his view of his position was that in all its leading features it was that of a general in the field, with unlimited powers of promotion, and surrounded by a staff who attended to troublesome details. That he has been studying politics on his brief foreign tour, and has at last mastered the science of government at the age of fifty-seven, is now gravely put forward as something which people ought to believe on the mere word of those who are pushing him for the nomination; but it is not worth serious examination.

As to the real facts of his prospects just now, we think, without exaggeration or distortion, it may be said that they are these: The persons who push him most actively still largely deny that they themselves wish to see him nominated, and represent that they are simply preparing to carry out an irresistible popular decree. The enthusiastic popular support of a third term is very apt not to be visible in the place where we hear of it, but in some other State or section. A canvass in any particular locality of prominent or representative persons usually fails to show that Grant is the strongest candidate in the field, and brings out a great deal of doubt about the propriety of putting him forward. His failure to come to New York, and his retirement—for so it may be considered—to the South, indicate a fear that the enthusiasm inspired by his presence may not, now that it has begun to wear the look of electioneering, last until next summer, and that "the boom" was begun a little too soon. The discussion of the objections to his nomination becomes every day more outspoken, and proves that there is no general acceptance of the doctrine that a third term is not a third term unless it follows the other two in succession. The reluctance to admit that the United States needs a "strong man," or that the Constitution will not work without a soldier in the background, grows with deliberation and debate, and with the gradual subsidence of the alarm about the "Solid South." In certain States—Ohio, Wisconsin, and New York, for instance—there is a German and Independent vote which probably cannot be induced to accept him whether nominated or not, and without which these States cannot be carried by the Republicans. It is safe to predict, finally, that between now and June all these difficulties in the way of General Grant's nomination will increase rather than diminish, and that the boom will end, as it ended in 1876, in a kind of collapse.

THE LAST POLITICAL NOVELTY IN FRANCE.

THE Waddington Ministry in France went to pieces under a combination of difficulties which brings out strikingly the novelty of the experiment in parliamentary government which the French are now trying. Theoretically the relations of the Ministry to the Chambers are the same as those of the British Ministry to the House of Commons—that is, it is presumed to represent and be supported by the majority. As a matter of fact no French Ministry since 1870 has represented and been supported by the majority. They have all received during a certain period the votes of the majority, not because the majority really felt that they were its own men, or because it approved completely of their policy, but because it was feared that if they went out of office something very serious and threatening the form of the Government itself would follow. The firm establishment of the Republic by the resignation of Marshal MacMahon did not change this state of things. The Waddington Cabinet has been all along in a position towards the Assembly which in England would be considered very degrading, and in which no self-respecting politician would consent to remain—that is, dependent on the votes of various sets or cliques, who did not pretend to like it or believe in it, and yet to whom it may be said to have been indebted for permission to carry on the Government. Nominally it possessed the right of the British Ministry to initiate legislation, and to manage the conduct of business in the Chamber. In practice, however, it was not allowed to exercise this right, and, in fact, stood towards the Legislature somewhat in the position of the American Presidential Cabinet towards Congress. If it desired to carry a measure it had to conciliate the committees and the chiefs of sections of the Left, and secure their approval or forbearance by compromises or concessions. But even this was not sufficient. The various sections of the Left could not be induced in this way to give up the right of interference and control over the discharge of purely executive duties, and in this control and interference they freely indulged. The last months of the Ministry were, in fact, passed in a state of things like that in which President Hayes and his Cabinet would be placed if the Democratic majority, besides possessing the power of hostile criticism, possessed also the power of turning them out of office by a hostile vote. General Gresley, the Minister of War, resigned in a huff because the Left disapproved of his refusing to dismiss from the service peremptorily an officer of the Territorial Reserve who had drunk the health of Henry V. at a public dinner, but had been tried for it and acquitted by a court-martial. The situation in which the Ministry fell may be best described by supposing President Hayes's Cabinet dependent for their places on the acquiescence but not the support of a majority of the House, composed partly of Stalwarts and partly of Republican and Democratic Greenbackers; or by supposing the members of it to have seats in the House and to be obliged to be constantly in their places to answer criticism, and this criticism to cover all their acts whether legislative or administrative, and supposing them at the same time to be charged, as the English Ministry is, with the duty of proposing and conducting legislation, but compelled to share their powers in this field with the various Congressional committees and obliged to conciliate them.

Their troubles were aggravated by another circumstance new in recent French history, which completes the foregoing supposed American analogy. Fixity of tenure, or tenure during good behavior, has hitherto been the law of the French civil service, and the respect paid to it by all parties since 1789 accounts for the extraordinarily small amount of damage or derangement wrought by the numerous revolutions through which the country has passed during the last century. No matter what changes took place in the form of the Government at Paris, and no matter who got possession of the legislature or the ministerial buildings and the supreme executive authority, the administrative machine continued to work with regularity. Order was not disturbed in the provinces. The police patrolled, the courts sat, and the préfets and sous-préfets discharged their duties in the usual way, no matter how startling the news which came from the capital. In the great departments of state, too, in Paris, the subordinate employees have never hitherto experienced any anxiety about their future, in consequence of the violent expulsion of their chiefs from power. Of late this happy state of things has been put in great peril. The Republicans on obtaining full control of the Government have found the administrative offices filled by men who owed their places to Bonapartists or Legitimists, and who have no faith either in the permanence of the Republic or in its suitability to France. The judicial bench, too, and the higher grades in the army were largely occupied by the same class. In the old Napoleonic days officials, however disaffected to the actual régime, would not have dared to express dislike of it, punishment was so sure to be prompt and high-handed; but the Republican régime is much milder, and takes pains to show liberality towards malcontents and dissenters, and, besides this,

its ascendency only dates from last year. The result is that the deputies of the Left are in constant receipt of complaints of disloyal language and acts on the part of Government officers in the provinces, and of decisions by the provincial courts framed in a spirit of hostility to Republican suitors and defendants, and they carry them to the ministers with frantic demands for a thorough Republican purge of the whole service. This demand is, in a country in which the administrative machine is so ponderous and complicated as in France, something which ministers find it impossible to meet without disorganizing the service and alarming the whole country, and they therefore temporize and evade, and have ended by enraging the Left. It is needless to say, too, that no such movement can be started without filling the minds of Senators and Representatives with the idea which has excited such a pestiferous influence on American politics—that the legislator may freely push his own political fortunes by obtaining places for his adherents in his district. It has worked infinite mischief also by the alarm it has spread among the Government employees as to their own future, and by keeping a powerful "lobby" of anxious préfets and sous-préfets constantly in Paris absent from their posts.

It will be readily seen from all this that the kind of parliamentary government France is to have is as yet by no means clear. It has now some features both of the English and American systems which, when combined, become absolute defects. It is not likely that homogeneous parties such as exist in England and the United States, one of which is ready to carry on the government when the other goes out of office, will be seen in France for a long time, if ever; and many shrewd observers in Europe are asking the question, whether the plan of a homogeneous ministry will not be given up completely before any such parties are formed. At present the Ministry stands or falls together, as it does in England; but inasmuch as its solidarity is no real help in legislation, and as the Chamber undertakes a minute control of all the work of the departments, why, people begin to ask, should all the ministers go out of office together because the majority finds fault with one of them? This idea has, in fact, found partial expression in the late reconstruction of the Cabinet. M. Waddington, who was for various reasons a failure, has retired, and so has General Gresley, the Minister of War. But M. Freycinet, who is the head of the new combination, has simply transferred himself from the Ministry of Public Works to the Presidency of the Council, and put in four new members in the Cabinet, and made transfers among the others, so as to placate not the majority in the Chamber, but various sections of the majority. There is much reason for believing that this may lead to the permanent modification of the principle of ministerial responsibility, so as to enable the Legislature to dismiss a single minister without bringing about the retirement of the whole Cabinet; and if so, this would be a new experiment in government. That something of the same kind is to be looked for in Italy, as the result of a similar absence of homogeneous parties in the Chamber, is a very probable opinion; and should it come to pass, we shall perhaps have to set down a Latin parliamentary government, as distinguished from the Germanic, as a new division in the nomenclature of political science.

THE RAILROAD QUESTION IN GERMANY AND PRUSSIA.

BERLIN, December 15, 1879.

SINCE the publication of the article "Railroad Ownership and Regulation in Germany" (*Nation*, No. 722, May 1, 1879) the railroad question in Germany has been quickly developing in the way which was then pointed out. At present it is no longer doubtful that the project of state ownership of all railroads will in one way or another be carried out in Germany; either the several confederated states will own and manage all the roads situate in their respective territories, or the German Empire will own and manage all the German railways. A notable step forward is that the railway problem is no longer being discussed solely in the press and at public meetings, but has now been brought before the parliamentary assemblies, so that the practical realization of the idea is close at hand.

The question of the regulation of railroad tariffs must be decided by the Bundesrath and Reichstag. Prince Bismarck has for a long time been engaged in arriving at a correct solution of this intricate question, which is closely connected with the regulation of the customs tariff. If, for instance, a state levies high protective duties on certain articles which the railways are largely interested in transporting, they might—if their powers to fix rates were unlimited—nullify this whole protective policy by establishing the lowest possible rates. I will not here examine whether this possibility really exists for the German railroads. Prince Bismarck, assuming its existence, declared in his memorable letter to the Bundesrath of December 15, 1878, that, considering the intimate relations of both railway and customs tariffs, in regulating the one it would also be necessary to lay down fixed laws for the other. Consequently the necessary preparatory legislative enquiries have taken place. It was intended to bring in a railway-tariff bill at the same time with the customs-tariff law. According to the former, all German railways would be compelled to levy exactly the same freights per ton per mile throughout the whole country. Only those lines which were constructed and managed under particularly difficult or easy circumstances would be allowed to establish higher or lower rates in the following manner: their length was to be assumed to be greater or smaller than it was in reality (*virtual* length in opposition to *natural* length), and the tariffs were to be constructed on the basis of the *virtual* length of the lines. In this way the rates per ton per mile on all German railways would be apparently the same. Special rates for particular articles and certain directions must obtain the sanction of the principal railway ministry of the Empire (the Reichseisenbahnamt).

A bill embodying these principles has long been debated by the confederated governments. The peculiar difficulties to be overcome were rather more of a political than an economical character. The German middle states, Saxony, Würtemberg, Baden (Bavaria occupies an exceptional position in railway affairs), held that the regulation of fixed tariffs for all German roads was not subject to the legislation of the Empire, but was a privilege of the several states for their respective railroads. For this reason, and also because they themselves managed large railroad systems whose revenues would be affected by any imperial statute, they opposed the passage of such a law. Nevertheless, the Bundesrath appointed a special committee to prepare the bill, which was finished by the month of May. The states just mentioned again protested in the session of the Bundesrath itself against the bill as not being in accordance with the Constitution, and, notwithstanding the warm intercession of Prince Bismarck, they succeeded in referring back the bill to the committee. In the meantime it had proved impossible to lay the bill before the then assembled Reichstag, whose session was nearly at a close, and since that time the whole matter has made no progress.

The tendency of this bill has been loudly declaimed against by the liberal parties, and particularly the free-traders, who fear that if their tariffs were regulated by law the railways would no longer be able to answer the exigencies of trade and commerce. On the other hand, they apprehend that the influence of the Government in imposing special rates would be too great, inasmuch as it would be enabled to favor particular branches of commerce and industry, and even certain private persons. I am not of this opinion; for at present the Government (and even the private) railways have much greater freedom in regulating their tariffs, and are not in the least restricted by the legislative assemblies, and the bill does not enlarge this freedom, but limits it. The establishment of uniform maximum tariffs for all German railways will not be so very difficult, because the regular rates do not actually differ very greatly from each other; and all who sympathize with the idea that the rights of the several German states should gradually pass over to the Empire must regard this bill as a great step forward.*

Besides the tariff question, the question of buying a large number of private railroads for Prussia has lately been debated and is near its final decision. I pointed out in my last article that the Prussian Minister of Railroads, Herr Maybach, "firmly and persistently pursues the project of state ownership of all railroads." The past few months have proved the truth of this assertion. Last summer Herr Maybach opened negotiations with seven Prussian private railways, among which are some of the principal ones, for the sale of all their lines to the state. With five of them transactions have been concluded. The roads in question are the following: †

* That, however, the question of railroad tariffs in America must not be compared with the German I showed in my previous article in the *Nation*.

† A description of the several roads would lead me too far. I recommend the reader to consult a railroad map of Germany.

	No. of Miles of Track.

Hannover-Altenbecken	168
Köln-Minden	700
Berlin-Potsdam-Magdeburg	160
Rheinische	870
Berlin-Anhalt	268
Total	3,229

The agreements with the first four roads have been brought before the Landtag, and must be ratified by January 1, 1880, because the shareholders are bound by their contract only until this date. The agreement with the Potsdam-Magdeburger Railway was settled on the 2d of December. The negotiations with the Rhenish railroads will probably be brought to a close in a general meeting of the shareholders which is to take place December 18. All the different contracts are founded on the basis that the state acquires the right of managing the roads for a fixed annuity, which of course differs according to the revenues of the several lines. The state is further obliged to pay the interest to the bondholders, and within a certain time to exchange the shares for the same amount of consols bearing interest at four per cent. After this exchange has taken place the state acquires the ownership of the railroads and of all their property.

The bill in question was accompanied by an explanatory memorial, in which the minister argues that the only possible railroad system for Prussia is the system of state ownership. To go back to the purely private system would be out of the question, and, furthermore, it has grown perfectly evident that the existing system of mixed state and private ownership is altogether impracticable. A real equilibrium cannot be kept up between the state and private roads. What makes this mixed system especially precarious is the fact that the state superintends the railroads which are its competitors, so that an impartial superintendence is rendered impossible. The reasons for the system of state ownership have partly a military, but above all an economic, character. It is an acknowledged fact that during the wars of 1866 and 1870–71 the private as well as the state railways fully performed their duty. Nevertheless the innumerable different lines and managements created many difficulties and contrasted strongly with the concentrated, uniform government of the French private railways. Moreover, during the war, owing to the chaos of railroads, the travelling of private persons and the transportation of goods, even on those lines which were not required for military purposes, were for a long time impossible. It is to be expected that the concentration of all railways in one hand will have an improving influence in this respect. Still, I repeat, the principal reasons for changing the railroad system are economical. The minister hopes to save considerably by the simplification of the management and by the gradual reduction of the bonded interest. He also thinks that the state's judgment in regard to the real exigencies of traffic can be more correct than that of private companies, and above all he feels sure that the Government will be better able to carry out a tariff policy adapted to the veritable needs and interests of the whole country. The funds (*Reserve-* and *Erneuerungsfonds*) which the private railways bring to the state are, according to a second bill, destined for the construction of new roads in those provinces which as yet are not sufficiently provided.

The debates in the Chamber of Deputies terminated December 12. A majority consisting of the Conservative and National-Liberal parties accepted the bill, while the Centre and the Progressists voted against it. The assent of the majority was given only with the proviso that the present management of all the state railways should undergo some modifications, and this condition was accepted by the Government. The first of these modifications is that in future the budget of the railways shall be entirely separate from the general budget. Out of the revenues of the roads the interest of four and one-half per cent. for the whole railway stock is to be paid. Further, the surplus of the revenues up to one per cent. of the stock is to be set aside as an extra fund, which is to be employed in making good the deficiencies of bad times. If a still greater surplus is attained, a half per cent. may serve for the amortization of the railway debt, and the rest can remain for the current state expenses. Secondly, different committees, consisting of representatives of the commercial, industrial, and agricultural interests, are to be periodically called together for the purpose of giving the minister and the railway directors advice on all important questions of trade and commerce.

The bill has now been laid before the Upper House, which will undoubtedly give its assent to the action of the Lower. Minister Maybach lately declared that a bill concerning the acquisition of the Berlin-Potsdam-Magdeburger and the Rhenish railways would be brought before the Landtag during this session. Including these and the above-named Berlin-Anhaltische railroad, the state will own and manage a railway system of 9,300 miles, and the remaining private railways cannot possibly retain their independence for a long time. Then Minister Maybach will be able to show whether he can fully master the gigantic task which he has undertaken. If his grand attempt is successful in Prussia it must influence the railway problem also in other countries, and Herr Maybach has the great merit of having pointed out and cleared the way for the solution of one of the most important and difficult modern economical questions.

RENAN'S CHRISTIAN CHURCH.—II.

PARIS, December 25, 1879.

I LEFT Hadrian after the extermination of the Jews as a nation and his return to Rome, which he never quitted again after 135 A.D. The imperial artist thought himself the type of the humanitarian despot. Renan cannot conceal his sympathy for the man, and, to a great extent, for his government. "People had reason to be glad to live," he says, and he has applied almost the same words to France in recent times. Hadrian spent his last years in amusing himself in constructing, near Tibur, a villa which became the "album of his voyages." In this hospitable pandemonium all the styles, all the civilizations and religions, of the past were represented: there was a Vale of Tempe, there were Elysian Fields, there was a Tartarus. When he died, however, the world lost the last emperor who was fond of ancient art, of ancient literature; the last who believed in glory, who had truly imperial instincts; he bequeathed his place to the representatives of different instincts. The old world had lost its ideal; a new ideal appeared in Antoninus.

"Antoninus," says Renan, "was a Saint Louis in his heart and his sense of honor, with much more judgment and breadth of mind. He is the most perfect sovereign who ever reigned. He was even superior to Marcus Aurelius, since the reproach of weakness cannot be brought against him. To enumerate his virtues is to enumerate all the qualities of which the accomplished man is capable. The whole world saluted in him an incarnation of the mythical Numa Pompilius. He was the most constitutional of ministers, and withal frugal, economical, occupied with good works and public works, far above any excess, devoid of rhetoric and of all affectation of mind. With him philosophy ascended the throne."

Philosophy was the transition from the old Roman ideal to the new Christian ideal; but it was soon evident that philosophy is not or was not made for the government of the world; still, for twenty years the Empire enjoyed a truly paternal and wise government. The Christians in this empire of reason were still a revolutionary and destructive element; they were pessimists, they kept making lugubrious prophecies; they considered the struggle between the Empire and the Church as a holy war, like the struggle of God and Satan. Antoninus was obliged to maintain all the forms and ceremonies of the old religion; the Christians were still considered as members of secret and illegal societies. But Antoninus did as much as he could to abate the severity of the laws, though he could not modify the public feeling, which was very hostile to the new religion. Christianity was very imperfectly known; the mystery which surrounded it had filled the popular mind with all sorts of notions; the people really believed that the Christians committed crimes, that they were atheists, that their ceremonies were the occasion of the most monstrous scenes. Renan remarks that the Epicureans felt somewhat lenient towards the Christians, while the Stoics disliked them. The Epicurean philosophers attacked the oracles and miracles of the old Church, and represented them as inventions of the priests. The doctrines of the Stoics were more in accordance with the Christian laws of morality, but they confounded the Christians with the Cynics. They looked upon the heroism of the martyrs as a mere affectation.

The great religious event of the reign of Antoninus was the final reconciliation of the disciples of Paul and of Peter. The concessions came chiefly from the side of the Paulists, though the churches of Paul were more prosperous than the churches of the Ebionites. It was admitted that Peter and Paul had been the two founders of the Church of Rome, and in all the old churches of the basilica style you will always find the representation of Peter at the end of one side, and that of Paul at the end of the other. "Peter and Paul became the two halves of an inseparable whole, twin luminaries like the sun and the moon." Out of this reconciliation sprang the great catholic unity of the Church. Rome was the centre in which this fusion took place.

"The fundamental condition," says Renan, "of the success of Christianity is now secure. Neither Peter nor Paul could succeed separately. Peter meant conservation, Paul revolution; both were necessary. They

say in Brittany that when Saint Peter and Saint Paul came to preach Christianity in Armorica, they arrived before an arm of the sea which was narrow and deep. Though they were both in harmony on all essential points, they resolved each to remain on his own side and to teach the Gospel after his own fashion, for it seems that, notwithstanding their great confraternity, they could not live together. Both, after the fashion of all saints in Brittany, began to build a chapel. They both had stones, but they had but one hammer, so that every night the saint who had worked during the day threw his hammer to his companion over the arm of the sea. Thanks to the alternate labor resulting from this arrangement the work went on well, and the two chapels which were then built are still to be seen."

Another great revolution may be called the consolidation of the Gospels; the Church ceased to recognize anybody's right to remodel them. The age of the living tradition had passed; the Book became the great authority, and towards A.D. 180 the Catholic Church traced its limits and closed definitively the list of the Gospels. Irenæus will tell you that there are four Gospels, as there are four corners of the world; four revelations—the revelations of Adam, of Noah, of Moses, of Jesus; four animals in the cherub; four mystical beasts in the Apocalypse. The task of the theologians will consist now in harmonizing the four Gospels. This final consolidation was not, however, the work of a day. In Asia Minor as well as in Rome, the two great centres of the new religion, many tendencies were always at work: there were conservatives and progressists, friends and enemies of Judaism, millenarians and spiritualists; the transcendental theories of the gnostics seemed to many the highest form of Christianity. The dogma had not yet received its final lineaments. The theology of Marcion was a sort of Manichæism; Polycarp believed that God had a material body. The Gospels were the great field of battle with the Old Testament. Marcion took his stand on the Gospel of Luke, and he was never satisfied till he had cut all the Judaic connections of Jesus with the past. His Jesus is not born, he did not suffer nor die. Marcion considered Christianity as absolutely hostile and contrary to Judaism. Justin Martyr was a disciple of Plato as much as of Christ and of Moses; his church was a very broad church. He considered that revelation was permanent, that it was an eternal fruit of the *logos*. Polycarp, of Smyrna, was considered a prophet; he was as old as St. John, he lived in a world of visions; it was generally admitted that he had passed several years with John. Among his disciples was Irenæus, who received the last traditions of the apostolic world. Polycarp was a materialistic millenarian of the old school; he was an intolerant conservative, he hated the heretics. But there were heretics everywhere, and new sects were born every day.

"These sects could not admit that the evangelical productiveness should be crystallized, and that there should be no occasion to write new lives of Christ. The gnostic sects wanted texts incessantly renewed, so as to satisfy their ardent imagination. All, almost all, the sectarian chiefs had gospels which bore their name, such as Basilides, or which were compilations, such as the Gospel of Marcion. The Gospel of Apelles came, like so many others, out of the Jewish gospel Marcus mixed everything, the authentic and the apocryphal. . . . The names of the apostles offered ample guarantees for all these frauds. There was hardly one among the twelve who did not have his supposed gospel. Nothing was invented, to be sure; but the people wanted details which the four inspired apostles had omitted. The childhood of Christ above all excited an intense curiosity. Nobody could admit that Jesus, whose life had been a long prodigy, could have lived for years as an obscure Nazarene. Such was the origin of what we call the 'Apocryphal Gospels,' a long series of weak works whose beginning must be placed towards the middle of the second century. It is an insult to Christian literature to compare these flat compositions with the master-pieces of Mark, of Luke, of Matthew."

It became impossible, at the end of the second century, to imagine that Mary, Joseph, Anne were ordinary personages These figures assumed the proportions and surrounded themselves with the halo which have found their material expression in so many works of art. The ox and the donkey found their way into the stable of the Nativity, which has been so often painted and figured. Joseph became a type, an old man, so old that the birth of Jesus became a necessary miracle. Mary was taken to the skies and did not die the death of a mortal. The Passion of Jesus surrounded itself also with many legends. Renan believes that most of these spontaneous and sometimes touching additions were made in Asia. He says, with much truth, that Christian iconography, whether Byzantine or Latin, owes much to these apocryphal gospels:

"The Perugian school would have had no *sposalizio*, the Venetian school no Assumption, no Presentation; the Byzantine school no descent of Jesus into Hades, but for the apocryphal gospels. The infancy of Christ would be wanting in its most charming details. Their advantage lies in their inferiority. The canonical Gospels were too strong food for the people. Vulgar, and sometimes low, stories were more on their level than the Sermon on the Mount or the speeches of the fourth Gospel."

A literature of false "Acts" was also produced; but the Acts of the Apostles had been the individual work of Luke, and there had never been various versions of them. It happened, therefore, that there was not so much room for invention; and, in fact, the Apocryphal Acts have little in common with the Acts of Luke. The history of the apostles never received a definitive form, and it was constantly modified.

Renan now promises a volume on the reign of Marcus Aurelius, and it is quite true that in a certain sense this reign still belongs to the beginning of Christianity. The sect which goes by the name of Montanism appeared under Marcus Aurelius; it was a sort of miraculous efflorescence; but, as Renan says, religion under Marcus Aurelius, and after the disorders of gnosticism, needed something more than miracles—namely, discipline. The Phrygian prophets met with the resistance of the orthodox bishops. Renan has another reason for speaking of the reign of Marcus Aurelius: he wishes to show the ties of Christianity with the great contemporary philosophic movement of reform. Christianity was not an isolated fact; it answered a great need of the time, but Hellenism, Romanism had their share in the work of social amelioration. Marcus Aurelius will end this long series of emperors; he was the last representative of the school of virtue which tried to save the world by the mere work of reason. He ought to have been the real Constantine, and to have reconciled the Church and the state. Renan will tell you why he was not, and why Christianity so soon linked its fate with the Empire.

Correspondence.

THE RELIGIOUS PRESS AND THE TALMAGE CASE.

To the Editor of The Nation:

Sir: In your last issue, commenting on the Talmage case, you refer to the attitude of the religious press in regard to it, quoting from a speech, of which you say:

"The Rev. J. M. Sherwood, who was one of the prosecuting counsel in the last trial, has published his speech, which is curious reading, inasmuch as it enforces on the Synod the desirableness of respecting within the Church the prejudices of the outside world on questions of 'fundamental morals.' He makes some very severe observations, apropos of this, on the religious press, and produces a quotation from one of those religious papers, which objects to trying Talmage for falsehood and deceit, not because he is innocent, but because,

> "'As it is now the golden time of autumn, when city people are coming back from the country, and churches begin to be full, and ministers preach with new zeal and hope, and look for blessed revivals of religion, it would be a thousand pities if this peace and harmony and the brooding influences of the Spirit were all driven away by the reopening of an ecclesiastical trial which has vexed the ears of the Christian public much too long.'

These and other things are making a great many people ask whether some of the churches have not got a good way towards the old pagan idea of religion, which assumed that the favor of the gods was won by prayer and praise simply, and was in no way conditioned on the good behavior of the worshippers."

Here is wisdom. You find a stray sentence quoted in a speech (the animus of which might well have made you suspicious); you quote it at second-hand, without stopping to ask where it came from, or in what connection it was introduced; and on this sentence, taken out of its place, with "other things" of a like character, you jump to the conclusion that "some of the churches have got a good way towards the old pagan idea of religion, which assumed that the favor of the gods was won by prayer and praise simply, and was in no way conditioned on the good behavior of the worshippers"! This is a pretty serious imputation—that a portion of the Church is returning to paganism, and its ministers, forsooth, are little better than the priests of Jupiter!

Now, if you had taken the slightest pains to "verify your references" (to quote the advice of Dean Stanley to theological students), and to "study the context," you would have seen that the article quoted from did not warrant at all the complexion which you gave it. It was not a defence of Mr. Talmage; nor did it, as you affirm, "object to trying him for falsehood and deceit." *He had been tried already.* For weeks the Presbytery of Brooklyn had done nothing else than sit in judgment on the case. They had sifted every particle of testimony, and at the end had heard it summed up in arguments of great ability on both sides; after all which they rendered their verdict, that the charges were *not sustained*, and the case was dismissed. Was not that a "trial" long enough in all conscience? After that months passed; Mr. Talmage went abroad for the summer. When he returned in the autumn the question arose whether those who had pressed the matter with so much zeal before, and been

defeated, should "go at it again," and fill the public prints with their uproar and strife? This was a question of practical wisdom, and the only question which was considered in the article to which you refer.

As to your statement that it "objected to trying Talmage, *not because he was innocent*," this, too, conveys an impression that is totally false. The question of "innocence" was not raised at all, nor on that did it express any opinion. To do so would have been a great want of decorum. The article was designed for the members of the Presbytery, the very men who had conducted the trial and were familiar with the testimony. For an outsider to give *them* a flippant opinion of the merits of a case on which they had deliberated for a whole month would have been an assumption of superior wisdom, which they might justly have resented as an impertinence, and ask, "Who made you a judge over us?"

But there was one thing which one who was in friendly relations with all parties could say without offence, and with a faint hope of a good result—to wit: That those who had felt it to be their duty to bring charges against Mr. Talmage, having had those charges fully investigated, might now feel that they had done their whole duty in the premises, and were absolved from any further obligation. Writers on ethics insist much on "the limitations of human responsibility." In this case it seemed that that limit had been reached. Their troubled consciences might be relieved. They could wash their hands of the whole business, assured that, however "guilty" Mr. Talmage might be, they at least were not partakers of his sin.

Such was the feeling which prompted the article in question. It was not written in the interest of Mr. Talmage nor of his accusers, but in the interest of public decency, which was outraged by this constant dragging before the public of what had been discussed *ad nauseam*.

The additional motive which appears in the sentence you quote is one which you do not feel the force of, and deride as a "pagan idea"—mere cant and hypocrisy—but it was one which would be felt by every serious and devout pastor in Brooklyn, to whom it was addressed.

Upon reflection I think you will agree that so small a text was not well chosen to point so grave a moral; that a bit of friendly advice, the dictate of common sense and of the kindest feeling, was hardly sufficient to warrant the inference that "some of the churches" are relapsing into paganism, or "have got a good way towards pagan ideas."

HENRY M. FIELD.

NEW YORK, Jan. 12, 1880.

[Dr. Field, we are sorry to say, has fallen into something like "journalism" in the foregoing. We did not say "these and other things of a like character." We said "these and other things," and we meant other things of a different character. Nor did we "in this single sentence taken out of its place," etc., jump to the conclusion "that some of the churches," etc. We said that these and other things "were making a good many people ask whether some of the churches," etc.—*i.e.*, these and other things were creating doubts in the public mind about the attitude of some of the churches with regard to the relations of religion and morals. The observation on "the priests of Jupiter" makes us fear that Dr. Field read our remarks in a state of excitement. We have since read the article from which Mr. Sherwood quoted, which when we received his speech we had not seen. We must say frankly that we think it shows that the writer was more troubled by the scandal of Talmage's trial than by the possibility of his guilt, and thought the interests of religion would be best served by dropping the question of his guilt, or, in other words, justifies the construction put on it by Mr. Sherwood. Dr. Field seems to us to labor under a misapprehension as to what took place before the Presbytery. The facts were not disputed, but the court divided on their moral complexion. This, according to our view, made it the duty of the prosecutors to carry the case up on appeal, and get a still more authoritative decision, if possible, on the morality of Talmage's conduct. In fact, we are not sure that they would not have been justified in carrying it to the General Assembly for the same purpose. If the Presbyterian Church thinks that Talmage's acts in the slander charge, the telegram charge, and the subsequent "moral rottenness" performance in his pulpit, were harmless, or merely imprudent, the public ought to learn it from the highest authority in the Church. With all respect to Dr. Field as a theologian, we deny that "the brooding influences of the Spirit are driven away" by ecclesiastical trials; they are driven away by the bad behavior of pastors and church members, and the feebleness of church organizations on questions of fundamental morals. We do not mean to be irreverent, therefore, in advising the religious press to give itself no concern about the Spirit, but to keep a sharp eye on the Talmages.—ED. NATION.]

THE POET AND THE KING.

TO THE EDITOR OF THE NATION:

SIR: Please allow me to correct some errors in your note about the Norwegian poet Björnson and the King of Norway and Sweden in your issue of the 1st inst.

The drama "Leonarda" did not create much excitement in Norway. It was very readily accepted by the managers of the Christiania Theatre, which is neither a royal, a state, nor a municipal institution, and it was also very favorably received by the public and the press, with only the exception of a leading conservative paper that is generally considered the organ of the Government. The somewhat radical tendencies of this play are not of a political but of a social nature.

In Norway there is no censorship of any kind. Professor Molbech is censor at the Royal Theatre in Copenhagen, and as such rejected "Leonarda" in accordance with the tradition of this institution, which has generally rejected the best plays of Norwegian poets, but as regularly accepted them afterwards when they have made their round on the first stages of Europe.

Immediately after having rejected "Leonarda" Professor Molbech was decorated with an order, not by his own king, the King of Denmark, but by King Oscar of Norway and Sweden. The decoration was dated a couple of days before the rejection of "Leonarda," but it is asserted that already at that time it was well known at the court of King Oscar, in Stockholm, that Mr. Björnson's last play would be rejected by Mr. Molbech.

Some time last summer it was reported to Mr. Björnson by ear-witnesses that King Oscar had, on a festive occasion at his palace in Stockholm, loudly denounced him (Björnson), and declared that he "had trespassed against all the ten Commandments." Last fall, immediately before starting on a journey to Germany, Mr. Björnson sent a letter to King Oscar's Norwegian Prime Minister in Christiania, asking, in a very moderate tone, for an explanation. Such an explanation he has not, as far as known, yet received, and he will probably never receive any. The Conservative press of the Scandinavian countries has, curiously enough, turned very severely on Mr. Björnson because he dared to ask the King's minister for an explanation, as though Björnson, and not the King, was the insulter. Meanwhile the liberal Scandinavian press is discussing the question whether the constitutional provision that the King's person is sacred, inviolable, and irreproachable, must be so construed as always to shield him against being prosecuted for violations of the criminal laws of his countries.—Respectfully, H. H.

CHICAGO, Jan. 1, 1880.

Notes.

J. W. BOUTON announces that all subscribers to the *Portfolio* for the current year whose names are received prior to May 1 will be entitled to a choice of Rembrandt's famous etchings, "Death of the Virgin" or the "Three Trees," as reproduced by the Amand-Durand process, of which the fidelity is marvellous. A series of etchings from North Wales, by Mr. Herkomer, is promised during the volume.——In the *Naturalist* for December and January Mr. Frederick Brendel gives a full and interesting "Historical Sketch of the Science of Botany in North America, 1635–1858"; a history, as he says, necessarily that "of travelling and local collectors, and of descriptive botany so far as it concerns American plants." To the current issue Dr. Elliott Coues contributes a summary "Sketch of North American Ornithology in 1879."——We have received the prospectus of the *American Entomologist*, to be edited by Prof. Chas. V. Riley and Mr. Andrew S. Fuller, and published in this city by Max Jaegerhuber, at 323 Pearl Street. It will be illustrated, and may safely be recommended to all cultivators of the soil as a valuable aid in combating the insect pests of the garden and the orchard.——The first number of the *Planter's Journal*, the organ of the Mississippi Valley Cotton Planters' Association, has reached our table. It is published monthly at Vicksburg, Miss., and edited by Mr. F. C. Morehead, President of the above

Association. The contents are by no means exclusively devoted to cotton, but have much the same range as our agricultural journals at the North. The most significant article in the January number is that on the Clement attachment by Mr. F. E. Whitfield, of Corinth, Miss., a manufacturer under the "new process." His statements are enthusiastic, but seem to have a solid basis.——We regret to learn from the December number of the excellent *Library Journal* that it has not yet received the measure of support to which it is entitled by its merits. It will, however, be continued another year, and, while public libraries should without exception enroll themselves on its list of subscribers, every owner of a considerable private library ought also to give it a cordial welcome. The office of publication is at 13 Park Row.——The first three parts of Mrs. Lamb's 'History of the City of New York,' vol. ii., begin with the opening of the Revolution in 1775, and carry on the story to the year 1777. The battles of Harlem Heights and White Plains are freshly retold, and with the aid of some excellent new maps, in which the modern city is laid down over the old scenes of warfare. In Part 3 will also be found a map of the "burnt district" of 1776—no mean destruction.——Four parts (*A1—Colombia*) of a 'Dictionary of Commerce and Manufactures,' edited by Dr. L. de Colange, the former editor of 'Zell's Encyclopædia,' have been issued by Estes & Lauriat, Boston. The entire work is estimated to consist of twenty-five parts of 48 pages each. Its scope is indicated by the following titles from p. 29: *Atlantic, Mississippi and Ohio R. R., Atlas, Atmometer, Atropia, Attachment, Attar of Roses, Attestation, Attire, Attorney, Aubergine, Au besoin, Aubusson, Auctioneer*, etc., which do not differ greatly from those on p. 34 of McElrath's 'Commercial Dictionary.' Still, Dr. Colange has more room for details than his predecessor (compare the articles on *butter*), and undoubtedly will keep his promise to give "a large lot of miscellaneous information," brought down to the year just elapsed.——What energy and perseverance can do for the advancement of a community may be realized from the announcements of the Mozart Club, New London, a town boasting, at the best, some twelve thousand inhabitants. Last year this club was established for the cultivation of classical chamber-music, such as the duos, trios, and quartettes for stringed instruments and pianofortes by the foremost composers. The first two programmes were furnished by Mendelssohn, Handel, Hummel, Haydn, Schubert, Weber, and Chopin, and the attendance was so large as to bewilder the managers by the want of room for the auditory. From the same locality and under the same auspices comes a programme for the 26th inst., by the children of the public schools, assisted by elder amateurs, numbering together one hundred and fifty voices, which is to present choruses by Gounod, Handel, Reichardt, Costa, and Verdi. It is owing to the zeal of Messrs. A. H. Chappell and C. B. Jennings, the principal of one of the New London schools, that these educational influences, of unmistakable value, are fostered and developed.——Sitting Bull has, we learn from *Polybiblion* for December, been made the subject of an octavo volume of 365 pages, by Godefroid Kurth, Professor in the University of Liège. Naturally more than half of the book is devoted "à l'exposé de la situation faite aujourd'hui aux Indiens par leurs frères Yankees." In the same journal for December and January will be given a bibliography of the immaculate conception.——The *Academy* of the 27th ult. announces the beginning of two new journals with the new year, one called *To-Day*, published in London weekly and apparently similar in aim to *Truth* and the *World*, and the other a politico-economical monthly, in both French and German, published at Zürich under the editorship of Herr Ottiker, and entitled *Der Schweizerische Volkswirth* and *L'Économiste Suisse*.

—There is now being published at Boston, by Mr. J. P. Soule, 349 Washington Street, a series of photographs of interest to the general public, but of especial value to students of the history of art who have been unable to obtain sufficiently numerous or adequate illustrations of the different schools and masters. They are reproductions, made with great care and of a nearly uniform small size, of the photographs of Braun, Naya at Venice, Alinari at Florence, and others of the best foreign photographers who have copied from the originals. The series includes the complete works of Michael Angelo in the Sistine Chapel, great numbers of Raphael, Titian, Botticelli, and all the famous masters of the Low Countries and Germany, as well as of Italy, besides statues, bas-reliefs, mosaics, antiquities, the Tanagra figurines, views in Egypt, the Holy Land, Greece, and Rome. The photographs are, of course, useless for the study of color, but they afford satisfactory means of studying outline, design, composition, and in general the style and spirit as well as the progress of the various schools. Of especial interest to classical students is a series of nearly fifty reproductions of vase-pictures, bas-reliefs, and monuments from the works of Gerhard, Visconti, Kekulé, and the 'Monuments inédits publiés par l'Institut de Correspondance Archéologique,' which have been made especially to illustrate the lectures at Harvard upon Greek poetry and art; so, too, is the series which reproduces the complete set of Stillman's Athenian photographs, which are the best ever taken, and are now very difficult to procure, as only one hundred sets were originally printed. The student of art or of antiquities could not obtain any similar aid except by consulting numerous books and collections in our largest city libraries, and even then he would hardly meet with such variety and profusion of illustration. Over fifteen hundred numbers have already been printed, and the list is continually growing longer and richer; the collection affords an opportunity for information and study in respect to art, both modern and ancient, such as has never before been offered in America, not only because of its extent and variety, but also for the fidelity and care displayed in it. The photographs, unmounted "cabinets," are sold at the comparatively trifling price of $1.50 per dozen.

—American sculpture, since the war, has confined itself either to portraiture, or else, when ambitious of displaying the flight of fancy, to the confection of military monuments. This gives consequence and distinction to the very few efforts making in the purely ideal kind, and invites our notice of a graceful model of "Psyche" recently finished in this city by T. Baur, an unquestionable genius, though a man not often mentioned before contracting committees. The "Psyche" is treated as a decoration, the bust in high relief leaning out of a ring whose circle is interrupted by the advancing wings. The eyes are closed, and the vines which supply the ornamental saliencies seem to influence the enervation and languor of the figure. This Clodion-like motive is carried out with fastidious grace, the curves harmonizing well, the complements of light and shade balancing each other finely, and all importunate realism being kept far away from a composition which yet has none of the affectations that shock the realists.

—We commend the following opportunity to our esteemed contemporaries, regretting that we cannot ourselves employ the services of our correspondent, who, by the way, frankly acknowledges that he is "aged about forty-two years":

"I write asking for a Situation: or as Correspondent or Writer for thy paper: I have been for 15 yrs practising and preparing myself for an Author and writer, (5 years devoting my whole time to this) and now feel it to be time for to make practical use of it; having written and collected 117 note books of 'points,' all numbered, upon finance, business, Social Science, etc., etc., etc., the points amounting up to this time to 266,586; from this practice my style is very condensed probably too much so."

—The third soirée of chamber-music given by the Philharmonic Club was a rather uninteresting affair, the only redeeming feature being Beethoven's great Trio for pianoforte, violin, and violoncello, in B flat, Op. 97, in which Miss Anna Bock took the piano part. This accomplished young artist, whom we praised a few weeks ago as a very brilliant and spirited performer of compositions of the most modern school, showed that she possesses every quality needed to interpret the noblest works of the classical period, among which Beethoven's Trio must undoubtedly be numbered. Mr. Arnold is always excellent as regards purity and correctness of tone, and a certain amount of execution; but his playing is singularly devoid of interest, and, in the absence of fine shading, becomes very wearisome. This defect was very noticeable in the bright, joyful Scherzo and in the sombre Trio which follows it. There was a sameness in his interpretation of these two movements, which are as different in character as they possibly can be, that was positively distressing. The remaining numbers were not remarkable. A Duo for flute and piano by Schubert, in spite of Miss Bock's and Mr. Werner's admirable execution, made a rather doleful impression. The Scherzo from a quartet by Cherubini is a bright and pretty little composition, but it is always hazardous to take a single movement out of a complete work. We should have enjoyed Cherubini's quartet in its entirety vastly more than this solitary number, played after a very insignificant Adagietto by Bicet (or Bizet?), with which it has no connection whatever. The concluding number, a string quartet by Mozart, in F major, not by any means one of the most interesting of the thirty-two string quartets which the prolific master has left, was very satisfactorily played by Messrs. Arnold, Gantzberg, Gramm, and Werner.

—In the Gossip of *Lippincott's* for January is an account of "A Visit to the Maison de Molière," which describes hastily the many curious works of art collected in the Théâtre-Français. Since that visit was paid, M.

Réné Delorme has published 'Le Musée de la Comédie-Française' (Paris: Ollendorff; New York: F. W. Christern), an ample volume of over two hundred quarto pages, in which the riches of Molière's house are set forth in order, exactly, and with fulness. Hereafter a visitor to the Théâtre-Français need not rely wholly on the word-of-mouth catalogue of his courteous conductors, for here in print is a seemingly complete list of the treasures of the building. M. Delorme points out that this museum (for such the theatre really is) is but little known even to Parisians, for want, perhaps, of a list of its contents; and this in spite of the fact that it contains pictures by Mignard, Van Loo, David, Gros, Ingres, Delacroix, Isabey, Dubufe, Gérôme, and Robert-Fleury, and statues by Houdon, Caffieri, Dantan, Clésinger, and David d'Angers. The museum is about a hundred years old. In 1777, when the company owned a picture or two, Caffieri proposed to found a gallery of great French dramatists and actors, to which he himself made the first contributions. In 1815 there were a dozen paintings and nearly two dozen marbles. In 1850 M. Arsène Houssaye became the director, and his artistic taste gave great impulse to the collection, which has continued to grow under the present director, M. Émile Pérrin, a pupil of Gros and Delaroche, and, like M. Houssaye, formerly a frequent writer on art topics. Now the total catalogue of works of art belonging to the Comédie-Française reckons over three hundred numbers, including one hundred and seventy-one pictures and seventy-seven marbles. Most of these are portraits, all of departed authors and actors. After a general description of the museum, its origin and its growth, and after an account of the various artists, M. Delorme gives a classified catalogue of all the works of art in the building, excepting only those which may hang in the private dressing-rooms of the actors. These dressing-rooms are not the little cubby-holes one sees in most theatres, but ample rooms with large closets. Many of the actors and actresses are either artists or the friends of artists; Mlle. Sarah Bernhardt, like Mrs. Siddons, is a sculptor, and, like Mr. Joseph Jefferson, a painter. M. Coquelin is intimate with M. Vibert and M. de Neuville, and he was a great friend of Henri Regnault and of Fortuny. His portrait as *Mascarille*, by Madrazo, hangs in his dressing-room, and has been reproduced on wood for the December number of the *Moliériste*.

—While the second volume of Dr. Friedrich Ratzel's great work on the United States is still in preparation, supplementing with an account of our political and social characteristics the volume devoted to the physical geography of the country; and while Dr. von Holst is doing for the constitutional history of the Republic what no native writer has ever attempted, a third work of comprehensive scope and costly manufacture on 'Nord-Amerika, seine Städte und Naturwunder, sein Land und seine Leute,' by Ernst von Hesse-Wartegg, in four volumes of upwards of 800 pages, comes to us from the house of Gustav Weigel, in Leipzig. Equipped with all these publications, no German who wishes to form a correct idea of the United States has any excuse for remaining in ignorance. The latest is the most superficial, and is strictly to be classed among illustrated guide-books, though it is meant to be read continuously, and is, in fact, well digested and well written. It has no maps of any kind and no index, but it abounds in woodcut illustrations of every degree of authenticity and verisimilitude, though of pretty uniform execution. It gives 13 pages (large octavo) to the New England States, 22 to the Dominion of Canada, 233 to the Middle States and the District of Columbia, 152 to the upper Mississippi valley, including Kentucky and the Mammoth Cave, 239 to the Rocky Mountains and the Pacific Slope, 43 to Arizona and New Mexico, and 72 to the Southwest and South (with only 9 pages allotted to Texas). This distribution is such as the average tourist, since the opening of the Pacific Railroads, would make, and represents, we suspect, pretty nearly the extent of the author's personal experience of travel; for when he passes, as he rarely does, from mere description into narration, he is found on the beaten track. But it also answers sufficiently well a main purpose of the work, to prepare German emigrants (naturally of some intelligence and property) for a choice of home in the New World.

—Some misrepresentations have arisen from an uncritical selection of pictorial illustrations. Only here have we ever seen on Broadway by daylight ladies riding, or emerging from the St. Nicholas Hotel, in full evening dress. The "types" are seldom anything but caricatures, and the Indians are uniformly figments of the imagination, except in the very few instances in which photographs have been copied, as they ought always to be. The negro is frequently travestied, whether we see women in the cotton-fields stripped to the waist while at their work, or a dapper negro porter on the Baltimore and Ohio Road deftly kicking a trunk from the baggage-car in the face of its irate owner. The view of a Quaker meeting (i. 153) looks rather like a Mormon conventicle, though the author says, on the next page: "A true religiousness (*Religiosität*) animates the Quakers, while the Baptists, Methodists, and other denominations by the dozen (*Dutzende Andersgläubiger*), unhappily make a show of religiousness, from which the Germans of Philadelphia are fortunately exempt." The temperance and Sunday laws of New England, its woman's rights and spiritualism, its religious eccentricities and "incredible social peculiarities" (not specified), seem to the author to account for this section being left one side by the stream of immigration. Still, he is not sparing of compliments in other respects, even to the praise of New England "model farming." In addition to the other isms, Boston is the seat of Quakerism (here pronounced an "abnormity") and Shakerism (!), and is remarkable for the social influence of the clergy (*Pfaffen*); but it is still possible to live there "without coming in contact with these unwholesome conditions." That for the East Herr Hesse-Wartegg relied too much upon books and not enough upon observation is again evident when he says that the teaching of French and German is remarkably neglected in Boston, speaks of the old elm on the Common as still standing, and states that Hawthorne and Prescott live in the vicinity of the city.

—The Massachusetts Railroad Commissioners have lately begun to test railway employees for color-blindness. It was quite time for taking action in the matter, the facts being that color-blindness is congenital, incurable, and considerably more frequent than is generally supposed; in our community one out of twenty-five males is totally unable to distinguish red from green. These being the colors in universal use for railway and marine signals, the power to distinguish instantly between the two is momentarily deciding, the world over, between life and death for the traveller. Three or four in each hundred of the railway and marine employees in this country are incapable of making this decision, as Dr. Jeffries concludes from testings in many thousand cases, and are unfit for their places. Following the lead of Sweden and France in their examinations, the Massachusetts Board are beginning to do what will be done, and at no distant future, throughout the country. Their action calls, however, for one criticism—it is not thorough enough and does not take enough account of the experience of foreign countries in this matter. The examinations for color-blindness, while simple in theory, yet require in practice much experience and expert knowledge in order to give results that are fair to both parties—to the railroad employees and to the travelling public. On the one hand, an employee must not be dismissed for less cause than actual color-blindness in such degree as to prevent his distinguishing signals; on the other hand, the public must be certainly protected from the risk that a single color-blind engine-driver shall remain at his post. This great existing danger to life and property is now certainly remediable by proper examinations. The Massachusetts Board, however, began by appointing not an expert, but a railway conductor, to examine the employees of the Fitchburg Railroad. Examination by a conductor is certainly better than no examination at all, but in recent European experience even the railroad surgeons failed to make satisfactory examinations for color-blindness, and ophthalmic experts had to be called in at last. Precaution less than this will hardly satisfy our travelling public after it shall have learned that safety requires the absolute elimination of the color-blind from the railway *personnel*. Examinations for color-blindness and the range of vision in recruits have already been ordered in the United States Army, the army surgeons being the examiners. The number of experts in this branch of service will increase rapidly by reason of the increased attention now called to the subject; meanwhile it seems clear enough that only expert examiners should be employed for railway and marine examinations. The subject offers the most striking recent instance of a strictly scientific enquiry that has suddenly been transformed into a serious question of every-day practice.

—Prof. Johan Nikolai Madvig, whose name is known the world over in every school where the Latin language is taught, celebrated on the 17th of November last the fiftieth anniversary of his appointment as professor in the University of Copenhagen, Denmark. Although Madvig is most widely known as the author of a Latin grammar, his most valuable work as a scholar has been done in another field. Before his appearance as a philological critic scientific criticism could hardly be said to exist in the realm of philology. The Greek and Latin classics had been published in the most arbitrary manner, printed from such manuscripts as happened to be at hand, and though something had been done sporadically by the great linguists of the last century, still textual criticism was in its infancy. It was not rational, but depended on accidents, and to

Madvig is due the credit of putting an end to it and of establishing a logical, rational criticism on a scientific basis. He recognized the fact that manuscripts must be weighed, not counted, that it is not the number of manuscripts, but their character, that determines the reading of a passage. He showed that manuscripts must be classified according to their origin, and how it is possible by careful comparison to determine which is child and which is parent, so to speak, until you have made your way back through the entire pedigree. It is well known how nearly fifty years ago he contended for his principles against the noted Orelli, and how Germany was at last constrained to recognize their soundness. Madvig was born August 7, 1804, and is still enjoying perfect health and mental vigor. In personal appearance he is like an average New England Congregational minister; he is not a native of Copenhagen, and a provincial pronunciation of Danish, which he has always retained, gives a peculiar quaintness and charm to all he says.

—Jón Sigurdsson, an Icelander, distinguished alike as a scholar and a political leader, died at Copenhagen December 7. He published numerous learned works relating to the classical and modern literatures of his country, but he will, perhaps, be longest remembered as the man whose wisdom and energy succeeded in rendering his native land independent of foreign rule. Even the Danes, against whom he waged a persistent political warfare, were compelled to respect him, partly because of his thorough common sense, partly because he more than once prevented the more impulsive insular patriots from breaking into open revolt. He presided during sixteen sessions over the Icelandic Althing, both before and after his exertions had made it a real legislative body. The hour of his triumph came in 1874, when, at the time of the celebration of the Icelandic Millennial and the visit of Christian IX. to his polar subjects, a new and liberal constitution was proclaimed, separating Iceland for ever from the domination of the Danes. In Iceland itself he was idolized, his portrait hanging on the walls of every farmstead and every fisherman's cottage; and he was highly esteemed by both Scandinavian and foreign scholars. He died in his sixty-ninth year, and is to be buried at Reykjavík, the Icelandic capital.

—The absolute necessity of keeping abreast with German scholarship in English is impressed upon us more forcibly than ever by a glance at the last two volumes of the *Anglia* and the *Englische Studien*. Of the thirty-six contributors to the *Anglia* only two are Englishmen (Furnivall and Sweet), one is an American (Dr. Phelan, of Memphis, lately deceased). All the others are Germans. The *Englische Studien* makes even a worse exhibit; here only *one* contributor (Sweet) is a non-German. For the winter semester 1878–79 nearly seventy courses of lectures on English language and literature were announced for the universities of Germany, Switzerland, and Austria. Some of these were upon modern authors; but at least thirty of these courses were upon English philology, in the strictest sense of the term. We can appreciate, then, the force of the admission made by one of the most eminent scholars in England, that Germany is the only country in which it would be possible to edit a review like the *Anglia*.

EATON'S CIVIL SERVICE IN GREAT BRITAIN.*

ALTHOUGH the Administration has not kept its promise to promote civil-service reform actively, it has done something in that direction by requesting Mr. Eaton to prepare, at his own expense, the volume now presented as a history of office-holding in that country whose public life most nearly resembles our own. In so far as it is an argument—and it does form a vigorous and convincing plea for the reform—it proceeds indirectly by comparisons founded on historic detail. The greater part of the work is devoted, as its purpose required, to showing how the spoils system in England grew out of the absolute ownership of offices by the crown, and was modified but not improved by the substitution of party government; and how, as its abuses became rank and intolerable, a rising spirit of public reprobation kept pace with them, till at last the sense and virtue of the English people overpowered the selfishness of a class, and triumphed by the destruction of the system. The author makes skilful use of the occasions such a review presents for enforcing the need and the practicability of just such a national purgation among ourselves.

The rising generation of Americans really knows of nothing better than our present vicious system of appointment to office, accepting it generally as traditional practice, without any enquiry into its reasons. People whose eyes and ears are open admit the great evils that affect republican government in our degenerate time; and such as hear and see anything beyond their own neighborhood deplore the consequent discredit of republicanism abroad. But the multitude who have not reflected at all on the subject fail to connect these evils with our faulty system of administration, while those who have half reflected on it accept the false notion, cunningly fostered by small politicians, that such evils necessarily attend republican government, that they are the essential complements of its benefits, and, after all, preferable to the abuses of other kinds subsisting under monarchies. It is for the sake of going to the root of this error, not argumentatively but by historical comparison, that the author devotes so many pages of his work to the causes of bad administration in England. He shows that the spoils system was born at the opposite pole to free government. It sprang from the king's single will: offices were his creation and officers his creatures. It was cradled in feudal slavery and nursed by Plantagenets and Stuarts. It is the active expression of absolute rule, and it logically follows that it can have no fixed root, nor reason for being, among the principles of a free government.

Quite as strong is the proof, fortified by iterated instances and apt reference to statute and record, that government by parties—the machinery through which the modern representative principle works—has no necessary connection with bad administrative organization. It is weakened and debased just in proportion as it resorts to the spoils system. It gains vigor and purity, and works towards the true ends of government, just in proportion as it adopts the merit system. It would take too long to follow the author through the elaborate exposition of these truths that employs more than a fourth of his space. Succinctly stated, the result of his researches is that as party control becomes partisan the framework of modern government, theoretically blending in associated action the distinct and independent legislative, executive, and judicial functions, becomes practically dislocated and paralyzed. It is no longer a despot who absorbs and engrosses all profit and power, but it is a class that quite as absolutely sacrifices the public good to its own selfishness. The commonwealth is stolen to become the property of banded intriguers. The nation may perish, so that a handful of placemen and their patrons may thrive.

It is here that the close analogy with our own wants and dangers presents itself. Administrative reform in England found two prodigious obstacles to surmount which do not lie in its way in our own country. A powerful aristocracy, entrenched behind usage, fought with intelligence, unity, and desperation to retain place for worthless dependants. A venerated church clung to abuses honeycombing its fabric, as if corrupt appointments protected the ark instead of defiling it. But the agency both these interests used in defence was that in which lay the main strength of resistance to reform in England, as it lies in this nation—party selfishness. So far as concerns party management, the modes of continuing bad administration, the arguments for a change, and the pleas to be let alone were precisely the same in England forty-five years ago as they are with us now. Most striking and instructive, though too detailed to be more than glanced at here, is the author's elaborate account of the advance of this reform in Great Britain since party government came in. He paints the rising anger and contempt of the nation for the selfish iniquity of patronage—the light that dawned on a few far-sighted statesmen before the date of our independence—the conviction at length possessing all patriots that either the spoils system must yield or the Constitution break down and the greatness of England decline. He describes how executive action within its due limits, needing no power from Parliament, and hardly wringing from it pecuniary aid, slowly and cautiously experimented with the merit system—how it was applied at first on a small scale to parts of the service—how its range extended, its processes improved, its results over and over again received investigation by legislative commissions containing picked men of both parties, until the existing wise, just, and comprehensive system of official administration and responsibility was established in Great Britain. The author's copious data on these subjects, with his sound conclusions from them, furnish information and suggestions which will be invaluable whenever the halting advance of our own civil-service reform is resumed, as it surely will be. The change will be brought about with us by the same steps taken to bring it about in England. The fact is strongly presented that the reform there triumphed against party action, in spite of party murmurs and ridicule. Its achievement demanded assiduous labor through many years from the best men. There was no spasmodic resolution by any party; no sudden access of public virtue visited either. They all

* 'Civil Service in Great Britain. A history of abuses and reforms, and their bearing upon American politics. By Dorman B. Eaton.' New York: Harper & Brothers. 1880.

went on doggedly in the old ways of selfishness till the disgrace and demoralization pressed too heavily for common English sense and honesty to bear. They found a voice, they organized a change, they backed and urged chosen men of all ranks and political faiths in unwearied enquiry and experiment, until a pure system of administration, resting on merit, drove out the miserable party tyranny that had kept itself alive by patronage.

It is a signal encouragement to the friends of civil-service reform in this country that we have our own record of a purer state of official life to turn to in contrast with its existing corruptions and inefficiency. We need but to go back to the practice of earlier days, and to regulate it by close examination of the theory of the subject. Administration as a science has never been studied among us, yet administration as a system was better in the first half-century of the Republic than it was at the same period in England. And it was so because the generation of Hamilton and Madison declared and maintained character and capacity as the qualifications for office. It is not so long since this standard was lowered at the dictate of politicians: "The present generation of Americans has seen patronage and coercion steadily increasing, whereas the present generation of Englishmen has seen them as steadily fall away." It may require the persistent struggle of another generation still to regain the old ways, but that we shall return to them may be predicted as surely as any coming event in history can be foretold. To suppose that the stain of the spoils system will not be effaced from our republicanism, is to believe that Americans are morally weak and mentally purblind as compared with their English brethren. The chapter in this volume which treats of the bearing of British experience upon civil service reform in the United States is especially manly in its spirit, and full and clear in the exposition of the subject. The merit system, it declares, can be firmly established only through public enlightenment, the general conviction that the welfare of the state demands it, and its recommendation by practice.

It is the fashion—and the fashion of the day sometimes reflects the truth of the day—to put little faith in the wisdom or virtue of Congress. This history teaches us that Parliament held to its patronage with as firm a clutch and as shameless a greed as ever a ring representative has shown. Fortunately for us, the small beginnings of reform that have been made in the New York Custom-house and Post-Office justify the promises and efforts that led to their trial. And it is fortunate, too, that our system of decentralization gives opportunities for doing a great deal without any reference to Congress. Each of our three-dozen State legislatures and our countless municipalities affords a point of attack to which argument may be addressed, and a sphere that would admit, at slight cost and with little change, the experiment of the merit system. Not a few of our cities have fallen into a depth of financial distress that cries out for some heroic relief. After a few more have been turned over to receivers or sold out by the sheriff, the rest in similar risk may bethink themselves of the cheap and simple protection of reformed administration. It is with the collection and disbursement of revenue, involving questions of taxation, that such a reform first concerns itself. Rural voters, learning thus how to guard their pockets, will naturally direct their thoughts to higher interests, and insist on applying improved systems to larger economies in a wider range of policy.

As our remedy for the evils of the present system must ultimately come through the ballot, so there are two circumstances in our late history connected with the ballot which will intensify them, unless soon cured, to a very dangerous degree. One is the extension of the suffrage to the blacks. Politicians have enormously multiplied the number of their instruments of misrule and corruption by that measure. Supposing that a free ballot truly existed at the South, of what advantage would that be to the country under the present curse of patronage? Ethiopia would soon stretch out her hands for bribes of place, as Hibernia has long been doing at the North. Another consideration that should spur the zeal of the friends of civil-service reform is the spectacle of California politics. There the sand-lot patriots have leaped to very practical conclusions. They have said to the office-holders: "You are a corrupt, self-seeking set. We have the power of the ballot. *Ôte-toi, que je m'y mette.*" Their crass notions and wild schemes are installed in the State-house and injected into the constitution, pregnant with mischief and disorder. What shall guarantee other States against the contagion of their example? What shall prevent the mass of latent communism, and what has been well styled sincere demagogy, throughout the country from being leavened by it, and effervescing up through the legal issues into power? If we rely on popular intelligence for safety, then the sooner that intelligence is enlightened and the corruptions of patronage, justly offensive to it, are swept away, the more reasonably may we hope to avert such dangers.

This volume will become a text-book among us on the science of administration. It would be well worth the pains to compile an abstract from it in the form of a manual for use in schools. Whenever this is done, or when a new edition appears, the large proportion of press errors that now disfigure it, some twenty within its 450 pages, should not be allowed to recur.

BOOKS OF HUGUENOT HISTORY.*

THE second and third of these books require only brief notice. The Life of Coligny is a bright, cleverish little volume; the fruit, not of any considerable research, but of good reading among secondary authorities. It is from a pen that has done several pieces of literary job-work now in the market, and done them well. And a picture of one of the most heroic characters in French history fairly well painted is a noble object for popular study. Of course, the author who issues such a work without referring to his authorities thereby advertises that he has nothing to say to scholars or even to critical readers. But his book is valuable for Sunday-school and other circulating libraries, among which we wish it a general acceptance.

'The Huguenots in the Nipmuck Country,' a small book, printed in a limited edition, treats interestingly and exhaustively of its tiny little episode of history, furnishing material for a chapter in Dr. Charles Baird's forthcoming history of the Huguenot migration. The introductory letter from Dr. Holmes is an exquisite specimen of its writer's faculty of doing a little thing with perfect grace and good taste.

The two solid volumes of Professor Henry Baird's 'Rise of the Huguenots of France' seem to us likely to take a classical position among American historical writings. And this is to be said quite as much to the credit of the public intelligence and good taste as to the honor of the work. A bit of literary history, which has attracted no public notice, strikingly illustrates the advance that the public has made in these respects. Forty years ago the florid and perfervid 'History of the Reformation in Germany,' by Dr. Merle d'Aubigné, was the most popular book of the day. Probably no book of its class had ever had so extensive a sale. Within a few months has been completed the English edition of the same author's 'History of the Reformation in France and Switzerland'—a work every whit as good as its predecessor, on a subject of greater epic interest—and it has been a dead failure. The Longmans were only restrained from throwing up the unpopular venture, after the first three or four volumes, out of consideration for the author's family; and we doubt not that the Carters could give a like account of the solitary American edition. A salutary change has come over the public taste: not that readers are less disposed either to history or to pulpit eloquence, but that they have learned to like them served up separately.

Therefore we expect and cordially hope a lasting success for Mr. Baird's 'Rise of the Huguenots,' because, occupying the same field and period with Dr. Merle d'Aubigné's unsuccessful work, it is utterly unlike it. Looking for a word with which to characterize Professor Baird's work, we are tempted to use *neatness*. It is not a glorious quality, but it is an immensely satisfactory one; and where it is found in such perfection, it is no merely negative one. To find the results of clean, scholar-like investigation expressed in a lucid, consecutive, and sober narrative gives a sense of positive satisfaction to the critical reader which the finest of fine writing is powerless to bestow. We can well afford to miss the high coloring of Mr. Froude's historical gallery for the sense of security and confidence which Mr. Baird constantly inspires, but which we habitually feel the lack of in reading Froude. It is needless to raise the question whether the resources of Mr. Baird's art would have sufficed him had he been less favored by his subject. Certainly there are few chapters of human history the plain recitals of which answer all the conditions of art so completely as the story that ends with St. Bartholomew's day, 1572. But if there are those who think that no art is required for the plain telling of such a story systematically and in its proper order, without running forward to anticipate or backward to bring up arrears of the narrative, they can easily find out their mistake by experiment. The neatness

* 'History of the Rise of the Huguenots of France. By Henry M. Baird, Professor in the University of the City of New York.' Two volumes 8vo. New York: Charles Scribner's Sons.

'Gaspard de Coligny, Admiral of France. By Walter Besant, M.A.' New York: G. P. Putnam's Sons.

'The Huguenots in the Nipmuck Country, or Oxford [Mass.], prior to 1713. By George F. Daniels. With an Introduction by Oliver Wendell Holmes.' Boston: Estes & Lauriat.

of Professor Baird's work evinces not only painstaking scholarship, but high literary skill.

In some of the more showy qualities of the historian he does not excel. Many a time the copious notes contain details of fact which, if they had been wrought into the text, would have waked the whole page to life. On page 418 of volume ii. we read in the narrative that the queen-mother, finding Charles IX. to be absent from court, "pursued him in precipitate haste." A note informs us, on contemporary authority, that in the pursuit she killed one or more horses by overdriving. It is easy to imagine with what a stroke of the pen, in a word or two, Froude or Macaulay would have sent this mad gallop rattling across the page. But opportunities like this, of bringing the very act and deed of his characters before the reader, are too often rejected by our author in favor of some mild generality. It is through this failure on points of detail, and through an overstrained sobriety of tone, quite misplaced in telling of the fiercest tragedy of modern times, that 'The Rise of the Huguenots' comes short of being a really great history.

The author's judgments on the questions of fact and motive that come before him, amply fortified as they are by authorities, are strong in their own reasonableness. The favorite Protestant view has been that the massacre was planned in cold blood and with long deliberation; that it was talked up and arranged in the lobbies of the Council of Trent; that Philip II., and Alva, and the Pope were privy to the plot; but that Catherine was the head devil by whose infernal malignity, subtility of machination, and inexorable tenacity of purpose the long-protracted and widely-ramified combinations of perfidy and murder were pushed forward to their final execution. The alleged long deliberation and extensive combination for the massacre are now clearly disproved, and never more clearly than by Mr. Baird. And as for Catherine, although the wildest zeal for historical paradox has never yet proposed to canonize her as a saint, the sober judgment of scholars completely strips her of the false prestige in which she has so long stalked the stage as a sort of satanic heroine. She stands cowering before the gaze of the world a weak, whiffling, timorous woman, whose best trait was a brute love of her offspring, and who joined to this a superstition without faith, an unbounded perfidy and cruelty, the very fruit of her cowardice, and a cool speculation in other people's lusts that makes her personal chastity to appear like an added blemish to her character. Such a revelation is a gain to the cause of public morals. It certainly is no loss to the dramatic interest of the story in which she is so conspicuous a figure. In these lucid but unimpassioned pages we find the highest elements of tragedy, as we witness this wicked and wretched creature caught in the toils of her own wickedness and dragged on to abysses of infamy which she never had foreseen.

We need hardly say that the dishonest attempts that have been made, in a sectarian interest, to relieve the pope and his court from the shame of being accessories after the fact to the enormous crime of St. Bartholomew's day, find no mercy at the hands of Professor Baird. There is one line of defence for the Roman Church, and only one: it is to affirm (as that Church does logically and consistently affirm) the rightfulness of religious persecution, and thus to justify the fierce glee with which the "strages ugonottorum" was approved at Rome and commemorated in medal and in painting.

A Ride in Egypt, from Sioot to Luxor, in 1879: with notes on the present state and ancient history of the Nile valley, and some account of the various ways of making the voyage out and home. By W. J. Loftie, B.A., F.S.A., author of 'In and Out of London,' 'A Plea for Art in the House,' etc., etc. (London and New York: Macmillan & Co. 1879.)—This book gives the reader more than it promises in its title: its sketches are not the result of one ride through central and upper Egypt, but "of three visits to the Nile valley, comprising in all about fifteen months' residence"; and, in fact, also—as the contents show—of previous studies on the subject. Mr. Loftie is an enthusiastic admirer of ancient Egypt, as revealed in its monuments, but detests modern Egypt, as he found it in the reign of Ismaïl Pasha, before whose deposition the book was prepared for the press. The fall of that ruler did not induce him to alter any of the statements referring to him, although some of them were evidently penned with the intention of making him and his acts appear as black as possible—an intention attributable not only to a more or less just abhorrence of them, but to a vehement impulse to refute current views of an opposite character. Here is a sample:

"When we arrived from the upper Nile in a dahabeeah we anchored our boat near the road to the Pyramids, and remained in her for some days. Every morning when we looked out of our windows early we saw a long and melancholy procession on the bank. First came an ill-looking man in a red fez and a long white shirt, carrying a cane. Then came two or three dozen boys and girls, half-naked, footsore, weeping as they limped along, or trying to sing a kind of slow chorus, and following them another man with a cane, which he freely used to encourage the loiterers. This was a gang of day laborers. The Khedive was filling up some low-lying land with earth taken from the river's bank, and these poor little wretches had been requisitioned from the villages and suburbs to carry the soil from one side of the road to the other. They were paid a microscopic sum—at least it was paid to the taskmaster—and we may hope against hope that they ever got any of it. In the hot midday we passed by the scene of labor and saw them at work, and after sunset we heard the sad chant of the morning and saw the same processions, without the canes, going home. It was shocking to see young girls carrying huge burdens of earth, or baskets of lime for the builders, or running up and down to the Nile for water for the workers, their feet and often their bare shoulders bleeding."

And the Nile, which constantly witnessed all these Pharaonic exactions, bears on its banks no small number of "splendid but tawdry plaster-work palaces," belonging to "the Khedive's sons, or sons-in-law, or step-mothers, or cast-off concubines. The money that has been spent on them would have built the pyramids of Gheezeh, yet in any climate but Egypt they would not stand a single winter." Yet, flimsy as they are, Mr. Loftie "heard"—the authority is not given—that "a single staircase in one of them cost twenty thousand pounds, and that the Khedive took a dislike to it as soon as it was finished, and so it was pulled down and another built at a similar cost." Mr. Loftie, to judge by his racy, off-hand delineations and criticisms, seems to consider the bondage of the ancient Egyptians a comparatively pleasant condition, and the extravagance of the pyramid-building Pharaohs a comparatively mild and useful frivolity. The latter, at least, left us those stupendous monuments which carry us back in history many centuries beyond the popular date of the creation of the world, and about which the writer, after so many others, gives us accounts still fresh and curious. And then some of the subjects of the Pharaohs, at least, lived quite a merry life. "These ancient folk were keen sportsmen. . . . They shot, they hunted, they fished, they went on the Nile in pleasure boats, they tamed wild animals, and trained falcons"—though the last point is "not altogether certain."

The author's orthography in ancient Egyptian matters, of which he speaks with a laudable minuteness, is far from pleasing to eyes familiar with less popular works on the same subjects. One name he uses in a decidedly improper form: that of Cheops or Khuphu (according to a less correct way of spelling, Chufu), whom he calls Shoofoo. This form is now almost obsolete, and justly so. Brugsch, in his German 'History of Egypt,' has "Chufu," and in the French, correspondingly, "Xufu"; Poole, in the new 'Britannica' (art. "Egypt"), like Lenormant, in his 'Ancient History of the East,' "Khufu"; Maspero, "Khouwou"; Duncker, "Chufu." The latest work of note known to us which has "Shufu" is Rawlinson's 'Ancient History,' but that has also the companion name "Shafré," for which Mr. Loftie has the more correct form "Chafra" (=Xhafra).

Adaresses, Political and Educational. By Sir John Lubbock, Bart., M.P., etc. (London and New York: Macmillan & Co. 1879. 8vo, pp. 209.)—There is a curious mixture of nomenclature in Sir John Lubbock's book. It is entitled 'Addresses,' but—if we understand the meaning of the term—there is not a single address in it. The running title is 'Essays,' and two of the papers are really essays upon educational subjects, while two others are articles originally printed in the *Nineteenth Century*; still another, on Egypt, appears to be a *lecture*. The rest are *speeches*, originally delivered in Parliament, and now published with alterations. But, whatever the title, the book is a very useful one. It contains brief and perspicuous discussions of most of the leading questions of English polity, well provided with statistics, so as to form a serviceable book of reference for persons interested in English public questions. There is nothing here profound or original, possibly the views presented may be called commonplace; but they are generally sound and well argued, and enforced by a good array of well-selected facts. The essays are ten in number, all except one—the lecture upon Egypt—upon practical questions of the day. They cover a wide range: one upon Elementary and one upon Public School Education; one upon the Preservation of National Monuments; one upon the Imperial Policy of Great Britain; one upon the Declaration of Paris; the rest upon economical questions—the Bank Act of 1844, the Income Tax, the National Debt, and Marine Insurances.

The essays upon Education present views familiar enough, and in

fact generally accepted in this country, being designed mainly to urge the claims of the natural sciences as against the almost exclusive attention given to the classics. They give, however, a good deal of information upon the English system of education, and that upon the Public Schools contains some interesting and valuable extracts upon the method of teaching the natural sciences. The essay upon the Imperial Policy is in the main a defence of that policy, aiming to show that Great Britain has been at once generous and fair towards the subject peoples. The essay upon the National Monuments is an earnest plea for legislation which shall preserve the prehistoric remains of Great Britain from destruction. Many surprising facts are given to show the indifference of the people of Great Britain in this matter, many monuments of great antiquity and interest having already entirely disappeared. The lecture upon Egypt is a good summary of what is known about that country. It undertakes to cover too much ground, and from this cause is rather rambling and superficial; we could very well have spared, for example, the sketch of the history of Ancient Egypt, which has no special merit or interest. On the other hand, the statement of what has been learned from the monuments is good and might advantageously have been expanded.

In regard to the more specifically political papers, the author defends the Bank Law of 1844; recommends legislation for reducing the National Debt and for regulating marine insurance; and urges that England should extend the principles of the Declaration of Paris, by exempting private property from liability to capture at sea—maintaining that England, as a commercial nation, is peculiarly interested in this reform. As to the Income Tax, he discusses the various propositions that have been made to modify it, and shows that no modification proposed would remedy all inequalities in its operation, pointing out at the same time that these inequalities are largely balanced by the fact that other taxes fall heaviest upon wholly different classes from those which are most burdened by the income tax.

The following passage, from the essay upon Elementary Education (p. 83), presents very forcibly the objections to the usual method of teaching history to children:

> "The air of unreality which pervades our whole system is one of its greatest drawbacks. So far from preparing the children for the great battle of life, our schools seem calculated to carry them into another, a dimmer and a duller world; not, indeed, a fairy-land by any means, but one crowded by difficult abstractions and vague shadows, where the mind is wearied by dates and tables, the conscience seared by crime none the less objectionable because gilded by rank, and where the imagination has no more energetic stimulant than the dates of rulers who are mere names, and the names of distant countries, to them almost as shadowy as clouds."

Geschichte Frankreichs. Von Karl Hillebrand. Band II. Die Blüthezeit der parlamentarischen Monarchie (1837–1848). ['History of France from the accession of Louis Philippe to the downfall of Napoleon III.', in Heeren, Ukert, and Giesebrecht's 'History of the States of Europe.'] (Gotha: F. A. Perthes; New York: L. W. Schmidt. 1879.)—The dates upon the title-page pertain really to the second part of this second book of Hillebrand's history of France during the past half-century. The first five chapters, just one-third of the nearly eight hundred pages, cover the whole period of the July monarchy, in reviewing respectively the state of society under it, the literary movement, the religious movement, socialism and politico-economical doctrine, economic progress and legislation. The author's grasp and learning were never better displayed than in these intensely interesting surveys of one of the most brilliant epochs of modern times; nor is the sympathy with which his temperament and experience always cause him to treat French topics, characters, and events less conspicuous here. In the remaining five chapters we have a very comprehensive account of the successive steps leading to the Revolution of Feb. 24, 1848—the long struggle to bring Louis Philippe within Thiers's definition: "The king reigns but does not govern," otherwise known as the substitution of a parliamentary ministry for one dependent upon the crown; the overthrow of the Soult ministry, the short but pregnant "dictatorship" of Thiers; the Convention of the four Powers against Mehemet Ali, July 15; the coalition put in force against the angry menaces of France; the popular war-feeling against Germany and the revival of the spirit of 1813 in the owners of "der freie, deutsche Rhein"; the Napoleonic fiasco at Boulogne; the return of Bonaparte's remains to France and interment in the Invalides; the beginning of the fortifications of Paris; the warlike purpose of the "man of journalism," aiming a blow at Austria in Italy; the address from the throne corrected in a peaceful sense by the king himself, and the consequent resignation of Thiers and end of the parliamentary ministry; then the less striking and picturesque interval of agitation and discontent that closed with the downfall of the Guizot ministry, the rout of royalty, and the declaration of the Republic on Feb. 24, 1848.

In this retrospect, besides the author's thorough familiarity with his subject and his constant fairness, stand out his contempt for Louis Philippe and his admiration for Thiers, with whose relegation, indeed, to the ranks of the Opposition the dramatic interest of the narrative (the Boulogne episode apart) may be said to cease. Under his brief administration the country strove for a moment to reassert its traditional European hegemony, and in the true Napoleonic vein he could, in seeking to force an unwilling alliance, speak of Italy as a mere army road in the calculated collision between France and Austria. The chapter which relates his failure to play any but a mortifying part—that of a bystander afraid to enter into the mêlée—in the famous settlement of the Eastern question of 1840, is perhaps the most instructive in the book. Not only does it reveal the weakness of the French genius, whose love of glory made it an easy prey to illusions concerning the real strength of Egypt (complete freedom from which was the key to Palmerston's boldness), but it throws a flood of light on the motives which to this day govern the policy of England towards Turkey and the East.

This work is emphatically one which in its entirety deserves translation into English as speedily as possible. It seems paradoxical that a German alone should be capable of writing such a history of France; but no one, we think, capable of reading it in the original will fail to see how rare is the conjunction of talent and circumstances favorable to observation and study which Karl Hillebrand illustrates on every page.

L'Enfance à Paris. (Paris: Calmann Lévy; New York: F. W. Christern. 1879. 8vo.)—Le Vicomte d'Haussonville, whose father is known to students of French history by his 'L'Église romaine et le premier empire,' and who is himself known to students of sociology by his 'Établissements pénitentiaires en France et aux colonies,' treats in this very interesting work, not of the children of the well-to-do, but of the poor, the sick, the criminals, and of those who are as it were in training to become the mothers of future criminals—the children who are to be found at the Enfants Assistés, and the Enfants Malades, at La Salpêtrière, at Sainte-Pélagie and Saint-Lazare. M. d'Haussonville has been indefatigable in his enquiries; he has visited the establishments of charity for the sick, the blind, the idiots, the orphans, or the abandoned, and has questioned the inmates and the nurses; he has frequented the police courts and prisons, the cheap lodgings ("cheap and nasty" even more than in London), and the public balls. One of his most interesting chapters is on "Les bas fonds," an account of nocturnal visits to several of the sixty or more eating, or rather drinking, houses where the thieves of Paris have their rendezvous—visits that remind one of the volume of Henry Mayhew's 'The Poor of London,' which treats of those "who will not work." In all these places there is no lack of children. Complaints are made in France that the population increases so slowly in comparison with other countries. The cause of the deficit must be among the better classes. Among the Parisian poor, as with us, children swarm. The poorer the quarter the more numerous they are. Every year fourteen or fifteen thousand illegitimate infants are born. When the surroundings of an illegitimate child are considered, the lack of care, and the kind of education he or she is likely to get, the Commune becomes intelligible. The only wonder is that all the means of repression, correction, and reformation that the author describes, taken together, should be able to make any impression upon the mass of vagabondage.

His account of the efforts of the French to deal with the problem is on the whole hopeful. There are, he shows, defects of legislation to be supplied and some mistaken practices to be abolished; but one gets the impression from his book of great care and considerable good judgment on the part of the police, and boundless devotion on the part of the various sisterhoods. The chief reforms for which he calls are: the more effectual supervision of the cheap lodgings—the "Commission des Logements Insalubres" having even smaller powers than our Boards of Health; the extension of the cellular system to all the prisons; and the entire separation of young and first offenders from old and hardened criminals. This separation, which common sense, it would seem, would dictate to any one at first thought, is strangely neglected in the Parisian police arrangements. Want of room is in two cases the cause: in the Central Police Depot utility having been sacrificed to architectural effect, and the prison of Saint-Lazare being an old monastery, entirely unfit for its present

purpose. M. d'Haussonville is opposed to the restitution of the "tours," turning-boxes at the foundling-hospitals, in which parents could formerly leave their children unseen by the attendants—an institution frequently commented upon unfavorably by English travellers, who believed that it was a direct encouragement to immorality. Certain it is that while the "tours" were in operation the number of children abandoned went on increasing, till in 1833 the number in the hospitals, in spite of an excessive mortality, reached 131,000. The "tours" then began to be given up, and the last were abolished in 1860; but there are still those who urge their re-establishment as safeguards against infanticide and abortion. For us the question is not without interest, for although public opinion at present would not sanction such encouragement for the desertion of offspring, American opinion on moral subjects is mutable, and a decade hence the arguments which M. d'Haussonville opposes may be found plausible.

Teachers should Examine

THE

Reading-Book of English Classics.

Edited, for use in Schools, by the Rev. C. W. Leffingwell, D.D., Rector of St Mary's School, Knoxville, Ill. 8vo, cloth extra, $1 50.

Teachers who wish to cultivate in their pupils a taste for reading of a high order, and to make them acquainted with great authors and their works, will find this Reading-Book adapted to their use.

"One of the best compiled selections for its purpose I have ever seen. . . . Should be used in every high-class school."—*Alonzo Flack, Claverack College.*

"An excellent introduction to the study of English literature. Well adapted for class use."—*Cook & Stevens, Normal School, Morris, Ill.*

"The selection has admirable variety both in kind and authorship."—*Prof. S. L. Caldwell, Vassar College.*

"A model of what it purports to be."—*A. Markham, Milwaukee.*

"The plan of the book is excellent and the selections most judicious."—*Pres. E. Hewett, State Normal Univ., Normal, Ill.*

"An admirable compilation, which I shall take pleasure in recommending."—*Julia E. Ward, Prin. Mt. Holyoke Seminary, South Hadley, Mass.*

Poetry for Home and School.

Selected from the best standard English and American authors. Edited by Anna C. Brackett and Ida M. Elliott. Square 16mo, pp. 320, cloth extra, $1 25.

"An idea carried out with discrimination and intelligence."—*N. Y. Nation.*

Poesie fur Haus und Schule:

A collection of standard German Poetry, selected and arranged for use in schools and the home circle, by L. R. Klemm, author of 'Sprach und Lese Bücher in acht Kreisen,' etc., etc. 16mo, cloth extra, $1 25.

This forms a companion volume to Miss Brackett's popular collection of 'Poetry for Home and School.'

"An excellent compilation. . . . Uncommonly well adapted for school use."—*Prof. C. J. Hinckel, Vassar College.*

"The collection is edited with excellent judgment. . . . I have introduced it into my classes."—*Prof. C. P. Otis, Institute of Technology, Boston.*

Irving's Sketch Book.

Pocket Edition, for use in Schools. Square 16mo, cloth extra, 75 cents. People's edition, in larger type, 16mo, cloth, $1 25.

One of the best possible volumes to place in the hands of higher reading classes.

Liberal terms for introduction.

G. P. PUTNAM'S SONS, Publishers,
182 Fifth Avenue, New York.
☞ *Complete List sent on application.*

The Nation.

NEW YORK, THURSDAY, JANUARY 22, 1880.

The Week.

THE President has at last filled up the vacant foreign missions. Mr. James Russell Lowell has been nominated for London, a post for which he will, we imagine, willingly exchange his present one, and would do so even if it were not positive promotion both in pay and in other ways. The field of choice for the English mission has been much restricted by the difficulty of finding any one to take it who, besides possessing the necessary intellectual and social qualifications, was rich enough to bear the expense of living in the style which tradition has attached to the place. The President has solved the problem in the best possible manner by giving it to a man who will illustrate the position without being rich, and will therefore not be called on for lavish expenditure. Mr. Foster, the present Minister to Mexico, goes to Russia; Mr. Fairchild, of Wisconsin, to Spain, in Mr. Lowell's place. Mr. Philip H. Morgan, of Louisiana, who is now said to be practising law in Egypt, goes to Mexico. The delay in filling these vacancies has brought out the fact that an Administration which is at all desirous of filling diplomatic positions carefully, finds increasing difficulty in doing so. The use made of many of these offices of late years has made them much less of a distinction than they used to be, and Americans of the right kind feel more keenly than they used to feel the dulness of life in a foreign capital, without a knowledge of the language or more than official access to its best society, and without recognition by the diplomatic corps as professional brethren. In fact, considering the changes the telegraph has wrought in the mode of conducting negotiations with foreign powers, and the impossibility of making diplomacy a regular calling, it is a question whether the work of all the existing missions would not be best done by a single Minister, having his headquarters in Paris, free to travel about, and with consuls-general under him in the various capitals.

The Maine Republicans have organized a legislature, composed of the majority of the members really chosen last fall, elected Mr. Davis Governor, and submitted their action and all possible questions—twenty-seven in all—which could arise out of the present or similar complications to the decision of the State Supreme Court. The Fusionists meanwhile elected Joseph L. Smith, the recent Greenback candidate, Governor, and both he and Davis delivered inaugural addresses. Smith's has by this time become curious reading, particularly the note of thankfulness to Providence with which it opened. The Supreme Court returned eminently satisfactory answers to the Republican questions. General Chamberlain, who has been a kind of dictator throughout the trouble, and is, of course, now mentioned as a candidate for the Vice-Presidency, recognized Mr. Davis, as did also the State officials generally, so that the Fusionists have been compelled finally to hold their sessions upon the sidewalks and date their orders "State of Maine, House of Representatives, as near as possible." "Governor" Smith is reported to be anxious to withdraw "as gracefully as possible," and the Fusionists may possibly gradually subside. They have, however, taken the seal of the State, bagged the election returns, and talk with their accustomed effrontery; indeed, their opponents are in great fear that they will persist in keeping up their organization, and will send to the Democratic Congress next year a Democratic list of Presidential electors for Maine.

The practice of "fixing" legislatures, of which the attempt of the Fusionists of Maine is a feeble example, was, it must be remembered, begun in Louisiana in 1873. There were then two factions of the Republicans contending for the mastery, one supported by the custom-house and the collector, Casey, President Grant's brother-in-law, and there was a dispute, as in Maine, over the returns as canvassed by two rival canvassing boards, and two legislatures were in consequence set up—one the Pinchback and the other the Warmoth legislature. The Pinchback party thereupon filed a bill under the Force Act in the United States District Court, and got an order from Durell, the judge, at midnight, directing the United States marshal to seize and hold the State-house, and admit no one to seats whom he (the marshal) did not think entitled to them. The marshal took United States troops accordingly, seized the State-house, and admitted no one but members of the Pinchback faction, and the legislature thus organized was promptly recognized by telegraph from Washington by President Grant in person. Previously to this, Warmoth's Senate had been prevented from forming a quorum by Casey's lending the United States revenue-cutter to carry off a number of the senators out of reach of the sergeant-at-arms. They were kept on board several days, but Casey was not dismissed for his conduct.

In 1875 there was another dispute over the returns for the legislature, and Kellogg, the Republican governor, like Garcelon, did not like the body which claimed the seats, and was not willing to concede to them the parliamentary power of passing on their own qualifications. So he determined to organize the Legislature himself with United States troops, which were promptly furnished him for that purpose. General de Trobriand went into the House, read a letter from Kellogg telling the House it was an illegal body, and expelled from the Chamber such persons as were pointed out by General Campbell, Kellogg's general of militia. General de Trobriand then had the roll called, and seated such persons as he thought proper with the aid of a file of soldiers. These things are worth recalling, as having much to do with the growth and spread of the disposition to get hold of the government in any way you can, no matter how your opponents feel about it, of which the Maine affair is a striking exemplification. People thought in 1873 and 1875 that the contagion of Southern lawlessness and contempt for the forms of law would not reach the North; but this is a contagion which no quarantine can stop. After what has happened in Maine, would it not be well for everybody to examine himself and cast out whatever political unscrupulousness he finds in his composition, let the other party be ever so wicked and base? The secret of "Mexicanism" is the enormous wickedness of the other party.

A bill has been introduced into the New York Assembly, and a similar one is promised in the New Jersey Legislature, providing for the appointment of Presidential electors by Congressional districts, save the usual two from the State at large. The newspapers have been at some pains to discover the drift of public sentiment in regard to the matter, and it appears that Republicans generally are in favor of, and Democrats opposed to, the proposed change, which was to have been expected. The arguments offered by the former are that the election next November would be far less exciting; that New York would cease to be the "pivotal" State, a position which it has no business to occupy any way; and that every possible means of forestalling such Democratic action as the proceedings of the Fusionists in Maine have shown is to be confidently anticipated, ought to be improved. Mr. George Bliss, for example, "thought it simply a matter of consideration whether it is necessary to protect the Republican party from unfair legislation by the Democratic legislatures in other States." The Democrats, on the other hand, of course, take the lofty ground that no legislature that was not specially elected to make such a change has any right to violate traditions so peremptorily and for such evidently interested reasons, and they rely largely upon the "conservatism of the country."

The proposition has, nevertheless, been received with coldness, singularly enough, by the friends of Mr. Conkling, by whom it is deemed a shrewd but flimsy device to belittle the entire stock in trade of the Favorite Son of the "pivotal State." It is said that he himself is, of course, out of the Presidential race, and is only to be considered for the reason that he is supposed to carry "the great State of New York" in his pocket, and to be inclined to place its electoral votes at the disposal of his former chief. But the signs of the times all point to a rapid decline of the Grant movement. In three States, all more or less "pivotal" (namely, Indiana, Ohio, and Pennsylvania), a renewed newspaper effort has just been made to "feel the popular pulse" on the Presidential question, with disastrous results for the "boom"; Sherman and Blaine appear to be large favorites over Grant. Consequently the friends of Senator Conkling are beginning to ask themselves whether it is not worth while to proclaim him openly as a principal, instead of tacitly regarding him as a second. The main difficulty in the way of this is the ridiculousness of his candidacy; but it is quite clear that this is not sufficiently apparent to him and his friends to prevent them from thinking him—provided the third-term notion finally collapses—a greatly abused and curiously unappreciated public leader.

The Senate Committee on Finance have reported adversely on Mr. Bayard's bill for withdrawing the legal-tender quality from the greenbacks, to which only himself and Mr. Kernan subscribe unconditionally; Mr. Wallace desiring to amend it and Mr. Morrill being opposed to its taking effect immediately without an interval of preparation. The interest which the Senate takes in financial matters generally was shown on the same day when Mr. Morrill attempted to discuss the possible rate of interest for refunding and was very uncivilly treated by his colleagues, who paid no attention to him. Mr. Hoar has again brought up the question of the final distribution of the Geneva Award, and has threatened to take it out of the hands of the Committee on the Judiciary if they delay much longer. The Sixteenth Amendment, which seems predestined to relate to woman's suffrage, has been introduced by Mr. Ferry, of Michigan. In the House, the Committee on Banking and Currency has reported with amendments Mr. Price's bill compelling banks to keep one-half of their reserve in gold and silver.

On Monday Mr. Kelley got a large vote on a motion to suspend the rules and pass a resolution declaring that the negotiation, by the Executive and Senate, of a commercial treaty fixing the rates of duties on imported articles would be "an infraction of the Constitution, and an invasion of one of the highest prerogatives of the House of Representatives." Mr. Kelley relies on §7 of Art. I. of the Constitution, which says that "all *bills* for raising revenue shall originate in the House." Mr. Morrill, of Vermont, took the same ground in the Senate in regard to the Sandwich Islands Treaty, which nevertheless was ratified by 51 to 12 five years ago (March 18, 1875). But we consider a less doubtful objection to be that one house should not forestall or misrepresent public opinion on a question on which parties have divided and may divide again with great intensity, and which regularly should be settled by modifications of the tariff agreed to by both houses, after due and public deliberation. The latter method, too, has educational advantages which ought not to be lightly abandoned.

The Voorhees Committee for investigating the causes of the negro exodus from the South began taking testimony on Monday. The first persons examined were a Congregational minister in Washington and Assistant Postmaster Tullock, who stated that they had agreed to serve as the Board of Audit of a certain Emigrant Aid Society, whose circular begging for assistance in helping the freedmen find refuge from persecution is being widely distributed and bears their names; but they denied any personal knowledge of the causes of the emigration, or of the circular. This seems a little singular, and shows the uses to which a board of audit can be put, but it also unpleasantly recalls the liberties taken with the names of prominent Republicans by the originators of the Freedmen's Savings-Bank. A colored clerk in the Treasury Department appeared as a member of the Society in question, who had had many conversations with the North Carolina emigrants on their way to Indiana. The chief reason for their removal, he discovered, was simply that they did not get enough money for their work in the former State. An Indiana judge testified that there was no room for the new-comers in Vigo County, and that they were ill received because "the general impression is that they are brought there only to vote." Meantime, the movement does not lack for opposition in North Carolina itself and among the colored people. In the Christmas issue of the Raleigh *Journal of Industry* there is a warm editorial protest against it, on the ground of the general well-being of the blacks in the State, and their wonderful progress in all respects since the war; and the paper contends that "those who are leaving the 'Old North State' are principally the more shiftless or worthless class of our population." The Chicago papers are printing charitable appeals from Kansas on behalf of the refugees there, who are represented as suffering greatly for want of clothes and shelter.

The appointment of the Superintendent of Public Works in this State, a very important office, was lodged in the Governor's hands by the recent Constitutional Amendment for the express purpose of taking it out of politics. It has become Governor Cornell's duty to fill the place for a new term, and he has promptly appointed Mr. Silas B. Dutcher, the well-known custom-house appraiser. Mr. Dutcher has had no experience at all in connection with "public works," but he is a "worker" of undoubted activity and ability. He knows all about "fixing" and "controlling primaries," and on such subjects as the "Solid South," the "Brigadiers," and "rebel claims," and the criminal jurisprudence of South Carolina and Mississippi, he is sound as a bell. He excited some attention as a stump speaker in the late canvass by his having been permitted by Secretary Sherman, in direct violation of the civil-service rules, to leave his post in the Custom-house in order to thunder through the State on the above-named topics. His appointment is very properly taken as an indication that Mr. Cornell means to work the Machine vigorously during the coming year—and of this no one who voted for him can reasonably complain. But it ought to be observed that the jobbery and corruption in the public works will probably be fully as great as under the old régime. He is now being solemnly warned not to reappoint Smyth, the wicked Conklingite Superintendent of Insurance, but there is no efficient reason for his heeding these warnings. No man in the State is more opposed to murders in Mississippi and Louisiana than Smyth.

The return flow of currency towards New York has at last begun in considerable volume, and the banks are each week increasing their reserves. During the week one of the large national banks of this city—the Metropolitan—gave up its note circulation of $2,200,000, principally in order to be able to turn into cash a profit of $90,000 which existed on the 4 per cent. bonds pledged to secure these notes, the bonds being exceptionally high and the season of the year being one in which the profits of bank-note circulation are small. The returning ease of the money market has caused speculation to blossom anew, and the Stock Exchange has been the scene of several extraordinary speculations. One of these involved the stocks of two railroads, the Louisville and Nashville and the Nashville and Chattanooga. After months of rivalry between the respective managers the former stole a march on the latter by secretly buying enough of its stock to get control. This was announced with a great flourish as one of the most important railroad combinations on record, and besides as one of the "neatest pieces of financing" known, and the Louisville and Nashville stock jumped from 89½ to 121, but fell back to 110. The stock of the Nashville and Chattanooga, which was the vanquished contestant, advanced from 89½ to 95¾, but afterwards receded to 80. The other speculation was in the stocks of the Union Pacific and the Kansas Pacific railroads. These

were advanced, on the proposed consolidation of them, the former from 89 to 97½, and the latter from 95 to 107; the one fell back to 93½ and the other to 94. There were other minor movements of the same sort. Investments of all kinds were strong; and the New York Central Syndicate offered to the public here and in Europe the 250,000 of the stock recently bought from Mr. W. H. Vanderbilt. Bids were invited for it for three days, and will be opened at the close of business to-day. Accompanying the invitation for bids was a statement which shows that the road is now earning at the rate of more than 14 per cent. per annum. Silver in London advanced to 52½*d.* per oz.; and the bullion value here of the 412½-grain silver dollar advanced to $0.8817.

Sir Henry Layard's first attempt to discipline the Turks has not been very successful. Dr. Köller, a German missionary, employed a Turkish priest, named Ahmed Tewfik, to translate some religious compositions in manuscript into Turkish. The police got wind of the matter and arrested Ahmed Tewfik, and confiscated the religious composition, and condemned the translator to death. The British Minister remonstrated, and, no attention being paid to him, sent in an ultimatum demanding the restoration of the manuscript and Ahmed Tewfik's release, and the dismissal of Hafiz Pasha, the Minister of Police, a miscreant who had figured prominently in the Bulgarian massacres, and whose punishment had, therefore, been demanded by Lord Derby. Pending the Porte's answer, Sir Henry suspended diplomatic relations and telegraphed home for instructions. The Porte then answered that Dr. Köller was a German subject; that his manuscript would be restored; that Ahmed Tewfik would not be executed, but exiled to a Christian island, and that Hafiz Pasha would not be dismissed, as it was the Sultan himself who had ordered the arrest.

This the English Liberals regard as a snub for Sir Henry, while the Tories say that the Sultan was put up to the arrest by the wicked and cunning Russians, who wished to embroil him with his Western friends. But the real interest of the incident lies in the impudent reliance of the Porte on its weakness. It knows that no Power but Russia dares to exert any real pressure on it. It shows, moreover, that, in spite of the Tanzimat and the Hatti Hamayon, the religious toleration which exists in Turkey is no greater than it ever was, in the eyes of the authorities. Non-Mussulmans were always allowed freedom of worship and freedom of proselytizing among each other; but to convert a Mussulman or to leave the Mussulman Church is not permitted now any more than ever. On this point the law is positive. The case of an ulema translating or spreading infidel documents is not provided for in terms, but any Mussulman who blasphemes God, or his attributes, or the Koran, or denies the divine mission of Moses or Christ, incurs the penalty of instant death. So does any one who attacks the Mussulman faith, or the obligation of its rites and ceremonies, or derides its sacred things.

The distress in Ireland seems to grow, and so does the turbulence. There is in many districts open and concerted resistance to the service of processes looking to eviction, and in one case it went to the point of a conflict with the police, who charged with the bayonet and wounded several persons. The best statement of what can be done, and ought to be done, for Irish discontent by legislation, which has yet appeared from an authoritative source, is a paper by Dr. Neilson Hancock, the well-known statistician of Dublin, in the last number of the *Fortnightly Review*. He gives the highest praise to Mr. Gladstone's legislation during the years 1869, 1870, and declares that his Irish Church Act and Irish Land Act of these years gave everything to Ireland which she would have gained if the Treaty of Limerick had not been broken, and Pitt had been allowed by George III. to carry out the pledges made at the time of the Union. Unhappily, the beneficent policy thus entered upon was dropped by the Beaconsfield Ministry for the more attractive work of extending the empire abroad. The things Dr. Hancock now asks for as sufficient are, the complete assimilation of the Irish electoral franchise to that of England and Scotland; the introduction of cumulative voting into the election of local boards; the election of county governments by the taxpayers; an increase in the discretionary powers of these boards; the assimilation of the Irish to the English and Scotch poor-laws by the out-door relief of the able-bodied. This class can now only obtain relief in Ireland by entering the workhouse, which they abhor, and sooner than do it they resort in times of distress to crime, as they undoubtedly would in Scotland and England also. Finally, Dr. Hancock asks for the legalization all over the island of the Ulster tenant-right custom, which gives an outgoing tenant the right to sell the good-will of his farm, and an increase in the legal facilities for the purchase by tenants of the fee of their holdings on estates sold by the Encumbered Estates Court. The article ought to be read carefully by Mr. Beecher, and such sons of thunder all over the country as are declaiming on the Irish land question. Mr. Parnell himself could hardly do better than read it aloud to his audiences.

Germany has at last recognized the independence of Rumania, a step which it appears was delayed, in spite of the emancipation of the Jews of the Principality, by a dispute between a Jewish syndicate in Berlin, whose cause Prince Bismarck espoused, and the Rumanian Government over a railroad concession. This incident derives additional interest from the fact that a terrible press war is raging in Germany between the Jews and the Christians, and that Bismarck has got over the intolerance which made him declare in 1847 that he would concede them all rights but one, that of filling administrative offices in a Christian state. The Crown Prince has also recently taken occasion to appear at a charitable meeting in a synagogue to testify his sympathy with the Jews under the tempest of hostility which is now beating on them. The well-known publicist, Treitschke, has attacked them, and to him Dr. Paulus Cassell has replied in the *Preussische Jahrbücher*. Eleven anti-Jew pamphlets have appeared in the same controversy, some of which have run to ten or twelve editions, with such titles as the "Victory of Judaism over Germanism"; "News from the Theatre of the Jewish War"; "The Jewish Question from the Point of View of German Commerce and Industry"; "Down with the Jews"; "The New Palestine, or Germany Judaized." The Jews and their friends have been equally prolific in reply, and the conflict wages fiercer every day. The anti-Jews say that the great enemy of the German nation works neither with plough, nor trowel, nor hammer, nor pickaxe, nor spade; that he escapes military service by being flat-footed, bow-legged, humpbacked, and weak-backed; that he monopolizes commerce and controls the money market; that he is pushing, restless, intrusive, gets all the best places for himself, and lives in the country as if it were a tavern. To which the Jews reply, that for ages they were shut out from all employments but that of money-changer or trader; that their physical defects are the result of the wretched existence long led by the race under Christian oppression; that they make no money by any means not open to everybody, and that they use it for as noble purposes as the Christians; that they are as public-spirited and patriotic; that the race has given Germany Mendelssohn, Meyerbeer, and Heine, and the world Spinoza, Moses, and Jesus Christ.

Treitschke treats the Jewish question as most momentous, and says that Germany is being overrun by northern Jews, who are eating up the country in all fields of activity, besides seizing on the periodical press; that it is all very well for Englishmen and Frenchmen to laugh over the German excitement, but there are in Italy only 40,000 Jews, in England only 45,000, in France only 45,000, while Germany has 600,000, and the cry is still they come. He declares "that the anti-Semitic movement is powerful and deep in all the most enlightened and cultivated circles, and amongst those who are furthest removed from all idea of religious intolerance or national pride. There is only one opinion on the matter—'the Jews are our curse.'"

THE RAILROADS AND THE TARIFF.

THE *rationale* of the existing protective tariff is that while public opinion has not been greatly moved one way or the other, either to raise or lower the scale of duties on imports, or to maintain them at any particular level, certain important and powerful interests deriving profits from the restrictions imposed upon foreign trade have been well organized and constantly on the alert at Washington to prevent any meddling with this source of their gains. Hitherto there has been no united effort or set purpose on the part of any particular class or interest in opposition to any particular branch of the protective system. The overthrow of the duties on quinine last summer was due mainly to the ravages of yellow fever in the South; and the sudden and sweeping success of the measure shows that whenever public opinion is considerably aroused respecting the duties levied by way of protection upon articles of general use and necessity, the protected classes are powerless to resist it. In the absence of any such manifestation of public opinion, or of any opposing interest, the existing duties, however unreasonable or comical—for some of them seem to have been inserted into the law only to excite laughter—bid fair to remain undisturbed, in obedience to the law of statics, for an indefinite period of time.

There are signs, however, of movements, both general and special, directed against particular features of the protective system. A motion in the House of Representatives last week to abolish the duties on salt resulted in a tie vote, which is something surprising seeing that it was brought before the House on the responsibility of a single member without the previous consideration of a committee. The yellow-metal manufacturers of the United States have sent a memorial to the Committee on Commerce praying a repeal of the duties on copper (the chief raw material of their industry), or, as an alternative, a reimposition of the duties on sheathing-metal for ships' bottoms, which ship-builders are enabled by the act of 1872 to withdraw from bond without the payment of duty. They allege that Lake Superior copper has been exported to foreign markets during the past year at about 13 cents per pound, and has at no time been sold for consumption at home for less than 15½ cents, while at the date of the memorial the price was 21 to 22 cents per pound, or about the price at which the same copper could have been brought back from England with the duty added. They allege further that the manufacture of yellow metal was begun in this country thirty-five years ago without the aid of protection, that it succeeded so well on the basis of free-trade that it drove the British article first out of our own markets and eventually out of those of South America and China, but that under the operation of the copper tariff and the act of 1872 English sheathing-metal has returned and driven our manufacturers out of the home market. Perhaps nothing could illustrate the cut-throat principles of the existing tariff more forcibly than this example.

A case of much greater magnitude and interest, however, has been brought before the Committee of Ways and Means by a number of railroad companies which are laying or relaying their tracks with steel rails. In the "memorandum" which they have presented to Congress they show that the duty on steel rails ($28 per ton) was at a recent date equal to 120 per cent. *ad valorem*, while the cost of ocean transportation, which operates equally with the duty as protection to the manufacturer in this country, brought the virtual rate of protection up to 131 per cent. This is more than double and nearly treble the rate of duty imposed upon manufactures of steel generally, which is fixed in the tariff at 45 per cent. *ad valorem*, which was also the rate on steel rails prior to 1871.

The "confidential" petition of the steel-rail makers to Congress in 1870, praying an increase of the then existing duty (45 per cent.), is appended to the present memorandum. This is an important, but by no means novel, document. It is signed by six persons, representing as many corporations then engaged in the manufacture of steel rails, and it sets forth that, as their branch of industry "is new and in its earliest stages, it should just now receive exceptional protection"; that the capacity of the existing works is equal to the present demand; that steel rails are used only by railways in the Eastern and Middle States, and, hence, that the Western and Southern States are not interested to resist an increase of the duty; that by the time the Western and Southern roads require steel rails "home competition will have secured to them the best domestic rail at a price lower than the foreign rail can be obtained," etc. The prayer of the petitioners was for a duty of two cents per pound, or $44 80 per ton. They had, perhaps, learned by experience in former cases that the Committee of Ways and Means were in the habit at that time of cutting down the demands of applicants about 33 per cent., and accordingly raised their own figure to meet the anticipated paring. At all events, they secured a duty of 1¾ cent per pound, or $28 per ton. The capacity of the six companies was stated to be 100,000 tons per annum. It proved to be somewhat larger than this; but so far was it from supplying the demand that in the three following years more than 400,000 tons of steel rails were imported from abroad, paying the increased duty, and imposing a corresponding charge upon the transportation of freight and passengers.

Nearly ten years have passed since this extravagant tax was placed upon one of the most important instruments of civilization; and the railway companies, pressed upon all sides by demands for lower rates in their scale of charges, have begun to ask whether the phrase "just now," with which the steel manufacturers prefaced their petition to Congress in 1870 for exceptional protection, is bounded by time or only by eternity. It is known that in the progress of mankind there was a stone age, followed by a bronze age, succeeded by an iron age, and it is enquired whether the steel age of 100 per cent. duties is to last as long as the others. The railway companies are greatly to blame for allowing this tax to be imposed upon the chief raw material of their business, seeing that it was not imposed for public revenue but the contrary. They could have prevented it if they had chosen to do so. Some of them aided in securing the passage of the bill; others believed that they could collect the tax off their customers *in perpetuo*, while the great majority, using only iron rails, were indifferent as to steel. The public gave as little heed to the matter as they did to the bill, which passed about the same time, expunging the silver dollar from the coinage.

So great a change has come over the steel industry since then by the cheapening of processes, labor, and materials, both here and abroad, that the cost of steel rails is now but a trifle above that of iron. Steel rails sold in this country in 1869 at $132 per ton, in 1879 at $42 50; while in England they declined in the same period from $55 to $22. A duty of 1¾ cents per pound when the price abroad is $55 is equal to 50 per cent., but when the price falls to $22 it is equal to 122 per cent. The gradual equalization of price between iron and steel has, of course, greatly multiplied the use of the latter, so that the demand in the United States has again outrun the domestic supply, and the importation is now going on from both England and Germany at a rapid rate in spite of the duty. A writer in the *Herald* (Mr. J. A. Roberts) estimates that the demand in this country, for work already laid out, exceeds by 1,000,000 tons the capacity of the American mills to supply. So great a demand has, of course, raised the price abroad as well as at home. The demand may possibly be equal to, or in excess of, the world's present power of supply, in which case the total abolition of the tariff would not immediately lower the price, and hence would not lessen the profits of the American manufacturer. But the supply would eventually overtake the demand, and the price of rails would fall to the cost of production plus the average rate of profit in manufacturing industry generally. The promise of the steel-rail makers that "by the time the Western and Southern roads require large quantities of steel, home competition will have secured to them the best domestic rail at a price lower than the foreign rail can be obtained," has not been realized. The Western and Southern roads require large quantities of steel now, and are actually importing it

from abroad, but the price of the domestic rail remains (as was intended) $28 per ton above the foreign.

The petition of the railway companies is for a reduction of the duty to $10 per ton. This is a higher tax than there is any present or prospective need of, but a lower one can hardly be expected now. The question of the success or failure of the movement in Congress depends very much upon the earnestness and unanimity of the railway companies themselves. When in 1870 they allowed the increase of duty to be imposed, times were good, freight was pressing upon the means of transportation, railway profits were uniformly large, Granger legislation had not begun to torment them, and the "railway problem" had not agitated the public mind to any great extent. There was every reason to suppose that the railways would be able, in the future as in the past, to charge over upon the public every item of cost that entered into their own expenditures. But the times have changed and ideas have changed also. Great havoc has taken place in railway property from one cause and another, and competition has reduced the cost of transportation generally to a very narrow margin of profit to the carriers—probably not above four per cent. average on the capital actually employed—the "memorandum" says only two per cent., taking the whole country together. Times are improving now for railways as well as for other trades, but there is evidence tending to show that the law of competition will not hereafter regulate the rates of railway transportation exclusively, except where it regulates them downward. A strong public opinion has to be taken account of henceforward, so that even in good times railway companies cannot confidently rely upon getting back from their customers every sort of expense that may be imposed upon them by excessive duties and taxes or by their own improvidence. On the other hand, the public must recognize the fact that the actual cost of railway transportation has to be paid for, at all events, by the goods and passengers transported, whether railway shareholders get much or little, and that the chief item of cost is in the rails that support the traffic. Consequently, they have an interest in the pending question at least equal to that which they take in the regulation of railways by State laws and State commissions. The steel-rail makers will probably exhibit a new lot of public advantages to result from maintaining the present rate of duty, but the failure of their former predictions, both as to their ability to supply the home demand and to supply it at as low a rate as the foreign article, ought to disqualify them as witnesses.

THE GERMAN CHANCELLORSHIP.

THE statements of the telegraph about Bismarck's condition are vague and contradictory, but they leave little doubt that the Prince is really in a serious condition, and that the worst result is unhappily not beyond the range of the possible. Even though he survive the present attack, it seems not impossible that he may practically relinquish his duties and retire from affairs. The question of the succession becomes, therefore, what the French call an actual one, and the public mind of Berlin, which has so long, so recklessly, and one might add so systematically neglected to prepare for the inevitable vacancy in the first office of the Empire, is now meditating uneasily on its near approach.

That this will prove to be a costly improvidence seems to be already apparent to the Prince himself, if the anxiety which he is said to have lately expressed was the product of a sound mind rather than of an unsound body. But the discovery comes, in any case, too late to vindicate his reputation for prescience, except, indeed, at the cost of his reputation for prudence. He is himself the worst offender; he himself has taught Germany to be indifferent about the future. If his countrymen, awed by the spectacle of his own greatness, seemed reluctant or unable to place him within those stern rules of mortality from which no statesman is exempt, it was his duty to correct their error by a wise provision for the last emergency. When they seemed dazzled by the splendor of his achievements he ought to have been training up pupils who should preserve those achievements after his departure. This he has neglected or refused to do, but rather throughout his career—alike in constructive statesmanship, in regular legislation, and in his relations with men or parties—has made his policy so strictly a personal one that no system permanently available and no successor at all competent has been created. In private he used sometimes to deplore the absence of two compact rival parties and of rival sets of efficient statesmen, both of which he found in England. For this equilibrium and abundance of resources England, he has said, was to be envied. But his hearers commonly took such observations not as maxims of practical wisdom, but rather as ironical commentaries on the helplessness of German parties as against his own authority and on the folly of all petty aspirants to his own place—an interpretation which the Prince never, to our knowledge, corrected. And in the same way the friendships which he showed for one man or another were never lasting or significant enough to make out of their object a recognized candidate for the succession. This incredulity may have been unjust to the Prince, but the consequences were not for that reason any the less serious. It is to-day more than ever apparent that Germany not only has no second statesman who can be named in the same breath with Bismarck, but that there is not even one whose prominence in the state or popularity with the people would in the least facilitate the choice of a successor. There is only an indefinite group of respectable politicians from whom, *faute de mieux*, the next chancellor may be selected. Some of these we will briefly mention.

The first impulse of the Court and the military party, in case the chancellorship should become vacant, would probably be to look for a fitting person in the ranks of diplomacy. Bismarck himself began his political career and first made his reputation in that service; his influence will first there be missed; and urgent as undoubtedly is the need of continued progress in the work of domestic reform, it is still in foreign politics that the most serious interests of the Empire are engaged. But the diplomatic service boasts only one possible chancellor, Prince Hohenlohe. There are other accomplished ambassadors, such as Von Keudell, Prince Reuss, Count Hatzfeldt, one or two of whom are favorites of Bismarck; but Prince Hohenlohe alone has been regarded as in any sense in training for the chancellorship, and even he has one grave disqualification. He is a nobleman of the highest social rank; has an ample fortune; his course during the critical years between Sadowa and Sedan was patriotic and sagacious; he has approved himself a cautious diplomatist, sufficiently docile to satisfy even Bismarck's exacting notions; and he enjoys the advantage of a Prussian bureaucratic training. But he is a Bavarian, and this alone will probably render him ineligible for the higher post. An unwritten law, to which Bismarck himself has often given utterance, requires that the Chancellor of the Empire be also Minister President of Prussia, and a Bavarian in the latter capacity is hardly to be imagined. There was even a considerable outcry when two minor non-Prussian officials were admitted into the royal ministry. If, again, we leave the narrower field of diplomacy and search for the new Bismarck in the bureaucracy at large—that of Prussia being always understood—the material seems to be more copious, but the result is little less barren. The civil service produces admirable officials and few statesmen. The training is too technical, the discipline too rigid; and initiative being sternly repressed by the very spirit of the system, its members seldom acquire the vigor and self-reliance in opinion and action which are indispensable to the political administrator.

Where among the ornaments or the victims of this institution shall be found a man qualified to direct the fortunes of the Empire? It cannot be Eulenburg, the Minister of the Interior, an aristocratic dilettante, who broke down ludicrously in the effort to defend the Socialist law before the Diet; or Stolberg-Wernigerode, whose nominal office as Vice-President of the Council is only a dignified retreat for an incompetent nobleman; or Von Puttkammer, who had the audacity to take the place vacated by Dr. Falk, and has since made himself notorious by a long series of those blunders

which in political life are equal to crimes; or Lucius, the Minister of Agriculture, but really a reputable physician, almost as much out of his place as Garcelon; or, in short, any one of the disciplined mediocrities whom for his own purposes, or because he found them in the system, Prince Bismarck has used without trusting and favored without educating. None of these men would have the confidence of Germany or the respect of Europe. To speak of them as candidates for the responsible post of Chancellor of the Empire, and for the succession to Bismarck, is futile, and they may be dismissed without further ceremony. The military class demands even less attention. Germany has one political soldier of the highest capacity, and another soldier who is a deputy, and on rare occasions an effective speaker; both of them are admired by their countrymen. But Manteuffel, as Governor of Alsace-Lorraine, has already a place where his civil and his military talents are sufficiently tried, and, notwithstanding his popularity with the Emperor, his aspirations are believed to rest short of the chancellorship; while Moltke is old, is a bitter reactionist, and has no ambition. The appointment of a soldier would in any case be a menace, not to say a provocation, to Russia and France, but it would also be a dangerous symptom of anxiety about the future. The Emperor alone would be unconditionally in favor of such a measure.

There remain, finally, parliament and the parliamentary leaders. Here there is a much greater wealth of original talent, of political education, and of possible statesmanship; and the choice of a chancellor could most easily be made from among the leaders of debate in either the Imperial Diet or that of Prussia. The Liberals alone could form a complete cabinet, in which, with the single though momentous exception of the chancellor himself, every member should be superior to the present ministers. Richter or Bamberger would make an admirable Minister of Finance, having, indeed, less bureaucratic experience but far more special knowledge; Lasker is a Liberal jurist who has statesmanlike views, and Dr. Gneist is a professor of law whose reputation is world-wide; Dr. Falk would find his old place in the Ministry of Education awaiting him; and the other portfolios would pass into the hands of men no less capable. The disposition of the chancellorship would depend on the composition of the cabinet, but it would almost necessarily fall to one of two men. These are Von Bennigsen and Delbrück. If the cabinet should have a pronounced parliamentary and Liberal character, Von Bennigsen, leader of the Left in the Reichstag and Speaker of the Landtag, and a man endowed with real qualifications for statesmanship, would be its fitting and representative head. But if, on the other hand, considerations of party should give way, as is not unlikely, Dr. Delbrück would be almost the predestined chief of a ministry organized for practical work. He has, indeed, political opinions, moderately liberal and, for the most part, perfectly correct. For one of them, his devotion to free-trade, he separated himself from Bismarck, and went into retirement, in circumstances extremely flattering to his honesty and independence. But he grew up in the civil service, and has not quite shaken the bureaucratic dust from his garments.

These two men would probably, of all others, command the largest, or at least the most compact, following both in Parliament and in the country. They would most nearly introduce an era of parliamentary government. And yet there is reason to believe that at the royal palace this very fact would be an objection to them. It is a notorious truth that the Emperor has been impatient even under such concessions as Bismarck has thought it advisable now and then, but only since 1866, to make to the popular will, and the course into which, freed from that restraining hand, his despotic impulses and his obstinacy might lead him, is unfortunately not calculable. If he should long survive he might do irreparable mischief. But he too is approaching his end; and although it is not impossible that the last years of his reign may revive the violent and dangerous years with which it began, his death, making way for a more liberal and conciliatory successor, would bring in at least the possibility of a mild, just, and hopeful policy.

THE IRISH PARTY IN THE HOUSE OF COMMONS.

London, Jan. 6, 1880.

YOU have Mr. Parnell among you; and it will be natural to judge the Irish party in the House of Commons, of which he is the leader, by his language, manner, and appearance. This will be natural, but it will be a source of mistake. Mr. Parnell leads the Irish party because he is in almost every respect unlike the rank and file of it. Though Irish by some generations of descent, and by the mingling, through his mother, of American-Irish blood with the original current, his family traces its beginning to the little town of Congleton, in Cheshire, whence his kinsman, better known in Whig administrations as Sir Henry Parnell, took the title by which he was elevated to the peerage. Mr. Parnell is essentially an English gentleman in Ireland, and what is more to the purpose, he is essentially an English gentleman in the House of Commons, understanding the forms of society, and speaking with the accent of Belgravia. Educated at Cambridge, his associations have been largely English. To these qualities, and the fact that he is a Protestant country gentleman, quite as much as to his devotion to Irish questions and parliamentary business, or rather parliamentary obstruction, he owes the leadership of the party.

I have spoken of Mr. Parnell as the leader, though that post nominally belongs to Mr. Shaw, a wealthy Irish merchant and Methodist, of considerable sagacity and faculty for business. Mr. Shaw's relation to Mr. Parnell is that of Lord Hartington to Mr. Gladstone. Mr. Parnell was the real leader even while Mr. Butt (also, by the way, a Protestant) lived, his relations with whom were a sort of parody on those which a generation ago subsisted between Smith O'Brien and O'Connell. Mr. Butt was a sort of feeble shadow of O'Connell. The resemblance would have been closer if he had had O'Connell's genius and oratoric power, and if O'Connell had had Mr. Butt's amiable vices. Both had a considerable faculty of humor; both were consummate tacticians, alike in the House of Commons and the courts of law; both had the highest positions on the judicial bench within their reach if they had pursued their career at the bar. O'Connell gave up his profession for the work of agitation. Mr. Butt took to the business of agitation when his profession gave up him. The pleasures of the table were too much for poor Mr. Butt—of the card-table and of the dinner-table. He was a dexterous hand at drawing parliamentary bills, but he occupied himself more frequently in drawing bills of another sort, for which he found it even more difficult to get acceptance. Imperfectly clean and imperfectly sober, with face and hands half-washed and a suit of thread-bare black, unbrushed save by the friction of long wear, Mr. Butt was, of late years, a melancholy spectacle in the lobby of the House of Commons. While he was practically an exile in England doing hack literary work, and skulking silently on back benches, he saw his juniors becoming attorneys and solicitors-general for Ireland, and his inferiors Irish chief-justices and chancellors. Mr. Butt made many desperate sallies, one of which brought him to the front as leader of the Irish tenant-right agitation, and afterwards of the Home-Rule movement. He got again into a sort of practice in Ireland, though his fees were always forestalled, and though no one could tell whether he would not break down, through a relapse into bad habits, in a strong case, or by a vigorous rally pull through a client in an apparently hopeless one. In the House of Commons he acquired during his later years a sort of consideration, through his good humor, his dexterity as a speaker, though he was seldom eloquent, and through the restraint which as a parliamentary tactician, with some remains of respect for parliamentary forms, he exercised upon the more ardent and unscrupulous spirits about him. But he was roughly thrust aside, and, though when he died still nominally leader, was deposed by Mr. Parnell, as O'Connell was by Smith O'Brien. The parallel is not likely to go much further. Mr. Parnell practises obstruction with the strictest regard to those parliamentary forms which poor Smith O'Brien defied, and he practises obstruction with a scrupulous abstinence from even the show of violence. The coal-hole, the cabbage-garden, the convict prison, and the penal settlement, which were stages in Smith O'Brien's career, will be carefully avoided by his successor.

The leadership of the Irish party in the House of Commons has certainly gained in moral respectability in passing from the hands of the clever, broken-down, card-playing, whiskey-drinking, debt-incurring, creditor-evading "Ikey" Butt into those of the clean, well-dressed, industrious, sober, consummately respectable Mr. Parnell. The former was a boon companion; the latter is the least bit of a prig, who is believed to pass in the reading of bills, and blue-books, and May's 'Parlia-

mentary Practice' every moment that is not spent in the House of Commons. He studies these things, as Count Moltke studied every inch of French soil and every stone in French fortresses, with a view to hostile operations. Mr Parnell, as you have found out, is not eloquent, but he has a certain readiness ; and he understands parliamentary forms at least as well as the Speaker or the Chairmen of Committees. They are seldom able to rule against him, and they are as often wrong as right when they do so. Mr. Parnell is always polite and submissive, but he is always evasive, and if one form of procedure fails him he is ready with another. As to Irish eloquence, it is difficult to say what has become of it. It is a tradition, but it is scarcely a living reality in the House of Commons. It may be with eloquence as with a jest : its prosperity may lie in the ears of those who hear it quite as much as on the tongues of the speakers. That condition of prosperity is lacking in St. Stephen's. The ears of the majority of the members of Parliament are skinned, as the French expressively have it, by the rough side of the Irish tongue. Apart from this, there may be a certain antipathetic feeling between the two races. Burke, whose whole training was in the House of Commons, was never in harmony with it ; and Grattan's failure was not due merely to the difficulty of transplanting an old oak. The late Mr. Maguire was the last cultivator of the impassioned style ; the "good-God, Mr. Speaker," fashion of oratory, which Lord Beaconsfield censured in Canning, expired upon the foaming lips of the late member for Cork. Mr. P. J. Smyth, a mild revolutionist, somewhat resembling the late Mr. J. S. Mill in appearance, is a consummately graceful reciter of speeches whose admirable literary form rivets the attention of the House ; but Mr. Smyth is among Irish orators what Gray was among poets, and a single speech is supposed to cost him the unremitted labor of a whole year. The best debating speaker among the Irish Home-Rulers, both in manner and in substance, and one of the best in the House, though, for reasons which Cicero's doctrine about oratory might partially explain, he is not much heeded, and not at all reported, is Mr. O'Connor Power. Mr. Justin McCarthy, whose character and literary reputation make him a very valuable accession to the Home-Rule ranks, has great readiness of ideas and fluency of speech, and there is an artistic form about what he does which is refreshing amid the slovenliness of British oratory. But at present the training of the journalist and the book man is conspicuous ; and Mr. McCarthy improvises essays and leading articles rather than parliamentary speeches. As for Mr. O'Donnell and Mr. Biggar, they have every fault except that of want of fluency (which in their case would be a merit) that parliamentary speakers can possess.

The constitution of the Irish Home-Rule party in the House of Commons differs in some respects from that of other sections of the House. It is less plutocratic. Irishmen, who were formerly the military adventurers of Europe, are now the parliamentary soldiers of fortune ; and the way lies through the House of Commons and political repentance and conversion to commissionerships, secretaryships of boards, and even to colonial governorships. The phrase that half the world does not know how the other half lives, applies, with a variation in the proportion, to the House of Commons and a large section of the Irish Home-Rulers. It is commonly supposed that they sleep in the open air on the benches of St. James's Park, in the intervals between their being turned out of one lodging and finding the money to pay a week in advance for another. But this is a fable and a calumny. Occasional newspaper work, the writing of correspondence for provincial journals, and other hack literary business fall to their lot. When these things fail they lend to each other, and club their poverty. Besides, there are young men of fortune and family who are Home-Rulers, as young lordlings and squires in England are Radicals, by way of sowing their wild oats and alarming their elderly relatives among the female aristocracy. Conspicuous among them is Lord Francis Conyngham, a descendant of George IV.'s Marchioness Conyngham, lately the Home-Rule whip and much admired in the Ladies' Gallery from his supposed resemblance to a pirate of the Byronic order. There are the honest political theorists of Home Rule, and the casuistical minimizers of it who accept it in words as the condition of getting a seat, and explain it away into a system of county or provincial boards. The Home-Rule party, which has its "whip" in Major Nolan, a distinguished and scientific artillery officer, its titular leader in Mr. Shaw, and its real leader in Mr. Parnell, has also its joker, or clown of the ring, in Major O'Gorman, who, if not as witty as Mr. Bernal Osborne, or as sprightly as Sir Wilfrid Lawson, is more grotesquely amusing than either. The Major, who more than confirms the young lady's theory that all majors are fat and elderly, is himself a greater joke than any he ever perpetrated. The sergeant-at-arms smoking-room is the scene of performances, on his part limited to a select few, as amusing as those of which the whole House is the witness. There is no reason to think that the Home-Rule party will ever conquer home rule, but they may help to bring about a more reasonable distribution of power between Parliament and local boards. If they do this they will effect more good and less harm than they design. † † †

MADAME DE RÉMUSAT'S MEMOIRS.—VOL. II.

PARIS, January 9, 1880.

THE first volume of the Memoirs of Madame de Rémusat ends with the proclamation of the French Empire in 1804. The new Cæsar is organizing his court, while Moreau, M. de Polignac, and his accomplices are being tried. Napoleon spared the life of Polignac at the instance of Madame de Polignac, who was a daughter of the famous Helvetius. Seven royalists were sent to prison, thirteen were executed, and Moreau was embarked for the United States. Napoleon continued meanwhile to organize his fleet of transports for an expedition against England, and soon left for the camp of Boulogne. Josephine was getting more and more uneasy about the divorce, and Napoleon gave her the most signal proofs of infidelity. Madame de Rémusat continued to be the confidante of Josephine, and some of the stories she narrates show that Napoleon had completely ceased to keep bounds with his wife. I have tried to ascertain who the Madame —— is who is mentioned in connection with a most painful incident at Saint-Cloud (pages 45 to 49), for there are still persons who keep the traditions of those times. When I heard the name I was not surprised that the author of the Memoirs did not like to have it printed in full.

Josephine always took advantage of such incidents. The vain Creole was extremely anxious to be crowned at the ceremony of the coronation, which had become the subject of a negotiation with the Pope. She succeeded, and two days before the coronation she had the satisfaction also of being religiously married to Napoleon (hitherto they had only been civilly married). The religious marriage took place in the Emperor's room, through the ministry of Cardinal Fesch, before two aides-de-camp only. The coronation took place on the 2d of December. The Empress was forty-one years old, but with her splendid diamonds and her hair arranged in the style of the time of Louis XIV., she seemed only twenty-five years old, says Madame de Rémusat. When she went to the altar she had a moment of altercation with her sisters-in-law, who did not like to bear the ends of her imperial mantle. The Emperor had to say a few sharp words to his sisters. The Empress soon had new reasons for jealousy, and Madame de Rémusat, as usual, tried to smooth matters between the pair. Napoleon told her once that "he could not be in love ; that Madame de —— was no more to him than any other woman ; that love was made for other characters than his ; politics absorbed him ; he would not hear at his court of the empire of women ; they had hurt Henri IV. and Louis XIV.; he had a much more serious business before him than these princes."

In the year 1805 the crown of Italy was added to the imperial crown of France ; this event was the occasion for new fêtes, and "Athalie" was played at Saint Cloud for the first time in a number of years. Napoleon heard it with interest, remarking "that he should like such a play to have been written under his reign." He allowed Corneille and Racine to be played again in Paris, with a few corrections by the censors. M. de Rémusat accompanied Napoleon to Milan, where he was to receive the Iron Crown. This great ceremony took place on the 23d of May, and M. de Rémusat wrote to his wife that the spectators were much struck by the way in which Napoleon repeated the famous formula: "Il cielo me la diede, guai a chi la tocchera." Prince Eugène Beauharnais became viceroy of the new Italian kingdom, and Napoleon started for the valley of the Adige to make a reconnoissance of the Austrian forces. War had become inevitable, and Napoleon had resolved on it, as he understood that Austria could not see with equanimity the formation of a French kingdom in Italy. The Emperor presented his sister Eliza, who had accompanied him, with the principality of Lucca and Piombino; he gave the most splendid popular fêtes at Verona, in the amphitheatre, and at Genoa, on floating gardens and islands built on boats.

When he returned to France the *Moniteur* became ominous in its tone towards Europe. The Emperor had received in Italy denunciations against Madame de Rémusat ; his secret police represented her as too free in her comments on the Emperor and his family. He became cold towards her, and she became timid before him. His manners with the ladies in waiting, who had grown to be very numerous (there were now

Italian and Belgian ladies, besides the French), were sometimes very offensive.

"One day a certain number of us were breakfasting with the Empress, and in the number were the ladies who had gone to Italy with the Empress. Bonaparte suddenly enters the dining-room, and, with a rather cheerful face, leaning on the back of his wife's chair, addresses to one and another some insignificant remarks, and, asking questions about our life, tells us, at first in covered words, that among us there are a few who are the subject of comments on the part of the public. The Empress, who knew her husband, and who knew that from words to words he could go very far, tried to change the conversation; but the Emperor, going on, soon made it very embarrassing. 'Yes, ladies, you occupy the good inhabitants of the faubourg St. Germain. They say, for instance, that you, Madame ——, have a *liaison* with M. ——; that you, Madame ——'; and so he addressed himself to two or three among us. It is easy to understand the embarrassment into which such a speech threw us all. I believe still, in truth, that the Emperor amused himself with this uneasiness. 'But,' said he suddenly, 'people must not think that I approve such gossip. To attack my court is to attack me; I will not have one word said about me, or my family, or my court.' And then, his face becoming threatening, in a more severe voice, he uttered a long tirade against that portion of Paris society which was still in rebellion, saying that he would exile any woman who should say a word about a *dame de palais*."

After he was gone it is not much to be wondered at that one of the ladies assured the Empress, "If the Emperor defends us once more in this way, we are lost women." At Saint-Cloud the duty of M. de Rémusat was to organize the plays of the evening to amuse the man whom Talleyrand called *l'inamusable*. (Madame de Maintenon also once said of Louis XIV. to her niece: "Ce vieux roi n'est plus amusable.') In vain did M. de Rémusat choose among the masterpieces of the French theatre; in vain did the best comedians make the greatest efforts. The Emperor was always preoccupied; he scolded the Grand Chamberlain, he scolded Racine, Corneille, the actors. He had a sort of affection for Talma, whom he had known when he was young and obscure; he received him familiarly and gave him much money. "Like a sick man who makes everybody responsible for his ill-health, he was angry when he found himself insensible to what the rest considered a pleasure; and he always thought that by scolding and worrying he could oblige people to invent something which would amuse him."

War was his great, his only amusement. He had passed in review his great army at Boulogne, but the French fleet was defeated off Cape Finisterre and the expedition against England was abandoned. A coalition was formed against Napoleon on the Continent, between Russia and Austria, and the Emperor sent M. de Talleyrand to Strasbourg. Talleyrand had been named Minister of Foreign Affairs through the influence of Madame de Staël, who had recommended him to the Director Barras. He had been indispensable to Napoleon during the Consulate and the first years of the Empire. When the Emperor of Austria entered Bavaria, the Elector retired to Wurzburg, and Napoleon went to the French Senate and called for the reserves of five years. He started for Strasbourg with the Empress; he had become, since war was decided on, much more serene and amiable; he had praised Corneille's "Menteur" two days before his departure from Saint-Cloud, and at Strasbourg he remembered Fleury, who had played in it, and sent him a present. These small incidents show the real man; Napoleon was really never himself except in the camp, in the tumult and confusion of war; he was a born conqueror; war was the game which calmed and excited him at the same time.

Madame de Rémusat says that this new war was not popular; money got scarce; every family was trembling for its sons. The army of Boulogne had been transported, as by enchantment, from the shores of the Channel to Germany, and Bonaparte entered Bavaria; his activity was truly surprising. The campaign began on the 1st of October, and by the middle of October he wrote to his wife: "Reassure yourself; I promise you the shortest and most brilliant campaign." The bulletins of the Grand Army contained such phrases as: "The destinies of the campaign are fixed." The capitulation of Ulm, which was prepared by the most masterly strategy, struck all Germany with terror. After this great event the Emperor himself dictated to the editor of the bulletin this phrase: "The eulogy of the army can be made in two words: it is worthy of its chief." On the 13th of November the French army entered Vienna. "The Emperor," said the bulletin, "has established himself in the palace of Schönbrunn; he works in a room adorned with the statue of Maria Theresa. When he saw it he exclaimed: 'Ah! if this great queen were still alive, she would not let herself be guided by the intrigues of a woman like Madame de Colloredo! Always surrounded by the great statesmen of her country, she would have known the wishes of her people. She would not have opened her provinces to the ravages of the Muscovites!'"

The joy of Bonaparte was somewhat dampened by the news of Trafalgar; he sent for Talleyrand and prepared with him the ground of the future negotiations. M. de Rémusat also received an order to leave Strasbourg for Vienna; when he arrived, the Emperor had gone; the approach of the Russians had determined the Emperor of Austria to try once more the fortune of arms. The two armies had joined in Moravia at Austerlitz; Bonaparte resolved to attack them on the 2d of December, the anniversary of his coronation: "Il faut finir cette guerre," said he in his proclamation to his troops, "par un coup de tonnerre." The day before the battle he received the visit of Prince Dolgorouki, who came with proposals of peace, but he was not in a mood to receive them. "Russia asked that France should abandon Belgium and give up the Italian kingdom." "If France," said Napoleon in his proclamation, "can only obtain peace on the conditions proposed by the aid-de-camp Dolgorouki, Russia would not obtain them even if her army were encamped on the heights of Montmartre." "It was written," says Madame de Rémusat, who does not often indulge in such philosophical reflections, "that these same armies should one day encamp on those heights of Montmartre, and that Alexander should see at Belleville a messenger from Napoleon offering him any peace of which he should himself dictate the terms."

Three armies and three emperors met at Austerlitz; the Austrian and Russian emperors were obliged to take to flight to escape being made prisoners. Bonaparte himself wrote, on the battle-field, the account of this momentous struggle.

Correspondence.

BISHOP COLENSO AND THE ZULU WAR.

To the Editor of The Nation:

Sir: A letter just received from Dr. Colenso, dated Bishopstowe, Maritzburg, Natal, Nov. 20, 1879, contains an announcement which may possibly interest some of the readers of the *Nation:*

"I have just sent to England for publication," he writes, "a small work entitled 'Private Journal of Cetshawayo's Dutchman,' being an account of the sojourn in Zululand during the war of a white trader who wrote the King's letters for him and read and explained those of Lord Chelmsford. In the Dutchman's narrative, which I have translated, I have added a series of notes and prefixed a good photo. of the King; at least I have arranged for the work being published in this form, and sold at a low price, for the Dutchman's benefit, in order that as much light as possible may be thrown upon the treatment received by the Zulu King and nation at the hands of the representatives of a Christian people during the late war. I think if this little book falls in your way you may like to read it, and perhaps mention it to others."

Elsewhere in the same letter Dr. Colenso speaks of "facts coming to light which show how shamefully the character of the Zulu King has been blackened in order to support a foregone policy."

It may not be generally known that the only influential voice raised in South Africa against the invasion of Zululand—there regarded as a source of profit and in England as a necessary step toward increasing "our magnificent empire"—was that of Bishop Colenso. He alone denounced from the pulpit with unsparing severity the great crime of the British Government and of the colonists themselves. In England, however, six prelates of the Church, of undoubted orthodoxy, by their votes in the House of Lords, cast the episcopal sanction upon the Tory policy of war and conquest.

Notwithstanding its apparent failure as a guide to national rectitude, perhaps orthodoxy has its use. A. J. L.

Brooklyn, January 18, 1880.

THE VENUS OF MILO.

To the Editor of The Nation:

Sir: If, as I judge, the writer of the note on the above subject, in the *Nation* No. 755, signed "M. F. C.," and patently a reply to mine in No. 754, is the same as the author of the article in the *Atlantic*, I beg her pardon for having said anything to offend her. If she had signed the *Atlantic* article I should have been disarmed, and, perhaps, not have merited the accusation of having "patented" anything in archæology.

The case stands thus: M. Doussault, in 1847, heard certain statements

from a very old man of something that happened a quarter of a century before. The old man, neither architect nor archæologist, gave M. Doussault indications from which he constructed plans of a seventh-century Christian church, etc., etc. These statements are confessedly contradicted by those made by the officers who were engaged in removing the statue; they are contradicted by the statements of M. Brest, junior, made to me about twenty years later. Twenty-five years these facts had lain in the memory of the elder Brest, and thirty in that of M. Doussault, for the book is only published in 1877, and we are asked to accept this statement as scientific evidence without M. Doussault having taken the trouble to verify the facts by a visit to Melos and inspection of the ruins, and without photographs or any irrefragable documents attesting the existence of them, or, so far as stated in this connection, any confirmatory statements by other people of any part of the story.

On the other hand, I personally visited Melos, and saw what M. Brest, junior, assured me was the niche in which the statue was found, and he detailed to me the circumstances of the finding, which I communicated to the *Nation*. I have no file and cannot recall the date, even within a year, but it was near enough to the narration to be free from great probability of any material error in transcription. This story, as any one may read it in the *Nation* of that date, absolutely contradicts that told in the *Atlantic* article on the authority of M. Doussault (or Grasset d'Orcet).

I do not pretend to infallibility either of memory or judgment, and it is quite possible—1st, that M. Brest, junior, deceived *me;* 2d, that I may have walked over and through the ruins of a seventh-century church and not have seen them ; 3d, that I may have seen them and forgotten them; and 4th, that my natural capacities for telling such a story may be much less than those of M. Doussault. Your readers must decide where the balance of probabilities lies, but I must say that I cannot perceive that "M. F. C." has made out a better claim for a patent to M. Doussault than I have; at any rate my caveat was filed before his. In the doubt, I submit that it is fair that the testimony of the officers engaged in the rescue of the statue from the Turks should be allowed to weigh. As my "patent" is entirely *pro bono publico*, I have no interest to maintain it if reasonably contested or otherwise.

Yours truly, W. J. Stillman.

Florence, Jan. 2.

COLOR-BLINDNESS AND THE MASSACHUSETTS RAILROAD COMMISSIONERS.

To the Editor of The Nation :

Sir : In my copy of the *Nation* (No. 759) I find, on page 45, a notice of what the Massachusetts Railroad Commissioners are supposed to have done in their investigations in regard to color-blindness, in which their action is criticised for lack of thoroughness, etc.

As the writer of the notice at the time it was written could not have known from the Report of the Commissioners what its contents were, or what they had done, it was at least premature, and a specimen of pretty poor *guessing*. The Report has been delayed by the late fire in Boston, which injured the offices of Rand, Avery & Co., the publishers, but I send you to-day a copy of a portion of the advance sheets of the Report, published through the enterprise of the Boston *Herald*, from which I think you will see that the *reviewer* fell into several errors. The Commissioners did not "detail a conductor" to make the examinations of employees upon the Fitchburg Railroad. This false charge was made in the *Advertiser* (through an erroneous statement) and denied the next day. What the Commissioners did, and why, you will see by the Report. Again, the article says, "their action does not take enough account of the experience of foreign countries in the matter." The Report shows that the Commissioners were not wholly unfamiliar with that experience, and, as a matter of fact, they sent two hundred circulars to medical experts of all the principal countries of Europe, and their conclusions were largely based upon the communications received in answer to those circulars.

Very respectfully yours,

Albert D. Briggs.

Springfield, Mass., January 17, 1880.

[We made no attempt to anticipate the Commissioners' Report or to guess its contents. Of course, if we had seen the correction of the misstatement, our paragraph would have been modified or not written.—Ed. Nation.]

Notes.

J. B. LIPPINCOTT & CO. have in press 'The King's Rifle : From the Atlantic to the Indian Ocean,' by Major Serpa Pinto, the well-known Portuguese explorer ; and 'The Great Living Men of Our Country,' a dictionary of biographical notices.——Ginn & Heath have brought out the second edition of Prof. Goodwin's 'Elementary Greek Grammar,' which has been thoroughly worked over and much enlarged. The new preface contains some very sensible remarks on the teaching of Greek as well as of other languages.——Estes & Lauriat will publish 'The Experiences of a Barrister and Confessions of an Attorney,' by Samuel Warren ; 'Our Common School System,' by Gail Hamilton ; and Masson's 'Outlines of the History of France,' abridged from Guizot's 'Popular History.'——Henry Holt & Co. have in preparation a volume of poems by Austin Dobson, and Mrs. Brassey's new book, 'Sunshine and Storm in the East.'——J. W. Bouton is the American agent for the illustrated library edition of 'Don Quixote' (Motteux's translation) undertaken by William Paterson, Edinburgh. The work will be beautifully printed, in four volumes octavo, with thirty-seven etchings by Ad. Lalauze. ——Harper & Bros. have added 'Hawthorne,' by Henry James, jr., to the "English Men of Letters" series.——A new edition of Alger's 'History of the Doctrine of a Future Life' is promised shortly by Roberts Bros. ——'Lamartine and his Friends,' *ana* and correspondence ; and Blanqui's 'History of Political Economy,' are announced by G. P. Putnam's Sons.——Macmillan & Co. have just published the 'Life and Work of Mary Carpenter'; and a memoir of her brother, the late Dr. Philip P. Carpenter, has also appeared in England, with the imprint of C. Kegan Paul & Co. Macmillan & Co. will issue immediately a complete index to the four volumes of Lanfrey's 'History of Napoleon I.'——We sincerely regret to record the death on Thursday last of Mr. Joel Munsell, of Albany, a publisher of the most disinterested character, who has especially done much to foster the publication of family and town histories and to encourage antiquarian research generally.——We accidentally gave last week a wrong address to Mr. J. P. Soule, Boston, who may be found at No. 338 Washington Street.——The first number of the *American Entomologist* is before us. The salutatory recalls the *American Entomologist and Botanist* suspended nine years ago, of which Dr. Riley conducted the entomological portion, as now (in connection with Mr. Andrew S. Fuller) he conductst he revived and restricted periodical. The chief articles of value in the present number are a discussion of the hibernation of the cotton-worm ; a revelation of the food-habits of thrushes, which, we are sorry to say, are convicted of living on the useful predaceous beetles ; and a review of Entomology in America during the past year, by Mr. J. A. Lintner.——A second edition of 'Appleton's Dictionary of New York,' revised and improved, has already appeared. The work is kept in type, so that revision can be made at once as the growth and changes of the city may demand.——The English dramatic magazine called the *Theatre* has passed into the hands of Mr. Clement Scott, an adapter of French plays and a copious writer on theatrical topics. The January number appears with a cover designed by Mr. Du Maurier, with photographs of Mr. Henry Irving and of Miss Ellen Terry in the "Merchant of Venice," and with the omission of the interesting theatrical summaries from foreign countries.——'Picturesque America,' under the name of 'L'Amérique du Nord Pittoresque,' has recently been published in Paris with great success by M. Quantin, the successor of M. J. Claye in the management of the great printing-house.——A German admirer of Wagner, named Hagen, has commenced the publication of a commentary on the libretto of "Rheingold." He finds as much to admire in Wagner's text as his most faithful followers have found in the music of the future. Indeed, the commentary bids fair to exceed the Cabbala in fanciefulness and the Talmud in length. Not content with a most thorough examination of the grammar, he even investigates at length the use of single letters; an O, for instance, representing entirely different ideas from an R or an S. Judging from the two volumes already issued, it is thought that the commentary will fill 80 volumes of 360 pages each and be completed about 2199.——We are glad to learn that the Boston Heliotype Printing Co., which suffered a total loss in the recent great fire, has promptly re-established itself in new quarters, and will continue to employ the large variety of photo-engraving processes which have added so much to the resources of book-making, commerce, and the study of the fine arts, and are fairly to be called indispensable.

—By an oversight last week we omitted to mention the dates of Mr.

John Fiske's four lectures on "America's Place in History," of which the first was given last evening in Chickering Hall. The remaining three will be delivered at the same place on the evenings of January 24, 28, and 31, and we can say for them, of knowledge, that they possess a degree of excellence very rare in our lecture courses, and which places them in the front rank of lectures anywhere. They are admirably comprehensive, and are as free from dulness as they are from commonplace.

—Professor Lounsbury concludes in the January number of the *New Englander* a series of three articles on Giraldus Cambrensis which together make a truly masterly piece of biography. An "old scholar of the twelfth century" is not only put before us in all his habits as he lived, but is made more entertaining than it is to be feared any scholar of the nineteenth century ever can be made, unless, which is devoutly to be wished, Professor Lounsbury should one day be entrusted with the charge of writing the life of Mr. E. A. Freeman. The three articles in the *New Englander* should, by all means, be brought out under one cover.

—All the illustrated prose articles in the February *Harper's* will repay reading in various ways. Mr. Howard Pyle, whose pen and skilful pencil keep even company, gossips about the elder Bartram and his botanic garden on the Schuylkill, and does what may be done in such limits to keep the memory of that worthy green and fragrant, as it deserves to be. Mr. B. F. De Costa's "Foreign Tips" is a humorous, not overdone summary of the exactions, in the shape of fees for services real or imaginary, which the American traveller experiences as soon as he leaves his native shores. The Grimani breviary in the library of San Marco at Venice is described by Mrs. J. W. Davis, but the admirably engraved specimens of the illuminations speak more forcibly of its splendor. "Washington as a Burgher," in Alexandria, is the subject of a paper by Mr. William F. Carne which contains much fresh information. Mr. John Bigelow's "Visit to the Republic of San Marino" gives in a few words what is, for all practical purposes, an exhaustive account of this anomalous government, and is accompanied by a topographical map and a good general view of the city of San Marino as seen from below. What is said of the Percheron and Norman horse by Mr. A. B. Allen is perhaps open to correction as regards the utility of this breed on the farm in comparison with lighter and more active stock. Mr. A. A. Hayes, jr.'s, papers on the mining regions of Colorado are apparently brought to a close in "Grub Stakes and Millions."

—The wood-engraving controversy is taken up by *Harper's* in a notable symposium, to which the following engravers contribute: Messrs. A. V. S. Anthony, Timotheus Cole, John P. Davis, Frederick Juengling, Richard A. Müller, John Tinkey, and Henry Wolf. The temper of the discussion is unexceptionable, and Mr. Linton, who is called by Mr. Anthony "the best engraver that ever lived," will not be offended even when he is told that he is guilty of faults he ascribes to others, that he cannot produce this or that effect by his method, and that "it is a shame for a man to cut such a lady's work [Miss Hallock's] in that way." There is a general agreement that photographing on the block has given the engraver a larger liberty and a fresh impulse, but all do not prefer it to a drawing, and its disadvantages—as falsifying color and requiring the original to be kept at hand, etc.—are freely admitted. It is pointed out that photography can delineate minutiæ which no draughtsman could put on the block; and it might have been added that, for certain subjects, abundance of detail and definiteness of purpose are qualities of the highest draughtsmanship which, from the nature of the case, the photograph possesses. Nearly all (Mr. Anthony seems to be an exception) hold that the engraver should efface himself in the effort to reproduce the spirit and stamp of the artist: "when seeing an engraving you should recognize the artist first and not the engraver." The necessity (under instructions) of imitating the brush-marks and the vehicle of the original is regretted by some, but accepted by others as legitimate. All things considered, we believe Mr. Cole more nearly expresses our own views than any of his associates. Mr. Müller announces his intention to achieve the *tour de force* of engraving "direct from nature on a blackened block," as if he were etching. The conception, of course, that the block is black and not white, like a sheet of paper, is fundamental in wood engraving and ought to be for draughtsmanship on the block.

—Since the appearance, more than twenty years ago, of Herbert Spencer's suggestive essay on the "Origin and Function of Music," and Mr. Darwin's more recent remarks on the subject in connection with sexual selection, various articles have been written and suggestions offered, without, however, with one or two exceptions, throwing much new light on the questions involved. The latest contribution is by Mr. James Sully, whose article on "Animal Music" in the November *Cornhill*, if it does not add much to our knowledge, is yet a convenient summary of some of the most important and striking facts, and may be of use in showing in what directions further observations are still desirable. In writing on animal music, birds necessarily form the chief topic, for though some insects, amphibia, and mammals are endowed with more or less musical voices, yet in regard to smoothness, compass, and variety of voice, birds are greatly their superiors, just as they are in regard to ornamentation and color. We find in the song of birds almost all the elements which enter into our own music; our latest acquisition, harmony, being the only primary factor that is conspicuously absent. There is, first, the sensuous element, which distinguishes from each other the voices of different species and individuals; then the emotional element, which marks any one strain as sad or joyful; and, finally, the intellectual element, as shown in an incipient sense for rhythm and tonality. Nor, although birds of a feather usually repeat the same sequence of notes all their life and hand it down to posterity, are their musical powers limited to these few notes, as might at first appear. For it has been pointed out by Mr. Wallace and others that if young birds are removed from their nests before they can have heard the song of their parents they will readily adopt some other simple melody of a different species. This shows that it is not an inflexible instinct, but the higher psychic power of imitation, which teaches birds to sing. Attempts have been frequently made to record the song of birds in our musical notation, and in the case of some birds which sing in true diatonic intervals, in whole notes, thirds, fourths, or fifths, this is easy enough. More frequently, however, the irregularity of the rhythm and the introduction of intervals smaller than a semitone allow only an approximation to correctness, as in the case of the erratic tenors and sopranos we often hear in concert and opera, whose song no existent device of man short of the phonograph would enable us to record. But as a good musical ear can distinguish an interval so small as the fiftieth of a semitone, and as the ancient Greeks in some forms of their music employed intervals of a quarter of a tone, which it is not impossible may be introduced again by some musician of the future, some ultimate improvement in our notation may yet enable us to record the song of all birds as well as that of operatic tenors and prima-donnas.

—The fact that mammals, with their superior nervous centres and general intelligence, should be so inferior to birds in musical development, is a hard nut for the comparative psychologist to crack. Our present ignorance of the individual and ancestral habits and traditions of most animals makes it, as yet, difficult to account for the development of musical gifts on the principle of utility by means of natural selection; and the difficulties seem even greater if we cling to the theory of sexual selection, which has been so seriously damaged by Mr. Wallace. Mr. Sully suggests several explanations of the apparently anomalous distribution of musical powers among animals, which, however, as he himself feels, are hardly satisfactory. But as long as sexual selection, and especially the selection of the male by the female, is an open question, it is surely premature for Mr. Sully to say that "it is *certain* that the songs of birds have as their express object the charming of female ears." Still more unwarranted, if not positively absurd, is the statement that "the capacity to enjoy tones by no means progresses uniformly with the development of the ear." This statement is based on the assertion by Brehm that the degree of musical sensibility of different animals would seem to vary inversely rather than directly with the degree of the development of the ear. To this we must reply that, in the first place, Herr Brehm, who is a descriptive naturalist, is no authority whatever in questions relating to the physiology and microscopic anatomy of the organs of sense. Secondly, his work appeared at a time when little was positively known in regard to the minute structure of this almost incredibly complicated organ, the ear, in comparison with which even the eye seems a model of simplicity. Helmholtz, Hasse, Hensen, Waldeyer, and Preyer have since then made many important discoveries, but much still remains for future observers. The difficulty and uncertainty of the subject is best shown by the fact that each of the four editions of Helmholtz's great work, especially the last (1877), has introduced important modifications in our views of the functions of different parts of the cochlea. In our opinion it is chiefly the arrangement of the hair cells and their connections with the nerve-fibres that await further research. The important discoveries of Max Schultze in regard to the eye should have taught Mr. Sully not to make such an utterly unscientific observation in regard to the ear. Max Schultze showed that the color-sense depends on the presence and arrangement in the eye of certain nervous elements called

cones, which are variously distributed in the retinæ of reptiles, birds, and mammals, not in accordance with their general rank in the scale of animal life, but entirely according to their habits of life and their *need* of a color sense. Hence there can be no reasonable doubt that when once the functions of *all* the parts of the ear are clearly ascertained there will be found a close correspondence between their development and the musical habits of animals.

—Miss Anna Bock, the gifted young pianist, who has appeared twice in public within the last few weeks, gave on Thursday last a concert of her own, in which she was supported by Messrs. Arnold, Ganzberg, Müller, and Dulcken. The opening number was a quartet by Brahms for piano, violin, viola, and violoncello, which, we believe, has not been heard here before in public. It is a work of decided merit, written in the best style of the modern school of chamber-music, of which Schumann, Mendelssohn, Brahms, and Raff may be taken as representatives. Schubert's compositions of this kind belong decidedly to the school of Beethoven, whose great works he took as a model for his own efforts. Brahms's serious and elaborate work did not produce much impression upon the audience on a first hearing, but we have little doubt that upon closer acquaintance it will become a favorite with our amateurs. It was performed by Miss Bock and her associates in a very spirited and highly-finished manner, particularly the last number, a brilliant Presto alla Zingarese, the technical difficulties of which are very great. Miss Bock appeared later in the evening in one more concerted piece, Beethoven's Kreutzer Sonata. By a highly intelligent and powerful rendering of this immortal composition and of Brahms's quartet the young artist fully justified the opinion which we expressed last week. Her brilliant technique and excellent memory also called for hearty admiration in the spirited performance of a series of ten solo pieces. Her programme, including the names of Beethoven, Schubert, and Rubinstein, in the first part, of Schumann, Saint-Saëns, Chopin, and Liszt in the second part, was most judiciously arranged. A numerous audience rewarded Miss Bock with enthusiastic applause.

—The third concert of the New York Symphony Society included a new instrumental composition by P. Tchaikoffsky, a suite for full orchestra in D minor. Since Hans von Bülow introduced this composer's pianoforte concertos here several years ago the public has become acquainted with numerous other of his works, both greater and smaller. Mr. Neuendorff gave last season two of his most elaborate works—a symphonic poem, "Francesca da Rimini," and a very long symphony. Tchaikoffsky's style is that of the modern German school, beginning with Schumann and ending with Liszt. While he is wanting in the original genius of the great representatives of that period, he has learned from them the art of powerful instrumentation and finished construction. These are the characteristics of his last composition, of which Dr. Damrosch gave an excellent rendering on Saturday last. Another interesting feature of the evening was the début in New York of M. Adolphe Fischer, a violoncello player of very great merit. M. Fischer's tone is not very powerful, but it is very sweet and pure, no matter on what string or in what position, and his execution is marvellous. These are the typical characteristics of the Belgian school, which has educated so many eminent artists, and to which M. Fischer belongs. His first number, a concerto by Camille Saint-Saëns, is a composition in which perhaps nothing higher is attempted than to exhibit the best qualities of the virtuoso. It bristles with breakneck difficulties, which were mastered by M. Fischer with the most perfect ease and with a placidity that was delightfully reassuring for the hearer. In one of those thoroughly martistic arrangements of one of Chopin's pianoforte nocturnes which ought to be excluded from serious concerts M. Fischer showed a better style of tone, and in his second solo number, a Tarantelle of his own composition, he displayed an amount of technique which astonished and delighted his audience. The remaining orchestral numbers, Beethoven's Pastoral Symphony and Wagner's introduction to "Tristan und Isolde," were given with the refined taste which, as a rule, characterizes Dr. Damrosch's performances.

—In one of his conversations with M. Soret Goethe looked into the future and gave three guesses, which are not without interest at the present juncture :

"Dined with Goethe. He spoke much, and with admiration, of Alexander von Humboldt, whose work on Cuba and Colombia he had begun to read, and whose views as to the project of making a passage through the Isthmus of Panama appeared to have a particular interest for him. 'Humboldt,' said Goethe, 'has, with a great knowledge of his subject, given other points, where, by making use of some streams which flow into the Gulf of Mexico, the end may be perhaps better attained than at Panama. All this is reserved for the future and for an enterprising spirit. So much, however, is certain, that if they succeed in cutting such a canal that ships of any burden and size can be navigated through it from the Mexican Gulf to the Pacific Ocean innumerable benefits would result to the whole human race, civilized and uncivilized. But I should wonder if the United States were to let an opportunity escape of getting such work into their own hands. It may be foreseen that this young state, with its decided predilection to the West, will, in thirty or forty years, have occupied and peopled the large tract of land beyond the Rocky Mountains. It may, furthermore, be foreseen that along the whole coast of the Pacific Ocean, where nature has already formed the most capacious and secure harbors, important commercial towns will gradually arise, for the furtherance of a great intercourse between China and the East Indies and the United States In such a case it would not only be desirable, but almost necessary, that a more rapid communication should be maintained between the eastern and western shores of North America, both by merchant ships and men of-war, than has hitherto been possible with the tedious, disagreeable, and expensive voyage round Cape Horn. I therefore repeat that it is absolutely indispensable for the United States to effect a passage from the Mexican Gulf to the Pacific Ocean ; and I am certain they will do it. Would that I might live to see it ! But I shall not. I should like to see another thing—a junction of the Danube and the Rhine. But this undertaking is so gigantic that I have doubts of its completion, particularly when I consider our German resources. And thirdly and lastly, I should wish to see England in possession of a canal through the Isthmus of Suez. Would I could live to see these three great works ! It would be well worth the trouble to last some fifty years more for the very purpose."

The fifty years which Goethe wished for have come and gone ; this conversation was held on Wednesday, February 21, 1827 (as is recorded on p. 222 of Mr. John Oxenford's translation of Goethe's 'Conversations with Eckermann and Soret'), and of the three things Goethe longed to see, though only one is accomplished, one other, at least, is in a fair way of being shortly begun.

—A new work is announced to appear by subscription in Belgium which deserves the special notice of astronomers, of librarians, and of all bibliographers whose collections contain works on astronomy. It is called 'Bibliographie générale de l'Astronomie, ou Catalogue méthodique des ouvrages, des mémoires et des observations astronomiques publiés depuis l'origine de l'imprimerie jusqu'en 1880, par J. C. Houzeau, Directeur de l'Observatoire Royal de Bruxelles, et A. Lancaster, Bibliothécaire de cet établissement.' The work is already partly in type, and it will appear in three thick octavo volumes. These will be published by *fascicules* of 300–400 pages. The price will be 30 centimes, or 3 pence English, per *feuille* of 16 pp., and the work can only be had by addressing the authors at the Royal Observatory, Brussels, Belgium. A brief description of the admirable plan adopted and of the contents is as follows : The three volumes embrace—I. Ouvrages, II. Mémoires, III. Observations Each part has a classified subject-index and also an author-index. Vol. I., *Ouvrages*, relates to books separately printed. These have been examined, either directly or through the standard bibliographies of Lalande, Erlecke, Scheibel, and others, and classified by subjects. That is, under the name of a subject, as *Polémique au sujet du mouvement de la Terre*, a brief history of the origin of the question is given, and then the works (A) in favor of the motion of the earth and (B) against it are given. The full title of each book is set down and bibliographic and astronomical notes added, sometimes from the authors' hands, sometimes from standard bibliographies. An example of an entry from (B) is—

"Havemann, M. Astraea, in qua de hypothesibus astronomicis disseritur, coelestis globus probe explicatur, adparentiae coelestes jucunde demonstrantur.—8vo, Rostochii, 1624.—4to, Francofurti, 1650.—4to, Stadae, 1684.

"Les deux dernières éditions ont pour titre : Astraea, sive epitome sideralis scientiæ, in qua etc.

"Dans ce premier ouvrage contre Copernic, il ne s'agit encore que de discuter la question physique."

Other subjects are treated in a like manner.

—Vol. II., *Mémoires*, classifies all the memoirs published in journals, transactions of scientific societies, etc., in the same way. It is sufficient to say for it that it does for astronomy what the subject-index by Drs. Billings and Fletcher, now publishing by the Surgeon-General's Office, does for medicine. An example of the form of entry is :

"Tisserand. Note sur l'invariabilité des grands axes des orbites des planètes.

"Paris, Crh., LXXXII., 1876, 442.

"Il refait la démonstration de Poisson, en combinant le mémoire de La Grange de 1809 avec certains passages du mémoire de Jacobi sur l'élimination des nœuds dans le problème des trois corps."

Vol. III., *Observations*, contains a classified list of the observations of each planet, etc., and extensive references to all subjects of observation. It is, in short, a classified subject index to the five hundred or more volumes which have been published by astronomical observatories, and also to all observations published in scientific journals, transactions, etc., something on the model of Carl's 'Repertorium der Cometen-Astro-

nomie.' When it is considered that the publications of observatories (except those of Washington and Greenwich) are entirely without proper indexes, it will appear that this volume alone will approve the work to professional astronomers. The complete classified lists of the other volumes will enable the librarian at once to answer any question as to the contents of his works on astronomy. The biographies of astronomers presented make the book valuable in a library of reference. Few persons know the immense labor involved in such a work, or even in one small part of it; but those consulting it will find that in some way all their wants have been attended to. Nothing of the kind has been published in Astronomy of anything like its value, and the writer, who speaks from personal experience of this kind of work, confidently commends it to the class of readers which it seeks to reach.

—'Staats- und socialwissenschaftliche Forschungen' is a series of monographs edited by Professor Schmoller, of Strassburg, as a supplement to Holtzendorff und Brentano's *Jahrbuch für Gesetzgebung*, etc. It is designed for papers which are too long and too special in their character for the periodical itself, while yet having a distinct bearing upon the practical questions of the day to which the periodical is devoted. In general they may be said to belong to that field in which the editor is so distinguished—the application of economical principles to historical problems; they discuss, for the most part, questions of historical finance. The first number, of 118 pages, published in 1878, is by Professor Inama-Sternegg, of Innsbruck, upon the formation of great estates (*Die Ausbildung der grossen Grundherrschaften*) in the Carolingian time. It is easy to see how important this investigation is for the history of feudalism—especially on its so much neglected side, its relation to the peasantry; it is, moreover, an almost wholly unexplored field. The essay consists of four chapters, besides a short introduction. The first chapter discusses the mark-community, which was the starting point in the entire process, especially in its social and economical aspects. The second is statistical; the third treats of the development of great estates; and the fourth of their social influence. These two chapters contain the substance of the work, and are remarkably clear and exhaustive statements. We have never seen described so fully the process by which the free peasantry was gradually brought into serfdom, or a condition analogous to it; nor is there, probably, so complete an account of the social condition of Germany at this period as that contained in these chapters. The fourth chapter is, perhaps, the most interesting. The author shows that the eighth century was distinguished by a rapid economic advance, which was not without its influence in subverting the freedom of the peasantry; when great fortunes are made rapidly, the weaker go to the wall. It was imperatively necessary, however, in the interests of economic progress, to pass from the narrowness and isolation of the earlier agricultural life; and the formation of great estates, with the feudalism that grew out of it, was an essential step in civilization. Here, too, the author shows clearly why it was that in Germany (the same thing is true for France) the feudal order of things, and so the modern, which grew out of it, was not based upon the earlier mark-communities, but upon the so-called *villication*, while in England the feudal unit, the manor, was identical with the township.

VILLARI'S MACHIAVELLI AND HIS TIMES.*

VILLARI'S first volume is a picture of Italian politics and society at the close of the fifteenth and the opening of the sixteenth century. If this first instalment of his great work lacks something of biographical interest it has the immense merit of bringing into a clear light the paradox of the Renaissance in Italy—that a period of new birth was also a period of national decay, and that the country which first entered into the spirit of modern European life perished at the very moment when surrounding nations were putting forth new power and energy. The existence of this paradox Villari, at any rate, makes so plain that even the most careless student cannot henceforth fail to observe what is after all one of the strangest of phenomena. "We behold in Italy," he writes, "an enormous intellectual activity. On all sides old traditions, forms, and institutions were crumbling and disappearing to make way for new." The scholastic methods give way to the new philosophy. The first steps are made in scientific experiment. Commerce and industry flourish. An Italian discovers America. Printing becomes an Italian trade. Classical learning is universally diffused. The sciences of politics, of war, of architecture, and of history are either created for the first time or revived from the dead. The age of Leonardo da Vinci, Machiavelli, Brunelleschi, Perugino, Raphael, and Michael Angelo is certainly an age of life, of hope, and of progress; yet in the midst of this vivid splendor strange and inexplicable contradictions were to be found. This people of Italy, "so rich, so industrious, so intelligent, before whom all Europe stood, as it were, in an ecstasy of admiration—this people was rapidly falling into corruption. Everywhere liberty was disappearing, tyrants springing up; family ties grew weaker and weaker; the domestic hearth was profaned; no man trusted any longer to the good faith of Italians. Both politically and morally the nation became so feeble that it could no longer withstand the shock of any foreign power; the first army that passed the Alps traversed the peninsula almost without striking a blow, and was soon followed by others which devastated and trampled upon the country with equal impunity"

Let it, however, be realized that both the bright and the dark side of this description are true, and the question at once suggests itself, What is the explanation of the undoubted fact that the pioneer of European civilization ultimately fell far behind nations which were almost barbarous when Italy was full of light and culture, and that the development of Italian intellect appears to have been almost bound up with decay in all the qualities which make up the moral character of a nation? Many of the explanations which pass current are most unsatisfactory. To point out that Italy fell from her greatness through her moral corruption, is little else than to restate the very fact which requires to be accounted for. To say, again, that the peninsula became a prey to foreigners because Italians were torn by the spirit of faction, is indeed to call attention to a circumstance which contributed to the ruin of the country; but Italian party spirit does not of itself explain why it was that Italy could not resist invaders, for the country was at least as much divided by the spirit of party during the Middle Ages as at the period of the Renaissance, whilst mediæval partisanship did not produce half the evil which resulted from the same spirit of faction in a later age. Villari, who fully perceives the nature of the problem to be solved, has the merit of suggesting considerations which afford, at any rate, a partial explanation of the calamities which afflicted Italy. His theory is in effect that the rapidity of Italian progress led the country to the brink of an inevitable social and political revolution, which, owing to foreign intervention, Italians could not conduct to a successful issue. The different points embraced in this view ought each to be carefully considered. The groundwork on which it rests is the fact that Italian civilization, like that of ancient Greece, was a civilization depending upon the astonishing intellectual and political activity of small city communities. The city, or the commune, played a part in Italy which it has never played in any other country of modern Europe. Florence and Venice, to take the two typical Italian republics, pressed forward to the condition of civilized states at a time when France, England, and Germany were comparatively barbarous countries, still weighed down by the burden of the feudal system. The result, however, of this very progress was that Italy at the moment of the Renaissance had outgrown her institutions, and, what was of at least as much consequence, had to a great extent thrown aside the moral and political ideals which influenced the rest of Europe. Everything in Italian life, and especially the rise of tyrannies, marked the necessity for some revolution. It is possible, one may perhaps say probable, that could the states of the peninsula have been left to themselves the changes necessary for the further progress of the country would have been carried out. Some one state or monarch might gradually have gained either leadership or supremacy, and thus have given to Italians that unity which was in their case a necessity if they were ever to maintain independence or to achieve a career of peaceful progress. The intervention, however, of foreigners arrested what may be termed the natural development of Italy, and for more than two centuries and a half prevented the states of the peninsula from attaining that national spirit which is proved to be for the states of modern Europe an essential condition of progress. Villari further makes clear that foreign intervention was itself an almost inevitable result of the condition at once of Italy and of the states by which she was surrounded. A city, for example, like Florence, which, while the whole country was going to ruin, bent all her efforts to the subjugation of Pisa, inevitably became dependent on foreign powers. A country such as France, where powerful monarchs were surrounded by armies longing for war, was certain—one might almost say fated—to invade a land which was at once civilized, disunited, and, so to speak, unarmed.

Villari's solution of the problems presented by the history of Italy in the sixteenth century is, as far as it goes, true, but is also almost certainly

* 'Pasquale Villari. Niccolò Machiavelli e i suoi tempi.' Firenze: Successori Le Monnier.
'Niccolò Machiavelli and his Times. By Prof. Pasquale Villari. Translated by Linda Villari.' London: C. Kegan Paul & Co.

incomplete. He does not fully perceive that the early advances in civilization made by the Italian republics were made at the cost of deviation from what has turned out to be the true path of modern progress. The essential difference between the classical world and the world of modern Europe is that the basis of classical civilization was the city, whilst the basis of modern society is the nation. The Italian states were formed upon the classical model. They were towns, the free citizens of which governed the subject country districts. They had many of the merits, but they had also most of the defects, of classical republics. Some of these faults were indeed intensified, for the curious blending of feudal and classical conceptions which is apparent in the city governments of the middle ages, divided a mediæval town from the country districts dependent upon it by even a harder line than that which separated the citizens of a classical state from the dependent population who had not the full rights of citizens. The great step made by modern civilization has been the gradual blending of town and country; but this step in the path of progress was one which the Italian cities were far less capable of making than, say, a country like England, which must have appeared to a statesman such as Machiavelli almost barbarous. The Florence, indeed, of Lorenzo de' Medici (1469-1492) must have appeared to the men of that age rich in all the elements of civilization in which the England of Edward IV. and Richard III. (1461-1485) was deficient; but we can now see clearly enough that England had, even before the end of the Wars of the Roses, in substance advanced further on the true road of modern civilization than Florence. The position of an English yeoman was politically better than the condition of the inhabitants of the villages round Florence. The yeoman was a British subject, with the rights of a freeman. The Tuscan countryman could not even be trusted with arms by the city, which could constrain his obedience but could not command his loyalty.

The Renaissance, further, was, it must be remembered, from one point of view a period of reaction or revival. To use a happy expression of Villari's, men found the new world of modern life in seeking to revive the old world of classical literature. Still the movement was, in its form at least, a revival of classicalism, and, in a country like Italy, consisting of cities which were in reality states, like those of the ancient world, had a tendency to reproduce the defects of classical conceptions. It is, for instance, apparent that the very revival of ancient learning intensified the exclusive spirit of Florentine liberty. Savonarola's feelings and principles were in the main those of a monastic reformer, but where he was not a monk he was a patriot of the Greek or Roman type. His loyalty was loyalty to Florence. He welcomed the French invader as a deliverer of the Florentine state. His very patriotism (and the same thing must have been true of men in every way his inferiors) led him to a policy radically inconsistent with the independence of Italy. Another example of what we may term the classical spirit is seen in Machiavelli's schemes for forming an army of free citizens; but the crowning proof of the fatal turn given to Italian history by the predominance of civic rather than national patriotism is seen in the view predominant among Italian statesmen, that the great danger of Italy lay in extension of Venetian power. To this must be added another characteristic of Italian statesmanship, which greatly added to the reputation of Italian politicians whilst it wrought deep evil to Italy. This characteristic was the overestimate of the personal side of political life. The Italians undoubtedly were the earliest diplomatists. Men like Machiavelli perceived what the untrained statesmen, say of England or Germany, had hardly learnt—how large was the part which diplomacy, and diplomacy of a very personal character, might play in the contests between states and nations. They invented and carried to perfection what has sometimes been called kingcraft. From them not only Italy but the whole of Europe imbibed the belief that the great aim of statesmen ought to be to gain their own ends by working on the sentiments, the prejudices, or the interests of kings and potentates. That this idea of politics, which made statesmanship a matter of intrigue, tended to undermine both public and private morality, is obvious. What is not perhaps so often remarked is, that it tended to conceal the importance to statesmen and rulers of acting in harmony with what may be called the permanent forces which govern society. Every one now knows that almost all truly successful statesmen, from Louis XI. down to Prince Bismarck, have owed the greater portion of their success to their having, either by virtue of insight or of happy accident, enlisted in favor of their schemes some strong popular feeling or interest. This was precisely the aspect of politics which Italian statesmen and their followers hardly understood. A Florentine diplomatist, could he have returned to life between 1860 and 1870, would have been able to enter with the utmost keenness into the contest of wits by which first Cavour and next Bismarck outmanœuvred the French Emperor. Such a politician might probably enough have suggested strokes, including possibly the occasional use of assassination, which would have escaped the acuteness and have shocked the conscience of both the Piedmontese and the Prussian statesman. But the Florentine diplomatist would have found a difficulty in perceiving that neither Cavour nor Bismarck owed half so much to his astuteness as to the fact that he had behind him all the force, in the one case of Italian, and in the other of German, national sentiment.

It is easy to perceive how the view of statesmanship which made it consist in the arts of diplomacy naturally grew up in the Italy of the sixteenth century. It is also easy to perceive that this onesided conception of politics was almost certain to lead Italian states to ruin. If, in short, we ask why it was that the Italian Renaissance led to something like the ruin of Italy, the answer appears to be, first, as suggested by Villari, that the rapid progress of Italian civilization necessitated a political and social revolution which the country was, owing in a great degree to foreign intervention, unable to effect; and, secondly, that Italian genius was, owing in part to the very circumstances which at one time placed Italy in advance of other nations, incapable of perceiving as clearly as did the statesmen of less civilized countries, what was the true direction towards which nations should steer that were to pass from the barbarism of the mediæval world to the true new world of modern civilization.

ICELAND'S ANNALS.*

AS the initial volume of the series of Icelandic texts to be issued by the University of Oxford no better work could have been selected by the delegates of the Clarendon Press than the 'Sturlunga Saga.' It has heretofore been edited but once—by the Icelandic Literary Society in its very earliest years (1816-20)—and then in a most uncritical way; and that edition has been so long out of print as to have become virtually inaccessible to English and American scholars. Its style and method distinguish it as one of the best of the many remarkable productions composed by Icelandic writers during the twelfth, thirteenth, and fourteenth centuries, while it is comparatively free from the corruptions introduced by the copyists into the texts of the other greater sagas. In its matter it embraces the period of Iceland's annals most instructive to the student of the history of Teutonic civilization—the final century of the Icelandic republic. The little Teutonic colony, planted in a land and under circumstances especially favorable to the development of an independent national life and an independent national literature, passed through the culminating period of its political and social prosperity in the years between the beginning of the eleventh century and the closing half of the twelfth. This prosperity, however, itself nourished the seeds of those domestic dissensions which finally put an end to the national existence. As Dr. Maurer, in his 'Island von seiner ersten Entdeckung bis zum Untergange des Freistaats,' has so well shown, the fabric of Iceland's political institutions rested upon the godord, or temple community, which, with the decay of the old faith, lost the religious part of its character and became purely political. At the head of the godord was the godi, who in the beginning exercised the functions both of priest and magistrate. So long as each of the communities into which the land was thus divided had its own godi, whose power extended over no other community—so long, in other words, as each godord remained distinct and intact—there was little danger of any resulting evil, for each of the chiefs was the equal of every other. The godar of each quarter or district, in the district Thing, or of all quarters in the Althing, met on equal terms. But unfortunately the office was alike hereditary and transferable, and this led to disastrous consequences. By marriage, by direct inheritance, and by purchase these godord began at length to fall into the possession of a few wealthy and powerful families, whose ambition and avarice filled the commonwealth with turmoil. A singular provision, which in its inception was evidently designed to guard the personal liberty of the members of these communities, turned out to be fraught with ill. Any citizen, if dissatisfied with the head of the community in which he lived, was allowed, without changing his residence, to place himself under the pro-

* 'Sturlunga Saga. Including the Islendinga Saga of Lawman Sturla Thordsson and other works. Edited, with prolegomena, appendices, tables, indices, and maps, by Dr. Gudbrand Vigfússon.' Oxford. 1878. 2 vols. 8vo. New York: Macmillan & Co.
'An Icelandic Prose Reader. With notes, grammar, and glossary. By Dr. Gudbrand Vigfússon and F. York Powell, M.A.' Oxford. 1879. 8vo. New York: Macmillan & Co.

tection of another godi. This soon gave to a rising chief a large clientèle distributed in all parts of the island.

The abuse and degeneration of the godord system were, perhaps, the most marked cause of the republic's decline. Another was the position occupied by the church. With the introduction of Christianity and the establishment of bishoprics and a priesthood the ecclesiastical power was divorced from the secular, and, the change being gradual, the demarcations of each were left undefined. Conflicts naturally resulted. The bishops of Skalholt and Holar were often at war with the powerful civil chiefs. The intercourse with Norway was another unfortunate incident of the times—unfortunate in more ways than one. The Icelandic sees were placed by Rome under the jurisdiction of the archbishops of Tronyem (the present Throndhjem or Drontheim), the then Norwegian capital, and it was natural that the kings of Norway should early conceive the idea of making the boundaries of the secular domain coincide with those of the spiritual. The members of the great Icelandic families, too, in their visits to Norway, soon learned the fascinations of courtly favor, and, on their return, by their graphic accounts of what they had seen—theirs was a nation of sagamen—infatuated others with an admiration of royalty. Like Ulrich, in Schiller's 'Wilhelm Tell,' this semi-nobility at last grew weary of ruling a nation of shepherds, and longed for stirring deeds and brilliant careers under the banners of kings who were indeed foreign, but whose language was still the language of Iceland, and who delighted to honor those who illustrated that language by works such as the motherland could not produce.

All the story of the stormy times which these various causes tended to bring about is told in the Sturlunga. The tale is necessarily one of turbulence—of quarrels, forays, assassinations, battles by land and sea, burning and rapine, insidious assaults and brutal revenges. But there are brighter, or at least lighter, sides to the picture. The daily life of the times, the social customs prevalent among the peculiar people of a peculiar clime, traces and traditions of a heathen age side by side with the newer practices of Christianity, strange superstitions contrasted with a simple religious faith, feasts and festivals and weddings, the shifting scenes of every-day life at court, occasional gleams of patriotism, flashes of poetic wit—all these things are portrayed, often with an intense dramatic vigor and always with historic fidelity. Through the panoramic narrative runs the thread spun of the fortunes and struggles of the Sturlungs—Iceland's greatest family. To this family belonged the author of the larger part of the work, Sturla Thórdarson (born 1214 or 1215, died 1284), who was an eye-witness of the principal scenes he portrays, and a participant in all the great events of the age. His more famous uncle, Snorri Sturluson, author of the Sagas of the Kings of Norway, whom Walter Scott somewhere styles the Cicero of the North, but who better deserves the appellation of the Northern Herodotus, is, until his death, the central figure; but all the Sturlungs play their parts—Sturla's father, the sagacious and peace-loving Thórd; Sturla's brother, Ólaf, known as the White Poet; Sighvat, the other uncle of the historian and his daring son, Sturla, the historian's beloved namesake; and Snorri's weak-minded son, Orækja, whom the reader soon comes to despise. Of the other characters, the crafty and wicked Earl Gizur, who presides over the final suicidal rites of the republic, when the land, in 1262–64, quarter by quarter, swears fealty to the Norwegian monarch; the cruel Kolbein, the unswerving foe of the Sturlungs, and Thórd Kakali, their avenger, are perhaps the principal ones. The possession of the godord now passed to the crown; the old common law which had made an active political life both possible and necessary, gave place to a written code; the Althing became a mere shadow of itself; and the great houses—the Sturlungs and Oddaverjar and Haukdælir—which, in the midst of their turbulence, had at least preserved the traditions of a better past, passed away with the commonwealth.

No other of the Icelandic sagas has been so well edited, and rarely has any work been edited with such a complete critical apparatus. The prolegomena of 245 closely-printed pages is by far the best sketch of the ancient literature of Iceland yet given to the public, and ought to be separately reprinted. It includes analyses of all the sagas, chapters on the skaldic and eddic lays, and treats with great fulness a hundred questions of interest. Among them may be cited, merely sample-wise, the elaboration of the newest theory in regard to the origin of the eddic poems (pp. 183 to 194)—namely, that they assumed their present shape in the Western Isles (that is, in the Orkneys, Shetland, the Hebrides, Man, and on the adjacent coasts of Ireland and Scotland), among the Norse colonists, whose emigration from the parent land began before the discovery of Iceland. "The lays are, in fact, to these islands what the saga was to Iceland." The large colored map of Iceland in the twelfth century which is attached to the second volume may serve to illustrate many of the sagas, and is a necessary aid to their comprehension, noting as it does the different godord and the boundaries of the quarters. The excursus on the site of the lögberg (mount of the law), accompanied by a map of the Thingvellir, is of interest, whether the reader adopt or not the theory advocated by the editor, Dr. Maurer, and the Danish topographer, Kaalund, against all the traditions of the later past. The volumes are likewise rich in fac-similes of manuscripts, various readings, genealogical tables, and full indices. The editor, it need hardly be said, is Dr. Gudbrand Vigfússon, whose noble Icelandic-English dictionary was published seven years ago by the Clarendon Press.

Dr. Vigfússon's labors ought to give a great impetus to the study of Icelandic among the English-speaking nations. Heretofore, in order to become familiar with the classic literature of the North, it was necessary first to learn Danish, as all the aids to the study of Icelandic were in that language. Now they are surpassed by those in our own tongue. The 'Icelandic Prose Reader,' by Dr. Vigfússon and Mr. York Powell, includes a grammar not essentially different, though less elaborate, than that prefixed to the Oxford Dictionary, and a glossary complete enough for the beginner. The texts are well selected, occasionally from inedited manuscripts. American students will be especially thankful for the saga of Erik the Red, which relates to our own continent, and which is here printed for the first time, from the best text. Useful to the critical scholar are the specimens of manuscripts, preserving the orthography of the copyists, the extracts from the treatises of the ancient grammarians, the section on runes, and the specimens of old Swedish law-texts. The notes to the body of the work are full of valuable suggestions. Those accompanying the translation of St. Matthew—from the first Icelandic New Testament (1540)—comprise an interesting account of the various editions of the Icelandic Bible.

RECENT NOVELS.*

AN 'Earnest Trifler' deserves some critical attention for more reasons than one. Although published in Boston, its author is known to be a young lady of Western origin and habitat, by name Miss Mary A. Sprague, of Newark, Ohio. The book has met with a marked success, and has been the means of procuring for Miss Sprague an amount of trans-Alleghanian journalistic fame which we will not say is beyond her deserts, but must, we think, have somewhat surprised her. One Ohio newspaper, in the course of an elaborate review, announces that the book "threatens to create a furore something like that aroused by little Fanny Burney's romance in the days of Dr. Samuel Johnson." With that unblushing effrontery which the Ohio critic has no doubt caught from exposure to the air of Ohio politics, it remarks that it almost "goes without saying" that the author is an Ohio woman; but attempts to reassure its readers by adding that "in Boston and New York people are reading it eagerly," and that "it has passed the ordeal of perusal in the most cultivated circles in this country, and has been enthusiastically approved." Another Ohio newspaper publishes an "interview with Professor Sanford, of the Cleveland Female Seminary," at which institution of learning Miss Sprague was formerly a pupil. The head-lines introducing the interview to the reader begin "Miss Sprague—School Life of the now Famous Authoress." The Professor was, like a true gentleman, "reluctant to say anything that would in any way compromise the modesty of Miss Sprague, which he greatly admired," but felt obliged to mention that "she was one of the kind that a teacher always likes to have in his classes, . . . highly honorable, conscientious, full of fun," but never allowing "fun" to interfere "with her duty." The Professor further declares that he is not surprised at Miss Sprague's success, and remarks that he understands that "the Newark people are as much gratified over her success as if they themselves had written the book." A more enterprising correspondent of the same paper has done better than this, and had an interview with Miss Sprague herself, in company with "a prominent citizen of Newark." He describes the father of the novelist as "a wealthy, intelligent, well-educated gentleman," and the family as consisting of "three sons and two daughters, the latter element being the more prominent" The "Sprague girls," it seems, have always been "popular in Newark society"; but whether the cause of this popularity is to be found in the intelligence for which they have both been noted, or in "their independence in wearing what they please without regard to fashion," is not stated. Miss Sprague's life, strange to say, has been "an uneventful

* 'An Earnest Trifler.' Boston: Houghton, Osgood & Co. 1879.

one," hitherto. The interviewer goes on to draw a striking picture of Miss Sprague's personal appearance, describing her "form," her eyes, etc., and finally her dress—"a neat-fitting black silk trimmed with velvet, buttoned close up to the throat and supplemented by a white linen collar."

No one could read a novel by Miss Sprague after this introduction to the world without a lively interest in the work. To tell the honest truth, 'An Earnest Trifler' is a clever little love-story of a sort that a clever woman knows best how to tell. Rachel Guerrin, the heroine, is a New England girl, living in a secluded village, through which a railroad has been laid out. Two engineers come to the place, representing two types familiar to novel readers—one the strong, earnest man, given to deep and overwhelming feelings, but poor at the expression of them; the other a gay young butterfly, charming in conversation, agreeable to women from his gayety and society, but more given to expression than to emotion. With Rachel both of these gentlemen fall in love, and, of course, the strong, earnest man marries her. It is just at this point that we are rather disappointed in Miss Sprague's novel. It appears from one of the newspaper accounts from which we have been quoting that Miss Sprague is studying in the style of James and Howells. What resemblance there is between the style of James and that of Howells we are at a loss to guess, but in Miss Sprague's disposition of her heroine's fortunes she has certainly not followed Mr. James's method. If 'An Earnest Trifler' had been written by the latter it is an absolute certainty that Rachel would not have married the strong, earnest man. She might possibly have married his rival, or not have been allowed to marry any one at all; but the strong, earnest man would never have married her. Again, if Miss Sprague is emulating Howells and James, it ought to be brought to her notice that they write better English than she does. The distinction between the proper and improper use of "will" and "shall" and "would" and "should" may possibly not be regarded by the Cleveland Female Seminary as a necessary part of an Ohio young lady's education, and we shall therefore say no more about it, except to mention that the use of these auxiliaries is one of the old-fashioned tests still applied by cis-Alleghanian criticism to English composition, just as the use of the knife at the table as a cutting instrument solely is among old-fashioned people a test of breeding. There are a good many other faults in Miss Sprague's English that we could point out, but it is hardly worth while. 'An Earnest Trifler' is a slight story by a clever young lady, who has, as many other clever young people of both sexes have done, put into it all that life has yet taught her. But in the nature of things it cannot have taught them much. It may reveal to them something of the nature of the feminine heart and mind, and this is exactly what it has done for Miss Sprague. Her Rachel Guerrin is an attractive picture of a girl brought up, as so many girls are brought up nowadays, in a remote and sequestered corner of the world, but admitted through literature of all kinds to a vicarious knowledge of men and cities. Her relations with her two lovers are well described, and her conversation is always bright. Indeed, it is in dialogue that Miss Sprague is at her best. Her conversations are always lively, if possibly a little too witty for real life. But the other characters are not good. The strong, earnest man does not justify the intense interest he excites in Rachel's breast, and though Halstead is much better, it is really Halstead in the act of flirting with Rachel that makes up most of his character as we see it. These flirtations are certainly admirable, but flirtation does not alone make a novel. No attempt is made at narration, so that it is impossible to say what Miss Sprague could do in that way, and there can hardly be said to be any plot. Under these circumstances it is impossible to tell what Miss Sprague will prove capable of in future. If she will take our advice, she will fear Ohio critics, especially when bringing editorial tribute, and go on as she has begun, learning what she can from life, as lately from her instructors at the Cleveland Female Seminary, and telling in turn only what she knows.

Miss Fothergill is already favorably known to novel-readers as the author of the 'First Violin,' which was noticed in these columns at the time of its first appearance. The two stories do not possess many traits in common beyond the author's simple, natural style. 'Probation' concerns itself, of course, with love; this time not with love in the æsthetic atmosphere of a German musical capital, but amid the prosaic surroundings of a Lancashire cotton-factory. Myles Heywood—an intelligent young man and an employee in this factory—of very humble birth, obstinate temper, strong ambition, and excellent character, falls in love with Adrienne Blisset, the half-English, half-European niece of old Mr. Blisset, who has come to spend the evening of his life in the town in which the mill is situated. Myles makes the acquaintance of Miss Blisset at the town library, and protects her from the insults of a brutal but well-to-do young man, whom he afterwards thrashes soundly at the "Club." Sebastian Mallory, the young owner of the factory, returns from foreign travel, and also falls in love with Miss Blisset, and asks her to marry him. She, however, is all the time in love with Myles; and finally, after that young man has been through terrible sufferings, marries him. Adrienne is drawn well, and so, too, is Myles Heywood. With the great people of the story, however, the author is less successful. Sebastian is rather a woman's man, while his mother's pride and contempt for the "lower classes" seem to be overdone. Miss Fothergill has rather injured the effect of the otherwise well-imagined love-story of Miles and Adrienne by bringing in Myles's family, who are on a social level so far below that of the heroine that her marrying one of them seems almost out of the question. We cannot help, too, from this and various other indications, suspecting the author of a desire to make her novel a demonstration of the moral superiority of the poor and humbly-born to the rich and well-born. However, in this we may do her wrong, as Sebastian Mallory is undoubtedly a good character, and Helena Spenceley also turns out well, after adversity has softened her. The story itself is clumsily and heavily managed, as was that of the 'First Violin.' Description and dialogue are Miss Fothergill's *forte*, as is the case with most of her sister novelists.

'Hope Mills' is a co-operative novel. One of the principal lessons taught by it is that enterprises which fail when carried on upon the basis of individual ownership and responsibility may be made profitable when managed on that of industrial partnership. Particularly is this true when the new management is in the hands of a spirited young fellow like Jack Darcy; and when he once puts his hand to the plough we have as little doubt that his balance-sheet will prove a favorable one as that he will ultimately marry the beautiful Irene Lawrence, and not Miss Barry, the latter being from the outset clearly destined by the author for Frederick Lawrence, the quondam school-fellow and friend of Jack, whose character is first spoiled by prosperity and then made over again by adversity and Miss Barry. There is nothing very original or interesting about 'Hope Mills'; but its effect, if any, on the stock of mills carried on in the non-co-operative way would be depressing.

'His Majesty, Myself' is good enough to excite regret that it is not better. It is an expansion of a short story that appeared a year or more ago in *Scribner's Monthly*, and bears the evidences of such treatment, its normal limits being somewhere between those of its two forms. The hero of the story, a deformed and suffering genius, assumes in the novel the functions of a Greek chorus, explaining the other characters with effusion and admiring the action with ecstasy. Although we are unable to enter into this enthusiasm so far as to mistake the lay figures of the book for real flesh and blood, there is no small power shown in their first sketching in and in the beginnings of their development, and we are somewhat disappointed to find that anything more than this, which may be called in reality only a rather indefinite statement of the problem of the book, is a little beyond the author's scope. The characters are numerous, as they should be to allow of seven deaths, but skilfully managed enough to seem more numerous than they are, and to give the principal quartette the air of living in the world. It should be said that the author evidently had a serious purpose in writing his (or her) book, and that he looks at life far more seriously than the authors of better novels have sometimes done.

Those who have given a warm welcome to Miss Phelps's former books will probably find a place for her latest, a collection of short stories mainly reprinted from the monthly magazines, and called, from the title of the first, 'Sealed Orders.' Miss Phelps excels in stories of kindly and lonely women, for the most part single, warped into an eccentricity that is quaint and amiable by a narrow life withdrawn from all the realities and activities of the world save the important exception of charity. The best of these stories is of such a woman, a poor dressmaker without friends, who becomes, through her goodness to all who need a helping hand at the boarding-house where she lives, the central figure and main-stay of them all, albeit quite unconsciously. She tells her own story, and yet leaves the impression of this unconsciousness, a difficult artistic accomplishment, for which Miss Phelps ought to have a long mark; witness the failure of Dickens in 'Bleak House.' 'The True Story of Guinever' has

'Probation: A Novel. By Jessie Fothergill.' New York: Henry Holt & Co. 1879. (Leisure-Hour Series, No. 108.)

'Hope Mills; or, Between Friend and Sweetheart. By Amanda M. Douglas.' Boston: Lee & Shepard; New York: Charles T. Dillingham. 1880.

'His Majesty, Myself.' No-Name Series. Boston: Roberts Brothers.

'Sealed Orders. By Elizabeth Stuart Phelps.' Boston: Roberts Brothers.

nothing to do with anything real, but is prettily fanciful. Queen Guinever, who is in this case the charming little wife of a master carpenter, is saved just on the brink of the catastrophe, and, with her sorrowful lesson fully learned, brought back to happiness again. A somewhat similar but less successfully told story is 'The Lady of Shalott.' The heroine of 'Running a Risk' needs to be told sharply that the only risk she runs is in consequence of her selfishness and sentimentality. The remaining tales are more or less marred by a meagreness of observation and experience, and by strained expressions of strained modes of thinking, which produce an unpleasant effect of what we may paradoxically call the eccentricity of commonplace.

'Doctor Hildreth' is almost spoiled by eccentricities of all kinds. The doctor is a peremptory little man of the kindest intentions, who avenges the irritations of life upon his phlegmatic and mentally amorphous wife. Besides these the materials of a conventional love-story are eked out with a match-making mamma, her two marriageable daughters, the conquering hero and his rival, the heroine with a French companion who has had "a past" and does the heavy villany, an old-maid aunt, two robbers and a tramp.

It is difficult to make out whether the object of the author of 'True as Steel' was mainly literary or moral, and this in itself raises an objection to the book. The scene is laid in France before and during the Franco-Prussian war, and the hero of the story is M. Clodion, the head of the Verified-Title Department in a certain Government office. His life is one long piece of self-sacrifice, which ends in his having himself shot instead of his nephew, who has been condemned to death by a German officer. The idea of a life of unrequited self-sacrifice is not an unfamiliar one in French fiction. Such masters of the art as Balzac and Droz have both made use of it in their own way: but it is one which requires consummate ability in handling. The difficulty with Madame Colomb's way of managing it is that she fails to make it interesting. M. Clodion is undoubtedly a very good man, and meets his self-inflicted death with true nobility; but this is not enough. A mere statement of the facts of the case does not arouse our sympathies. Owing to the unfortunate constitution of the human mind goodness as such is not interesting. The struggle of a man to save his own life may be very exciting; so may be his struggle to save another's. But the mere fact that A., being at liberty and in no danger of death, substitutes himself for B., and dies in his stead, is a very different matter. Unexplained it may excite curiosity, and might thus, in the hands of a Gaboriau or a Collins, serve as the groundwork of some blood-curdling tale of crime and love. When it is explained by the fact that the hero is a truly good man, the story, as in this case, too nearly suggests a syllogism: All truly good men die for their nephews; M. Clodion was a truly good man; therefore, M. Clodion died for his nephew. But we know very well that the major premiss is not true. We are willing to admit that some truly good men may die for their nephews, and that M. Clodion was a truly good man; but the conclusion that he necessarily dies for his nephew does not follow. In order that this logical hiatus may be bridged, we must have a vivid picture of the internal struggle in M. Clodion's mind which leads to his voluntary death. We must be taken into his confidence and made to feel that it is a very great and terrible struggle that leads to this tragic result. Instead of this, the reader at the end of the book is rather in the position of Combaleuf, who observes that "it was just like him," as if M. Clodion had been in the habit of dying for his nephew from time to time.

The Bible of To-day. A Course of Lectures by John W. Chadwick, Minister of the Second Unitarian Church in Brooklyn, N. Y. (New York: G. P. Putnam's Sons. 1879.)—These lectures are eight in number, four treating of the Old Testament, one of the Apocrypha, and three of the New Testament. They were written during the winter of 1877–78—for the author's "own people"—and published "with the hope of propagating their ideas somewhat beyond the circle" of the original audience. Mr. Chadwick's object in preparing them for the press was "to condense into a single volume, modest in size and cost, the principal results of the best historical and scientific criticism of the separate books of the Bible, and of their mutual relations." For this volume he lays no claim "to any virtue of original research or exhaustive presentation," but he justly trusts that it will be found "at once compact and comprehensive."

As to the Old Covenant, Mr. Chadwick's standpoint is sufficiently defined by the bare mention of his chosen leader, Kuenen; it is the standpoint of general radicalism, of revolutionary subversion—not in obedience to temper or the behests of a formula, but to the dictates of thoroughgoing scientific enquiry, strict and logical, which overlooks no detail and shrinks from no generalization. The main conclusions reached by this school, which has become simultaneously flourishing in Holland and Germany—having in the latter country risen from Vatke, through Zunz, to Graf and Wellhausen—will be startling enough to nine-tenths of Mr. Chadwick's best-prepared readers. Let us state some of them: Moses is not the author of the Pentateuch—either of the chapter which relates his death, or of those which describe the creation of the world, or of the accounts of the lawgiver's own career; in fact, not of a single chapter. Moses was not the founder of Hebrew monotheism; he was no monotheist. The so-called Law of Moses is not his. The oldest parts of the Pentateuch were written, and not exactly as we have them, hundreds of years after his death; Deuteronomy, the first Book of the Law, was given to the people more than eight hundred years after the date commonly assigned to his death; the bulk of the Pentateuch, embracing portions of Genesis and Exodus, and almost all of Leviticus and Numbers, was composed a thousand years after that date. Most of the Levitical legislation was unknown before the Babylonian captivity. Joshua is neither the author of the book named after him nor the organizer of the Hebrew commonwealth. Samuel was a soothsayer, and his Jehovah a cruel god. David was neither wiser nor better, and the whole of his history is opposed to the notion of his having written a single one of the one hundred and fifty psalms. Nor did Solomon write the book of Proverbs or a part of it, or any of the books ascribed to him. The prophets Elijah and Elisha combated the worship of Baal, but they had no rebuke for the worship of Jehovah under the form of a young bull, as practised at Bethel.

The first historically-known representatives of pure monotheism are Amos and Hosea, closely followed by Isaiah and Micah. Israelitish monotheism, with its higher ethics, had gradually and slowly been developed; it became triumphant in the nation in the time of Josiah, about 620 B.C., when Jerusalem was made the exclusive centre of worship, and Deuteronomy was promulgated as the Law of God. But this reformation was also a victory of the priestly spirit in Israel over the free prophetic; and formalism, as soon after developed in the captivity—by men like Ezekiel against men like "the Great Unknown" of Is. xl.–lxvi.—finally rose to the dimensions of the Levitical legislation introduced by Ezra and Nehemiah, under Persian dominion, about 450 B.C. The Pentateuch was then complete, and all of it was falsely ascribed to Moses and direct divine revelation. The tragic end of Josiah's reign, the destruction of the Temple by the Chaldeans, the Babylonian captivity, and utter powerlessness under the Persians had brought about a general decay, which glaringly manifests itself in a comparison of the prophets of the Persian period, Haggai, Zechariah, and Malachi, with the prophets of the eighth century B.C., Amos and his followers. As Ezra's Pentateuch falsified the history of Israel's origin, so, two centuries later, Chronicles falsified the history of the kings; pious priestly motives inspired both transactions. As patriotic and religious ardor had induced the Deuteronomist to cover himself with the garb of Moses, so the Apocalyptic writer of the time of the Maccabees presented himself under the mask of Daniel. Judaism became Talmudical. New doctrines, concerning immortality, resurrection, angels and devils, paradise and hell, were introduced. These and Messianic expectations paved the way for Christianity.

Having thus epitomized Mr. Chadwick's outlines of the religious and literary history of Israel, even beyond the sphere of the Old Testament, we expect to be asked, Does the author prove all these startling points concerning the Hebrew Scriptures? To this we must answer, He does not, nor does he pretend to do so. Piles of books and dissertations were needed gradually to mature the critical results which Mr. Chadwick lays before his public in his first four lectures, and in these there is no room for even an epitome of the arguments. Our author's presentation of the main parts of his subject is both thorough and lucid. His diction, always energetic, is for us sometimes too much so; his delineations of traits are occasionally too vivid, his praise and blame too much accented; here and there his tone reminds us of Oort, Kuenen's foremost disciple, who so often reflects the intrinsically combative tenor of his master's 'Religion of Israel,' and so seldom the Socratic placidity of his 'Prophets and Prophecy in Israel.' Most of these remarks hold good also of Mr. Chadwick's treatment of New Testament topics, which, on the whole, however, will appear to his readers less novel, and comparatively almost conservative. It demands no full statement here.

The Nation.

NEW YORK, THURSDAY, JANUARY 29, 1880.

The Week.

THE Senate has confirmed Mr. Lowell's nomination as Minister to England, together with the other nominations connected with his transfer from Spain. Of general business it has done little, except to discuss Mr. Bayard's resolution concerning the greenbacks, whose chief opponent was the senator from Kentucky. Mr. Beck did Mr. Bayard the service of recalling the fact that in May, 1878, when the act was passed forbidding the further retirement of legal-tender notes, the latter moved an amendment in the spirit and terms of the present resolution. For the rest he indulged in a free use of demagogic talk about the dictation of the money power; declared it "absolute folly" to doubt that the greenbacks would always be as good as coin; and in the same breath admitted that he believed their issue to have been unconstitutional, and hinted at the irregularity of the Supreme Court decision as to the war-issue, to which, nevertheless, he submitted, and would "make the most of it." Mr. Bayard made a masterly rejoinder on Tuesday. In the House the inflationists took fright at their own bill in regard to metallic bank-reserves, saw contraction in it, and refused it a third reading by 158 to 78. The hard-money men generally voted for it, and fifty-six of the seventy-eight yeas were Republicans. Mr. Kelley's resolution denouncing commercial treaties obtained a two-thirds vote on Monday. The question remains, What can the House do if the Senate and the Executive disregard its protest? The contingency is, however, remote enough. General debate on the new rules came to a close on Thursday.

Things have undergone very little change in Maine. The Republican Legislature still occupy the State-house, while the Fusionists meet in melancholy fashion in their hall; but there appears to be increasing difficulty in keeping the latter together. They have drawn up a list of questions, addressed to the Supreme Court, touching their own status, and affixed the great seal of the State to the application for an answer to them, but the judges have formally declined to recognize their existence as a body having any legal pretensions to be the genuine and duly elected Legislature, and "Governor" Smith is reported to be laying aside his unsupported title with great cheerfulness. All these submissions of disputed points to the Supreme Court have been deprived of a good deal of efficacy by the fact that there has never been any formal agreement between the disputants as to the facts, so that the Supreme Court has hitherto decided on assumptions which might or might not be true.

The Republicans have belittled themselves and their position during the week by calling out the militia, garrisoning the State-house, and commanding the front gate with a Gatling gun. This performance seems to have been the result of a hoax got up by some of the Fusionist wags. It appears to have been so successful that the Associated Press telegraphed all over the country that "triangular pieces of white paper" had been stuck on the doors of Republican houses in Augusta to mark them out for the torch of the Fusionist incendiary. As Mr. Blaine is the superintendent of the Republican operations, this awful mark must have excited the lurid imagination which so often has followed the murderous tracks of Ben Hill and the Brigadiers. For two or three days it seemed as if the "outrages" of the coming canvass would be supplied by Maine. The probability of use for the militia is declared not to be over yet, however. The Legislature is said to have passed a bill punishing theft of the State seal, public papers, etc., under which it is thought it will be possible to catch all the conspirators. As the seal and papers (returns) were removed before the act was passed it is, of course, inoperative with respect to the theft. But it also legislates against those who, having the same, shall fail to return them, as well as against the use of the seal by unauthorized persons. Now, it is intended, when all arrangements are made, to order Sawyer (the ex-Secretary of State) and "Governor" Smith, if he holds out to the end, to surrender the seal, etc. If they refuse, they are to be arrested; and if their friends resist, there will be a row.

We notice that the same nefarious ubiquity which is well known to be a characteristic of Mr. Tilden is beginning to be attributed to Secretary Sherman, though of course in a less degree. The New York *Times*, which was, we believe, the discoverer of the trait in Mr. Tilden, is naturally the first to get on the scent of Mr. Sherman's schemes, and shows them up with unction. It has ascertained that the Secretary "commenced his campaign for the Presidency" as soon as Mr. Hayes was inaugurated, and has since then had the support of the President. Considering the fact that Mr. Sherman long ago announced his candidacy, and that there is no other Hayes Republican in the field, there seems nothing improbable in either of these statements. But the *Times* also learns that the Sherman canvass is being managed as skilfully as possible, and that in all manner of direct and indirect ways the influence of the Administration is made to assist it. Only Sherman men are appointed to important positions, and the Treasury patronage is used "in the most barefaced way." Special agents are travelling in the South at the Government expense and starting Sherman clubs. Several specific instances are mentioned, and a letter of a special agent advocating "the claims" of his chief to the Chicago nomination has actually "fallen into" the hands of a *Times* correspondent. Meantime the Custom-house here is being "fixed," under the thin disguise of enforcing civil-service rules which are so applied as to "clean out the old fellows." The report that Grant would write a letter to the Pennsylvania Convention which assembles next week, declining to be considered a Presidential candidate, is also described as "a scheme gotten up in the interest of Secretary Sherman," to whom, moreover, the *Times* applies the same opprobrious stigma that was found so apt in Tilden's case—"restless activity," namely.

Mr. Voorhees is probably not disappointed with the result of his enquiries thus far as to the causes of the recent emigration from North Carolina; and if he could confine them to that State it might be well for "the party." During the week his committee has examined the President and Secretary of the Washington Emigrant Aid Society, from whose testimony it appears that the founders of that organization knew of no particular hardships among the negroes of North Carolina, and do not now know of any except the system of "store orders" and an assumed poverty-stricken soil; that they diverted the emigrants from Kansas to Indiana on the flattering representations of one J. H. Walker, an active Republican politician and United States mail agent at Terre Haute; and that they "incidentally" mentioned in their circulars what a good thing it would be, by making an early start, to elude the census-taker and so diminish the representation of North Carolina, while increasing the Republican strength in Indiana. This gave them a solid claim to Republican support in their appeals for aid. Still better evidence of the artificial character of the movement came from the Southern passenger-agent of the Baltimore and Ohio Railroad, who had gone down to North Carolina to help the exodus along and secure it for his road exclusively. Like the agents of other roads, he had arranged with the real promoters of this business, the colored men Evans, Perry, and Williams, at so much per head for

all the passengers they could deliver, and he would cheerfully make the same terms for transporting them back in case they became dissatisfied with Indiana. Evans had been working for upwards of a year through mass-meetings and secret societies, and the use of the Washington Society appears to be to keep the promise of his circulars that emigrants on arriving in that city shall receive clothes and transportation northward. As for Perry, he is said by the same witness to have been forced to leave the State suddenly under a charge of forging school certificates.

The House Committee on Military Affairs has made majority and minority reports in the usual fashion on General Fitz-John Porter's case. The majority recommend his restoration to the Army and the payment to him of between $50,000 and $60,000 arrears of pay, after a recital of the facts as found by the late Advisory Board. The minority refuse to pay any attention to the evidence produced since the first trial in the shape of surveys of the battle-field and the testimony of Confederate officers, on the ground that it is not "proper" to do so. They hold that Porter distrusted General Pope and did not obey his orders on the 29th of July, but refuse to pay any attention to the opinion of the Military Board as to the lawfulness and expediency of a corps commander doing so under the circumstances. They consider it foul scorn to take "Confederate testimony and Confederate reports to determine the right or wrong of the actions of a Union corps commander in battle so as to justify his restoration to the Army and the receipt of a large money reward." The breakdown of that portion of the case against Porter which charged him with shirking on the 30th while his brother commanders were resisting heavy attacks, under the production of evidence showing that the bulk of the fighting on that day was done by him and his corps, they dispose of by declaring that the reference of the Board to the events of that day, as favorable to Porter, "is foreign and out of place, and has no pertinence whatever; that it simply vindicates the patriotism and bravery of the soldiers, not their commander." In other words, they think reference to those events on Porter's trial for the purpose of blasting his character was all right, but reference to them for the purpose of vindicating him is damnable and impertinent. Like Dr. Johnson in reporting Parliamentary debates, it is their business to see that, whatever happens, "the Whig dogs get the worst of it."

The conclusion of the report is very bouffe in sound, but is produced seriously. It recommends "the remission of the remainder of the unexecuted sentence" which disqualifies Porter from holding office under the Government, and concedes that this is an illogical recommendation, but justifies it by the fact that all "persons formerly in arms against the United States have been amnestied and pardoned, and the removal of disabilities for offences as dangerous as his to the perpetuity of the Union are of daily occurrence," and deduces from these premises the conclusion "that the reasons of the minority for their action in the Porter case are obvious." These majority and minority Congressional reports make many a man a little ashamed of having his conduct regulated by the human mind; but this particular minority report is somewhat mitigated in its absurdity by the observations of the New York *Times*, which evidently sympathizes with it. That journal opposes Porter's restoration to the active list of the Army and his receipt of back pay, on the ground that during the past seventeen years since his dismissal he has been successfully engaged in professional pursuits in civil life. The fact is, we understand, that General Porter has had great difficulty during that period in supporting his family in any pursuit, for the simple reason that the sentence of the court-martial sent him out into the world as an infamous man, who had betrayed his country and his comrades in the hour of trial, and who was, therefore, regarded by the bulk of the community as unworthy of all confidence. We believe he had to relinquish one situation in the West owing to the insults to which he was exposed in the ordinary course of his business. So that his seventeen years of professional pursuits have really been a piece of prolonged torture, which nothing but extraordinary courage and fortitude would have enabled him to endure. To point to the fact that he has lived through it as a reason why he should not now receive even the money he lost by an unjust sentence, is even more grotesque than the conclusion of the minority report. We say all this, it is proper to add, with but the slightest possible acquaintance with General Porter, whom we never even saw until after the decision of the Advisory Board.

The report of the special Railroad Committee of the Assembly is, as was to have been expected, a voluminous one; but it is also clear, suggestive, and, so far as it goes, practical beyond the reports of many legislative committees of special investigation. Whether it results in anything useful or not, it serves as an excellent illustration of the kind of work in which legislators can, at all events, be least harmfully employed, and the statistical enquiry and collection of which, if systematically followed out, must very soon substantially improve the value of legislative sessions. The report is, in brief, a presentation in detail of the railway question as it at present stands in this State, and of the inferences which it seems to the Committee are naturally to be drawn from the testimony taken. The most important parts of it may be summarized as follows: Advantageously as New York and Brooklyn are situated, they greatly lack terminal facilities, and the important lighterage charge is a direct tax on transportation without being a benefit to anybody but the lighter-owners; so that, whereas the railroads are in no need of subsidies, they do need better terminal facilities, and the Committee think these should be secured by a co-operative private effort, with, however, "possible exercise of authority." As to rates, the already familiar facts are recited, the unjust and arbitrary discriminations strongly condemned, and the opinion expressed that secret rates should be forbidden. "Competition among railroads as a regulator of freight tariff is a failure." The possible exercise by the roads of vast political power is called "an unanswerable argument in favor of instituting governmental supervision." It is admitted that a road "must be run by brains and not by legislation," but to the plea of counsel that in guarding the interests of its stockholders it will regulate itself, the very excellent objection is made that railroads are by no means invariably run in the interest of the stockholders. For these and many other reasons the introduction of "a public element" is advised, and a commission accordingly recommended. The temper of the report, it is to be noticed, is throughout conservative, and its most positive recommendations are offered with caution and a realization of the difficulties involved in executing them.

Accompanying the report are six bills, one of which establishes a Railroad Commission of moderate functions, and with a capacity for usefulness which perhaps lies chiefly in the power to secure publicity for the acts and accounts of the companies. It is proposed that the Commissioners be three in number, holding office for five, four, and three years respectively, and provided with a clerk authorized to issue subpœnas for witnesses and administer oaths, and a marshal to serve notices; having their offices at Albany, with perhaps a branch in this city; and invested with "the general supervision of all railroads and railways." They are to examine these roads and keep informed of "their condition and the manner in which they are operated, with reference to the security and accommodation of the public, and the compliance of the several corporations with the provisions of their charters and the laws of the State"; to investigate accidents and report on them in their annual report; to notify the corporations in writing of their failure to comply with the law or any usurpation of authority, and to present their neglect to heed the notice to the Attorney-General for his action; to notify them likewise of necessary repairs or increased facilities or salutary changes of rates or fares, with the same recourse to the Attorney-General. They can also call for any desired information and for copies of all contracts and engagements; and they may prescribe

the form of the report now required to be made by the corporations, and must prepare from them tables and abstracts to be incorporated in their annual report. Finally, they are to draft "such bills as will, in their judgment, protect the people's interest in and upon the railways of this State." As in Massachusetts, the expenses of the Board are to be borne by the companies, and a maximum of $40,000—$45,000 for the first year—is assigned.

The New York Court of Appeals has reversed the ruling of the Extraordinary General Term in the Nichols case, and decided, in brief, that the action of the Mayor in removing officers of the city government is reviewable by the courts. His power of removal, the decision also affirms, is not an arbitrary one, but is to be exercised only upon just and reasonable grounds and after due notice to and hearing of the accused official. What the effect will be upon the particular case in question is of much less importance, of course, than its obvious bearings upon the opportunities and responsibilities of the Mayor in his administration of the city government.

The principal financial events of the week were (1) the sale, by the syndicate which bought in November last 250,000 shares of N. Y. Central & Hudson stock from Mr. W. H. Vanderbilt, of 200,000 shares of the same at an average of $133 per share; the price paid in November was $120 per share. The whole 250,000 shares were offered here and in London to the highest bidders; the remaining fifth was withdrawn. (2) The consolidation of the Union Pacific, the Kansas Pacific, and the Denver Pacific companies into one, to be known as the Union Pacific Railway Co.; all these roads now come under the control of Jay Gould, who also controls the Wabash system, and appears to be making rapid progress towards the completion of the transcontinental road which has always been regarded as the dream of an ambitious man. (3) The sale, by Mr. C. P. Huntington, of 50,000 shares of Central Pacific stock, with the privilege to the buyers of taking 50,000 shares additional. The buyers are a syndicate of Stock Exchange people, who have undertaken to popularize the stock in this market. One of the reasons why Mr. Huntington sells the stock is supposed to be to get cash with which to extend the Chesapeake & Ohio, and to forward the construction of the Southern Pacific. In addition to these events there have been continued negotiations to complete the union of the St. Louis & San Francisco, and the Atchison, Topeka & Santa Fé roads in the work of extending their lines to the Pacific coast under the old Atlantic & Pacific charter. The Vanderbilt or N. Y. Central interest has given fresh proof during the week of its friendliness for the Erie by making an arrangement by which the Eries increases its business from Buffalo as well as its New England business. These important events have furnished fuel for the speculative fire in Wall Street, and have been sufficient in their influence on prices to overcome the unfavorable effect of a bad bank statement. The notable event in which the Stock Exchange is, in company with mercantile interests, only indirectly interested, was the break-down in the "bull speculation" in wheat, hog products, and cotton. This was immediately followed by a decline in the rates for foreign exchange; and should this "bull speculation" be utterly routed, a renewal of gold imports from Europe is to be expected. The price of silver bullion in London advanced during the week to 52¾*d.* per oz. The bullion value here of the "buzzard dollar" at the close of the week was $0.8817.

Talmage on Sunday week "recalled" in his pulpit the assertion he had made in the same place that "materials" had been put into his hands which would enable him to show the "moral rottenness" of the ministers who accused him before the Presbytery. He evidently thinks that by so doing he leaves matters as they were before he made the charge; but in this he is undoubtedly mistaken. Retracting or "recalling" a charge may be all that would be necessary to atone for an insult; but a minister cannot get out of a scrape of this kind in this way. The question still remains, Did he or did he not tell a lie when he said he had proof of the "moral rottenness" of his accusers? If he had not such proof, he did tell a lie in his pulpit on Sunday, and a lie of a peculiarly atrocious kind, which cannot be "recalled." If he had such proof, he is bound to produce it before a proper tribunal, so as to rid the ministry of the thirteen or eighteen villains who have been assailing him. We trust these gentlemen will follow him up, and force the Church either to own him or disown him.

Apropos of the Jewish controversy, so well summarized by our correspondent in Berlin on another page, a Bremen paper has presented the geographical distribution of the Jews in Europe in some striking tables. Arranging the countries in the order in which this population abounds, Poland heads the list with 13.7 per cent., Austria-Hungary follows with 3.8, Rumania 3.6, Russia (including Finland) 2.8, the Netherlands 1.9, Germany 1.2, and Turkey 1 per cent. But, on the other hand, the absolute numbers (out of a total of 5,000,000 European Jews) give Russia 1,829,000, Austria 1,376,000, Poland 783,000, and Germany only 511,000, while, dividing the various peoples into ethnologic groups, we find in the Romance but 89,000 Jews, in the Germanic 842,000, and in the Slavic (*i.e.*, Russia and Finland, Poland, Hungary, Rumania, Servia, Turkey, and Greece) 4,047,000. The corresponding percentages are respectively 0.1, 0.79, and 3.6. Their peculiar concentration—eastward in the Germanic group, westward in the Slavic—creates a zone of greatest density extending from the lower Danube to the Baltic. There is a noticeable tendency on their part to flock to the most populous centres, so that in Berlin, for instance, from 1861 to 1871 the number of Jews was nearly doubled, while during the same period there was a falling off of about 16 per cent. in Posen. Bremen, in which the laws against them have been repressive and even prohibitory down to a very recent date, naturally shows a much smaller proportion (0.5 per cent. in 1871) than Hamburg (4.1 per cent.) or Frankfort (9.8 per cent.)

The news from Afghanistan a week ago was very cheerful, almost as cheerful as after the battle of Char-Asiab. General Roberts reported that the chiefs were coming in and making their submission; that the inhabitants had returned to Kabul, and that supplies were plentiful; that it was agreed on all hands that the last combination which had made the attack on the cantonment was the most formidable ever seen in Afghanistan, and that having failed, another attempt at resistance was very unlikely. This week the accounts have changed in character, showing clearly that the real state of the country is no better known at the British headquarters than it was before the Cavagnari tragedy or after the capture of Kabul. It is now announced that Mohammed Jan *is* preparing another combination, that he expects to attack early in March, and that Ghazni, which he holds, and where he has Mousa, Akbar Khan's grandson, is the centre of hostile intrigues against British rule, and may be the base of the next movement. Moreover, the winter hardships are telling heavily on the troops both in Shirpur and along the line of communication with Peshawur. There is no news as yet of Abderrahman Khan, Shir Ali's nephew, and the ablest claimant of the succession, who has long been the guest of the Russians, who wickedly made him an annual allowance, which he saved. He has made his escape from their hospitality, with the view, it is feared or believed, of setting up the standard of revolt somewhere. A possible programme has been telegraphed to the London *Times*, which is supposed to emanate from the Viceroy, according to which the British force would shortly retire to Jalalabad and Kandahar, and from these points observe without interference the Afghan attempts to set up a government, leaving subsequent action to be determined by circumstances. Whether this scheme is really entertained or is merely put out as a feeler, seems still uncertain. The hanging of prisoners has ceased, and the restrictions on correspondents have been withdrawn.

SCIENCE AND TRADE.

THE present uncertain condition of Mr. Edison's experimentation with the electric light, following close on an announcement that he had solved the problem of divisibility and cheapness, ought to be a warning to investors in these days of remarkable discoveries and inventions, not to be too hasty in accepting news from "the scientific world." There was a fall in the stock of gas companies, both here and in England, on the announcement made through the press, on information apparently furnished by himself or his assistants, that Mr. Edison had succeeded in producing an inexpensive electric lamp, and there was an enormous rise in the stock of a company formed before the invention was announced, to exploit it. This stock is said at one time to have reached $3,500; within a few days it fell one-half, and we do not know where it stands at this moment. We have undoubtedly reached a period in which remarkable inventions and discoveries may be looked for every year in great numbers, and probably in larger numbers in this country than in any other, because not only does the national genius seem to have a bent in that direction, but the application of science to the industrial arts has perhaps fewer rivals here than anywhere else in claiming the national attention. The industrial type bears undisputed sway among us. The number of inventors at work here, too, is unusually great, and the results of their work are very remarkable. But the inventor is nowhere else followed so closely and remorselessly by the speculator, and the speculator cares very little whether the invention or discovery is a really valuable one or not. His first object is to get stock on the market and get rid of it, and the first accounts of it are therefore pretty sure to emanate from him or be colored by him. The main defence of the public against imposition in this field must be found in the caution and integrity of scientific men. In too many cases hitherto the alliance between the scientific man and the speculator has ended in some kind of fraud or deception being practised on the public—that is to say, the speculator has too often succeeded in making the scientific man's dicta cover more ground than they were intended to cover, and excite expectations which they were never intended to excite, with a resulting explosion in which the speculator got all the money and the scientific man all the odium. The most striking examples of the evils and dangers of this alliance have hitherto occurred in the mining industry, but they have had the good effect of putting mining experts on their guard, and there are few of them now of any repute who care to furnish a vendor of mineral wealth with an opinion to be tacked on to the prospectus and used in the stock market.

Mr. Edison has done one or two very remarkable things in the field of discovery, and things well calculated to excite considerable expectations with regard to his powers. But he had done nothing to warrant the disregard of what may be called the decencies of research with which he entered on the pursuit of the cheap electric light. A "correct and authoritative account" by his "Mathematician," Mr. Francis Upton, endorsed by Mr. Edison himself, appears in the last *Scribner's Monthly*, and in it the conditions under which he began this pursuit are described with curious frankness. He was aware, he admits, that he was about to attack the value of $400,000,000 invested in gas-works in this country, and $500,000,000 in England, not to speak of other countries, but he mentions this not as a reason for caution and reticence in communicating the results of his work to the public, but by way of accounting for the ease with which he obtained $100,000 from capitalists in New York to enable him to prosecute his researches.

The Mathematician traces, in the article we have referred to, the history of experimentation with the electric light down to Sawyer and Mann's incandescent carbon stick, patented in 1873. This, like all histories of experimentation, tells of various attempts, some ending in total failure and some in positive additions to antecedent knowledge, the general result of the labors of the various investigators being that a very good electric light was produced, but a very expensive one, and one that did not admit of being substituted for gas in domestic use. The way Mr. Edison regarded these labors, however, is revealed in the remark that "Mr. Edison came to the investigation unhampered by the blunders of his predecessors. He had never seen an electric light. He took hold of the subject in his usual clear-headed, practical way. Next to solving a problem, its intelligent statement is to an investigator the most important thing. Mr. Edison saw that permanence in the lamp and a subdivision in the light were the main things to be sought after." *Cheapness* is in fact the main thing, but these others are also what his predecessors saw and strove for, and which his competitors are striving for still. There is a curious *naïveté* in the production of them as discoveries of Mr. Edison's. The whole electric world, if we may use the expression, is and has long been experimenting in this direction, but probably very few experimenters would acknowledge that the valuable failures of their forerunners were blunders "which hampered them."

We do not propose here to examine what Mr. Edison has achieved in his latest experimentation. It appears certain, however, that he has not, as yet, solved the problem of furnishing the electric light more cheaply than gas, to use the Mathematician's glowing language, "in a million domestic suns to illuminate a myriad homes." He may accomplish this feat yet. The fact to which we wish to direct attention is, that he was sufficiently injudicious, not only to allow his undoubted inventive powers to be converted into the capital of a joint-stock company—in which there is by itself no impropriety—but also to allow an enormous speculation in these shares, and an enormous attack on the large body of capital invested in gas, to be developed from very incomplete information as to what was going on in his laboratory. Stories of what he had accomplished, of the correctness of which he must have had some scientific doubt, were spread by the newspapers, embellished with all the reporter's art. The solution of the problem was, in fact, announced by visitors to his laboratory, without contradiction from him, long before the durability of his carbonized paper could have been ascertained; and excursion trains actually ran to his residence, taking hundreds to see the new wonder. For what these visitors said Mr. Edison was not, perhaps, responsible in all its details, but he himself made known through the article above mentioned, which was perhaps written in December, that "his crowning discovery," the electric light for domestic use, was at last "a scientific and practical success." He doubtless made this assertion in good faith at the time, but if events have since occurred at Menlo Park, as we believe they have, proving that he was mistaken, it shows that he had not at that date completed his experiments; and that the admission of the public to his laboratory, and the exhibition of his lamps as in successful operation, was improper, in view of the possible effect of these things on the stock market.

The higher a man's reputation as an inventor or discoverer stands, the greater his responsibility towards the public—and the public includes both those whom his discoveries will directly injure and those whom they will ultimately benefit. If Mr. Edison discovers "the domestic sun" he will confer a benefit on the world with which the loss of the money invested in gas is not to be compared for a moment, and he is not bound, of course, to think of this loss for a moment. But he is bound to see that no holder of gas-stock is frightened into selling at a loss by means of false rumors emanating from his laboratory, or by false expectations created by hasty or defective experimentation; and that nobody with money to invest puts it into electric-light stock in consequence of a premature announcement that his system of lighting is, on the economic side, a perfect substitute for gas. Caution on the part of inventors, and especially inventors of great genius, such as Mr. Edison undoubtedly is, is the more imperative because the public mind is just now in a most credulous condition with regard to scientific contributions to human command over the powers of nature. People are ready to believe anything, and it must be admitted that there is in the achievements of recent years abundant excuse for this credulity. Speculators will unavoidably trade on it, but scientific men ought not to be found lending them a hand.

THE RECENT CRISIS IN AUSTRIA.

THE long struggle over the Austrian military law, which lasted through the greater part of last month, and kept the country in a ferment of excitement, has ended with the complete defeat of the Liberals, or Constitutionalists. Whether the victory for the Ministry is as complete as the defeat is for the Opposition, remains to be seen. Coalition ministries are not apt to hold together long after the common enemy is disposed of, and it is very questionable whether the curious combination presided over by Count Taaffe will not quarrel over the spoils. At present it looks as if the Bohemian question would be the rock on which it will split.

The questions on which the recent parliamentary struggle turned are simple enough. The Ministry proposed a measure by which certain sections of the military law of 1868 were continued in force for ten years from the present time. These sections fix the strength of the standing army (including navy) at 800,000 men; and under them the Reichsrath surrenders for ten years the right of initiating any changes in the strength of the army and also in the number of recruits to be mustered in during each year. The right of annually determining the number of recruits is guaranteed the Reichsrath by the constitution, and consequently a two-thirds vote was necessary to part with this right. The system whose continuance unalterably for ten years was thus demanded was adopted in 1868, when Austria took lessons from her victor and adopted the system of universal compulsory service. The Constitutionalists, the present Opposition, introduced it; and as the period of active service was fixed at three years and that of service in the reserve at seven years, ten years were granted at that time, during which the Reichsrath gave up its right of making any determinations about the army. That the reasons which demanded this abdication of constitutional rights in 1868 are no longer imperative is shown by the fact that in 1878, when the ten years were over, the grants were continued only one year. Now, however, the Ministry of Count Taaffe demanded another grant for ten years. The Constitutionalists did not find it easy to adopt a common attitude with regard to this proposal. Finally, after long and exciting debates within the party, they agreed to grant the 800,000 men for ten years on condition that the peace-footing of the army should be reduced from 252,000, the present number, to 230,000.

Of course there were military specialists enough in the House who said that such a reduction, necessarily bringing with it a reduction in the time of service and training of the recruits, would seriously impair the efficiency of the army. And was it advisable to do this at a time when the state of affairs in Europe gave so little hope of peace and tranquillity? "It is curious how threatening the outlook becomes whenever a ministry wants men or money," remarked one of the Constitutionalists. Even the recent alliance with Germany was brought forward as a pretext for strengthening the army, as if the object of the alliance were not avowedly to preserve peace and diminish the necessity of being every day ready to fight. But by far the strongest argument in favor of the bill was contained in the speech of the Minister for War (or more properly for Defence—*Landesvertheidigung*), Von Horst. He presented an imposing array of figures showing that, compared to Germany, France, Russia, and Italy, Austria had the smallest standing army (Italy excepted), the smallest peace-footing, the smallest number of annual recruits, the smallest proportion of the population under arms; that her army cost her the smallest percentage of her annual income, and the smallest sum per head of population.

To the figures presented by the Minister, which were presumably reliable and certainly very striking, the Constitutionalists opposed a simple *non possumus*. Austria's burdens may be less than those of other states, but they cannot be increased, for her means are less in proportion. It may be true that in Austria the army costs only 24 per cent. of the total public income, while the Russian army costs 43 per cent.. the French 36, the German 30, the Italian 29½. Austria has a public debt of 1,500 millions of dollars, and interest on the debt and the army together divert 60 per cent. of the national income; while something like four per cent. goes for education and one per cent. for trade and industry. Austria is a poor country. She has for years been struggling with a deficit, which has been steadily increasing since 1870, and now amounts to nine millions of dollars. The population is heavily taxed and the taxes are in arrears, especially the income-tax. Suffrage in Austria, as is well known, is based on property; and it is not a good sign to find that in the last seven years, during which the population must have increased by a million, the number of voters has become smaller by twelve thousand. It is difficult not to share the conviction expressed without much circumlocution by members of the Left, that either the debit side of the budget must be brought down to a level with the credit side, or else the country must practically declare itself bankrupt by reducing the rate of interest on the debt. That such a thing is even thought of shows in what a desperate condition Austrian finances are. An increase of income is hardly to be looked for; help must be sought in saving, in diminishing the expenses. The military expenditure is the most unproductive in the budget; yet since 1869 it has steadily increased, now by some 40 per cent. altogether. The saving in this respect that would have been effected had the proposal of the Liberals been accepted (that the peace-footing of the army be reduced to 230,000 men), amounted to only three million gulden, of which two million (a million dollars) would have fallen to the Cis-Leithan part of the Empire. But as the beginning of a new movement, as the assertion of the principle of putting an end to the constant growth of the army expenses, the importance of these two millions cannot be overestimated.

It was acknowledged that the reduction of the peace-footing, as far as it went, would be detrimental to the efficiency of the army. Some few of the Constitutionalists were, indeed, bold enough to express a suspicion that the matter might not be of such vital importance. But what could be said in answer to the military specialists, the venerable generals, who vowed that the reduction would cause the greatest possible harm? The more radical members of the Left took higher ground, and were not afraid to express opinions which were at bottom shared not only by the Liberal party, but by many outside its ranks. It had been their wish that the army itself should be reduced to 600,000 men, and it was with reluctance, and only in order to preserve unity of action, that they accepted the compromise of reducing only the peace-footing. This reduction, as well as the saving of the million effected by it, would have given a needed check to the constant and devouring growth of the military system which has spread from Prussia over all Europe. All those who took part in the recent debates acknowledged that the huge army was an evil, if a necessary one; a few had the courage to doubt its absolute necessity. The international importance of the recent struggle lies in the fact that an attempt in the direction of disarmament was made—an attempt which failed, but which, when the history of the system of universal service comes to be written, will find a place in it. The dangers, social and economical, of this system have been pointed out often enough; its close connection with the theories of the professorial socialists is plain.

Notwithstanding the great superiority of the Constitutionalists in the debate, they were beaten. On two ballots the Ministry failed to obtain the requisite two-thirds majority; at last, on a third, a few members of the Left were persuaded to change their votes, and the matter was settled till the year 1889. How this persuasion was managed is now well known. The Emperor had a confidential interview with the President of the Liberal Club; there was a private meeting of the less steadfast Liberals; the proposer of the Liberal amendment, Czedik, is promised a portfolio. What more need be said? Perhaps the Emperor really was able to give the renegade Liberals information about foreign complications which rendered the maintenance of the efficiency of the army imperatively necessary. More likely it was only "playing soldiers" on one side and flunkyism on the other. But the inherent difficulty of constitutional government in Austria appears not in the action of these fickle few, but

in another constituent of the vote that passed the law. Looking over the list of names on the record of votes, one is struck by the fact that almost without exception the Slavic names vote yes, the majority of the German names no. The Czechs and Poles all voted with the Right. The Czech representatives, without whose votes the Ministry would have had no chance of success, took part in the proceedings of this session for the first time after a secession of eighteen years. Perhaps it is only a curious coincidence that on the same day on which the decisive vote was reached the so-called Czech memorandum was presented to the Emperor, in which the demands of the Czechs are categorically expressed—demands which, it must be confessed, are, at least for the present, moderate enough. Already a commission has been appointed to report on the memorandum, at whose head stands a pronounced friend of the Czechs. There can be but little doubt that some agreement was made between the Ministry and the Czechs, and that the latter have not given their votes for nothing. As much was acknowledged by Grégr, one of their leaders: "We expect [from the Ministry] the satisfaction of the just demands of our people; we expect, above all, that the equality of all the peoples of this Empire, which has up to the present been striven for in vain, will at last be realized." Many of the Czechs—the Young Czechs as opposed to the Old Czechs—who are led by the feudal nobility and the priesthood, would have preferred to vote against the military law; but what do they care for military laws and constitutional privileges, as long as they think their beloved Bohemia oppressed and their people defrauded of their just rights by the tyrannical Germans?

THE NEW "CULTUR" WAR IN GERMANY.

BERLIN, January 7, 1880.

MY bookseller has collected for me sixteen pamphlets of all sorts and sizes, on "the Jewish question," all published within a few months, and several of which have reached a fourth or fifth edition. Fourteen thousand copies of the first edition of an address by the court-chaplain, Stöcker, are said to have been sold in a week. Herr Glagau, a member of the Berlin Philosophical Society, has started an anti-Semitic semi-monthly called *Der Kulturkämpfer*, and Herr Marr, who first started the present agitation against the Jews, has founded a monthly called *Die Deutsche Wacht*. An "Anti-Semitic League" has been established, the object of which, as set forth in its statutes, is to restrict the Jews to an amount of influence proportioned to their numbers, to oppose the Jewish press, to resist the election or appointment of Jews to political or other offices, to withhold patronage from them in business, and to "free Germany from the oppression of Jewish influence, social, political, and ecclesiastical." The medical faculties in several universities have resolved to resist their further appointment to professorships, and at last Professor Treitschke, who has a great fondness for being on the popular side, has entered the lists against the Jews, and writes: "Let us not be deceived: the movement is very deep and strong. In circles of the highest authority, among men who reject with horror every thought of ecclesiastical intolerance or national pride, one hears to-day, as if uttered by a single voice: 'The Jews are our misfortune.'" Many, in fact most, of the pamphlets before me are ridiculously violent. The Jews are compared with the Gipsies, the Chinese, or negroes in America, the Catholics, the Jesuits, the Internationals, the Free-masons, shoddy aristocrats, etc. They are called, as were the Christians of old, "the enemies of the human race." Their creed is said to be found on the blank leaf between the Old and New Testaments. Their rule of life is the Talmudic verse which declares that, as man among animals, so is the Israelite among men. One writer says they must be expelled from Germany; and a Catholic paper in Silesia, I am told, declares that, but for the effeminate sentimentality of modern nerves, it would have a good moral effect to burn a few of them. The agitation seems in nearly every feature to be surprisingly mediæval and even inhuman. It bears every mark of an unreasoning race prejudice, and is disgraceful to the culture of Germany. I will try, however, to epitomize briefly and impartially the chief points in the controversy thus far.

The orthodox Lutherans urge that the daily press, owned by Jews, satirizes their clergy, conventions, and creed, making common cause with the reddest radicalism, while Christians never feel or express anything but reverence for the Old Testament or for the worship of Jehovah. They are outraged that a Jewish physician has urged, on purely medical grounds, that circumcision should be general, and that a Paris orator has lately said: "A new Messianic kingdom, a new Jerusalem, must arise instead of emperor or pope"; and accuse them of still cherishing the idea of "overcoming and enslaving humanity." The free-religious pamphleteers, on the other hand, argue that the Jews are now the same tricky, avaricious egoists that they painted themselves in the Old Testament, and are bound only by the letter, and fear only the penalties, of the law; and they reproach the Christian church for not having long since seen the vulgarity of the Old and clung to the New Testament alone. The first are more outraged by the reformed, the latter by the orthodox Jews, while both object that the Jews are allowed to send their teachers of religion to their own children in the public schools two or three hours a week. Another writer urges that, though possessed of strong and vigorous bodies and admirable vegetative physiques, a very large per cent. are found by medical examiners too weak of limb, from generations of sedentary life, to serve their time in the army, and, both as exempts and as being unwilling to fight their own race in armies of other nations, are eminently unpatriotic, and, in short, bad citizens and moneyed internationalists; while the "Alliance Universelle Israélite," founded in 1860, is described as hostile to patriotism in every country in Europe.

Again, it is said that, partly by introducing cheaper and less durable wares, as in ten-cent and dollar stores, they have destroyed the demand for good and thorough work, injured the retail trade, etc. Moreover, they are charged with being clannish, and always helping and playing into each other's hands. If a German Jew should see a strange French Jew and a German neighbor in distress, and could help but one, it would be the former, is repeated over and over again. If a Jew does anything at all noteworthy, his fellow Jews constitute themselves a mutual-admiration society to overpraise him. Thus, Disraeli; Gambetta; Ebers, the novelist; Heine, who by his flippant way of speaking of the deepest and most serious sentiments introduced a most un-German element into literature; Lasker, who conducted the National Liberal Party purely in accordance with Jewish interests; and many others, owe all their fame to the art of mutual laudation. It was the rapacious Jews who destroyed the springs of national life in Poland, causing it to fall so easily. Now they are doing the same thing in Rumania, under the protection of Disraeli's policy, as they will later do in Germany. They get the best seats in the theatre, the best coupés in the cars, are first served in the restaurants—all by bribery; and yet never work, produce nothing whatever that adds to values in the world, but only trade and speculate in the wares which others have produced; and therefore, since they decline all kinds of productive labor, refusing thus to bear the full burdens of citizenship, their rights should be restricted. Finally, the Prussian Minister of Public Works, Maybach, in a public address, denounced the Stock and Produce Exchange itself—a very large per cent. of whose members are Jews—as an upas-tree which poisoned national industry far and near, although, in consequence of the great excitement which his remark occasioned, he qualified it somewhat a few days later. On the one hand we are reminded that Marx, Lassalle, and even Nobiling were of Jewish descent, and perhaps in the following paragraph are told that next to their worship of the golden calf is the worship of the Jews for their own race and its traditions, and especially its prophecies. These last, in the scope they are now assuming, will be fulfilled only a few generations hence, when a material civilization shall have gone round the globe to Palestine again, which is best adapted by nature to be an universal emporium, and whence the nations will be ruled by a hegemony of banking satraps and feudal lords. Some Socialists now say that the present hard times are due to speculation and the accumulation of money in a few hands, and that Socialism will never be cured till the people rise *en masse* and drive out or plunder the Semites.

This will perhaps suffice to show how absurdly extreme and inconsistent are the current attacks. They remind an American of some of the anti-Catholic literature in the old Know-Nothing times. It is not impossible that some fanatic may vamp the old charges of poisoning wells and roasting Christian babies. The Jews, however, have shown that they know how to defend themselves. They urge, and I believe most justly, that they have been made the scapegoat for evils which they have not caused. Business depression has other causes, and the alienation of the community from the Christian faith is the inevitable drift of the age, with which they have nothing in the world to do. It is Christian far more than Jewish prejudice which prevents them from intermarrying and assimilating socially with the communities in which they live. It is the long, sad story of their restriction, oppression, and persecution through the Christian centuries which accounts for the accident that all their

family traditions, from the time when they were forbidden to enter any of the trades, incline them to traffic and to hold their possessions in movable form. If they are materialistic and self-seeking money-hunters, it is because they follow, not lead, the tendency of the age. They remind us that they number scarcely 50,000 in Berlin, and but a few thousand more in France or in all Great Britain; that their orthodoxy and radicalism are both less fanatical than that of the Christian sects; that they have always been the "Swiss guard of theism," and that the religious trouble began with Hegel's "veiled atheism" and ended with the Thersitic pessimism of Schopenhauer, neither of whom was a Jew. From Jews came the idea of one God, which superseded German polytheism. They refer with pride to their charities, and to the fact that a far larger per cent. of their young men than of Christians are in nearly all the higher institutions of learning in Germany, and compare their good citizenship with the political insubordination of the Catholic subjects of the Kaiser. There is no secret understanding whatever among Jews, and the Paris Alliance was only to aid in freeing and enlightening the Orient, as opposed to the benighted policy of Russia, from whose purer Panslavism alone Herr Marr sees possible redemption for Germany. That the Jews are proud of their ancient traditions and, perhaps, look upon Europe as young and inexperienced, somewhat as Europeans regard our own country, is for aught we know natural and certainly excusable enough. Their spokesmen now exhort them to remember that "Hamans and Marrs," that jealousy of their money, and religious and race hatred, have always assailed them; to "cleave everywhere to the party of liberty and progress which best represents humanity"; and thus to press forward to the accomplishment of all their mysterious destiny.

So far the Jewish side of the controversy has been a dignified, moderate, and rational plea of not guilty, with very little of the extravagance of their accusers and with almost no attempt at recrimination. Their numbers and influence are doubtless greater than in other large European countries, and no one denies that there are differences in religion and race. Haeckel thinks they spring from a different though by no means inferior species of ape to that from which the Japhetic peoples are descended. They are far the best of all the Semite races, and, in my opinion, both they and we should be nationally benefited by a fusion of blood. One writer, who defends them vigorously in every other respect, concedes at the end of his pamphlet that "Judaism unites realistic optimism with idealistic pessimism, while Christianity conversely is founded on realistic pessimism and idealistic optimism." But is it better to disparage or neglect the present in pursuing distant ideals or in hope of a transcendent future happiness, than to help a people like the Germans to react from the influence of absolute idealism toward a more broad and practical living, as the Jews have done, and to embody the utilitarian ideal of an enlightened even though "centrifugal" selfishness?

Correspondence.

SOUTHERN REPUDIATION AND THE NEGRO VOTE.

To the Editor of The Nation:

Sir: Your correspondent McC., of Tuscaloosa, says in the *Nation* of the 1st inst.: "The question which confronts us in the near future is not whether the negro will vote with the Democratic party or with the Republican party, but whether, in local questions involving the honor and well-being of State and municipal governments, his vote can be controlled by the conservative, taxpaying element, or by adventurers and malcontents?" This statement is true save that instead of being a question of the future, near or far, it is present now in Tennessee and Virginia. The disruption of parties began in this State and Virginia in the recent State-debt elections. The divisions then made will continue with more or less permanency for a long time to come. In the first trials of strength "the conservative taxpaying element" has been beaten. In this State another contest is to be held this year, with what result only time can prove; there is, however, every reasonable ground for hoping that the conservative, taxpaying element will triumph and preserve the credit of the State from total ruin. How far this division of parties is to extend beyond the limits of the Southern States will depend on the amount of repudiation material to be found in the Northern States. If the material for a repudiation party is present, leaders, bold, skilful, and unscrupulous, will soon present themselves. X.

Knoxville, Tenn., Jan. 19, 1880.

Notes.

THE late Gen. J. B. Hood's posthumous work, 'Advance and Retreat: Personal Experiences in the United States and Confederate States Armies,' has been published at New Orleans, by his comrade-in-arms, Gen. G. T. Beauregard. The entire proceeds of the sale of this work will be devoted to the Hood Orphan Memorial Fund.——Volume i. (including supplemental matter) of the 'American Catalogue' will, it is announced by the publishers, A. C. Armstrong & Son, be completed ready for binding in February.——The second edition of the 'Autobiography of Prince Metternich,' already called for and in press, will be accompanied by a reproduction of Unger's portrait of the prince.——The February number of *St. Nicholas* contains two special contributions by the poet Tennyson, one of which came set to music. In the succeeding number will be given a delayed revision of the score, which is now ascertained to be the composition of Mrs. Tennyson.——G. P. Putnam's Sons will shortly begin, with 'Knickerbocker's History of New York,' a new illustrated "Geoffrey Crayon" edition of Irving's works in twenty-seven volumes, the designs being by Mr. F. S. Church. Other forthcoming publications not previously announced are: 'Literary Essays,' by Bayard Taylor; 'The Genesis of Life,' by R. W. Wright; several additions to the New Plutarch series, and a large number of medical works.——Dr. G. R. Cutter's 'Dictionary of the German Terms used in Medicine,' published by the same house, is needed and will be of much use to medical students. In a future edition we hope to see English used more freely, in the place of a number of such useless words as paraphronetic, galactoplerosis, and cholemesis. A list of abbreviations is wanted; nor can we see why names of common drugs, not found in ordinary dictionaries, should not have been inserted, and some brief notice taken of the *terminations* of German chemical nomenclature. Words used in different senses by English and German writers should be given (*e.g.*, typhus, decubitus). More care should be taken in certain cases (*e.g.*, *Hemmung*, *Heerdsklerose*) to supply the word in current use in English.——President Eliot's annual report noticed below is also printed in No. 2 of the *Harvard Register*. In the same issue will be found the final report of the Committee on Elections, declaring Dr. H. W. Bellows eligible to the Board of Overseers.——With the December number *Munson's Phonographic News* completes its second volume, with the most favorable prospects of continuance. Its success, like its tasteful typographical appearance, has been exceptional.——Considerable interest is aroused at Oxford by the election, this month, to a travelling studentship for the encouragement of classical archæology, which has been offered by a member of the University. The early relations between the Greeks and the ancient civilizations of Asia, and, indeed, the whole of the archæology of Asia Minor, furnish comparatively new ground for exploration. Probably the new Hellenic Society, which is well aware what the French archæological schools in Rome and Athens have done, and how amply they have justified the support they receive from the French Government, will encourage and help to sustain both the English universities in so decided an advance in classical studies.——A new society for the publication of Old-Norse literature, particularly of the yet remaining unpublished Old-Norse manuscripts, has been organized at Copenhagen. Its executive committee consists of Dr. Svend Grundtvig (president), Dr. P. E. Christian Kaalund (secretary), Markus Lorenzen, Dr. Vilh. Thomsen, and Dr. Ludv. F. A. Wimmer, all eminent antiquarians. Prof. Rasmus Anderson, of Madison, Wis., has been appointed the agent of the society for America, and persons or institutions desiring to become members should address their letters to him.——With Parts 22, 23 the third edition of 'Spruner's Historical Hand-Atlas' has now been completed (New York: B. Westermann & Co.) They embrace four maps of Germany, and two of Italy (1137–1339), together with numerous side-maps, plans of cities, etc.——The English librarians, while well pleased with the *Library Journal* as an international medium, have found it inconvenient to await reports of their own proceedings from this side of the water. They have accordingly resolved to supplement (not supersede) this publication with "Monthly Notes," of which the first number reaches us from Trübner & Co., a businesslike duodecimo of eight pages, bound up with twelve of the publishers' advertisements.

—The size and costliness of the original edition of Mr. Ruskin's 'Stones of Venice' have prevented it from being generally serviceable as a hand-book for visitors to the city of which it treats. And yet for any one who desired to make a study of the works of art at Venice, and to understand their relation to its history and life, there was no other book

that could supply its place. The author has consequently done a great service to travellers in lately reprinting in two compact volumes, of a convenient size for the pocket, the portion of his original work which relates most directly to the history and monuments of the city, and especially the topical index, which by itself forms the most useful and instructive guide to the works of architecture and painting of chief interest. For the appreciation of the genius of Tintoretto, Mr. Ruskin's notes are, for instance, simply indispensable. The work in its present form contains little that any reader could find superfluous, and it may well be regarded as a necessary companion by any one who would fully enjoy the vast store of art which still makes the half-despoiled city one of the chief treasure-houses of the world. The work has been, as usual, reprinted in this country by John Wiley & Sons, though Mr. Ruskin derives no benefit from this edition. We notice, by the way, that the same publishers advertise their new octavo edition of 'Modern Painters' as "illustrated with all the plates and wood-engravings of the original London edition." It is not to be understood from this announcement, which is likely to mislead the unwary, that the "original" plates and woodcuts have been used in this edition. On the contrary, they have been reproduced by mechanical processes, and in the reproduction have been deprived of many of their finest qualities—qualities which give to the originals peculiar distinction, and place them among the most precious works of modern engraving. The American edition is comparatively cheap, but it may be a question whether it is not better to go without the book than to have it in this degraded form.

—A correspondent writes:

"In the *Nation*, No. 760, p. 61, we read: 'Of the three things Goethe longed to see, though *only one* is accomplished, one other, at least, is in a fair way of being shortly begun.' I call your attention to the existence since 1843 of the 'Ludwigscanal,' the junction of the Danube and Rhine. This canal was projected in 1834, commenced in 1836, and was made navigable and opened in 1843."

—The thirty-first annual report of the Astor Library, lately submitted to the Legislature, in addition to the usual information concerning the growth and increased use of the library, states that Mr. John Jacob Astor, following in the steps of his father and grandfather, has conveyed to the trustees a piece of land adjoining the present building on the north, and proposes to furnish the funds for an additional building, increasing the working space of the library by almost one-half. This information justifies the expectation that Mr. Astor will not permit the institution to go backwards while under his protection, and marks a new era in the history of the library. In 1848 Mr. John Jacob Astor provided by a devise of $400,000 "for the establishment of a public library in New York," naming with others as the first trustees Washington Irving, William B. Astor, Fitz-Greene Halleck, and Samuel B. Ruggles, of which body Mr. Ruggles, the sole survivor, remains an active trustee. An act of incorporation was speedily obtained, an unostentatious building erected capable of containing one hundred thousand volumes, and on the 1st of February, 1853, the library was opened, offering, without restriction, to the public use eighty thousand volumes, carefully selected, classified, and systematically arranged. All this had been accomplished within a short time, considering the task, quietly, without show or parade, and the library partook largely of the character of its first president, Mr. Irving, noted for his simplicity, accessibility, and accomplishments. More space being required, Mr. William B. Astor in 1855 conveyed to the trustees a piece of land adjoining the library, with an area much larger than that then occupied, and announced his intention to erect a suitable building as an addition, and to expend from time to time such sums as might be useful in the purchase of books. The carrying out of these liberal intentions found the library in 1859 in occupation of the whole building, 130 feet front, and containing more than one hundred and ten thousand volumes. General and analytical catalogues were soon after prepared through the labor and learning of Dr. Cogswell, accurate account was kept of the number of readers and the description of books called for by each, that the departments most used might be best supplied, and the total amount expended for books, beginning with $27,000 in 1849, had risen in 1869—twenty years after the incorporation—to more than $240,000. At the death of Mr. William B. Astor, which occurred in 1875, the property of the library had almost doubled. Mr. Astor by his will added a legacy of $249,000, and the entire property of the library at the date of the last report, being further increased by donations from Mr. John Jacob Astor, has reached the sum of $1,112,957. At the same time the fund for the maintenance of the library has grown to $421,000, and the number of books has reached almost 200,000.

—With this progress it was to be expected that the advantages offered would not be neglected, and the number of readers actually increased from 23,000 in 1865 to 59,000 in 1879. The library during all this time has been steadily and strictly conducted on the plan originally adopted. It sought to offer to the investigator in every branch of knowledge ample accommodations, and every requisite for thorough study. To this end, and because it was deemed necessary that every book needed should be promptly supplied, it was determined at the inception of the library that it should be devoted to reading and reference, and that no books, under any circumstances, should be taken from the building. Moreover, it has never attempted to attract desultory readers, nor to supply either fiction or the current ephemeral literature of the day. The undertaking was in many respects a novel one in this country, and it is fortunate that three generations of the same family should have so liberally supplied the means and so strictly adhered to the same system. The public patronage of the Astor Library has for some time outstripped the comfortable capacity of its reading-rooms, and the approaching enlargement comes none too soon. There are practical inconveniences in the present arrangement for delivering books at two different counters (according to a distinction of topics which the student constantly finds purely artificial) which we hope may be overcome with the aid of the new building. An increase in the hours during which the library is kept open, the ultimate use of the electric light when perfected, and a quadrupling of the assistants who procure the books called for, are also improvements which the generous object of the foundation imperatively demands.

—It is symptomatic of the long preparation required by our most popular periodicals that the "Midwinter" *Scribner's* should contain such out-of-door papers as "A Wheel Round the Hub," "New England Fences," "Success with Small Fruits," and "Notes of a Walker." More striking still, as evidence of the lapse of time between the completion of a manuscript and its appearance in print, is the authorized account of "Edison's Electric Light," by Mr. Francis R. Upton, the Mathematician of Menlo Park. The opening sentence and one other will illustrate what we mean: "The crowning discovery of Mr. Edison—the electric light for domestic use—is at last a scientific and practical success" "This lamp is Mr. Edison's main discovery." The most enduring contribution to the number is the first instalment of Mr. Eugene Schuyler's "Peter the Great," a narrative already of great interest, plentifully supplied with engravings often after little-known originals. It opens directly with the second marriage of the Tsar Alexis, the father of Peter. "A Wheel Around the Hub" describes a two-days' bicycle ride in the suburbs of Boston, by a club of forty-odd enthusiasts, and suggests much more than the writer is capable of describing. It is a not very successful attempt to combine adventure and local history, but the artists have made up for the shortcomings of the writer, who should profit by Mr. John Burroughs's "Notes of a Walker," on a succeeding page. A capital subject, which has long awaited treatment, is ably and poetically handled by Mr. Rowland C. Robinson in his "New England Fences"; his observations are very close, and will commend themselves to all who truly know New England scenery and the habits of her creeping things in field and wood. Mr. Robinson's English lacks the correctness of Mr. Burroughs's, but otherwise he seems to us a worthy peer of the latter. Mr. Edward Eggleston offers some timely and admirable criticisms on the present modes of Sunday-school instruction, and we hope that the replies which his paper will be apt to provoke will imitate his moderation of language. The political articles (for there are two in this number) show that the editorial sympathies are with the reformers in the Republican ranks—a remark which is, we think, applicable also to *Harper's* and the *Atlantic*, and is therefore of all the better omen We have found Part iv. of Mr. Cable's "Grandissimes" as entertaining as ever.

—An anonymous paper on "The Strong-Government Idea," and Goldwin Smith's article on "Pessimism," are the weightiest contributions to the February *Atlantic*. The first is brief, eminently to the point, and written with vigorous simplicity; it concisely sums up the progress the country has made "towards the realization of a broad ideal of national authority," the writer says, and, as we may admit, towards the familiarity with such an ideal at the least. The statements of our present condition, and the speculation as to the future, are perhaps of a somewhat summary nature, but the former shows much acuteness of observation and skill in presentation, and the latter must be regarded as sensible in temper, if not wholly convincing, by all who are neither alarmists nor optimists. The announcement that the State-rights theory survives "only as a sentiment associated with the beaten rebellion" is a matter of fact which it

would be difficult to prove, we imagine, though it is also to be said that it would be hard to disprove it. The writer has no feeling for it, evidently, and does not have any fears for the endurance of republican institutions in the event of its total abandonment. More reasons than the excellent ones given, however, for this confidence would have been acceptable, and, indeed, but for the frequent use of "our governmental system," etc, the paper might be taken, perhaps, for the production of an English Liberal of long familiarity with this country, acute powers of observation, but no particular sympathy with the principles still glorified in most lectures on American constitutional law. Mr. Smith's paper is highly entertaining in its review of the history of pessimism, sentimental and philosophical, and doubtless there are many readers who will enjoy accompanying the writer through the long and, we think we may add, suggestive speculation which follows this. It is worth noting, by the way, that the mention of Swift's intense misanthropy is, in great part, Thackeray done into less eloquent and more reasoned language, and—if Mr. Smith is a precisian, though we do not suspect it as regards light literature—that the oft lugubrious Richard Swiveller supplants Mark Tapley as "the impersonation of jollity." Mr. Howells's story increases, if possible, in cleverness, but we are nearing mistrust of the possibility of making the class of people he is so skilfully characterizing thoroughly interesting. Mr. Longfellow has a short poem of rhythmical beauty, and we believe we need particularize nothing else in a rather varied table of contents.

—Perhaps, however, we should not lightly pass over a somewhat remarkable and exhaustive review of Wordsworth by Mr. Christopher P. Cranch. "The age," the writer says, "grows more and more wisely critical, and is continually under the necessity of reviewing and enlarging its former judgments." With the rest the works of Wordsworth "are undergoing that winnowing process," and we have then three pages of the history of his career, when we come to consider him critically. "Nature and man form the substance of the themes he seeks to illustrate"; and though "other poets before him have touched these chords," and he listens to their "fitful strains," "he would commune at first-hand with the soul of man and nature," and the result is that "in the heart of the humblest peasant or beggar he can detect the heraldry of heaven." But he "has his prosaic side," and "the truth must be spoken": "his verses have good health and strong limbs, but they too often lack wings"; "we are not lifted, not fascinated, as we hoped." And it is curious that Wordsworth himself was blind to this; he has "such a proudly calm, persistent belief in himself" that you sometimes "begin to think you must have been wrong in any underestimate you may have arrived at." Nevertheless he "seemed to lack the artistic faculty both in selection and execution." We recur with zest to few of his poems as we do to "the finest symphonies of Beethoven or Schumann." "The truth is Wordsworth wrote too much." As to sonnets, now, "judgments differ of course, but it seems to me there are not more than thirty or forty really fine sonnets among his works." His ear for rhythm and sense of form were very defective, whereas "we could dispense with much profundity of thought were we only borne along by a musical motion which wedded itself spontaneously to the idea." But though "body and soul in verse are both desirable," still "if we cannot have both, let us, for Heaven's sake, have the soul." It is for the prevalence of this latter element in him, for his belief "in the beneficent ministry of nature to the soul of man," and among other things for "the oxygenic quality that lies in an apt expression of a commanding idea," that we must "rank Wordsworth among the foremost English poets." What that rank is precisely, "who can say"? We may be sure, at all events, that "the force of his poetry is more cumulative than dynamic," and "we must give him high praise for what he has uttered in his hours of highest thought and emotion." "We still sit at his feet . . . and are still lifted into a serener air by his confessions of that noble Pantheism which our Emerson has so devoutly and wisely taught us." It strikes us that, in the light of this last sentence and thinking of 'The Excursion,' this paper is also "more cumulative than dynamic."

—*Lippincott's* for February is pretty light reading, and we find little beyond the familiar epithet "varied" in the search for a favorable characterization. "A Day with the Ottawa Chantier-men" is a readable paper on the Canadian lumbermen; Mr. Oswald's eighth chapter of "Summerland Sketches" takes us to "The Delta of the Sumasinta River," and is perhaps pleasantly enough written to postpone the slight feeling of impatience his readers must be beginning to entertain for the conclusion of his series, of which, however, he is evidently making the most. A third illustrated paper is the first of two by Edward King on "Old and New Rouen," which is popular, but not particularly instructive. "A Future Capital of the United States" suggests "the claims" of Kansas City to that distinction, and declares that "now that the finance question is settled," the question of the removal of the capital will not be long kept in abeyance. Besides the geographical inconvenience of the present capital, it is situated, as appears, in the midst of a people "only faintly loyal"; and though Missouri is shown to have an even worse reputation as regards "loyalty," and to be unprogressive and dead to commercial honor, still Kansas City bids fair to be a great distributing centre, and Congress would not be in danger of starvation unless the farming interest should find it necessary to cut off supplies to hasten useful legislation. If the finance question had not been settled, and Mr. Hayes and General Sherman had not "dropped words" calculated to raise the hopes of Kansas City, we might think any present consideration of the question mooted premature. There is some talk about "Decorative Art," very sensible in the main. Elaine Goodale contributes a graceful little poem. "Adam and Eve" progresses entertainingly, and the shorter stories are unimportant.

—The annual report of President Eliot of Harvard contains the usual amount of valuable statistics of practice which make it the most eventful publication in the college world. As usual, too, it omits no opportunity of insisting on inadequate resources and of making appeals, sure sooner or later to be heeded, for material aid. Of most general interest are the remarks on the defects of the preparatory schools in mathematical, scientific, and English teaching, especially in English; on the feasibility of the New England colleges adopting common standards of examinations for admission; on the growing superiority of the private and endowed over the public schools in thoroughness of preparation; on the abolition of the Saturday holiday; on increase of salaries and institution of retiring annuities, etc. The case of the Lawrence Scientific School does not improve, and President Eliot's conclusion, after enumerating the causes of its diminishing vitality, that the most effective reinforcement which it could now receive "would be the endowment of a professorship of architecture," has almost a ludicrous sound. The Bussey Institution, the Law School, the Dental School, and the Library, are all in need of fresh endowments. That the Medical School will before long be opened to women clearly appears.

—The report explains and defends at some length the connection of the College with the Cambridge Divinity School, and defines theology as including "Hebrew, Arabic, and other Oriental languages, ecclesiastical history, the literature and criticism of the New Testament, natural theology, philosophy in its relation to religion, ethnic religions, and the history of religions," besides "Christian dogmatic theology," which, however, it says, "is quantitively a very small proportion of the enormous mass" of theological subjects. But this little body of "Christian dogmatic theology" is, after all, the leaven which leavens the whole mass. Without it all these other subjects which the report enumerates would have no claim whatever to be considered theological. "Hebrew, Arabic, and other Eastern languages" would be no more theology than French or German; ecclesiastical history would be simply the history of certain movements of the human mind; the literature and criticism of the New Testament would have no more interest or importance than the literature and criticism of the Rig-Veda; ethics would be no more theological than the common law, and the history of religions would be simply a chapter in the history of civilization, if they were not studied and taught with reference to the support they lend to and the light they throw on the dogmatic theology of Christianity. It is this and nothing else which puts it in anybody's head to call them "theology" and hand them over to the care of a divinity school. The report admits that "the expediency of grouping professorships which deal with these subjects into a separate organization called a Divinity School may be reasonably questioned." The letter of Dr. Bellows, printed in the appendix, defining the objects of the gift of $40,000 made to the Divinity School by Mrs. Tileston, will place those who administer the school on the above basis in a somewhat embarrassing position, because the gift is expressly declared to be made for the support of "theological *and religious* instruction." Religious instruction cannot be given through historical explorations or linguistic criticism. It must be given through expressions of belief in dogmas of some kind. By "religious instruction" Mrs. Tileston undoubtedly means instruction in the Christian religion. To use her money for teaching these subjects on a purely scientific method—that is, without bias and with indifference to the effect of the teaching on belief—would, therefore, be, as it seems to

us, an abuse of the trust. A very simple little test will throw a good deal of light on the real attitude of the College in this matter. The school, we believe, needs a professor of Hebrew. Outside Professor Ezra Abbot, who is otherwise engaged, there is little doubt that the best Hebraists to be had in this country, and by far the best, are Jews. If the Divinity School is a scientific institution there will be no hesitation in putting a Jew in the Hebrew chair. His faith or want of faith will be no more of a disqualification for it than it would be for the chair of chemistry. But we venture to assert that no Jew will have a chance of the place, no matter how high his Hebrew scholarship.

—It may be true, as the report says, that, "using the word theology in that broad sense which includes all the scientific subjects above enumerated, it is an indubitable fact that Harvard University has been thoroughly committed these many years to the maintenance of instruction in theology." There is, it seems to us, a little fallacy here. Harvard University has been committed, doubtless, to a study of some or many of the above-named subjects, and these subjects may be called "scientific" as well as theological, but the University has not been committed to instruction in them as scientific subjects. The Hollis Professorship of Divinity and the other theological professorships which were founded before 1819, as the report points out, were founded for the undoubted purpose of promoting belief in Christian dogmas and preparing ministers to teach them, and it is therefore not open to the College authorities to point to them now as examples of the traditional interest of the University in "scientific theology." The name, as well as the thing, was unknown at that time. The College can, of course, if it is deemed best, retain the sectarian character which belonged to it in the early part of the century; but if it now enters into the service of pure science in theology, as in other things, we do not see how it can accept large trusts for the maintenance of "religious instruction," or announce to the world that it is an unsectarian institution. There is, we feel bound to say, a vagueness and cloudiness about its position on this subject which the president and corporation owe it to the University and to the public to clear up thoroughly.

—Mr. Edgar Fawcett's play, "The False Friend," just brought out at the Union Square, seems likely to have a long run. Its immediate success has been due in great part to the acting, but the play, though by no means perfect, has considerable merits. It is probably the best "American" play of a serious sort that has yet been produced—though there is nothing very national about it, after all, except that one of the characters is American. The scene is laid in England and Australia; the plot is wholly English, as are all the characters, except the false friend. The play consists of a prologue and four acts. In the prologue we are introduced to *Lucian Gleyre*, an American "refugee," and *Cuthbert Fielding*, the heir of the great Fielding estates in England. They are in some Australian mountains, escaping from a band of cut-throats; *Fielding* is dying of a fever. Just before his death he reveals his real name and position to his friend, gives him his papers, among which is a diary containing a full account of his life, and then dies in his arms. *Gleyre* escapes, while the cut-throats appear in a highly operatic manner on the peaks of the lofty rocks which compose the scene, pointing at the body of *Fielding*. In act i. the scene changes to the Fielding estate in England, where the family have just received the joyful news that *Cuthbert* is on his way home. The principal persons in the family are *Edith*, the sister of *Cuthbert* (Miss Jewett); *Cyril Garland*, engaged to *Edith; Lady Ogden*, the aged aunt of *Cuthbert* (Mrs. E. J. Phillips); and *Andrew*, an old retainer of the family (Mr. Stoddart). At the same time there happens to be staying with them *Mrs. Chauncey*, the divorced wife of *Lucian Gleyre*. The scene on the lawn, with the tenant-farmers drinking healths and cheering in the background, is all very pretty. Of course it is *Lucian Gleyre* (Mr. Thorne) who makes his appearance as *Cuthbert*. To carry out his plot he relies on the fact that the man whom he undertakes to personate has not been seen by his family since boyhood, and upon his familiarity with all the events of *Cuthbert's* life, obtained from his diary. The presence of *Mrs. Chauncey* seems at first to be an insurmountable obstacle to his success. She attempts to expose him to the family, but he, with great presence of mind, admits his marriage and divorce, declares that he assumed the name of *Lucian Gleyre* while in America, turns the tables on her, and is recognized by all his relatives as *Cuthbert Fielding*. Up to this point the play is thoroughly well managed, and the climax at the end of the first act is very good.

—The second, third, and fourth acts, though full of telling situations, are not dramatically so well sustained. *Gleyre*, unluckily for him, falls in love with *Edith*, and out of jealousy of her lover, *Cyril*, postpones their marriage, and tries to separate them. There is a very good scene between him and *Edith* (acted with a great deal of delicacy and pathetic force by Miss Jewett), and another between him and *Cyril*. The best scene of the play, however, is one between *Gleyre* and *Lady Ogden* (who from the first has a lurking suspicion of the imposture), in which she puts him to a test by giving him a picture which she tells him is his mother's, though in reality it is not hers. He has no means of knowing whether it is a likeness of *Mrs. Fielding* or not, and he at once betrays himself. Mrs. Phillips's acting at this point, her indignation and resentment, are admirable. Mr. Fawcett's management of the rest of the scene, however, is rather clumsy. Instead of letting this disclosure terminate it, he makes *Gleyre* persuade *Lady Ogden* that he knew all along that the picture was not his mother's, and that he merely pretended to believe what she said in order to punish her for her distrust. She is persuaded by this, and promises to doubt him no more, thus bringing the scene to a second climax, when he again unmasks himself by mistaking another picture. This is, of course, final, and we have a third climax, in which the old lady forces him to admit that he is an impostor, and hurries from the stage to rouse the family and denounce him. The thunderstorm, however, which has been raging during the interview, also comes to a climax at this point, and *Lady Ogden* is struck by lightning before she has time to accomplish her purpose. All this is very awkward. Without being dogmatic, it is safe to say that the laws of dramatic composition will not tolerate so much climax in one scene. Notwithstanding this fault of construction, however, the acting of Mrs. Phillips makes it the best scene of the play. Of course in the end the real *Cuthbert Fielding* returns, and there is a very good interview between the two men, which terminates in the false Fielding ordering the real Fielding's arrest for imposture in attempting to assert his claims to his own name. The end of the play is rather feeble. *Edith* is persuaded, in order to test the true character of *Gleyre*, to find out whether his affection for her is really that of a brother, or something else. This is soon found out. He confesses his love and his deception, and the interview having been overheard by *Cyril*, *Cuthbert*, and other persons, the imposture is over and the play at an end. Why Mr. Fawcett, who is certainly fond of climax, held his hand here, where a climax was really needed, we cannot imagine. Though this is rather tame, the play as a whole is interesting, and the acting generally admirable. Of the comic plot which runs through the play we have nothing to say, except to call Mr. Fawcett's attention to the fact that farce and serious melodrama will not mix.

—The "Galley Slave" is another American play, written by Mr. Bartley Campbell, who, whatever faults may be found with his productions, has the merit of always hitting the popular taste. The "Galley Slave" has run many weeks, first at Haverly's, and, since it was taken off the boards there, at Niblo's. It is a wild kind of drama. *Cicely Blaine* (Miss Maude Granger), an American heiress, is betrothed to an Englishman of excellent character and commanding presence, who would undoubtedly marry her very early in the play were it not for the knavish tricks of one *Baron le Bois*, a nobleman of the vilest disposition. The baron has been married after a fashion to a young and beautiful Italian girl, who follows the somewhat humble occupation of a model, and who is also a model in a sense in which most models are not. The baron, of course, deserts *Francesca* (Signora Majeroni), and she wanders through Italy trying to find him. At length she is successful, and the baron seems on the point of being brought to account when, by a curious concatenation of circumstances, there is a complete misunderstanding of the facts by *Cicely*, who most unnecessarily insists on believing that the betrayer of *Francesca* is her own betrothed. In a fit of indignation and wretchedness she marries *Le Bois*, who thus secures, as he supposes, a rich prize. At the very moment of the marriage *Norcott* bursts into the house, and is discovered in an agonizing interview with *Cicely* by *Le Bois* and others of the *dramatis personæ*. Upon this, to save the reputation of *Cicely*, he declares that his purpose in effecting an entrance into the house was to commit a theft, and he is immediately consigned to the galleys by the remorseless ministers of the law for the long term always prescribed in cases of felonious trespass. Thenceforth he is the galley-slave, and the spectator becomes aware of the meaning of the name of the play. Of course *Francesca* and her child turn up at the galleys, and there is finally an explanation, and *Le Bois* is exposed, and *Norcott* and *Cicely* made happy again. It is really a very poor kind of play, for the misunderstanding which causes all the trouble is too im-

MALDEN PUBLIC LIBRARY

probable even for melodrama. But there is enough incident, and passion, and villany, and virtue to thrill the nerves of the average audience, and it is distinctly to thrilling the nerves that Mr. Campbell looks for his success. Signora Majeroni is a competent Italian actress, who does the part of the model very well, while Miss Granger rants through *Cicely's* part in a truly terrible fashion. The rest of the cast is in no way remarkable, though the comic parts are fairly well done.

—Mr. Strakosch's season of Italian opera, which began last week, has so far proved an artistic failure. With one or two exceptions, there is not a member of his troupe whose performances would satisfy the most moderate demands. Besides the absence of any star of the first magnitude, the chorus is wretched, the orchestra weak and slovenly, the *mise-en-scène* miserable. The operas given so far are, "Lucia," "Traviata," "Faust," "Aïda," "Carmen," "Mignon," and "Puritani." Of these "Aïda" is the only one which requires more than a passing notice. Mlle. Singer, who made her début on this occasion in the title rôle, is an artist of decided merit, and would occupy a high rank among dramatic singers but for one drawback. She possesses a very fine voice, of remarkable compass and power; her intonation is perfect; and the quality of her tone is sweet and sympathetic. Her performance of *Aïda*, as far as the vocal part is concerned, was very excellent—indeed, we do not remember having heard a better rendering of this difficult part in this city; but her style of acting is inartistic and exaggerated. This is a fault common to her nation (Mlle. Singer is a Hungarian), but one from which Mme. Gerster last year proved to be charmingly exempt. Mlle. Singer is always in a state of tempestuous intensity, and will deliver the softest, gentlest cantilena with a frowning brow and flashing eyes. Next to her, Signor Storti, the baritone, is the most distinguished artist of the company. His voice is very powerful, yet possesses a warm and sympathetic tone, and he produces at times excellent effects. His faults are the same as those of the prima donna, an exaggerated, not to say vulgar, style of acting. If we now mention M. Castelmary, the French basso, who has a fine voice and is a capital actor, like all his countrymen, and Mlle. Belocca, a fine-looking girl, very conscientious and striving to do the best with her little mezzo-soprano voice, we have exhausted everything that can be said in praise of Mr. Strakosch's company.

—The Philharmonic Society's third public rehearsal and concert, which took place on Friday and Saturday last, again attracted a numerous audience to the Academy of Music. In spite of a great disappointment, caused by Mr. Joseffy's inability to fulfil his engagement on account of a bad finger, the performance was very interesting. Cherubini's bright overture to "Anacreon" was the opening number. We cannot speak too highly of Mr. Thomas's violins, who rendered the brilliant and difficult passages with which this overture abounds with the dash and precision of one man. The next number was a very attractive arrangement for string orchestra of three movements taken from two of Bach's violin sonatas—the third and the sixth—by Mr. Bachrich. The selection is a very judicious one, and forms a perfectly artistic and well-connected whole. The first movement is one of those rushing preludes with which every lover of the earliest school of pianoforte music is familiar; the second a beautiful elegy full of the devotional spirit characteristic of the pious, simple-hearted Lutheran organist. The third is a bright, sharply accentuated gavotte, followed by a delightful little rondo. In this instance again Mr. Thomas's string orchestra did admirable work. The concluding number was Rubinstein's "Dramatic Symphony," a work of great dimensions and, as Schumann says of one of Schubert's symphonies, of "most divine length"—it lasts for over an hour and a quarter—but it was given by Mr. Thomas with so much spirit and such clear and correct execution that it was listened to until the close of the mighty finale by an attentive and interested audience. Mr. Rietzel, who played Beethoven's concerto in G, proved a most welcome substitute for Mr. Joseffy. He has just returned from Stuttgardt, and will, no doubt, occupy some day a prominent place among the leading pianists in this city.

—The French liking for a logical ordering of things and the French artistic taste have united of late to call forth all sorts of art-bibliographies, or rather iconographies. Not only are all the portraits of Molière and Voltaire, or illustrations of any kind of any of their works, set down in order in stout volumes, but there are detailed lists drawn up of the works of even the less important living painters and engravers. It is with no wonder, then, that we take up 'Victor Hugo, ses Portraits et ses Charges,' catalogued by M. Aglaüs Bouvenne. From 1827 to 1879 M. Hugo was painted, or drawn on wood, or lithographed, or engraved, or etched one hundred and fifty-seven times, twelve of the portraits appearing during the first six months of 1879; and there are caricatures enough to bring up the total number to two hundred and thirty. M. Bouvenne adorns his neat little volume of 76 pp. with three illustrations; the frontispiece is a photogravure of an etching made by Célestin Nanteuil in 1833; the second is an etched copy by the compiler himself of a drawing made by Prosper Mérimée in 1840, and the last is a portrait of the poet as he appears to-day. A comparison of the three heads is curious; it is difficult to believe them identical. M. Bouvenne explains the great number of portraits of M. Hugo by pointing out that he has been "the chief of a new literary school, not only the first of poets but the first of citizens, the apostle of every liberty and the defender of all liberties." A few pages before he had likened M. Hugo to Homer, whose "only superiority lies in having been dead three thousand years."

—Under the heading, "The Fate of a Book," the Leipzig *Grenzboten* of December 18 publishes an account of the adventures which befell Dr. Busch's well-known work on Bismarck in the first year of its prosperous career. Seven translations of it have already appeared in London, New York, Paris, Moscow, and Utrecht. Of the original German edition seven thousand copies were sold in less than two months, the total number issued up to date being fourteen thousand, or, including the translations, forty-eight thousand. The Russian edition, of course, was purged of some of the passages relating to that country, and one of the French editions, issued by one of the *Figaro* staff, omitted a large portion of the original work. Why the French press did not deal with the book very gently is self-evident, but the almost ferocious attitude assumed by the German papers was less intelligible. The *Grenzboten*, which was formerly edited by Dr. Busch and still receives contributions from him, attributes this hostility to various motives, personal, political, and Semitic. Curiously enough, among the few German papers that passed a favorable verdict was the *Norddeutsche Allgemeine*, which pronounced the book superior in interest to any previous publication on the events of 1870 and 1871. The paper referred to is Bismarck's "inspired" organ, and never says a word that would be likely to displease the Chancellor. Various rumors were afloat at the time as to what Bismarck himself had said about his biographer's achievement, but they were set at rest when it was announced that he had been rewarded with a diplomatic appointment. The article in the *Grenzboten* consists mainly of extracts from the criticisms which 'Bismarck und seine Leute' called forth, showing that in general they were the more favorable the further the place where they appeared is from Leipzig. The article accordingly opens with some general remarks on the superiority of the English and American press to the German, the inferiority of which is attributed to the corrupting Semitic influence already alluded to. The favorable notices of the London *Times*, as well as our own, are quoted at length with satisfaction, although we were hardly prepared to find the *Nation* described as an "influential London periodical." As Dr. Busch has travelled much in America and repeatedly written on American subjects, this error will clear him of the suspicion of having himself written the not very modestly-worded biography of his own work.

—A special school of diplomacy is to be established at the Vatican. The pupils, it is understood, are to be exclusively ecclesiastics, and are to study the history of the pontifical diplomacy in the original documents preserved in the archives of the Vatican. The report that the Pope had entered into negotiations with France, in which he had expressed a willingness to consent to the exclusion of the Jesuits from instruction on condition of receiving concessions in regard to certain other points, is authoritatively denied by the *Osservatore Romano*, which adds that the Holy See would never consent to drive out of the work of education an order which has rendered such great services in that line. Evidently the course of the new liberal—but not for that reason any the less Catholic—Pope is destined to be one of the most interesting subjects of conjecture and observation for the next few years. As the politicians of Europe once hung upon the nod of the Third Napoleon, as they now speculate about the intentions of Bismarck, of Beaconsfield, of Gambetta, so they will watch for the revelations of the *Aurora*, the new reputed "organ" of his holiness. One feature in that journal has already excited remark. The list of its contributors is a list of men known for their progressive ideas. Nothing could more clearly show the wisdom of Leo XIII.; nothing could be more dangerous to Protestantism than a reconciliation of the Catholic Church with "the spirit of the age," and an adjustment of the forms of statement of Catholic ideas, not necessarily to real science, but to the popular ideas of science. The Reformation of the sixteenth

century was a moral and spiritual reformation, and its first astonishing progress was stopped almost entirely by a counter reformation within the Church, which, like our Western hunters, fought fire with fire. The reformation of the nineteenth century is political and philosophico-scientific. The Church under its late head was content, for the most part, to oppose this movement bluntly, directly, dogmatically, by an *ipse dixit*. Under its present leader the Church will perhaps adopt the methods of its opponents and fight its enemies with their own weapons. What the result will be on the Church it is impossible to predict; but one thing may be taken for certain, the Church of Rome will not be one whit less propagandist, exclusive, and "infallible" than heretofore.

JAMES'S HAWTHORNE.*

IT is a little singular, considering his vogue both contemporary and posthumous, that Hawthorne's place in literature should have been so long left to take care of itself, as it were. That it is an important place has never been disputed by any one, and by Americans at least he has for the past thirty or forty years been accepted as a prodigy in literature; as he was one of the few men of letters of indisputable genius we have had, perhaps with a patriotic people this could hardly have been otherwise. But the very fact of the abundant eulogy of him indicates that there has been a certain vagueness in the general admiration quite hostile to anything like serious criticism. At any rate no serious criticism of him has been written heretofore to any purpose, unless Mr. James would have us except Poe's; it has probably been a little difficult to secure the requisite perspective. Mr. James has thus in great measure had a virgin field. Another of his advantages is the evident ease he has experienced in getting far enough away from his subject not to be overpowered by its Titanic proportions. To many of his readers, indeed, much of his book will seem like detraction, and, we may suppose, will be cordially resented. We venture to think, however, not only that this will be unjust, but that Mr. James has made an important contribution to the literature of criticism in America, and that the fact will one day be recognized with the most effusiveness by the same persons who may now be cherishing irritation at his audacity in venturing to describe the features, instead of being content to worship at the shrine, of so august a divinity as Hawthorne. This at all events is what he has done. He has made a careful, conscientious and even vivid literary portrait, such as few of our own writers could have made, we may say with safety; and, we are tempted to add, such as no one of the eminent writers who have contributed to Mr. Morley's excellent series has made. Whatever its comparative value, it has the artistic advantage of being less formally a biography and more completely a criticism than any of its predecessors; it may, indeed, be said to be saturated with the essence of literary criticism, and to be a fine thing in itself. Barring the recurrence of a few stock phrases and a certain consciousness at the start, it is, as an example of what we mean by form, admirable; it is not a narrative of Hawthorne's life, nor an analytic examination of his works, nor a sequence of these succeeded by a formal summing up; its divisions are hardly noticeable, but its continuity is not wearisome, and it is not without the light and shade which the most harmonious instances of literary art sometimes lack. It is penetrated by its purpose, and, in a very graceful and charming way, its total effect is made to leave upon the reader the consistent and single impression with which it is clear the author sets out, and which he nowhere loses sight of either through carelessness or confusion.

This is high praise, certainly; but it is well considered, and there can by this time be nothing extraordinary in highly praising Mr. James's literary art. What is here, however, of most importance is the worth of this impression of Hawthorne which he holds so firmly and conveys so clearly and charmingly. Mr. James's notion of the dignity of criticism is not, perhaps, an unusually high one for a critic of his intelligence and cultivation, but it is unusually distinct and unusually omnipresent. He never forgets his function and its claims upon him when he is engaged in the exercise of it. It happens from this sometimes that when these and the claims of his subject conflict—which is occasionally inevitable—the latter apparently get slighted. Considering how prevalent the contrary error is, insistence on this is not important. But to his respect for his office of critic the emphasis of his characterization of Hawthorne as "exquisitely provincial," and of the New England life which was Hawthorne's material as blank, are probably to be attributed. It is important to him that his vision be not obscured by the glamour of Hawthorne's reputation, that his standpoint should be that of "the world in general," and that he should describe him and his surroundings exactly as they are, without allowances, and with relation to the whole class of phenomena to which they belong, without personal or other prejudice. This is an admirable and, indeed, the only worthy critical attitude, though perhaps Mr. James assumes it with a little over-intensity and obviousness. But it is questionable if he would have so much to say of the provinciality of Hawthorne and the blankness of the old New England life if provinciality were not a good deal of a *bête-noire* to him. He speaks of the habit of Americans in Europe (page 148) "of keeping one eye, as it were, on the American personality, while with the other they contemplate" foreign institutions. It is possible that Mr. James himself has acquired the "habit" of keeping one eye on this spectacle; it is certain, at all events, that he is not to be caught napping. This is, however, fortunate for us, and we have sides of American life shown us which it is very wholesome for us to contemplate, and which a foreigner could neither persuade us were true nor exhibit so faithfully. But we ought not to get a wrong idea of the proportions of things; and though what Mr. James notes about New England and Hawthorne is true, and though he only notes it among many other qualities, it seems to us that he insists upon it a little too much—that, whatever the truth of the things he says, the tendency of them, the impression they leave, is a little too strong, and that following him here too implicitly would lead us astray. One asks himself, How important is it that Hawthorne was provincial? Did his provinciality in any way hamper his genius? Did it not rather assist it, or at least determine its fortunate direction? Still, in a complete portrait of the man it was by all odds worth pointing out; and if a great many admirers of Hawthorne, to whom he is a Titan of letters besides being an exquisite romancer, could have ascertained it in no other way—and we are not sure that they could—it was worth dwelling upon and reiterating.

We by no means agree, however, with Mr. James's regret concerning the blankness of Hawthorne's surroundings. On the contrary, it seems to us an extremely lucky thing. Mr. James gives this striking picture of them (p. 42):

"No State, in the European sense of the word, and indeed barely a specific national name. No sovereign, no court, no personal loyalty, no aristocracy, no church, no clergy, no army, no diplomatic service, no country gentlemen, no palaces, no castles, nor manors, nor old country houses, nor parsonages, nor thatched cottages, nor ivied ruins; no cathedrals, nor abbeys, nor little Norman churches; no great universities, nor public schools—no Oxford, nor Eton, nor Harrow; no literature, no novels, no museums, no pictures, no political society, no sporting class—no Epsom nor Ascot!"

To find his lines cast in these places would be an almost crushing thing for every romancer in literary history, perhaps, save Hawthorne. But Hawthorne is almost the only romancer who was not concerned with painting life at all. He was engaged, to use a phrase of Carlyle's concerning quite a different writer, "airily sketching out" certain currents in life, and this with a good deal of graceful disregard for anything but his own fancy. Mr. James is, on the other hand, passionately fond of life. He enjoys nothing so well as to assist ("as the French say," he would explain) at the spectacle of it. Elsewhere he regrets that Hawthorne has not left us "a picture of the Boston society of fifty years ago"; he notes Hawthorne's absence of realism and recurs to it again and again; he has a partiality for 'The House of the Seven Gables' because it is "pervaded with that vague hum, that indefinable echo, of the whole multitudinous life of man, which is the real sign of a great work of fiction"; the chief fault he finds with it is, that "Holgrave is not sharply enough characterized," that "he lacks features," and that "he is not an individual, but a type." Throughout the book he seems to regard Hawthorne as a novelist, at least to regard him from the novelist's standpoint. He has a long, an ingenious, and an interesting contrast of 'The Scarlet Letter' with Lockhart's novel 'Adam Blair,' for example, which seems to us quite amiss. So far from applying the standards of the novelist to the author of 'The Scarlet Letter,' we should instead have great doubts about calling his romances "novels" at all—except, perhaps, 'The Blithedale Romance.' If it be necessary to do this in order to distinguish Hawthorne in kind from the mass of the other great romancers it is eminently appropriate; and it may have been Mr. James's intention to do only this—it is evidently a question which he alone could decide; but we are obliged to judge from the impression he makes upon us, and that is of considering at much length the merits and shortcomings of Hawthorne in a sphere to which he conspicuously does not belong.

Perhaps this also results from Mr. James's notion of the dignity of criticism and respect for academic canons. The difficulty with too keen

*'English Men of Letters. Edited by John Morley. Hawthorne. By Henry James, jr.' London: Macmillan & Co.; New York: Harper & Brothers.

a sense of the worth of academic canons is, however, well understood; it is that the critic whose criteria are the usually excellent ones of "the world in general" is apt to miss something of the flavor of the individual genius he is considering, and not to be quite careful enough concerning the sureness of his sympathy. We have the word for it of so sceptical a critic as Sainte-Beuve that sympathy is part of the necessary equipment of the critic; but it is quite true that it is a quality generally most insisted upon by the transcendental order of critics, and we should say that if anything jarred on Mr. James more than provincialism it was transcendentalism. He is probably so hostile to its essence that he has small respect for any of its dicta. At all events, his own method in literary criticism is, like his method in fiction, that of looking at the thing in question upon all sides, considering it in all its relations, describing it in detail, and representing it "as it is," from a strictly impersonal view-point—"objectively, as the metaphysicians say." This is admirable, when one feels sympathetically towards the thing in question, or, we may add, at the risk of making an unusual statement, towards its opposite. Now and then it has seemed to us Mr. James does not feel in either of these ways concerning his subjects, and in these instances he loses the pith of the matter. In the present work he speaks of Thoreau (page 94) in this way: "He was imperfect, unfinished, inartistic; he was worse than provincial—he was parochial. It is only at his best that he is readable," than which nothing, it seems to us, could be more unhappy. He means that Thoreau was unacademic, which is so true that it is almost a slip to speak of it; but surely one would be hard bestead to find anything more perfect, finished, and artistic than many things in the 'Week.' On the other hand, it is perhaps his intimate hostility to the whole spirit of the New England transcendental movement that leads him to speak thus of Margaret Fuller: "It is safe to assume that Hawthorne could not, on the whole, have had a high relish for the very positive personality of this accomplished and argumentative woman, in whose intellect high noon seemed ever to reign, as twilight did in his own. He must have been struck with the glare of her understanding, and, mentally speaking, have scowled and blinked a good deal in conversation with her." Again, the habit of relying upon one's observation, the being accustomed to see far more clearly and deeply than most people, inevitably begets an occasional careless trustfulness in itself.

It is due to both these reasons, we may infer, that Mr. James's account of Hawthorne fails in the respects in which it does fail. We cannot help thinking that if he had had a quicker sympathy with Hawthorne he would not have been so deeply impressed with Hawthorne's provinciality and the blankness of his surroundings, and he would not have omitted so conspicuously to consider the poetic quality of his writings. He once or twice refers to a poetic passage, and at the end he says, "he was not simply a poet," for "the poets are more purely inconclusive and irresponsible," which implies that he was a good deal of a poet. But here as elsewhere his poetry is referred to by implication and rarely, whereas his qualities as a novelist are mentioned directly and abundantly. Consistently, too, it is his poetic quality that Mr. James in a sort objects to; that is to say, one feels that he considers his fancifulness a limitation of his powers as a novelist. In many regards there has been no such just judgment of 'The Scarlet Letter' written. But it is impossible to be quite satisfied with this: "The faults of the book are, to my sense, a want of reality and an abuse of the fanciful element—of a certain superficial symbolism." And he goes on:

> "The people strike me not as characters, but as representatives, very picturesquely arrayed, of a single state of mind; and the interest of the story lies, not in them, but in the situation, which is insistently kept before us, with little progression, though with a great deal, as I have said, of a certain stable variation, and to which they, out of their reality, contribute little that helps it to live and move. . . . Lockhart was struck with the warmth of the subject that offered itself to him, and Hawthorne with its coldness . . . Hawthorne was a thin New-Englander, with a miasmatic conscience. The idea of the mystic A . . . should, I think, have been just made and dropped; . . . his enjoyment of it is puerile. . . . Hawthorne is perpetually looking for images which shall place themselves in picturesque correspondence with the spiritual facts with which he is concerned, and of course the search is of the very essence of poetry. But in such a process discretion is everything."

And in reviewing such a process, one feels impelled to add, ultra-discretion is dangerous. It almost calls for cordiality. In the review of 'The House of the Seven Gables' we find the same slight inadequacy. In the account of the 'Note Books,' after quoting "The aromatic odor of peat-smoke in the sunny autumnal air is very pleasant," Mr. James adds: "The reader says to himself that when a man turned thirty gives a place in his mind—and his inkstand—to such trifles as these, it is because nothing else of superior importance demands admission," and he laments afresh the "simple, democratic, thinly-composed society."

But when he ceases to object to Hawthorne's unsubstantiality *per se*, and to the extent to which it is sometimes pushed, and comes to consider generally the quality of his mind and the complexion of his temperament, he writes with a subtle felicity, and, at the same time, a certain wholesomeness, that are the mark of literary criticism of the first class. His portrait of Hawthorne discloses what we believe to be the truth about him, and, as we have said, this has never been formulated with any precision heretofore. On the one hand Hawthorne appears in this portrait a very different figure from the fiction conceived by M. Émile Montégut, who represents him, as he would perhaps be likely to appear to the Gallic imagination, as a *romancier pessimiste*. All that can be said in support of this Mr. James says is true "with a difference." Hawthorne was a *romancier pessimiste*, "minus the conviction." On the other hand, the popular American notion that he was a genuine Puritan, and that his books are, from the very fact of their poetic imaginativeness, valuable enforcements of the Puritan morality, important expositions of the Puritan code of ethics, as it were; that they emphasize the awfulness of sin, and its universality; and that the human conscience is treated in them with vivid realism, Mr. James very happily shows to be wholly beside the mark. One has only to think of the difference between 'Faust,' for example, and 'The Marble Faun' to see how different in kind was Hawthorne's treatment of sin and the conscience from treatment so little "realistic" as even Goethe's. "Nothing is more curious and interesting," says Mr. James, "than this almost exclusively *imported* character of the sense of sin in Hawthorne's mind; it seemed to exist there merely for an artistic or literary purpose." That this purpose was not the reverse of trivial, however, no one will pretend. Just how serious it was, Mr. James intimates in the last sentence of his book, a sentence which, quite as much through what it suggests as what it states, defines Hawthorne's place almost with precision: "Man's conscience was his theme, but he saw it in the light of a creative fancy which added out of its own substance an interest, and I may almost say, an importance."

WOOLSEY'S COMMUNISM AND SOCIALISM.*

THE greater part of this book appeared in the form of weekly letters last year in the *Independent*. It contains, first, an historical sketch of the various attempts made to establish societies, small and great, united in common life by some one principle or motive, and holding all property in common for the general undivided interest of the members, beginning with the Buddhist monasteries, and coming down through the Christian monasteries and communistic sects to the Harmonists, Zoarists, Inspirationists, Oneida Communists, and Shakers of our own day. Dr. Woolsey then discusses with greater fulness the various socialistic theories and Utopias of our own time, and examines the extent to which they have laid hold of the popular mind, and their probable influence on the future of modern society. The former portion is necessarily a mere outline; the latter is more interesting, as containing the author's opinions on some questions which are now seriously affecting the political life of the Old World at least.

We must, however, take exception to Dr. Woolsey's definition of the terms Communism and Socialism. He treats them as synonymous, "the first of earlier origin than the other," and puts on the same level with them "two others of still more modern birth," Collectivism and Mutualism. That they are used frequently as synonymous in the popular writing of the day is true. As a matter of fact, however, we believe Socialism took its rise as a generic term, denoting the subordination of political reform to social reform—or, in other words, the substitution in politics of social questions for questions relating to the structure of the government or the distribution of political sovereignty. As such it included, and properly includes, Communism, Mutualism, Collectivism, Fourierism, as species. A Socialist is, strictly speaking, a man who seeks a change in the industrial organization of society as the end of political action, and the change may take the form either of Communism, or Fourierism, or of several other systems. Communists are, therefore, a sect of Socialists, and they demand the abolition of individual property and its transmission to the state, to be used by the state both as capital and as the reward of labor. "The plan," to use Dr.

* 'Communism and Socialism in their History and Theory. A Sketch, by Theodore D. Woolsey.' New York: Charles Scribner's Sons. 1880.

Woolsey's language, "is to take away all means of production—all land, machinery, manufactories, all means of transport, and transfer them as property to the state; to abolish all private trade, credit, business relations, and the medium of circulation."

His examination of the probable effect of such a plan on the foreign relations of the state, on its finances, on the patriotism and public spirit of the people, on the monetary circulation, on knowledge, and on the relations of the community thus organized to religion, to marriage, and the family, is both interesting and suggestive. Though perhaps sufficient for the audience to which he originally addressed himself—"those who would relish neither extensive details touching the communities of the past, which have left no mark on society, nor a long exposition of the economic principles of modern Socialism"—one cannot help wishing that he had in the volume before us treated these topics with greater fulness. The closing chapter on the probable future of Socialism, and the extent to which it threatens the present form of society with overthrow, overlooks, as it seems to us, two important considerations. One is, that there is no sign as yet that the passion for equality, which, as Dr. Woolsey truly says, constitutes the strength of Socialism, has at all shaken the passion for individual ownership. This appears to be everywhere as strong as ever. Men may desire that nobody shall possess more property than his fellows, but Socialistic agitation has not as yet revealed any evidence that the instinct of private ownership has been at all weakened in the race, or that it does not actually gain strength with the progress of civilization. All attempts to extinguish it or keep it in tolerable subjection even among small numbers of men, unaided by religious enthusiasm, have thus far failed miserably. The strength of Socialism lies in popular hostility to large accumulations of wealth in single hands, but we doubt if there are ten per cent. of the Socialists who, if put to the test of practice, would agree never to own anything themselves individually. This fact makes the numbers of Socialist voters in any country very delusive as an indication of the real strength of the movement, or of its danger to the present social organization. What they are really seeking, in the bottom of their hearts, is not the abolition of property, but a more satisfactory division of it among individual proprietors.

The second consideration is this: Dr. Woolsey takes Schaeffle's description of the probable practical working of Socialism as the basis of his remarks. In the system thus described, Marx's standard of value, the time spent in labor, is to prevail; that is, an hour of any one kind of labor is to entitle a man to as much of the common stock as an hour of any other kind of labor. In the Socialistic state everything the individual needs is to be kept in state storehouses, and thither each person is to go with his certificate of the number of hours he has worked, and draw as much of the goods as this entitles him to. The state is to own everything—land, machinery, buildings, every instrument of production and all products of industry. Now, Schaeffle, to say nothing of Karl Marx or Lassalle, argues as if "the state" were an individual of extraordinary power, who could take over the property of the community by proclamation, and manage it with as much ease as the Government now manages the post-office. That this illusion should run through the speculations of Continental reformers is not surprising, considering the mystery which surrounds the Government, even in the eyes of educated men, in every Continental state. But it is surprising that Dr. Woolsey, as well as most English and American writers who have attacked Socialism, have failed to perceive that it is through an examination of the term "the state" that the movement can be most easily breached. The state in its executive capacity is simply a large body of agents, not a mysterious and all-powerful will pervading the community. Transferring the property of the community to the state does not mean, therefore, simply the issue of a decree; it means the seizure and safe-keeping of all the machinery, buildings, raw material, lands, minerals, farm-produce, by a vast body of officers, under some system of accountability and discipline and inspection, and these officers would have to be at least one-third as numerous as the present individual owners, and would have to be persons of good character and of a certain amount of capacity. When the work of production began, there would have to be another body of officers, of still higher capacity, to decide what should be produced, and to select and superintend the processes of production, and to see that the laborers did their hour of labor, and to give them certificates of having done it. These officers would have to provide some means, too, of preventing too much labor being expended in particular fields of production, and prevent the total abandonment of the coarser forms of labor; for who would engage in street-cleaning, ditching, draining, and the removal of night-soil when his order on the public store could be had just as readily for grooming horses, or sawing firewood, or haymaking? The storekeepers, too, would have either to serve goods out according to their own view of each applicant's proper necessities—a wonderful task—or else allow the full play of individual tastes. But if they allowed the play of individual tastes, how would it be possible to adjust the supply of particular articles to the demand? In saying this we simply indicate the difficulties of the plan. Any sane man can readily picture to himself the rest of the problem. In short, "the state," under communism, even in the State of New York, would be an army of officials larger than that which Xerxes led into Greece, charged with duties which none but very extraordinary men have hitherto shown themselves capable of performing, and drawing to such a degree on the organizing power of the community that there would be no one left to command them. In fact, it is hardly an exaggeration to say that so much industry and talent would be absorbed in storekeeping and distributing and superintending, that there would be but little or none left for production. A mere glance at this aspect of it gives the whole scheme the character of a Bedlamite dream, and might well save grave social philosophers the trouble of examining the effect it would have in practice on morals or religion, or commerce, or war.

A GREAT DICTIONARY OF GEOGRAPHY.*

THE first volume of M. Vivien de Saint-Martin's 'Geographical Dictionary,' a large quarto of eight hundred and fifty pages of very fine print, embraces the letters A, B, and C (entire). Considering the amount of space generally occupied by these three letters in similar French publications, it is evident that the whole work is intended to be finished in two more somewhat larger, or in three more smaller, volumes. In any case it will be a work of vast dimensions among publications of its kind, and as the production, not of a corps of writers under the lead of one or more editors, but mainly of one author, aided by assistants—an author, too, who means to write and systematically elaborate, and not merely to compile—it is an almost gigantic literary enterprise. Of the few scholars who would dare to approach such a task M. Vivien de Saint-Martin is one of the best prepared. A student of geography from childhood, the writer or editor of a score of geographical publications of note—the first of which, 'Atlas universel,' appeared in 1825—an indefatigable collector and annotator, he had almost half a century of preparatory labor behind him when he definitively shaped his plan, and now, almost an octogenarian, he calmly and vigorously proceeds in its execution. It is needless to add that the great publishing house which issues the Dictionary amply supplies him with materials and aids of every kind.

This 'Geographical Dictionary' combines the features of a systematic geography and of a gazetteer. The larger articles contain extensive descriptions—physical, political, economical, and ethnological—ample historical notices, and a large amount of appropriate bibliography. The sources from which the information is drawn embrace the best authorities on the subject to be found—in the original or in translation—in English, French, Italian, or Spanish; the descriptions are pleasantly executed; and long quotations from famous writers, not exclusively modern and Occidental, add variety to the more interesting pages. Not only such articles as "Albanie," "Arabie," "Basques," or "Chine" are elaborate and attractive, but even notices like "Brooklyn" or "Baltimore" are very readable. It is unnecessary to state that everything concerning France and her colonies is treated with special minuteness. What we should particularly call the gazetteer-part of the work is to contain notices of from twelve to fifteen thousand communes of France. Europe altogether is to occupy three-fifths of the entire work. In spite of this there remains room enough—to cite one American name—for Albany, county of New York (7 lines); Albany, county of Wyoming (5 l.); Albany, capital of New York (nearly 70 l.); Albany, town of Georgia (9 l.); Albany, town of Oregon (8 l.); Albany, township of Vermont (2 l.); and Albany, township of Maine (2 l.) As to the share of Great Britain in the collection we may mention that upwards of sixty names of localities compounded with "Bally" (Ballyadams, Ballybacon, etc.) are separately noticed. As a characteristic bibliographical sample we may literally reproduce the "Bibliographie" of "Colorado":

"Bayard Taylor, *Colorado:* New York, 1867.—W. A. Bell, *New Tracts in North America: a journal of travel . . .*; Londres, 1869, 2 vol.—Du même, *On the Basin of Colorado;* Journ. of the Royal Geogr. Soc., 1869,

* 'Nouveau dictionnaire de géographie universelle. Par M. Vivien de Saint-Martin, président honoraire de la Société de Géographie de Paris, membre correspondant de l'Académie royale de sciences de Berlin, etc., etc.' Tome premier. Paris: Hachette & Cie.; New York: F. W. Christern. 1879.

vol. xxxix.—S. Bowles, *The Switzerland of America: a summer vacation in Colorado;* Boston, 1869.—W. Blackmore, *Colorado;* Washington, 1869, in-4to.—S. Southworth, *The new State of Colorado;* Geographical Magazine de Markham, mai 1875, p. 139-144.—Enfin un grand nombre de Mémoires sur la géographie, la géologie, l'histoire naturelle, l'archéologie du Colorado ont été publiés par F. V. Hayden et ses collègues dans les *Bulletins of the United States Geological and Geographical Survey of the Territories.*"

The bibliography of "Chine," nearly a page long, reaches down to the year 1873, but that of "Algérie" stops at 1873, that of "Australie" at 1872, and that of "Amoûr (Territoire de l')" at 1870. The titles, in various languages, are everywhere given with the same correctness which characterizes those above cited in English. The same accuracy marks, on the whole, the endless mass of names in most European languages, and also the Oriental names in scholarly French renderings. (The translation of names of this class is a feature of additional value.) Frequent inaccuracies occur, however, in Slavic names—the Russian excepted, in the revision of which the author has had excellent assistance—and especially in the names of polyglot Hungary. On page 540, for instance, we find "Kujavski," "*Ou*svica," "*Ou*szevo," "Bz*ou*ra," "Tarn*ov*," "Ro*pezye*," "*Vi*sloka," all Polish names false on their face; and on page 413 many more incorrect Magyar names: "Beregsz*asz*," "Munk*acs*," "T*é*mesvár," "Nagy-V*a*rad," "K*ö*ros," "Tem*è*s," "Bereny," "Zagyra," "Somegy," "Debreczèn," "Ung*h*vár," etc., etc. Worse mistakes occur in an Austro-Hungarian table of populations (p. 276), in which, besides many wrong spellings, "Kolosvar ou Zombor (Hongrie). . . . 25,000; Klausenbourg, capitale de la Transylvanie, . . . 25,000;" stands for this: Kolosvár ou Klausenbourg, capitale de la Transylvanie, . . . 25,000; Zombor (Hongrie), . . . 25,000.

Some lack of accuracy is discoverable also in regard to historical dates in the shorter notices. Thus, we read under "Bladensburg": "Les Anglais y gagnèrent une bataille en 1815" (they did in 1814); and under "Bull-Run": "ruisseau . . . devenu célèbre par la première bataille de la grande guerre de sécession, le 21 Juin, 1861" (it was fought on July 21). The second battle of Bull Run is not mentioned; the battles fought near Chattanooga and on the Chickahominy, and the operations for and after the capture of Atlanta, are correctly spoken of under the respective titles, but, probably from caution, without a date; Chickamauga, mentioned under "Chattanooga," has no separate notice. Some of the historical remarks are clear evidences of the writer's patriotism. Under "Bazeilles" we read: "Ce malheureux bourg, théâtre d'une action sanglante, le 1er Septembre, 1870, entre les Français et les Prussiens, fut le lendemain mis au pillage et impitoyablement livré aux flammes par ces derniers, en ressentiment des pertes cruelles qu'ils y avaient éprouvées." The fact is correct, but the reason alleged is a French version. Under "Canada," this remark is attached to a statement about the early French settlers: "Si leurs successeurs avaient continué leur œuvre dans le même esprit, l'Amérique serait en très-grande partie française."

To carry out a detailed examination of a number of the more extensive articles—and to pick out one or two could hardly serve any critical purpose—would require much more time and space than we can devote to this work. Suffice it to say that our general impression is that no library of any pretension can afford to remain without it.

Camps in the Caribbees. The Adventures of a Naturalist in the Lesser Antilles. Illustrated. By Fred. A. Ober. (Boston: Lee & Shepard. 1880. 8vo, pp. 366.)—This narrative of experiences in Guadeloupe, Martinique, Dominica, St. Vincent, Grenada, and the Grenadines, conveys in a popular manner a good deal of information on various branches of natural history. During a year and a half the author, in the field, in camp, or in the huts of the natives, armed with note-book and camera, gathered only such items as in his judgment would have a general interest. Though not at all exhaustive in the topics upon which he touches, he has succeeded in making an interesting work. The distances travelled were short; no hostile men and few or no ferocious beasts were met with; the country traversed is one in which an enthusiastic lover of nature revels in diversity. Mingled with the stories of adventure are descriptions of scenery and comprehensive notes on the plants, the birds, and the Caribs. Some space is devoted to early history and antiquities, and an enjoyable chapter to the home of the Empress Josephine and its surroundings. The primary object of the expedition being a collection of birds, these receive a great deal of well-bestowed attention.

The scientific pretensions of the work are most open to criticism. It is doubtful whether many will agree with our author in regard to the mysterious current spoken of in the opening chapter:

"Along the entire group of the Caribbee Isles, sweeping their western shores, flows a strange, mysterious current. Not subject, apparently, to the laws that govern the winds and tides of this region, it for years puzzled and baffled the ablest navigators and oldest sailors." "It was not known until a comparatively recent period that it was the outflow of a mighty river—no less than the great Orinoco—that caused all this disturbance of waters, and that dependent upon its different stages was the force of this river through the sea."

The great equatorial current, off the northeast coast of South America, flowing into the Caribbean Sea and making the Gulf Stream possible, carries the waters of the Orinoco in this direction, but their presence so many hundred miles to the northward and westward of the mouth of the river could only be a consequence, not a cause, of the Gulf Stream. The story of the discovery of the boiling lake in 1875, p. 66, needs investigation. A map of Dominica, published many years earlier, now in possession of Mr. Wm. Stedman, of Roseau, has a nameless lake in the position assigned to the recent discovery. In the account of the Hercules beetle, on page 158, the writer adopts an idea prevalent among the natives. It is said that the beetle seizes small branches between its horns (so called), and whirls around to cut them off. As the branch is of no imaginable use to the creature, and only the males possess the horns, the supposition that it is done to call the female is added by the author. The lower side of the upper horn is covered by a close growth of fine hairs, which, as Fabricius pointed out very early in the history of the insect, could not be retained if the limb were held between the horns tightly enough to cut it. The figure of this beetle will not deceive entomologists; it would have misled no one if the feet and claws had been supplied from the perfect specimens or good figures so easily obtained. There is no notice of its mutilated condition in the text. The following quotation occurs on page 159: "Further search among the leaves revealed several centipedes, which were more to be dreaded than the beetles, as their bites will throw one into a fever." This is the common belief among the negroes. Experiments in parts where fevers are excessively common have not verified it. Other instances might be cited which tend to show a degree of credulity and of recklessness in statement not always to be harmonized with the demands of science. The appendix contains a list of the birds collected by Mr. Ober, with descriptions of the new species.

Catharine and Craufurd Tait: A Memoir. Edited by the Rev. Wm. Benham. (London and New York: Macmillan & Co. 1879.)—This memoir of the wife and son of Archbishop Tait lets the reader into the heart of an English home in which the religious duties and emotions made the central and absorbing fact of life; it has been printed, indeed, in the belief "that the lessons which these memorials are likely, under God's blessing, to call forth are too important for the Church of God to allow them to lie buried within the sanctity of home," and certainly no lesser motive would excuse such a revelation of the most sacred joys and sorrows of private life. Mrs. Tait seems to have had from childhood a devoutly religious temperament. She was bred in the evangelical faith, but in early life she received strong High-Church notions from Edward Fortescue, her brother-in-law, whose influence she believed would have made her a nun, had she not married Mr. Tait. The character of this influence may be judged of by the account of how she passed Good Friday in Mr. Fortescue's house:

"The day had been spent in fasting and prayer, in the solemn endeavor to realize the scenes of that terrible day in Jerusalem; and when the hours of darkness came, as they were alone in their rooms, there was an awful silence, broken at intervals by his deep voice through their open doors, pronouncing the words of the dying Saviour on the cross, this lasting through the three hours of agony He hung upon it."

It is not strange that about this time "her higher life was quickened by a message which seemed to have come direct from the source of it, when, on some occasion of keen enjoyment of the earthly pleasures surrounding her, she seemed to hear the words, 'make for the higher!'" From these vague and morbid emotions she was withdrawn by her marriage with Mr. Tait, then head-master of Rugby, and her duties in her new and busy station called out her surprising practical ability, which was as marked a characteristic as her devotion.

After four years at Rugby—the happiest of their life—they removed to the Deanery of Carlisle, where they met with their great sorrow, the loss of five little daughters within five weeks. The narrative of this event is written by Mrs. Tait herself, to be published after her death, in the hope that it might "speak a word of help and comfort to those upon

whom a similar burden is laid." This is the most remarkable portion of the book; it is acutely painful in itself and heartrending in its minute delineation of every detail of suffering and shade of sorrow, while the whole is pervaded by a trustful and almost fervent religious resignation. Fortunately it is seldom that such a story is laid bare; the pain it gives must exceed any comfort it can afford, and the experience itself is too sacred ever to be disclosed. The narrative throws light on the education which was thought good for these children; it is not unfair to let the reader judge by this sentence about one of them not yet nine years old: "Almost always in health, this dear girl would find and choose hymns about death; from her earliest babyhood death had seemed to my May a great and blessed reality."

Shortly after the children's death Mr. Tait was made Bishop of London and afterwards Archbishop of Canterbury. His wife, in the new duties she was thus called on to discharge, won all hearts; her business as well as her social abilities found full occupation, and her time was largely spent among the charitable institutions, particularly those which had the care of children in view. St. Peter's Orphanage was wholly her work. In these later years are introduced the memorials of Craufurd Tait, the story of whose boyhood and youth relieves the sombre religiosity of the book, and agreeably corrects the notion that home-life in this family was only a succession of prayers, Sunday-school lessons, hymns, religious books and services. He was amiable, attractive, and full of spirits, given to sports as much as to books; and in his manhood was modest, diligent, and devoted to his work in the Church. His death, soon after his visit to the United States, which is still pleasantly remembered by those who met him, was the last trial left for his mother, who survived it only six months. Throughout the book are attractive glimpses of English life, but the interest is made to centre in the exhibition of Christian character here given—examples which will appeal forcibly to those who sympathize with the emotions and share the conviction in which the mother and her son had their real life.

Shakespeare's Morals: Suggestive Selections, with brief collateral readings and Scriptural references. Edited by Arthur Gilman, M.A. (New York: Dodd, Mead & Co. 1880.)—Mr. Gilman has the authority of Coleridge for holding that Shakspere especially lends himself to the editor of "beauties and selections," and it is apparently to show how just is the eulogy of Coleridge and others of Shakspere's morality that he has made this book. It is well made, and evinces a great deal of thoughtful diligence wholly superior to mere ingenuity, but we cannot help thinking that the editor has been at considerable pains to do something not at all needful to be done. He says himself, in his preface, that "It was not the intention of Shakespeare in his literary work to elaborate a system of morals, or to give his hearers maxims for their guidance in life," and, little as can be certainly said of any of Shakspere's "intentions," this seems an entirely safe thing to say. Nevertheless, if it were anywhere maintained that Shakspere's morality could not be favorably "contrasted with that of the writers of his own or the succeeding age, or those of the present day," as Coleridge says, or even if it was not felt by every one to appear in his "literary work" as a distinct element of it, it would be worth while to show the contrary. But the fact is quite otherwise, and there is really no serious reason for turning Shakspere into a "hoard of maxims." To do this is really to pervert Shakspere. The question is not as to the fact of Shakspere's morality, but how morality appears in Shakspere. He had, as Carlyle says, "penetrated into innumerable things; far into Nature" and "far into man's workings with Nature," and his morality is so distinct an element of his work because "moral ideas are really so main a part of human life," to quote a recent utterance concerning Wordsworth. How different this is from presenting a series of didactic maxims, such as the Book of Proverbs presents, or even the Sermon on the Mount, it is not at all difficult to see. Whether it is better from a moral point of view, is not a consideration; to confound the two is simply a perversion which must jar on any nice literary sense; and it must in the end lead to all manner of intricate and whimsical perversion, of which it is no excuse at all to plead the best intentions. It does so lead with Mr. Gilman. He divides his book into sections, each labelled with some moral maxim or statement of doctrine, such as "Character not to be judged by Appearances," "Hereditary Sin," "The Atonement," "The Guilt and Folly of Suicide." Under each of these he quotes one or more passages from Shakspere, from the Bible, Sophocles, the late Dr. Bushnell, and others, as he chances to think of a literary analogue. The result is grotesque in one view, certainly, but our criticism is that it is misleading. Under "Hereditary Sin," for example, we have (page 22) from "Timon of Athens":

> "There's nothing level in our cursed natures
> But direct villany."

Under "Character not to be judged by Appearances" (page 29) is quoted this from "The Winter's Tale":

> "The self-same sun that shines upon his court
> Hides not his visage from our cottage, but
> Looks on alike";

and from the Bible, "He maketh his sun to rise on the evil and on the good," etc. Under "The Guilt and Folly of Suicide" (page 196) we have *Hamlet's* soliloquy. Who does not see here that *Timon's* fierce invective does not involve any belief about the doctrine of hereditary sin; that the passage from Matthew has a wholly different meaning from that of *Perdita's* words; and that *Hamlet's* bitter "Thus conscience does make cowards of us all" is not an expression of either the guilt or folly of self-slaughter? And these random instances might be multiplied by the dozen. Taken together, moreover, they leave a total impression of the way in which moral ideas appear in Shakspere that is quite as false as these individual instances, and there is less protection against this because it is not palpable. It is, of course, not only in quality of thought that Shakspere differs from the author of "The Proverbial Philosophy"; and its indirect implication that the contrary is true forms the main demerit of Mr. Gilman's book, and makes it one of the last which we would put into the hands of the student of Shakspere, who, reading Shakspere by its light, would, we are convinced, read him quite amiss. The importance of noticing such books at any length is obviously in direct proportion to the importance of not reading Shakspere amiss, whatever views it is best to entertain about original sin and the guilt of suicide.

Some Account of the Bills of Credit or Paper Money of Rhode Island, 1710–1786. By Elisha R. Potter and Sidney S. Rider. With twenty illustrations. Rhode Island Historical Tracts, No. 8. (Providence: Sidney S. Rider. 1880.)—Mr. Rider has rewritten Potter's history of the Rhode Island paper money into a very handsome volume, with curious facsimiles, and, in one case, an actual specimen of the colonial issues. The work has gained very much in clearness of form and statement, and the additions made by Mr. Rider are of real importance. The antiquarian interest seems to predominate over the economic interest in the book, so that the casual reader would fail to derive the instruction which the history really carries with it in regard to paper issues. It is safe to say that there is no variety of form or device for the issue of paper money which was not tried in the colonies. Rhode Island, especially, subjected the notion of "banks" to a full and final experiment. The "banks" were masses of paper notes printed and issued by the colonial government, and loaned on the security of mortgages. This device, which finds advocates over and over again in every generation, was thoroughly tested here in the colonial days. It would be a great service to the science of currency, supposing that the material exists, if some one of the investigators would give us the history of the accounts of these banks—what portion of the interest was never paid (no security was given for the interest), what portion of the principal was lost, how many suits the state had to prosecute against delinquents and how the suits resulted, how many debtors were not found, etc. It is known in general that the results of the experiment under all these heads were most unfortunate. Especially did the plan fail in respect to so much "redemption" as it provided for. It was assumed that when the loans were repaid to the state they would be paid in the notes, which would thereby be withdrawn and cancelled. If this plan had proved practicable the people would have operated upon themselves, from period to period, voluntary expansions and contractions of the currency. Of course they never did this, but, when the time for payment and contraction came, they clamored for further issues and further depreciation. Thus each bank made another one more necessary, and the debtor interest became larger and more vitally interested in the system.

Nine of these "banks" were issued before the Revolution. The "tenor" of the notes was varied so that different species of them were afloat, having different ratings. It is worth noticing that in one case, where a sum was provided for retiring certain counterfeits, these were worth twice as much as genuine notes. The whole history shows that the "bank" scheme is a mischievous delusion, that the paper system was a clog on the colony, and that, when the English Government forbade any further issues of bills of credit, none of the terrible consequences which had been anticipated came to pass.

Methodism: Old and New. With Sketches of some of its early Preachers. By J. R. Flanigen. (Philadelphia: J. B. Lippincott & Co.

1880.)—This book is an amplification of a number of newspaper articles the original purpose of which was much slighter, but whose reception persuaded the author to continue and expand them into what he trusts, with some reason, is "such an interesting and running synopsis of the history of Methodism as will prove entertaining as well as instructive to readers of all denominations." It is for its entertainment that it will be mainly esteemed, perhaps. As a history of Methodism its value is not of great importance; it does not succeed in giving any clear idea of the rise or distinctive tenets of Methodism, though it seems to attempt this; but Methodists themselves will, of course, find this no blemish, and it is for Methodists that it appears to have been written. It is also almost altogether devoted to the history of Methodism in Philadelphia, though it contains a sketch of Wesley's life, and allusions to the progress of the cause in England and in other parts of this country. That history, it may strike the wholly "unsectarian" reader, seems to have been varied by an uncommon number of painful controversies, schisms, and heart-burnings, but his minute record of these is an excellent witness of the historian's impartiality and his confidence in the essential nobility of his theme. Mr. Flanigen enjoyed the acquaintance of many of the "old-time" preachers of his denomination in Philadelphia, however, and his book contains, as its most interesting material, numerous sketches of these worthies, many of whom must have been decidedly picturesque figures; and to the picturesque side of them he has the merit of not being blind. Among these were Richard Allen, first bishop of "The African Methodist Episcopal Church," at one time a slave, and, though "learned only from nature," nevertheless "rather an extraordinary man for his times"; Bishop Asbury, to whom American Methodism owes more than to any other man, we are told; Dr. Durbin, who "reminded one constantly of Henry Clay," though they were utterly opposed in manner and style, and resembled each other only, so far as is mentioned, in their power over audiences; William Barns, familiarly known as "Billy Barns"; J. N. Maffitt, Joseph Rusling, Lorenzo Dow and his wife Peggy, "old father Gruber," "Pappy" Neal, and many others. Next, of course, to Dow the Rev. Billy Barns was possibly the most eccentric of this array. Mr. Flanigen has several amusing anecdotes to tell of him. His wife used to restrain his eloquence on occasion by catching his eye and giving him a warning look; once in the midst of a fervid sermon he broke out: "Oh! you may look, and you may look, Mrs. Barns, but the tri-colored flag of Methodism, the Bible, the Hymn-Book, and the Discipline, shall be carried to the front in triumph if it costs William Barns his life." He wore a wig and was accordingly reproved for ostentation. "Preaching one day one of his fiery sermons, he raised his hand over his head, exclaiming, 'Here is William Barns with his wig,' and suiting the action to the word, and grasping the wisp of hair and holding it aloft, he continued, 'and here is William Barnes without his wig. How do you like him best?'" The effect was, we are assured, "not only electric but to some extent ludicrous." Mr. Barns's style was of an oriental character, and as it is probably typical of much of the preaching of the day, we may reproduce part of a single sentence quoted by Mr. Flanigen, as follows: "the blue vault of heaven, where we shall pluck the stars as flowers from a garden, and, dressed in garments of dazzling light, we shall drink from cups of gold circled with diamonds and rubies, from the pure and everlasting springs that circle and flow around and over Jehovah's starry throne." Mr. Maffitt was also "sensational in the highest degree," though the author shares the distrust of many persons, he says, who "refused to believe that he had ever truly experienced religion." He was, however, of no great account, and is described as a mere "pyrotechnic exhalation." A preacher of a different sort was the Rev. "Josie" Rusling; he allowed "a very respectable man," who was, nevertheless, "perhaps just enough unhinged in mind to have become devilish," to shout out "That is a lie," upon three successive Sabbaths, at some point in the sermon, without losing his dignity or vouchsafing a retort. The occurrence, by the way, led ultimately to a long lawsuit. Lorenzo Dow is described at length by Mr. Flanigen, who seems not without a dash of humor occasionally, though, for the most part, he has the faculty under good control; he says of Dow, for example: "He wore his hair long like a woman, except that he didn't put it up." We also get stray anecdotical allusions to preachers of other denominations, as to the Rev. "Jimmie" Patterson, a Presbyterian divine, who "preached that there were children in hell only a week old," which the author terms "egregious doctrine," and a nameless preacher of the same persuasion (his residence is, however, given) whose rich congregation have tried to get rid of him twice by the heroic means of reducing his salary $1,000 each time; but he still "sticks"—a standing argument, Mr. Flanigen thinks, of the wisdom of itineracy, under which "this brother would, doubtless, be doing effective work on a circuit where the people might like him well enough." Here we seem to lose sight of Mr. Flanigen's humorous faculty entirely, but we have said enough to show that he has made a moderately amusing book.

Four Months in a Sneak-Box. By Nathaniel H. Bishop. (Boston: Lee & Shepard. 1879. 12mo, pp. xii. 322.)—The first of Mr. Bishop's boat-voyages from Northern waters to the Gulf of Mexico will be remembered (see the *Nation*, No. 673) as having been made in a paper canoe, and by the route of the so-called "inner Atlantic coast." The present volume describes the second of these long voyages, made in 1875–1876, for the most part upon the Ohio and the Mississippi Rivers, and with a small duck-boat, or "sneak-box," instead of a canoe as his vehicle. This craft had the advantage of sufficient strength to serve as a bed without risk of injuring it, which cannot be said of a wooden or paper canoe; being three or four times as heavy, it had the further advantage, as we consider it, that the voyager could not strap it upon his back and carry it across portages; weighing two hundred pounds, it could be "conveniently transported from one stream to another in an ordinary wagon." It was, Mr. Bishop tells us, "a very home-like boat, which, though only twelve feet long, four feet wide, and thirteen inches deep, was strong, stiff, dry, and safe, a craft that could be sailed or rowed, as wind, weather, or inclination might dictate." The interest of this book, as of the earlier one, is mainly in the notes of the rough types of character which Mr. Bishop met, notably of the floating population of the Mississippi River. There is abundant incident, too, often of a more or less peculiar sort. The maps which accompany the volume, though on a small scale, claim the merit of accuracy, having been engraved at the Bureau of the Coast Survey. Mr. Bishop has, indeed, a taste for accurate geography; but he speaks perhaps too confidently sometimes, as where he says (p. 119) that "the Missouri is the longest river in the world, and the Mississippi is only a branch of it." Even allowing his estimate for that river's length of "4,363 miles, without counting some of its highest sources," still the measurements of the Nile and the Yang-tse-kiang remain to be completed before this question can be considered as settled. For the rest, Mr. Bishop's book is written in a direct and readable style, and makes a closely-matched companion volume to his 'Voyage of the Paper Canoe.'

A Hand-Book of Double Stars. With a catalogue of 1,200 double stars and extensive lists of measures. With additional notes bringing the measures up to 1879. For the use of Amateurs. By Edward Crossley, F.R.A.S., Joseph Gledhill, F.R.A.S., and James M. Wilson, M.A., F.R.A.S. (London and New York: Macmillan. 1879. Pp. 464. Illustrated.)—This work on double stars by three distinguished amateur astronomers of England deserves especial notice and recommendation to the amateur observers of America. We have in this country scores of private observatories eminently well fitted to do work of value, and owned by gentlemen who have sufficient leisure to undertake really serious labor. The most common complaint from amateurs is that they do not know to what use to put their instruments, nor *exactly* how to spend their limited time to the best advantage. To those of them who care to take up the subject of double stars this book answers all questions. With it they can see what stars to observe, how to observe them, and how to draw useful and interesting conclusions from observation. As a book "for the use of amateurs" it is just what was needed, and if properly read and studied any intelligent owner of a telescope can learn precisely how he can obtain a solid return for his astronomical investment.

Although it is chiefly to amateurs that we desire to commend the work, it deserves notice for certain special points which will be of value to the professional astronomer. Its catalogue of twelve hundred stars makes a useful observing list; the notes to this contain a synoptic history of each star; the chapters on the computation of orbits of binary stars by Dr. Doberck and Mr. Wilson are of immediate practical value; the bibliography of double stars is very full and valuable, and the various topics are treated from the view-points of actual observers who are familiar with the practical difficulties.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Simpson (F. P.), Select Poems of Catullus	(Macmillan & Co.)	
Swinton (W.), New Word-Analysis	(Ivison, Blakeman & Co.)

READY SATURDAY:

Mrs. Brassey's Sunshine and Storm in the East.

With 114 illustrations and two maps. Author's Edition. 8vo, $3 50.

"At least as diverting as her earlier voyage, if not even more so. . . . The most lively and entertaining book we have read for many months."—*London Saturday Review.*

Cox's Popular Romances of the Middle Ages.

Large 12mo, $2 25.

ESCOTT'S ENGLAND: Her People, Polity, and Pursuits. By T. H. S. Escott. 8vo, uniform with Wallace's 'Russia.'

"Mr. Escott's large and exhaustive treatise on England. . . . A most useful work. . . . A massive achievement, and one which is likely to do excellent service."—*Saturday Review.*

HENRY HOLT & CO., NEW YORK.

THE

ORIGIN AND DEVELOPMENT

OF

Local Self-Government

IN

ENGLAND AND THE UNITED STATES.

AN ADDRESS BY

JAMES M. BUGBEE.

8vo, paper, 40 pp., 25 cents.

BOSTON:

A. WILLIAMS & CO., PUBLISHERS,

283 Washington Street.

1880.

SECOND EDITION NOW READY.

"Hamlet Revamped."

A TRAVESTY WITHOUT A PUN.

By the author of the Travesty, 'Romeo and Juliet.'

Price 50 cents.

The first edition was exhausted on the day of publication.

G. I. JONES & CO., Publishers,

St. Louis, Mo.

NEW BOOKS.

THE MANLINESS OF CHRIST.

By Thomas Hughes, author of 'Tom Brown at Rugby,' etc. 16mo, $1.

A strong, frank, noble book, bringing forth prominently the incidents, circumstances, and central facts in the life of Christ, to prove that instead of being good in a weak and spiritless way, he had in superlative degree the bravest and highest manliness.

PROBLEMS OF LIFE AND MIND.

Third Series. By George H. Lewes. 8vo, $3.

This volume concludes the great work on 'Problems of Life and Mind' which Mr. Lewes planned but did not live to finish. This book was substantially completed before his death, and has been prepared for publication by thoroughly competent persons, working in co-operation with George Eliot, who is hardly less eminent in the domain of philosophy than in fiction.

PUBLIC HEALTH.

Vol. IV. Reports and Papers presented at the meetings of the American Public Health Association for 1876 and 1877. 8vo, $5.

This book comprises a large variety of papers on important sanitary topics, by writers of distinction and experience.

**** For sale by Booksellers. Sent, post-paid, on receipt of price, by the publishers,

HOUGHTON, OSGOOD & CO., BOSTON.

21 Astor Place, New York.

THE PORTABLE BOOKCASE (Patented), Eastlake designs, handsome, permanent, cheap; made of Black Walnut and Pine; in two sizes. Send for descriptive circular. LOCKWOOD, BROOKS & CO., Sole Makers, 380 Washington Street, head of Franklin.

Higginson's Short Studies

OF

American Authors.

By T. W. HIGGINSON, author of 'Young Folks' History of the United States,' 'Young Folks' Book of American Explorers,' 'Malbone,' 'Outdoor Papers,' etc. Cloth, 75 cents.

EXCERPTS FROM THE PRESS.

"In this small, wafer-like volume Mr. Thos. Wentworth Higginson has managed to condense a vast amount of valuable literary criticism. His studies, though brief, are characterized by great discrimination and force, and marked by an unusual delicacy."—*New York Graphic.*

"The sketch on Hawthorne is exquisite in its way. It shows a true appreciation of the man, and a rare insight both of his mind and his works. Mr. W. D. Howells, of the *Atlantic Monthly*, has never received a more just and appreciative notice than Mr. Higginson has given him. The paper on Henry James, Jr., is the best piece of criticism in the book, and contains a number of delicate and admirable touches."—*New York Express.*

"The volume is to be commended not only for its style but for a certain elevation of thought which Col. Higginson seems never to lose."—*New York Christian Union.*

"They form a series of pictures beautiful in outline and eminently instructive as character-studies."—*Providence Journal.*

"These little essays are fresh, crisp, incisive."—*New England Methodist.*

"A comprehensive literary history completed in this style would be a work of genius as well as a creation of art. But if the exquisite mosaics which are the fruit of minute, instinctive, and almost unconscious touches can be made little use of in great architectural designs, they have a beauty of their own which is none the less delightful and precious."—*New York Tribune.*

Sold by all booksellers, and sent by mail, post-paid, on receipt of price. Catalogues mailed free.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 5, 1880.

The Week.

THE Pennsylvania State Convention met yesterday, too late for us to learn anything of its proceedings before going to press. The accounts of what its action is to be are at this writing extremely contradictory. None of the county delegates seem to have been "instructed" for Grant, and many have been "instructed" against him. Some time ago it was asserted that Mr. Cameron had made all the arrangements for the Convention's sending an instructed Grant delegation to Chicago; then it was said that, being a knowing man, and mindful of the uncertainties of politics, he was going to carry the delegation to Chicago unpledged, and then throw its united vote for the winning man, be he who he might; so that in all events Mr. Cameron would be on the safe side and get what he wanted. Now, it is said, he has changed his mind again, and insists on Grant instructions, and says the opposition to a third term is "all bosh." The question will be decided, however, before this reaches our readers.

If the Pennsylvania delegation should be instructed for Grant it would undoubtedly greatly increase the probability of his nomination, if it did not make it certain, as the Southern delegations will support his nomination *en masse* and with loud yells; and there is little doubt that the New York Convention is being at this moment carefully "fixed" with a like end in view. All accounts from Albany agree that there never has been a more complete devotion of the machinery of the State government, both executive and legislative, to the business of electioneering, of course under Mr. Conkling's superintendence, than exists at this moment. Mr. Cornell is doing the work given him to do with energy and ability, and the henchmen are all helping him. Of this, as we have before remarked, those who voted for Mr. Cornell have no right to complain, as he is stern and implacable as ever towards the Brigadiers and the Mississippi murderers. But there are still five months before the meeting of the Republican Presidential Convention, and the decline which has overtaken the Grant boom during the last two shows how easy it will be with proper methods to finish it by June next, and put his nomination out of the question. From every side the news comes that the movement has collapsed under discussion, in the eyes of the more reflective part of the community. Moreover, it has been greatly weakened in the eyes of those who are not reflective, but cry for "a strong man" whenever they feel uncomfortable, by the cessation of exciting debates in Congress and of news of "outrages" from the South. This is in a large degree due to the fact that Blaine and the other Republican candidates have perceived that stories of murders and "stirring up Ben Hill" all accrue to Grant's benefit. A certain amount of horror of the South was necessary to keep the party passions hot, but when it began to indicate a certain man for the Presidency they felt that there was enough of it.

The Independent Republicans, both in Pennsylvania and New York, have organized and begun their operations with the view of preventing the use of the Convention either for the Strong Man, the Machinist, or the Bad Man. The Pennsylvanians have prepared an address to their own State Convention, with a strong body of influential signers, in which they ask the delegates to take warning by the last election in New York; to remember that a third-term candidate, a Machine candidate, or a corruption candidate (Grant, Conkling, and Blaine) cannot get the support of a large number of Republicans under any circumstances, and to be wise in time by presenting the party with a candidate to whom there will be no organized opposition within the party. The New-Yorkers have passed resolutions denouncing the nomination of Grant on the ground that a third term would "bring back the abuses which disgraced his Administration and disintegrated the Republican party already"; and that of Blaine on the ground that he is "the chief representative of those abuses whose objectionable political methods, demoralizing the public conscience, made possible in his own State the wilful outrages of the Fusionists." The public ought to be reminded just now that Mr. Blaine enjoys the miserable distinction of being the one Speaker of a great legislative assembly who, in all parliamentary history, has been convicted, on the evidence of his own letter pitifully claiming his reward, of having ruled in the chair in favor of speculators, with the object of being considered a partner in their venture. Yet this is only a small part of what he would have to face in his canvass.

Mr. Parnell seems to be getting into very troubled water as he continues his oratory. He said when he first came over that the Queen of England was the only sovereign in Europe who contributed nothing to the relief of Irish distress during the famine of 1847. This was promptly declared to be a falsehood by a cable despatch from Lord Randolph Churchill, the Duke of Marlborough's son, who gave at the same time the amounts contributed by the Queen and other members of the royal family—$30,000 in all. Mr. Parnell now says that what the Queen did was to prevent the Sultan of Turkey from giving more than she herself gave. He has since stated that the fund raised by the Duchess of Marlborough for the relief of Irish distress was not applied to the relief of tenants who did not pay their rent. This has brought another despatch from the same quarter, pronouncing it another falsehood; and it is also alleged that it is *his* organization which is guilty of intolerance in refusing relief to those who *do* pay their rent. In fact, they are "making it hot under the old flag" for Mr. Parnell. He replies to this last contradiction by alleging that one of Lord Randolph Churchill's ancestors was the first Duke of Marlborough, who rose through the dishonor of his sister, and another the "notorious Sarah Jennings," the mistress of the Duke of York, and that therefore people with better ancestors must not mind what he says about the distribution of the fund. Mr. Parnell also adds, apparently in corroboration of the above, that he has "the best and most recent information from the distressed districts," and his charge is "absolutely true." He has also got into a controversy with the *Herald* because that paper does not report his speeches; but it defends itself very successfully by alleging that he delivers only one speech, and that it always reports any changes he makes in it. This savage quarrelling over a work of charity is, however, a repulsive spectacle to all decent people on both sides of the water, and the only substantial result it can have is to diminish the amount available for the relief of distress both among those who do and those who do not pay their rent, and to disgust the civilized world with Irish patriotism.

Mr. Thomas C. Platt, a very active Conklingite politician of this State, was a candidate for a seat in President Hayes's Cabinet, as a representative of the Conklingite interest, but his claims were not recognized. He was then chairman of the next State Convention at Saratoga, in which he denounced the Administration in unmeasured terms and thoroughly exposed the baseness and hypocrisy of the civil-service reformers, Senator Conkling applauding with conspicuous vigor. This was followed by the Senator's own exposure of Mr. George William Curtis. It was expected that when Mr. Cornell came into power some place of great dignity and emolument would be found for Mr. Platt, whose powers seemed to call for some large and thoroughly vacant field. The public has been, therefore, much surprised to find that he is consigned to the humble rôle of a Commissioner of Quarantine. What this means it is hard to say; but it is right to add that the place is one which the public would, if left to itself, have selected for him. The standards of capacity in use

in the inner circles of Conklingism are not, however, those of the outside world.

On Thursday last, Commissioner Hayt, of the Indian Bureau, was summarily removed from office by Mr. Schurz, without being allowed to resign. This took place in the midst of an investigation which the Commissioner was undergoing at the hands of the Board of Indian Commissioners, in consequence of charges preferred by one of its members—General Clinton B. Fisk. It is, however, alleged that Mr. Schurz's action was based not on the revelations of the enquiry, but on a clear discovery by the Secretary of concealment on the part of his subordinate amounting to official deception. For the immediate interest of the service, therefore, it is of little consequence whether Hayt is found guilty of improper conduct before he was made Commissioner, or whether during his control of the Bureau he has been neglectful of public affairs and careful of his own, arbitrary and unjust towards the employees of the Bureau, oppressive towards its creditors and responsible for starving certain tribes; or, finally, whether he has shielded from prosecution a corrupt Indian agent named Hart, who obtained a silver-mine on the border of the San Carlos (Arizona) reservation, induced an Indian inspector named Hammond (who had been sent to investigate him) to survey the mine out of the reservation, and gave him authority to sell it at the East, namely, to a son of the Commissioner, under an assumed name. What the affair shows is the tendency of the Indian management, in spite of every precaution and the vigilance of a humane and rigidly upright Secretary of the Interior, to become rotten at the crown as well as in the extremities; and what it enforces is the urgent necessity of beginning and pursuing a policy which shall take from the Indians the last vestige of their dependence on the national Government.

The present condition of the Navy is in a general way appreciated by probably every newspaper reader, but few persons, perhaps, will be prepared for the particularly unpleasant exposure of it made by Mr. Harris to the House last Friday, in presenting a bill to provide for a permanent construction fund. The report sets forth that small as the number of our naval vessels is, compared with the force of European powers, it is "infinitely smaller" in real fighting power; that the five "first-rate" vessels we have are now to be classed as obsolete and as "non-combatants"; that of the twenty-seven "second-rates" three are "unfinished on the stocks, rotten, and worthless," seven are probably not worth repairing, and only nine are in condition for service; that of twenty-nine third-rate steamers six should be broken up, and only fifteen are now fit for service; that the six fourth-rate steamers are "of really no account as vessels of war"; that of the twenty-four iron-clads four are "rotten and worthless," a number of them unfinished, and the fourteen that are serviceable are all "fourth-rates," and carry only two guns each—smooth-bores of five-inch calibre. "There is not," says the report, "a single rifled gun on our iron-clad fleet afloat." This state of affairs is only less ridiculous than it is melancholy, of course, and can be defended only by those who see no necessity for even the satirical semblance of a navy that we possess. Accordingly, the bill looking to a moderate and gradual reform which has been introduced by Mr. Harris ought to receive considerable attention.

Congressional proceedings during the week have been very dull. In both branches a day was given up to speeches on the late Senator Chandler, Mr. Blaine being prominent with a "cordial eulogy." The Senate has appointed a special committee of nine to take charge of the subject of an Atlantic-Pacific canal, and receive all documents relating thereto; and Mr. Thurman has introduced, with the approval of a majority of the Judiciary Committee, a bill reviving the Court of Commissioners of the *Alabama* Claims, in the terms of the act of June 23, 1874, but repealing so much of section 12 as excludes the claims of insurance companies and insurers. The House has passed a bill declaring all public roads and highways to be post-routes; a measure which Mr. Conger defended as being in the interest of economy, but which is supposed to have originated in a desire to shield Assistant-Postmaster Grady from the consequences of his practice of establishing service on post-routes as soon as established by law, without reference to appropriations for the support of it.

Several wild bills for the protection against suit for infringement of parties who buy patented inventions for their own use have been introduced in both Houses of Congress, and the New York *Times* has commended them on the ground that such parties, having paid the "market value" of the patented article, have not intended to defraud the patentee and are innocent purchasers. But infringing manufacturers pay nothing to the patentee, and hence can and generally do undersell the honest manufacturer who pays for the use of the invention. Patents are property, and the "market value" of stolen property is always less than that of property honestly acquired. The better remedy for what is called the "oppression of patents" would be an improvement in the method of granting patents. If Congress would appropriate for the use of the Patent Office a portion of the quarter of a million surplus income of the office last year, and provide for a larger examining corps and higher salaries, so that a larger number of able men could be permanently retained in the office, there would be a more thorough scrutiny and greater strictness in the allowance of applications for patents than is now physically possible. Congress ought at the same time to provide for more judges in our United States courts. The holding of patent cases in some instances two or three years without decision has been a substantial denial of justice both to the patentee and to the public, which apparently has been unavoidable because the judges were overworked.

The increasing resort to arbitration on the part of the railroads in settling their private contentions is furnishing a wholesome example to the community at large. Especially might certain States, whose character has been sadly damaged by a wanton repudiation of their obligations, profit by the recent submission to arbitration of the difference between the Cincinnati, Hamilton & Dayton Railroad Company and the holders (in part or wholly English) of bonds of the Cincinnati, Hamilton & Indianapolis Railroad, on which the interest was guaranteed by the former. This interest was actually paid till within two years, when the Company pleaded poverty, ceased its payments, and called upon the bondholders to scale down the bonds one-half and take stock in their place, or consent to a reduction of the interest. No agreement was reached, although the English holders offered to compromise on five per cent. instead of seven hereafter, and to remit the interest on coupons past due. Finally, the two parties chose as their arbitrators Messrs. M. E. Ingalls and J. D. Cox, of Cincinnati, who united in adding Mr. C. F. Adams, jr., to their number, and the board thus formed, after a careful examination and consideration of all the circumstances, decided that the condition and prospects of the road were excellent and did not justify its continuing to break its faith with the bondholders, and adjudged the full payment of all coupons hereafter maturing, and the conversion of those past-due and unpaid into preferred stock of the Cincinnati, Hamilton & Indianapolis Railroad Company, with interest at seven per cent., and with a title to dividends under certain contingencies. This award affects bonds to the amount of $1,800,000.

The State of New Hampshire has brought a suit in the United States Supreme Court against the State of Louisiana to compel the payment of interest on certain consolidated bonds of the latter State, which it has virtually repudiated by a recent popular vote directing that the taxes heretofore levied to pay the interest should be applied to other purposes. The bonds were held originally by citizens of New Hampshire, but have been transferred to the State under a late act of the Legislature intended to provide persons cheated by State governments with a legal remedy through the intervention of their own State government, which can sue a State, as individuals cannot. We have discussed this question a good deal

in our columns of late, and trust the New Hampshire experiment may be successful and put a check on swindling by plébiscite, such as Louisiana has perpetrated. That we are to have a good deal of this sort of thing at the South, especially when the negro has made his peace with the rascally white element in the population, there is much reason to fear.

The imports of foreign goods at this port are becoming very large, the total value of those received last week having been $11,753,252, against $6,264,720 during the corresponding week in 1879 and $4,298,575 in 1878. This increase, of course, correspondingly swells the revenues of the Treasury, which for the month of January ran up to $12,307,104. The withdrawal of so much money from the loan market into the Treasury has fully sufficed to offset the return flow of currency from the South and West, and the result is that for two weeks the surplus reserve of the New York banks has been reduced. The value of exports is larger than a year ago, the respective amounts having been $23,337,520 for January, 1880, against $19,056,779 for January, 1879—an increase which hardly more than represents the present higher prices of exportable commodities. Except for the grain blockade, which is the result of speculation, the exports would undoubtedly have been very large, and it is not at all unlikely that the importations of gold would have been continued up to the present time. Without doubt, however, the country is on the road to a change in the foreign-trade balance, although this change may not be reached for several months, for the reason that Europe is again freely taking American securities of approved value. It is well to keep in mind the fact that when the foreign exchanges finally turn against us, and specie exports become necessary, gold will disappear, and all the beauties of the "dollar of the fathers" will be made apparent even to the dullest. At the Stock Exchange the main event was the sale of 50,000 shares of Central Pacific stock, amid great excitement, within fifteen minutes, the stock having been offered by a syndicate which bought it from C. P. Huntington, representing himself and the Central Pacific Co. Prices of stocks were influenced to a large extent by negotiations for a traffic arrangement between the Erie and the Lake Shore and Michigan Southern companies. The price of silver bullion declined in London to 52½*d.* to 52$\frac{9}{16}$*d.* per oz. At the close the bullion value of the "buzzard" dollar here was $0.8817.

General Boynton, who served with distinction during the war, and has since the war been a very able and useful Washington correspondent of the Cincinnati *Gazette*, has got into a somewhat ludicrous controversy with General Sherman. Boynton had written a book of severe criticism on Sherman's Memoirs, in which he accused him of much inaccuracy and injustice, and the General has never since entertained very kindly feelings towards him, either as a critic or a man, and on a recent occasion embodied his dissatisfaction with him in four propositions communicated to a reporter: (1) That everybody knew him to be a notorious slanderer; (2) that you could hire him to do anything for money; (3) that he was entirely without character, and (4) that for one thousand dollars ($1,000) he would slander his own mother. At the request of General Boynton, General Sherman transmitted to him also these propositions in writing. That they contain libellous matter there can, of course, be no doubt, and they constitute, it appears, an indictable offence under the laws of the District of Columbia. But General Boynton has too much respect for the office of General of the Army to drag its incumbent before the criminal court, so he has asked the Secretary of War to have him tried by court-martial for violation of the Eighty-third Article of War. We doubt much if the propositions will damage anybody but General Sherman himself, but if they damage General Boynton, the remedy is to be sought in the place appointed by law, the courts of the District. The notion that General Sherman, or any man who misconducts himself, is too good to appear there, is a strange one for a newspaper correspondent to produce, and it falls in a little too strongly with the late and growing tendency to create "exalted personages" in the shape of military men, who must not be judged by the ordinary rules either of law or morals.

The Railway Commission in England, which has now been in existence for ten years, and whose working furnishes a good deal of useful suggestion for legislation here, has just met with a check in the courts. The chief duty of the Commission is to see that the railroads furnish "reasonable facilities" for receiving, forwarding, and delivering freight, and that they make or give no undue or unreasonable preference or advantage in favor of any particular person, or place, or description of traffic, and receive and forward freight freely from other railroads, and make no difficulty about connecting with other lines. Under this power the Commissioners have recently ordered the Southeastern Railroad Company to enlarge and improve to a considerable extent their station at Hastings for the accommodation of passengers, and the Company took an appeal to the Queen's Bench, which has decided in their favor, two judges against one. The majority of the court held that if the Commissioners could order a railroad to erect "structural works," such as large, expensive stations, they might order it to lay a new track and do various other things which might need fresh capital for which the traffic would not pay, and which would thus cut off dividends completely. In other words, the Commissioners could only order companies to do what was within their "power and means" as measured by their capital earnings.

The British troubles in South Africa have taken a new form. The Transvaal Republic, inhabited by the Dutch Boers, has been formally annexed as a consequence of the war with Cetewayo and Sukukuni, neither of whom the Boers were able to hold in check. Now, they hate English rule and have twice fled from it into the wilderness, and they refuse to be annexed, though they are willing to join the South African Confederacy as an autonomous state under British supremacy. Sir Garnet Wolseley, however, whether under instructions from home or out of his own head does not appear, has declared the Transvaal a crown colony—or, in other words, a colony like Jamaica, governed directly by officials appointed in England, and without a legislature, or, in fact, any "home rule." To this the Boers declare they will not submit, and have held a convention lasting five days, at which stirring speeches were delivered and very strong resolutions passed. There was more or less talk of shedding the last drop of their blood in resistance, but it appears to be recognized by the Boers themselves that they are no longer very formidable as fighting men, whatever they may have been in their earlier days.

The resolutions declare that they do not wish to be and will not become the subjects of the Queen; call for the prompt meeting of the Volksraad, or Legislature; announce that they are willing to enter into the South African Confederation; that if their independent existence is not recognized before the 6th of April, they will in every way oppose a passive resistance to English rule; that they will destroy all writings, books, and documents in the English language they can lay hands on; withdraw their children from English schools; prohibit English speech in their homes; and refuse hospitality, assistance, and protection to Englishmen in their houses and on the road. Of course they will not pay taxes either. It is reported, too, that the hostility to annexation is growing stronger instead of weaker, and that it has made a certain impression on opinion in England. The only good reason for the annexation is that the Boers ill-treat the natives and make quarrels with them, and then are unable to protect themselves against them, and the only excuse for treating them as a crown colony is that they are disaffected to British rule. It is, however, against all the recent usages and principles of English colonial policy to seize and hold settlements of white men by mere right of conquest, and there can be little doubt that if the Boers keep their temper and maintain their passive resistance they will succeed finally in getting back at least their autonomy, if not from the present Tory Ministry, from the Liberal one which will probably succeed it.

THE UNITED STATES GOVERNMENT AND THE PANAMA CANAL.

THE visit of M. de Lesseps to Panama, and the renewed confidence with which he speaks of pushing his scheme of an interoceanic canal, in spite of his failure last August, have excited considerable feeling in Washington about the danger of permitting so vast an enterprise, in which we are vitally interested both politically and commercially, to be carried out by a company organized under the charter and laws of a European country. The "Monroe doctrine" has been once more brought forward by men of all parties, and even so calm and conservative a statesman as Senator Bayard warns the country that the canal must be "under the control of the Government of the United States. Our power may be questioned, but it will be maintained. Every counsel of wisdom, therefore, exhorts us to 'seize the day,' and in time of peace prepare for war, for it is the surest mode to avert it." These apprehensions derive much support from the history of the repeated attempts of both France and England to gain a firm foothold on the Isthmus. The French envoy at Washington has assured Mr. Evarts that the French Government has no connection whatever with M. de Lesseps's enterprise, nor does it intend to guarantee or protect it in any way. But nobody in this country ever supposed the present Government of France would unnecessarily incur the ill-will of the United States by avowedly espousing the canal scheme. M. Outrey goes too far, however, when he says that his Government will not guarantee or protect the proposed company; for, once organized under its laws, the French Government will owe it protection, and while we might trust that under the present régime the proposed company would not be permitted to abuse its position on the Isthmus, we cannot expect such a state of things to be permanent. A great power like ours, with two long coasts and with complex commercial interests on both oceans, is bound to see that these advantages are not put in peril of any kind. Moreover, the Government is now bound by treaties, as we shall presently show, to guarantee "efficaciously" the nationality and neutrality of the Isthmus to both Colombia and Nicaragua, and it is therefore incumbent on us to take in advance the steps proper to prevent that responsibility from becoming too costly and burdensome.

Once established on the Isthmus, the French company would practically own the weak country crossed by their canal. Colombia is rent by continual civil wars; her customs revenues are pledged to England for debt; and although she receives from the Panama Railroad a very heavy annual tax, she is invariably a debtor to the company. It would, therefore, be easy for the French at an opportune moment to make an issue with the local authorities; the home Government would be called upon to protect its subjects, and in such a case there is no reason to believe that it would not try to realize, if it could, the dream of French statesmen as to the rôle of France in countries of Latin origin. The intervention of Napoleon in Mexico in 1861 was based on the supposed necessity of protecting French subjects. In 1838 France, in order to obtain satisfaction for the reclamations of some of her subjects, made a blockade (and an unlawful blockade in international law) of Vera Cruz, and seized San Juan de Ulloa. In the same year she blockaded Buenos Ayres in order to obtain reparation for some complaints of Frenchmen against Rosas. In 1819 France tried to establish an empire in the La Plata provinces, at the head of which it was contemplated putting the Duc de Lucques, who was expected to marry a Portuguese-Brazilian princess. In 1858 Spain would have invaded Mexico, also on account of private claims, but for the firm attitude of Secretary Cass, who, on October 2, wrote to Mr. Dodge, in Madrid, that this Government would not suffer any protectorate or political influence of any European country in states of the American continent. Twenty years have not elapsed since so enlightened a statesman as the recently deceased Michel Chevalier wrote, referring to Mexico, that "the European interest is to oppose a barrier to the extension of the United States throughout the whole continent of North America." Louis Napoleon, while a prisoner at Ham, wrote in favor of an empire in Nicaragua for the same purpose for which he afterwards, as Emperor of the French, established Maximilian in Mexico. In all these cases the pretext of the proposed intervention was some kind of private reclamation.

The present *concessionnaire* of the Panama canal has made no attempt to disguise how little he is concerned with the vital interests of the people of this country in the canal. This is the way in which, according to his own *Bulletin du Canal Interocéanique*, he disposes of the opposition manifested here to his scheme:

"The opposition of the United States—if there is any opposition at all—is not serious. Its representatives came to the Paris Congress to submit themselves to the verdict of science and public opinion. And that verdict has been pronounced."

What that "congress" amounted to, and how it was packed with M. de Lesseps's friends, we have already shown in the *Nation* (No. 375, July 31, 1879). Since then it has been ascertained that Lieutenant Bonaparte-Wyse had actually in his pocket, for a month before the Congress was summoned, a concession for a canal in Panama, and that M. de Lesseps bought that concession of M. Wyse about two months later. It has also been ascertained that the much-talked-of exploration by MM. Wyse and Réclus of the proposed Panama route was carried on by Lieutenant Réclus and three engineers in precisely forty-five days, from March 5 to April 20, 1878. And now M. de Lesseps has come to Panama to decide most intricate points of engineering in less than a month, and in a few days will be, here and in Paris, assuring the world that everything in his scheme is feasible, and he cannot see why we are opposed to it.

However, this is a matter that rather concerns those who may be induced to lend him their money. Whether this canal be built or not, it is important for us to consider in time our position on the Isthmus in relation to the whole question of an interoceanic highway, with reference to which the Government of the United States has concluded treaties with Nicaragua, Colombia, and Great Britain. The treaty with the latter country, dated April 19, 1850, and commonly known as the Clayton-Bulwer convention, was signed, after much diplomatic discussion, two years after the seizure by England of the port of San Juan del Norte, the Atlantic terminus of the proposed Nicaragua canal. The convention declares that neither of the two governments will ever obtain or maintain for itself any exclusive control over any ship-canal by way of the river San Juan; that neither will erect fortifications or assume or exercise any control or dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America; that any privilege conceded by any of these states to either of the contracting parties cannot be accepted by it unless offered also to the other. The convention then goes on to provide for the neutrality of the canal, etc. There is hardly any question that England cannot bind us to this convention, which she has so often broken. Indeed, by the Treaty of Managua, of January 28, 1860, with Nicaragua, England actually agrees to terminate the protectorate of the Mosquito Coast within three months.* But even this treaty, in which England admits that since 1850 she has exercised dominion over a certain part of Central America, was subsequently infringed by her when, in 1864, she virtually seized the Mosquito Coast and constituted herself the legal guardian of the Mosco king, a twelve-year-old boy, elected at that time in a novel manner.

The United States treaty with New Granada, now the United States of Colombia, dated December 12, 1846, is a general treaty of peace, amity, and commerce, but it contains special provisions for the guarantee of the right of way through the Isthmus by any mode of communication. American citizens are given the same privileges extended to Granadian citizens. Art. xxxv. says:

"In order to secure to themselves the tranquil and constant enjoyment of the said advantages . . . the United States guarantee, positively and efficaciously, to New Granada by the present stipulation the perfect neutrality of the before-mentioned Isthmus, with the view that the free transit from the one to the other sea

* See Martens, 'Nouvel Recueil général,' tom. xvi. p. 375.

may not be interrupted or embarrassed in any future time while this treaty exists; and in consequence the United States also guarantee in the same manner the rights of sovereignty and property which New Granada has and possesses over the said territory."

The treaty of June 21, 1867, with Nicaragua is identical in terms. After granting to our citizens the right of transit, on the same terms as those enjoyed by her citizens, it empowers the United States, on giving notice to the local authorities, to carry troops and munitions of war in their own vessels on any canal that may be built, without hindrance, provided the said troops or munitions are not intended to be employed against Central American States friendly to Nicaragua. It also provides that the United States shall protect any such routes of communication between the two oceans, and guarantee their free use and neutrality. Then follows this provision (Art. xvi.):

"The Republic of Nicaragua agrees that, should it become necessary at any time to employ military forces for the security and protection of persons and property passing over any of the routes aforesaid, it will employ the requisite force for that purpose; but upon failure to do this from any cause whatever, the Government of the United States may, with the consent or at the request of the Government of Nicaragua, or of the minister thereof at Washington, or of the competent legally-appointed local authorities, civil or military, employ such force for this and for no other purpose; and when in the opinion of the Government of Nicaragua the necessity ceases, such force shall be immediately withdrawn. In the exceptional case, however, of unforeseen or imminent danger to the lives or property of citizens of the United States, the forces of said Republic are authorized to act for their protection without such consent having been previously obtained."

Thus the United States is in both cases the most favored nation, and has engaged to guarantee the neutrality of the Isthmus. In the case of Colombia our Government is expected to protect it as a compensation for certain advantages conceded by the local Government; it has been given the right to secure for itself the constant and tranquil enjoyment of any highway between the two oceans. And how? By guaranteeing "positively and efficaciously" to Colombia the "perfect" neutrality of the Isthmus. In the case of Nicaragua our Government may employ actual force even without the instigation of any local authority, in certain emergencies of which, of course, we are the only judges.

Since the promulgation of these treaties, which gave us so strong a position on the Isthmus, both Colombia and Nicaragua have concluded identical arrangements with France and Great Britain; and now M. de Lesseps steps in and, on the strength of existing conventions, does not ask for himself any protection from the United States, nor, it is said, from France or England, but leaves this matter entirely to international law. Colombia thinks her position secure; in case of trouble she is left free to call on the United States. France considers her interests well protected by her treaty, which places her on the same footing as the most favored nation. As to our own position, it is, under the treaties, similar to that of France and Great Britain; it is with them we are expected to guarantee to Colombia the perfect neutrality of the Isthmus.

Such a condition of affairs must be, to say the least, uncomfortable to us. It is true that the trade of both England and France with Central and South America, and with Australia and China, is much larger than ours. But the canal is of vital importance to us as a commercial link between the two coasts of our continent. M. de Lesseps insists, and in that he is right, that we are of all nations the one most interested in the canal. In the meantime the existing treaties give us no greater voice in the matter than France or England has; both of these nations are granted powers on the Isthmus the exercise of which may prove some day dangerous to this country. We must, therefore, seek in time the proper means of exerting that preponderating influence to which nationally, geographically, and commercially we are entitled.

Whatever Colombia may have agreed with France and Great Britain, nothing prevents our Government from acting directly with her and taking such security as may be necessary in order to ensure for American citizens the uninterrupted and safe enjoyment of the canal. It is now time to "seize the day," as Senator Bayard said, and act "positively and efficaciously," to the end that neither France nor any other power shall acquire a dangerous foothold at our doors. We cannot and ought not to stop the building of a canal, but we must protect ourselves against some of the possible results of the control of the canal by a French company in Colombia. To rest on existing treaties alone seems to us to be very hazardous. We see no reason to modify what we said on this subject in July last in the article already referred to:

"Wherever and whenever it [the canal] is constructed it will become the most sensitive and vital part of our interstate and international commercial system, and we must be prepared to protect it from the evil of local revolutions and foreign aggression, to seize it when necessary, and successfully defend it against the two greatest naval powers in the world. The completion of such a canal involves, therefore, the creation and maintenance of a naval force in the Atlantic and Pacific capable of contending with that of any possible European combination."

THE INVIOLABILITY OF TELEGRAMS.

THE bill to provide for the inviolability of telegraphic despatches now pending in the Senate is extremely simple in its provisions. It declares all despatches and copies made at the place of destination, or at any intermediate point, "the private papers of the senders and receivers," provides that they shall be "protected from unreasonable search and seizure, and from production as evidence in judicial and legislative proceedings, to the same extent as communications sent by United States mail." Of these the last is, of course, the novel and important one. Telegrams are probably now, from a legal point of view, the "private papers" of the sender and the receiver, and the protection against unreasonable search and seizure extended by this bill is already guaranteed by the Constitution of the United States and the various State constitutions and statutes. The protection from production as evidence to the same extent as letters is new, and may be expected to arouse formidable opposition in Congress. In what we are about to say with regard to it we do not propose to criticise the bill in detail. Some excellent suggestions as to legislation for the protection of telegrams will be found in a letter from a well-known Western lawyer, who has given the subject much attention, published in the *Tribune* of the 2d inst. We merely wish now to call attention to the general nature of the *abuse* against which any legislation must be directed.

The present state of the law with regard to telegrams is not thoroughly settled, but, so far as the courts in this country have declared it, it may be stated as follows: Telegrams are not what are technically known as privileged communications—that is, communications which the courts protect from disclosure from motives of public policy. The range of this privilege is and always has been very limited. The privilege of communications between husband and wife, and between attorney and client, has always been regarded as so sacred in Anglo-Saxon countries that even the interests of criminal justice must yield to it. Consequently they are exempted from the operation of the ordinary rules compelling the production of evidence. But, except within these narrow limits, if in any civil or criminal case it appears that a telegram has been sent which contains evidence that is relevant to the issue and competent, the original telegram may be produced; or, if that cannot be produced, a copy of it taken in the telegraph office may be used; or even if all written record of the message is lost, its contents may be testified to by the telegraph operator through whom it was sent. Further than this, when it appears that telegraphic despatches in the hands of a telegraph company *probably* contain evidence which is needed for the furtherance of justice between litigants, the production and inspection of such telegrams, where identified and described with certainty, will be compelled; in other words, there is no difference in these respects between telegrams and any other written evidence contained in books and papers. In England, it is true, since the purchase of the telegraphs by the Government, the courts have laid

down different rules, and decided private telegrams to be absolutely protected from disclosure by Government officials, on the ground that in assuming control of the service the Government had invited a confidence which it was against public policy, or a breach of trust, to violate. How far this will be carried in England remains to be seen, but the cases are obviously not entirely alike. There are many objections against allowing Government officials to testify to the contents of despatches, which do not apply to private corporations. A private corporation has no motive to disclose its secrets; on the contrary, experience has shown in this country that it has always resisted every effort to make it do so. But the officials of a government and the bureau which has such matters in charge will always be more or less swayed by political passion and a desire to do some political party a service. And it may be that on this account it is essential to have a government service absolutely secret. On such points as these there have been as yet too few decisions of the courts and too little discussion to enable us to speak with confidence; but before the English telegraph service became a branch of the postal service, the principles of law applied to the production of despatches in evidence appear to have been the same in both countries.

In any discussion of the telegraph question in this country it must be admitted at the outset that the abuses of the recognized power to compel the production of despatches have been glaring. But the important point to bear in mind is that these abuses have been legislative rather than judicial. In 1877, for instance, the Western Union Telegraph Company's manager at New Orleans was brought before the bar of the House for refusing to produce "all telegrams sent or received" by William Pitt Kellogg, S. B. Packard, and six other persons, at the office of the company in New Orleans "from and after the 15th day of August, 1876," and he was compelled by the House to obey. No court in Christendom could have issued such a subpœna as this, and the vote of the House established a precedent which practically throws open every telegraph office in the country to be ransacked by any enterprising politician who can persuade his fellow-representatives to put him on a committee for the purpose. His real object may be anything, from a desire to make political capital for himself to a determination to blacken the character of a political rival. As an engine of private malice and oppression it is difficult to imagine anything more odious than this, and it is an engine which at least one notorious politician is believed to have put to active use. The most startling thing about the telegraph controversy thus far has been the supineness with which the public at large have submitted to these wholesale legislative descents upon the telegraph offices, and have left the companies to fight their own battles with the committees and with Congress, as if the matter were one of little or no public concern. A century ago, had the telegraph existed then, the assumption of any such right would have been met with the same stern, popular resistance that was aroused by the writs of assistance and general warrants. The differences between the two cases are merely superficial. The oppression a century ago was directed by the agents of the executive, because the executive was then the usurping and tyrannical branch of the government. Now it is done by the legislature, which is the only body that has any old-fashioned absolute prerogative and irresponsibility. The pretext then was generally the furtherance of criminal justice; now it is usually the investigation of facts with a view to some contemplated or pretended legislative action; but in both cases the immediate object is the discovery of evidence, and the immediate means is an indiscriminate search, not to find evidence known or believed to exist, but to see whether somewhere or other there is not some evidence.

It is more terrifying and cruel perhaps to make unnecessary arrests than to make unnecessary seizures of papers, but except for this, what is the difference between an English king arresting several dozens of persons to find out who published a libel and an American legislative committee violating private correspondence in order to find out how an election went? The language used several years ago by Judge Cooley, of Michigan, with regard to the outrageous revenue seizures of that period, committed by ministerial officers, is by no means inappropriate to the dealings of legislative committees with telegraph companies: "Perhaps under no other laws are such liberties taken by ministerial officers, and it would be surprising to find oppressive action on their part so often submitted to without legal contest, if the facilities they possess to embarrass, annoy, and obstruct the merchant in his business were not borne in mind." This dread of the hostility of the Government on the part of those directly interested no doubt in part explains the lack of public interest displayed in legislative interference with the telegraphs. It is also probably due in a measure to the general sense of security and prosperity in the United States, and the ease with which, be the Government bad or good, oppressive or just, the comforts and conveniences of life are secured. An atmosphere of prosperity relaxes that watchfulness of the Government which is, after all, the price in the long run of free institutions, and the tendency of a particular branch of it to absorb irresponsible power and oppress the citizen attracts little or no attention until the mischief is done.

It is on this very account that the public ought to be grateful to the managers of the Western Union Telegraph Company for the effort they are now making to force Congress to take some action on the subject. As we said before, the details of the bill we do not intend to criticise here. In any case it will probably undergo many changes before its final passage. The clause assimilating telegrams to letters in the mail is in its present shape rather indefinite. If it is to be taken literally, it would seem to mean that despatches are to be, *while in process of transmission*, protected. This is the only protection extended to letters. After they have been received, the receiver, or any one who has them, or copies of them, may be called upon to produce them. But protection of despatches while in process of transmission would be nugatory, for the process protects itself. But if it means that the copies of messages, after they have been sent, are to be protected, this would seem to be in conflict with the well-settled rules of the courts. In that case the law ought to be of the most explicit character, and should not be passed without full discussion. A great deal is to be said on both sides of the question. On the one side, cases may be easily suggested in which there would be a great failure of justice if telegrams were not producible in court. The innocence or guilt of prisoners accused of capital offences may turn upon a despatch of six words, and the administration of justice would hardly stand the strain of verdicts based on the exclusion of such evidence once known to exist. So, too, in ordinary cases of contract it is difficult to see why an agreement which consists, as so large a number do nowadays, of despatches, should not be proved by the compulsory production of telegrams; on the other side, the abuses to which the production of telegrams gives rise may be sufficient ground for making them altogether privileged. But as to the outrage of the present system of legislative searches through telegraph offices there can be but one opinion. It violates every principle of justice and good government. It is somewhat startling to find in the Congressional discussions on the subject an almost total avoidance of any consideration of this side of the question. When a committee wishes to "go through" a telegraph office, it does not enquire first whether it will be wise or fair to do so, but solely whether it has the power to do so. As to this, only one conclusion can be reached, for a Congressional committee is, in its power to compel the production of books and papers, irresponsible. It can do as it pleases, and it invariably pleases to exercise its power. There is really no reason why it should stop at telegraph offices. It may, if it pleases, ransack houses, unlock drawers, pillage secretaries, and compel the disclosure of family and business secrets—and, in fact, searching through telegrams is in many cases equivalent to doing this; and no worse precedents for a future exercise of absolute prerogative in these respects could be wished than have been furnished by committees of Congress since the war. It must be remembered that Congress is not, like a State legislature, hemmed in by constitutional restrictions and the inter-

pretation of these by the courts at every turn. It has, within its sphere, an enormous amount of absolute power which it wields despotically. To paraphrase slightly the language of Chatham, it may still be true that the poorest man in his cottage may bid defiance to all the forces of the executive, and that all the land and naval forces of the President may not dare to cross the threshold of his tenement, however frail the walls or shaky the roof; but an investigating committee with a *subpœna duces tecum* will "go through" the premises in fifteen minutes without leaving him the faintest hope of redress. It is against this legislative abuse of the right to search for evidence that we think public opposition should be mainly directed.

LORD BEACONSFIELD AND THE COMING SESSION.

London, Jan. 20, 1880.

SHORTLY after this letter is in your hands—on the day possibly on which it may be published (Thursday, the 5th of February)—the present Parliament will come together for its seventh and last session. It has been rumored for some time that the Queen will open it in person, and the rumor gathers strength. If this be so, the sacrifice will be considerable and the motive will be obvious. The pageantry of the monarchy has always been distasteful to the Queen; and of late years protracted appearances in public have brought on a temporary but distressing malady, which forms a sufficient excuse for Her Majesty's withdrawals from the ceremonial of an office which is very erroneously conceived to be all ceremony. The late Lord Russell, in one of those happy sentences which light up, with something like a flash of genius, long passages of the commonplaces inseparable from Parliamentary oratory, likened our Parliamentary system to a glass hive in which the bees are seen at work. Observers do not wait for the result, but criticise the process at every step. But there was a reservation. The operations of the Queen-bee, if we may continue the metaphor, were conducted in secret. There was a veil spread before the throne. In the case of former reigns it was only withdrawn when the sovereign and his doings had become matter of history. The devotion of the Queen to the memory of her husband, and her desire to explain and vindicate the part which he took in public affairs, have led to disclosures which the etiquette of a previous age would have considered premature and undignified. Mr. Theodore Martin's authorized and inspired biography of the Prince Consort, in which the Queen's hand has directed the fingers that held the pen, and Her Majesty's own published diaries, have thrown much light on the part played by the Crown and the Court in public affairs. The memoirs of Baron Stockmar, who was the respectable German Bute of the present reign, have completed this information. The personal preferences and the political views of the Sovereign have been disclosed without reserve. The past interprets the present. If the Queen, for the first time after many years' retirement, opens Parliament in person, the reason will be transparent. Her appearance in public will be an artifice of royal electioneering. It will be an appeal from the throne to the constituencies on behalf of Lord Beaconsfield. The visit of the Prince of Wales to Hughenden Manor was a manifesto of similar purport. History repeats itself, though with a difference. Queen Victoria is in many respects the superior, both in intelligence and character, of Queen Anne. Lord Beaconsfield will scarcely be placed, even by his greatest admirers, on the same intellectual level as Lord Bolingbroke, on whose theories and political conduct he has modelled his career. Yet, with some allowances and qualifications, Lord Beaconsfield has been to Queen Victoria what Lord Bolingbroke was to Queen Anne. Both sovereigns have been alienated from the Whig principles which are the basis of the throne, and from the Whig statesmen who surrounded them during the greater portions of their reigns, by the dexterous arts of brilliant political adventurers, whose great power of managing men was yet inferior to their skill in flattering and humoring women. The appearance once more in the streets of the state-carriages, the cream-colored steeds, the outriders, and the scarlet liveries will be something more than a pageant. It will be an intimation of the Queen's preference for Lord Beaconsfield and his methods of government over the principles and statesmen of the Opposition. There is no reason to complain of veiled, or scarcely veiled, intimations of this kind. Though each party protests against the improper use of the Queen's name in political controversies, each party employs it whenever it can conveniently do so. The Whigs did in the beginning of the present reign, amid Tory denunciations, what the Tories are doing now amid the mutterings of Liberal discontent. The last Prince of Wales was more demonstrative of his friendship for the Whig Opposition than the present Prince of Wales is of his leaning to a Conservative Ministry.

It is quite possible, altogether independent of the results of the coming general election, that this is the last session in which Lord Beaconsfield will meet Parliament as Prime Minister. His elevation to the peerage was certainly not solicited, and was probably not very keenly desired by him. When he began to feel the labors of the House of Commons too much for his strength, he intimated to the Queen that at the close of the then current session of 1876 he should ask her leave to retire from official life. A seat in the House of Lords, where the labors of business and debate are very light, was urged upon him as a condition under which he could retain the Premiership. Lord Beaconsfield has always been fond of titles and splendor, and when he took his seat for a moment in robes and coronet among the English earls before proceeding to the Prime Minister's place in the House of Lords, no doubt there was a thrill of exultation in the consummated victory of the political and literary soldier of fortune over the prejudices of the plutocratic oligarchy which, descended largely from successful lawyers and enriched lord-mayors, fancies itself an ancient nobility. It is probably a mistake to suppose that Lord Beaconsfield is exultant, and eager to prolong his triumphs. He has never been buoyant, and he is now tired. Though, when he chooses, witty and entertaining, he is not by temperament very gay or cheerful. The epigrams which are supposed to drop every minute from his lips, usually in mixed society, interrupt long periods of self-possessed and deliberately maintained silence. They are the darts with which he will transfix a blunderer. *Solus cum solo*, or even more *cum solâ*, Lord Beaconsfield is said to be the best of companions, but he does not expend himself in promiscuous loquacity. He has mocked his successes, as well as those over whom they were gained, even when winning them. His summary of human life—"Youth is a blunder, manhood a struggle, and old age a regret"—was uttered when he was in the very crisis of his struggling manhood, and before youth had altogether departed. Congratulated by a friend on his combining the peerage, the garter, and the Premiership, he is said to have replied: "Twenty years ago it would have been something, but now what does it matter?" There is reason to believe that there is some truth in the stories which are floating about that, during the past year, he has more than once expressed his desire to withdraw from public life, and that he remains where he is at the urgent solicitation of the Queen and of his colleagues. In the speech in which he replied to Lord Derby's announcement of his resignation of the Foreign Office, he intimated that he had looked forward to a not distant moment when their parts would have been reversed, and his retirement would have opened the way for his friend's succession to the post he then occupied. There is little more for Lord Beaconsfield to gain. Starting in life a solitary adventurer, he has been leader of the Conservative party for a longer period than any of his predecessors; he has become absolute master of both Houses of Parliament; he has maintained an unbroken majority years after other ministers have seen the elements of dissension breaking up their ranks; he has figured at diplomatic congresses which have altered the map of Europe; he has been the hero of the populace, and he has been the most trusted adviser of the Queen, who at one time would scarcely receive him at court. His personal triumph has been complete. Lord Beaconsfield has a sense of dramatic completeness. He knows when to bring down the curtain, and he may not desire by a weak afterpiece to mar the theatrical effect of a well-contrived conclusion. Of course, all speculations based on personal character and motive have an unknown element in them which may vitiate them. But the most probable view of Lord Beaconsfield's intentions is that which has just been foreshadowed. It may be necessary that the coming elections should be conducted under the influence of his name. But it is not likely that in a new Parliament he would undertake either the toils of office or the more thankless labors of Opposition. A sated ambition and an exacting love of ease support retirement. Moreover, Lord Salisbury is ready and waiting.

The duration of the next session is matter of great uncertainty. The Irish Obstructionists may spin it out. The rival parties, stimulated by the recess speeches, will meet in an excited condition, which is likely to demand for its relief long debates on great questions of policy. The Government are pledged to several measures which would themselves easily occupy Parliament till August. They are not in the habit of redeeming their pledges; but they may naturally desire to make an electioneering flourish with domestic legislation before going to the country. An election postponed till the beginning of next year would mean

six months of political turmoil, and of election expenses from which politicians on both sides, in these times of depressed trade and backward rents, would naturally shrink. On the one side we are told that the Government will dissolve this spring in order to avoid bringing forward a budget which must open the eyes of the country to the burdens it will have to bear; on the other side confident assurances are made that they will dissolve after a budget which, by postponement and evasion, shall relieve the taxpayer now at the expense of the taxpayer of the future. The fact is that nobody knows anything of the times and the seasons, not even Lord Beaconsfield himself. The Government will wait for and seize their opportunity, whether it comes soon or late. The issue no one, of course, can foresee. In 1868, when they were decisively beaten, the Conservatives expected a considerable majority. In 1874, when they were signally victorious, they looked to be in a small minority. †††

THE VIVISECTION QUESTION IN GERMANY.

LEIPZIG, Dec. 15, 1879.

SINCE my letter to the *Nation* upon this subject last summer the agitation has steadily increased, until just here and now it is the absorbing topic in student clubs, newspapers, private parlors, etc. I have taken pains to look through a dozen of the latest brochures and articles upon the subject, the most conspicuous and perhaps absurd of which is by Richard Wagner.* The scientific spirit, he premises, is the *daimon* of our mechanical age, which is devoted to the culture of utility. Its true nature is best revealed in *vivisectoria* and artillery factories. We are slaves of our iron, materialistic civilization, and it is speculative physiologists, climbing about like apes on the tree of knowledge, who tell us that the soul is at bottom a chemical process. It is sympathy, on the other hand, which is the prime condition of the development of all organized society. It is this sentiment, above all, which we have a right to expect from practical physicians. Pity, in fact, is a religion. Our Saviour came and bore our sins out of pity for our lost estate. It is simply Christian to extend our sympathy to the animal world. A dog which sees a god in the master who tortures him for science, still lacks even the imperfect consolation of knowing that he dies for his master's benefit. Nay, more, the dog may be immortal; at least the vivisector is "infinitely farther from redemption than the animal, which is immaculate as a saint when compared with him." Still stranger, vivisection came into vogue at a time when scientific men were learning to regard animals as their progenitors. Medical students are systematically taught to be unpitying, and the reformers have lacked the courage to say that this of itself, apart from its proved uselessness, is cause sufficient for the abolition of vivisection. Physiologists should be regarded as state criminals, and the police should break into the Institute at Leipzig, free the uninjured, kill the mutilated animals, and lead off the directors to justice.

The Animal Protection Society here is a large and flourishing organization, and with Professor Ludwig, the great physiologist, as one of its officers, has done excellent work in improving the condition of working animals. It distributes prizes to owners who keep them in good condition, devises better stalls or harnesses, lays hard-bottomed roads in sandpits, distributes juvenile tracts to school-children, occasionally fines cruel coachmen, limits by law the number of passengers in street-cars, and has lately printed a remonstrance against the practice of ladies who wear wings, heads, or bodies of birds on their hats. Last week Von Weber, the chief agitator, with friends from æsthetic Dresden, attempted to organize a new protection society here which should recognize vivisection as an unwarrantable cruelty. His opening lecture was crowded by students and citizens in about equal numbers, and although his extreme and bitterly personal utterances were heard to the close, the meeting adjourned in mass to cheer Ludwig at his house, who has lately received many threatening anonymous letters, and been insulted or attacked on the street by ignorant people who believed their dogs were in danger.

When the agitation began it was so active, Von Weber's pamphlet was so zealously circulated in every school, and his pictured placards were so conspicuous on every street-corner, that before scientific men were well aware of the danger the sentiment of cultivated society, backed by English sympathy, was already directed against them. Their defence is now but just begun. Only a few pamphlets and popular articles, and a circular signed by seven thousand Germans, professors of medicine, comprising every eminent authority without exception, declaring that vivisection has regenerated the practice of medicine, and should be limited only by the individual convictions of experimenters, have been published, and already the reaction has not only begun but has extended to nearly all classes of intelligent, reading people. Thus Von Weber and his party now find their constituents, though more numerous, almost without exception among the lower classes. The character of his agitation has also degenerated. His polemics are now against the whole medical profession. He tells poor people that they are experimented on with drugs in the hospitals, and says that students are intentionally hardened. Moreover, it is now becoming known that he has never seen a vivisection, nor the instruments used, and that in some of his statements—as, *e g*, about an apparatus wherein an entire dog could be frozen stiff in an instant—he was the victim of the jocose or ignorant laboratory servant from whom he derived his information. He has also misunderstood his authorities, and in at least five cases quoted men who believe in vivisection as opposing it. It can now be said with confidence that this country is saved from the great misfortune which in England has diverted young men from the study of the science that is the basis of medical education—a science, too, we might add, which now in Germany combines an independent educational value and a direct practical utility perhaps before all others, and which in the United States, save in two or three of the best institutions, where it is now ably represented, we have hardly begun to understand.

The authorities quoted against vivisection, which have lately been pretty thoroughly canvassed, turn out—here it is said without exception, and in England and France with almost no exception—to belong to one of two classes: either they are men who wrote from three to five decades ago, when physiology even in Germany, its home in a peculiar sense, was in its infancy, when the medical sciences had not felt its regenerating influences, when only a few specialists had begun to have suspicions of its scope and object, and the public at large knew nothing of it; or else they are men eminent in other departments, like Wagner, whose sympathies are quick, and who chance to be ignorant of experimental science. These are backed here by an army of men whose wives have tended carts, or perhaps drawn them a-span for years with harnessed dogs (which are made members of the family in nearer relations than perhaps any domestic animal ever stood in before to man), and in England by the affectation and sentimentality which wealth and idleness are apt to produce, more commonly in ladies. Ferguson, it should be remembered, began his career at a time when it was the custom for young doctors to be apprenticed to older men instead of getting their education in lecture-rooms and laboratories; Charles Bell, whose testimony against it, so far as I know, is only constructive, has himself vivisected, and Darwin, who has also been quoted here against it, says: "I am fully convinced that physiology can progress only by the aid of experiments on living animals. I cannot think of one step in physiology which has been made without that aid."*

It is said that before vivisection came into vogue operations were here decided upon in medical consultations, especially in hospitals, sometimes at least as much for the good of science as for that of the patient. However this may be, such a temptation is entirely removed now that animals are found to be quite as good for every scientific purpose. Certain branches of surgery, to be thoroughly learned, many now assert, must be practised beforehand not merely upon dead bodies but upon living animal tissue. However this be, vivisection has become a surgical art, and has certain fundamental practical precepts. Among these are, that the more circumscribed the wound the easier it is to find a deep nerve or vessel; that an animal must always be operated upon as if it were intended to preserve it alive and in as normal condition as possible, and that the more sensitive tissues must be avoided and loss of blood reduced to a minimum; that one such careful experiment is more instructive than a hundred bad ones, and that the operator should be "inspired not by a sad necessity but by a certain joyous excitement," with his mind fixed upon the central object sought and not distracted by cries or blood.

Again, vivisection did not originate in man's laziness, or in a whim of his palate, like the practice of docking sheep, branding stock, or mutilating males; or in the desire of gain, like the extermination of insects or birds that prey upon the crops, or in the fur trade; or in his ambition, like the use of the horse in war; but it sprung from some of the very deepest and noblest of human feelings, such as only physicians can appreciate who have felt their science helpless in certain critical moments, and who reflectively repeated to themselves when it was too late the question they read in the eyes of anxious friends, Whether, after all, more

* 'Ein offener Brief an Ernst von Weber. Von Richard Wagner.' Berlin and Leipzig, 1880.

* 'The Vivisection Question Popularly Discussed. By Prof. Hermann, of Zürich. Translated by A. Dixson, M.D.' 1877. Pp. 59.

might not have been done? Such are the motives that prompted the earlier epoch-making discoveries by this method; and now that the purely scientific desire to understand the phenomena of life is added, we have a right to expect great results from it, and, recent as the method is, we are not disappointed. Take, for instance, the method of treating wounds, and more especially the diseases that were liable to arise from them. The latter are now almost unknown, and the former are healed in half the time required before Lister's study of artificial wounds on animals. Many diseases not before understood are now known to be due to microscopic organisms, and thus by observation of artificial diseases a rational system of disinfection has been developed. The treatment of fevers and high temperature has been almost directly reversed; the better understanding of symptoms by which diseases can be earlier detected, the medicinal properties of digitalis, salicylic acid, and many other drugs, have all been learned chiefly by the study of artificial pathological states in animals, until we may now say that medicine, which has been almost revolutionized within the professional life of many physicians now living, is no longer a speculative science, in accordance with which men were bled for inflammation of the lungs, and wherein life was studied in corpses, and Galen, and perhaps Hippocrates, were cited as authorities, but has become, as it should be, most practical and most healthful, while its influence radiates from the sick bed more and more widely over the active life of men. Thus another, perhaps the greatest of all, is likely to be added to the many debts we owe to animals below us.

There are many points where the interests of men and animals conflict—traces, some of them, perhaps, of an ancient desperate struggle for existence between them. Once priests inspected quivering entrails or shed the blood of animals as burnt-offerings, while now in veterinary schools vivisections are performed directly for the benefit of animals themselves. It is perhaps easy for some temperaments to cultivate the sentimental view and turn pale, like a certain princess on a visit to the laboratory here the other day, at the sight of a dish of diluted blood left in sight by mistake; or weep, as Von Weber assures us thousands have done, over the tale of an English lady who became insane because it was hinted that her lost poodle had been stolen by a vivisector. Some are still found who disapprove of the dissection of dead bodies, and an English clergyman is said to have preached against the artificial fertilization of flowers as unwarrantable meddling with God's handiwork. Every such sentiment, however, so fundamental is physiology becoming in the study and practice of medicine, must, we think, be now regarded as an essentially socialistic agitation against a serviceable and tolerably favored class of the community. The medical profession here suddenly found itself obliged to take the defensive to maintain its good name in the community, and all feel that the same frenzy which has been directed against it may to-morrow be aimed at lawyers, clergymen, or editors. May our country be spared such a sensational agitation as this, as well as such a "scientific scandal" as the English statute against vivisection!

Correspondence.

THE POPE AND THE ST. BARTHOLOMEW MASSACRE.

To the Editor of The Nation:

Sir: In a notice of Professor Baird's 'History of the Huguenots of France,' published in your issue of the 15th inst., you declare that the favorite Protestant view of the St. Bartholomew Massacre, which is that it was planned in cold blood and with long deliberation, and that the Pope was privy to the plot, is now clearly disproved, and never more clearly than by Professor Baird, who, however, is without mercy in his exposure of the dishonest attempts that have been made, in a sectarian interest, to relieve the Pope and his court from the shame of being accessories after the fact to this enormous crime. Your notice concludes with the following words:

"There is one line of defence for the Roman Church, and only one: it is to affirm (as that Church does logically and consistently affirm) the rightfulness of religious persecution, and thus to justify the fierce glee with which the 'Stragis Ugonottorum' was approved at Rome and commemorated in medal and in painting."

I submit that it is absurd to say that those who affirm the rightfulness of religious or other persecution are thereby justified in approving of massacre. Protestant churches, governments, and individuals have affirmed, and to some extent do still affirm, "the rightfulness of religious persecution"; but they are not, therefore, accused of giving countenance to butchery or assassination. There are Americans who hold that it would be right to put down Mormonism by force of law—that is, by religious persecution—but they do not imagine that this would justify them in approving of the massacre of Joseph and Hyrum Smith. The massacre of the Catholic Macdonalds of Glencoe, under William III., was cold-blooded and deliberate, and more brutal even than that of the Huguenots of Paris, but it was scarcely referred to in the press or other publications of the day; there was no outburst of indignation, and Protestant Scotland and England gave to it a tacit approval. Shall we, then, say that there is one and only one line of defence for the Protestants of Scotland and England of that day—that they affirmed "the rightfulness of religious persecution," and were thereby justified in approving of the most atrocious butchery which has been committed in modern times? No; a fair and thoughtful mind will perceive at a glance that this one and only line of defence which the *Nation* traces out for the Pope is an imaginary line, the only point to which is that it at least runs parallel with the vulgar taste for whatever may be made to tell against the Catholic religion. What is the line of defence which Macaulay sets up for this seeming approval of the massacre of Glencoe? It is simply this: that the real facts of the butchery were not made known to the public till long after its perpetration. The Whig version was that MacIan had laid an ambuscade for the soldiers, and had fallen into his own snare; and the Jacobite version was that a detachment of soldiers had been sent under cover of darkness to surprise the inhabitants of Glencoe, and had killed thirty-six men and boys and four women. Neither version gave even a hint of the real facts (*vide* Macaulay's 'History of England,' vol. iv. p. 172).

Now, we may set up precisely the same defence for the Pope's seeming approval of the St. Bartholomew massacre. When he permitted the "Te Deum" to be sung he did not know the real facts in the case. The second day after the massacre King Charles declared openly in Parliament that he had been driven to this deed of blood in order to prevent the carrying out of a Huguenot plot to assassinate the whole royal family, the King of Navarre, and the leading Catholic nobles of France. This was the version which was sent into the provinces and to Rome, and the religious services held in Rome were held in thanksgiving for the preservation of the royal family and chief nobles of France from the hands of assassins. That this was a false version has nothing to do with the question under discussion. That it was the version which the Pope received is evident from the sermon which Muret preached upon the occasion of this solemn celebration at Rome. "Veriti non sunt"—these are his words—"adversus illius regis caput ac salutem conjurare. . . . Qua conjuratione, sub id ipsum tempus quod patrando sceleri dicatum ac constitutum erat, divinitus detecta atque patefacta, conversum est in illorum sceleratorum ac fœdifragorum capita id, quod ipsi in regem et in totam prope domum ac stirpem regiam machinabantur." The version given by King Charles to his Parliament is repeated by the preacher in Rome; and it is manifest that Gregory XIII. believed, when he permitted the act of thanksgiving, that a plot to assassinate the King of France and the whole royal family had been discovered just in time to prevent a national calamity, and that the conspirators had been summarily dealt with. The "Te Deum" was in the nature of the congratulations which it is customary for European sovereigns to send in our day when an attempt is made on the life of the Emperor of Germany or Russia, or the King of Italy or Spain. Much more might be said, but I fear I may already have written more than you will like to publish. Professor Baird's book I have not seen, and can therefore say nothing of his merciless exposure of the dishonest attempts which have been made by Catholics to defend the Pope and his court.

J. L. Spalding.

Peoria, Jan. 19, 1880.

[The objection to the line of defence which Bishop Spalding ingeniously sets up in place of the line proposed by us is simply that it is not tenable. In the first place, neither the Protestants of England nor of Scotland have ever claimed the relation both to God and man claimed by the Pope. In the second place, Bishop Spalding supposes Pope Gregory XIII. to have been dependent for his information respecting the events occurring in France upon the lying assertions made by King Charles in Parliament and in his despatches to his envoys at foreign courts. As a matter of fact, he was not thus dependent. He had a skilful representative in Paris in the person of the Nuncio Salviati. It is true

that the first tidings of the massacre that reached Rome were brought by a courier sent by the Guises to the Cardinal of Lorraine, but it was not until letters from Salviati were received and read in full Consistory, on the sixth of September, that the good news was credited. It was in consequence of the information conveyed in these letters that the Pope and cardinals resolved on the spot to go in solemn procession to the church of San Marco to render thanks to Almighty God for the signal blessing conferred upon the Holy See and upon all Christendom. And it was no "false version" of the story that occasioned the three nights' illumination, the firing of cannon from Sant' Angelo, the striking of commemorative medals, and the painting of the scenes of the butchery on the walls of the Vatican. The Pope might pretend to give credence to the story of a Huguenot plot for the destruction of the lives of the king and the chief Roman Catholic nobles, as contained in the royal declarations. He relied, however, upon the secret despatches of his own Nuncio; and the Nuncio assured him that the rumor that the slaughter had been provoked by the detection of a Protestant conspiracy was not only false but absurd. In his first despatch, sent upon the very day of the massacre, Salviati had not a word to say about the existence of such a conspiracy. In a letter written nine days later, having heard the royal story, he declared that it would be a disgrace for any one possessed of any acquaintance with the affairs of this world to believe it—"ce seroit une honte pour quiconque est à même de connaître quelque chose aux affaires de ce monde de le croire" (Chateaubriand's trans.) It was with such accurate information before him that the Pope despatched Cardinal Orsini as his legate to congratulate the King upon "the glorious and truly incomparable transaction of his majesty, which, looking merely at the matter of glory, could be equalled by no act of his predecessors."

We do not see, however, that the case for the Pope would be essentially improved could it be shown that he was at first deceived respecting the true history of the massacre. Where and when did he exhibit sorrow or shame at discovering the base imposition that had been practised upon him? Instead of betraying any such generous emotion he persisted in his rejoicing, instructed his legate to remind Charles of his promise to destroy every Huguenot still remaining in France, and calmly watched Vasari as he deliberately sketched and elaborated, at the pontifical command, the paintings which were to perpetuate the memory of the most atrocious incidents in the events of St. Bartholomew's day.—Ed. Nation.]

Notes.

In announcing the receipt of the *Tribune* 'Index' for 1879 we are glad to acknowledge our frequent indebtedness to this annual publication as a guide to past but still recent events. The series has a great and growing value. Mr. John L. Weinheimer is the compiler.——Of Mr. A. R. Spofford's 'American Almanac' for 1880 the American News Co. publishes two editions, in paper covers and in the usual cloth, but the cheaper and popular edition omits the last hundred pages, retaining, nevertheless, the latest election statistics, which will be often consulted during the present year, and which fill nearly a hundred pages. This almanac continues to be the most valuable one we have for its lists of the personnel of the State and national governments, as well as for a great variety of commercial and financial statistics regarding both the United States and foreign countries.——From the office of the *Engineering and Mining Journal*, No. 27 Park Place, New York, will shortly be issued a 'Pocket Mining Atlas' for the United States.——The leading features of the *Magazine of American History* for January are an account of the operations of the allied armies before New York in 1781, by the editor, Mr. John Austin Stevens, accompanied by numerous charts; and the story of "an affair of honor" between Daniel Webster and John Randolph in 1824.——Bulletin No. 52 of the Boston Public Library contains Part IX. of its bibliographical "History of Mental Philosophy," and a topical index to the British Parliamentary Sessional Papers of 1877. It also acknowledges the acquisition by gift of a choice collection of Frankliniana, which will be set apart for special fostering. It embraces eighty different portraits and engravings.——The Board of Overseers of Harvard College have felt obliged, on legal grounds, to overrule the decision of their Election Committee and declare the Rev. H. W. Bellows ineligible from non-residence.——No. 14 of the Harvard Library Bulletin is noticeable for a summary account by Mr. Samuel H. Scudder of the entomological libraries of the United States, which "clearly shows the great advantage to an entomologist of a residence in this vicinity," the Museum of Comparative Zoölogy being rich in this department beyond all other institutions. Mr. Scudder appends a memorandum of some of the rarer works in the libraries of Boston and Cambridge.——Mr. Francis Galton contributes to *Nature* of January 15 one of those suggestive papers on original lines of research which give him a unique position in the scientific world. "Visualized Numerals" is the subject of it, the term having reference to the power of certain persons to call up a distinct (and individual) graphic image of the numerals, arranged systematically, by which mathematical mental processes are greatly simplified. Mr. Galton has been "astonished to find how superior women usually are to men in the vividness of their mental imagery and in their powers of introspection."——Marc Monnier's translation of 'Faust' into French verse has been very highly praised by Leopold Hamburger in the *Magazin für die Litteratur des Auslandes*. He says that he has only found one mistranslation, and is not sure of that. A recent translation of Lessing's 'Laocoon' into Latin by Herr Hasper is condemned by another critic for its Germanisms.——By invitation of a number of ladies, the lectures on "America's Place in History" which Prof. John Fiske recently gave at Chickering Hall, will be repeated as a morning course at an early day.

—We so seldom make the mistake of attributing to a man greater attainments than he possesses that we think we shall be readily forgiven for having described Dr. Ezra Abbot as an eminent Hebraist. He writes to us that his knowledge of Hebrew is, to his regret, "only elementary." We were led into the mistake by the high place he holds as a Biblical critic, overlooking the fact that it is on the New Testament side that his authority is greatest.

—The Sixth Annual Report of the President of Boston University is marked by the characteristic modesty of the literary metropolis, for the affairs of the University itself are not thrust into the foreground, and the majority of the contents relate to the doings of the world at large, and of institutions not directly connected with what would in other places be considered the subject in hand. Beginning with a view of "Liberal Education in the United States," and touching lightly upon "An Important Case of Tax-Exemption" in Illinois, the President reaches the theme upon which he is always eloquent, Coeducation. The utterance of President Barnard, of Columbia, regarding the admission of women to that institution is referred to at length, and the Harvard "Annex" is presented with the startling head-line, "The Beginning of the End at Harvard College," the influence of the humble Boston University in leading to this "beginning of the end" being modestly dwelt upon. The Harvard Medical School, Wellesley and Smith Colleges, and Abbott Academy, form the texts for the next divisions, after which the interests of Boston University are treated. We learn that there are 126 students in the College of Liberal Arts, 40 being women; the senior class containing 10 men and 11 women. The College of Music, an institution managed by Mr. Tourjée, is next shown to be in a very unpromising condition. This "College" seems to have scarcely more firm connection with the "University" than the late School of Oratory had. "The College of Agriculture" furnishes the theme for the most amusing part of the report. This "College" is no less than the Massachusetts Agricultural College, which is about as much a department of Amherst or Williams College as it is of the Boston University. It agrees to receive "matriculants in Boston University on the same terms and conditions as other persons," and by virtue of this stipulation is called a College of Boston University, its name being posted on the bulletin board on Beacon Street. The report of this department is omitted, but with sweet simplicity we are informed that it "will be presented to the legislature in a few weeks"! The schools of Theology, Law, and Medicine are next mentioned, and their work detailed, after which the School of Oratory (which died with its late dean, as it was his private enterprise) is made the subject of several pages. From the résumé at the end we learn that the total number of students last year was 631, 178 being women. In the late School of Oratory there were 67 women and 37 men; in the School of Medicine, 52 women and 94 men; in the College of Liberal Arts, 40 women and 86 men; in the School of Theology, 2 women and 67 men; in the School of Law, 150 men and 1 woman; in the "College of Agriculture," 16 men and no women; and in the School of All Sciences, 34 men and 3 women; the

total figures showing a loss of 36 from those of the last previous year. The "College of Agriculture" lost 6, the School of Theology 12, the School of Law 22, the School of Medicine 25. In looking over the report we find that twenty-three pages may be properly considered to treat the affairs of Boston University, while twenty-five pages are freely appropriated to the doings of the world at large. Until we are certain that women are admitted to the Massachusetts Agricultural College, we cannot be sure that the statement made on page 46 is exactly correct, that "this University is the only one in the world which neither makes nor ever has made any odious discriminations on the ground of sex." And we must further await action on the proposal of a legislative committee to turn the Agricultural College over to Amherst.

—By a happy circumstance not unexplainable by the initiated the most precious recent contributions to the history of the municipality of Boston have taken the form of city documents; and the latest, No. 119 of 1879, ought to attract general attention in all cities of a certain size and antiquity. It is a report to the Common Council of a committee on the naming of streets, and we read: "At the outset of their investigations your committee was somewhat surprised to find that there was no statute expressly conferring on any person or board the right to designate the names of public streets." The reduplication and confusion thence arising, which in the case of Boston has been greatly aggravated by extensive annexations, may be imagined. The committee recommend that hereafter names of streets should be given or changed only by vote of the Board of Aldermen on the recommendation of the Board of Street Commissioners, to take effect on May 1, and that no name should be given to two or more streets (or avenues, etc.); also, that a committee be appointed, to serve without pay, to consider what should be done with existing duplicates. A hint of the true method of dealing with these is given in the present report, namely, to distinguish them by a sectional addition, as, "High Street, Charlestown," "High Street, Brighton," etc.; but if there are two High Streets in Charlestown, to change the name of one. Whatever rules may be established, it is clear that they will be applicable as well to the nomenclature of towns, which it is high time was taken in hand by our State authorities in co-operation with the Post-Office Department. The appendices of this document are rich in lists which lack but little of affording a complete history of the streets of Boston proper, in connection with which a heliotype of part of the earliest known map of the city and its environs, of the date of 1693, discovered last year in Paris, possesses a curious interest. It was made by Jean Baptiste Louis Franquelin, Hydrographer to the King, and "verified by Sr. de la Motte," and is preserved in manuscript in the Dépôt des Cartes de la Marine.

—There has just been established at the Winchester Observatory of Yale College a Horological Bureau, whose object is to "encourage the higher development of the horological industries, and to pursue researches calculated to aid in the construction of refined apparatus for the measure of time." This Bureau has made arrangements with the Safe Deposit Company of New Haven for erecting in their steel vaults apparatus for testing the performance of time-pieces in a regulated temperature and in various positions, as dial-face up or down, or vertical, etc., at ordinary temperatures, in the refrigerator (40° F.) and in the oven (90° F.) The ratings will be carefully noted by trained observers, and in accordance with them certificates will be issued of several well-defined classes. The charges for these tests are so moderate that a certificate may properly be exacted of the seller where there is any doubt as to the quality of the watch, pocket or box-chronometer, or clock, and as a matter of course in the more expensive grades. The result must necessarily be to raise the standards of our manufacturers, and to give American time-pieces a scientific guarantee which will do much to promote their sale abroad. Mr. Leonard Waldo is the astronomer in charge of the Bureau, and will furnish application blanks; time-pieces may be sent by express to the safes at 89 Orange Street, New Haven.

—It is impossible for the unaided ear to determine with certainty the direction of a distant sound, especially when the atmosphere is foggy; hence the great utility to navigators of the instrument which its inventor, Prof. Alfred M. Mayer, of the Stevens Institute, has felicitously named the "topophone," or sound-placer. It consists of "a vertical rod passing through the roof of the deck-cabin," and bearing on the upper end "a horizontal bar carrying two adjustable resonators," below which a pointer is set at right angles with the bar. Rubber tubes from the resonators pass through the roof of the cabin and unite in a single pipe connected with a pair of ear-tubes. The vertical rod is turned by means of a handle in any direction. The first step is to tune the resonators accurately to the pitch of the sound under observation, and fix them "at a distance from each other somewhat less than the length of the wave of that sound"; the next, by turning the handle, to bring them simultaneously on the wave-surface, when, as "they both receive, at the same instant, the same phase of vibration on the planes of their mouths," it will result that if the connecting tubes be of the same length, the sound-pulses, acting together, will be reinforced to the ear, but, if the tubes differ in length by one-half the wave-length of the sound, the pulses will oppose and neutralize each other, and thus tend to produce silence. At this moment the horizontal bar is a chord in the spherical wave-surface of which say the fog-horn is the centre; and the pointer represents a radius, "or, in other words, coincides in alignment with a line drawn from the place where the sound is produced through the place of observation." By sailing the ship a measured distance "at an observed angle from the radius line thus found, a second radius line may in like manner be found," and "the distance between the two points of observation is the base-line of a triangle, of which the two convergent radii are the sides." From these data the distance of the fog-horn is readily computed.

—The *North American Review* for February contains an excited and somewhat extraordinary paper on "The Third Term," by Senator Howe, which is worth a word of description, perhaps, as an indication of how "the old set" reasons when it feels called upon to do so. It is an elaborate deprecation of the Springer resolution that the precedent established by Washington and other presidents in retiring at the close of a second term has become a part of our republican system. The history of the formation of the Constitution, so far as it relates to this point, is given in order to dispel the impression that the framers of that instrument had reference only to a second term, and to show how sincerely, in reality and if the truth were known, they were in favor of an indefinite re-eligibility. What has hitherto been imputed to Washington and Jefferson for patriotism is shown to have been in the former a cunning device to conceal impending senility, and in the latter the result of a wise forecast of probabilities, and the determination to prevent a successor from enjoying the third term which he saw was impossible for him to compass. The article seems to have been dictated by a fear that "true Republicans," and, by implication, overworked politicians, may be forced by "senseless clamor" to "quarry out a President while the foremost man of his age stands upon the mountain-top"; and it closes with the solemn warning that "the practical wisdom approved by the Saviour" is embodied in "Thou hast been faithful over a few things, I will make thee ruler over many," and that "the world will make a mistake if it shall turn from Jesus of Nazareth to follow Mr. Springer of Illinois." We believe no such august support of the "boom" as this has hitherto been invoked. On the other hand, the *Review* has in this number an able and interesting paper on the Emancipation Proclamation, by Mr. James C. Welling, to which it is worth while to call attention both for its historical and its argumentative merits.

—The announcement that companies are being formed to pirate the "Pirates of Penzance" has drawn the attention of the press to the law of stage-right, and very authoritative statements have been published to the effect that Messrs. Gilbert and Sullivan are amply protected by the law and have no reason to fear infringement. They have the credit of being so well advised in these matters that it would be superfluous to offer them suggestions with regard to their property, but the enterprising managers who are forming companies are probably acting under legal advice also. The fact is that the law of stage-right is not so well settled as it might be, and though the tendency of the decisions is all one way, misguided managers may easily get legal opinions throwing doubts upon the position taken by Messrs. Gilbert and Sullivan. The home of stage-right, the place in which it has received its fullest development, and where the courts are in the constant habit of deciding against piracy through unlicensed representation, is New York. The law, as it is recognized here, may be stated as follows: A dramatic author has, independently of all statutes, a common-law right of property in an unpublished play of the same absolute character that he has in his houses and lands, or in his stocks and bonds. It is perpetual and universal. He can sell the right to act the play absolutely, or for limited periods of time, or for limited districts. His right is, in short, exactly what Lord Mansfield attempted to establish for all literary property in the great case of Millar *vs.* Taylor. His attempt failed, and the consequence has been that ever since property in books, both in England and America, has only had such protection as has been accorded it by statutes local in their operation and limited in time. Stage-right is of a much later

growth, and wherever it is recognized we are confronted with what has probably struck Messrs. Gilbert and Sullivan as a "most ingenious paradox"—that the author of a play who cannot get from the copyright statutes anything more than a limited protection, which expires in a few years, may, by not taking advantage of the statutes at all, secure for the same play the most absolute property-right known to the law. Practically the effect of the judicial recognition of stage-right is that the author sells licenses to act his play for particular theatres or particular cities; and as a successful play is always very remunerative, it follows that dramatic authorship is at present, wherever stage-right is recognized, the most tempting branch of the literary profession—a fact which in part explains the recent noticeable development of it in this country.

—In Massachusetts the courts have taken a very different view of the matter. Some years ago Laura Keene, then the manager of one of the principal theatres in this city, bought from Tom Taylor both the play and the manuscript of "Our American Cousin." The play was brought out in Boston, and Miss Keene instituted a suit. The Supreme Court of Massachusetts decided, after a full argument, that the play having been previously represented for money, this amounted to a dedication of it to the public, and, therefore, no action could be maintained. It would seem from the language of the Court that the way in which the play was obtained for reproduction was by means of the *memory* of actors, and the Court thought that this use of memory could not be judicially restrained. We do not hesitate to say that a more unfortunate decision was never rendered by a respectable court. The right to use the memory is undoubted; so is the right to use the hands; but there is no greater right to use the memory for the purpose of pirating a play than there is to use the hands for the purpose of committing a theft. So, too, the question of publication is properly one of *intention*, and the idea that any one who represents a play for money thereby shows an intention to dedicate to the public is exactly the reverse of the fact. Nevertheless the Massachusetts decision is not by any means unsupported by authority. The truth is that during the last hundred years the conception of *ownership* in literary property has steadily grown, and a court which has a question of stage-right brought before it has an opportunity of taking either a liberal or a narrow view of the subject. As we have before pointed out in these columns, the history of copyright in the last two centuries is the history of a struggle between communism and the idea of ownership. We see them in conflict to-day—as, for instance, in the fact that international piracy is practised by the same nations that locally recognize a strict property right. So, in respect to dramatic authorship, the earlier decisions of the courts show that in the last century, while ownership in a manuscript was recognized, the antique legal communism which prevailed in the minds of some of the most learned judges of the day prevented them from admitting any right of property in the ideas embodied in the manuscript. It was this difficulty which really stood in the way of the recognition of copyright at common law, as anybody will see who reads the opinion of Mr. Justice Yates in dissenting from Lord Mansfield. This learned lawyer suggested that ideas were very much like wild animals, which ceased to be the property of the owner as soon as they escaped from his possession and control. So, in the case of ideas, they become public property on publication. It is this antique legal conception which really lies at the basis of the Massachusetts view of stage-right. The courts which take the opposite view only apply to dramatic property those principles of ownership which Lord Mansfield a century ago applied to all property in ideas.

—The last performances of Mr. Strakosch's opera company were in many respects superior to the first Both chorus and orchestra had become much better trained, and the leading artists appeared to greater advantage. The second performance of "Carmen" was very fair. Mlle. Belocca was charming in the title rôle, and Sig. Storti gave a spirited impersonation of the *Torreador*, though the part is much too low for him, and his fine voice did not show to the fullest advantage. The new tenor, Sig. Baldanza, has a powerful voice, but is utterly untrained. His natural gifts are above the average, and with conscientious study he may some day become a praiseworthy artist. Donizetti's "Favorita" was given for the first time this season. Mlle. Belocca as *Leonora* carried off again the honors of the evening, developing an amount of dramatic power both in her singing and acting which surprised her audience, who had hitherto only learned to admire her as a lyric singer. Sig. Storti was excellent as *King Alfonso*. This high baritone part is admirably suited to his voice, and ensured him perhaps his greatest success this season. Sig. Petrovitch, too, was better as *Fernando* than in any part he has undertaken. His performance of "Faust" on the following evening was very dull and uninteresting. M. Castelmary, a French artist, gave a rendering of *Mephistopheles* which, as regards dramatic strength and gracefulness of action, has never been equalled on the New York stage; but his part alone redeemed an otherwise tame and commonplace performance. "Sonnambula" and "Mignon" were repeated with the same cast, and the public was sorely disappointed at not having another opportunity of hearing Mlle. Singer, who is still indisposed, and upon whose appearance so much of Mr. Strakosch's success has depended.

—We were promised lately a new French bibliographical review which should be in itself coveted by the collector as a thing of beauty for his shelves. These anticipations are well fulfilled in *Le Livre*, of which the first *livraison* bears date of January, 1880, the name of A. Quantin, 7 rue Bénoît, Paris, as publisher, and that of Octave Uzanne as chief editor. This *livraison*, in shape of a large octavo, is composed of three *volumes*, evidently designed to be bound separately at the end of the year, though each shares the common title, *Le Livre;* and of these the first two have a rubricated title-page, while the first volume is printed on Holland paper, the second on a tinted, and the third on ordinary white paper, the third having also much the smallest number of pages. The three corresponding divisions are: Ancient Bibliography, Modern Bibliography, and Bibliographic Bibliography; the last being simply a classified list of French and foreign publications of the month (Nov. 15–Dec. 15, 1879), not so complete or well selected, at least on the foreign side, as we may hope to see it, and being immediately followed by a General Catalogue of Old Books, which, though paged consecutively with the former, is only a group of publishers' advertisements attractively displayed. Finally, it must be said that the Ancient Bibliography alone is adorned with engraved initial letters, head and tail-pieces and other illustrations to be specified presently, all of which give this portion of the *livraison* an air of great elegance.

—The leading articles are as follows: First, an account of Baron Taylor and his wonderful dramatic library, by Paul Lacroix, with an off-hand portrait by Bouguereau. Then "Bibliography in England," an analysis of the 'Index Librorum Prohibitorum,' by F. Drujon; a first paper, by Joannis Guignard, giving in alphabetic order illustrations of the marks of bindings belonging to eminent collectors, here generally the coats-of-arms, to which is added a full-page specimen of an illuminated cover; a sketch, by E. G. Brunet, of the life and works of the late Octave Delepierre, whose first wife was a sister of Lord Napier of Magdala, and whose untaught boyhood was the result of the father's addiction to Rousseau's doctrine of education; a pretty full and rather interesting list of books that constituted the library of the Dauphin, for whose instruction Louis XIV. provided so lavishly the classical commentaries *ad usum Delphini*—a list recovered by means of the crest on the bindings; and an appreciative memoir of the late Georges Trautz (Trautz-Bauzonnet), the consummate artist among Paris binders, accompanied by a portrait. Next in order is a summary of the Firmin-Didot sale, and with a *Chronique* of miscellaneous information Part I. concludes. Part II. opens with a description of the progress of public libraries in France, and passes to foreign literary correspondence from seven countries, including the United States; a department called "Le Livre parlé," and consisting of reports of lectures by the actor Coquelin and others at the literary matinées of the Théâtre-Français, and a schedule of the lectures at the Collège de France and the Sorbonne; a critique of Pouillet's 'Treatise on Literary and Artistic Property'; and, finally, to the reviews proper. These are of the French as distinguished from the English type, and call for no special comment, except that they relate only to French books or books translated into French; but what we suppose to be the true history of the 'Bibliographie clérico-galante' denounced by *Polybiblion* is given on p. 69. Notes and news are furnished in a *Gazette bibliographique*, among which we remark Minister Ferry's letter of instructions for the formation of a pedagogic library by translations from the best works in foreign languages, and the announcement of a new work, 'My Policy,' by the Duc de Broglie. Under Necrology respectful mention is made of Madame Louis Figuier, who was a frequent contributor to the *Revue des Deux Mondes* and a successful playwright. We take leave of *Le Livre* at the summary of periodical publications, including the principal literary or scientific articles in the Paris daily papers; the alphabetical list of "seizures, prosecutions, and convictions undergone by the press," and by equally hapless books; and the list of new journals which appeared in Paris in the month of November—thirty in all. All this quantity and variety *Le Livre* offers for the annual price of 46 francs.

—We have received three lists of words in *a* up to *adk* issued by the Philological Society, in the prosecution of its Dictionary, which contain respectively (A) dictionary words of doubtful existence elsewhere, the lexicographer's "apparent stock in trade"; (B) words mostly obsolete, with latest known date of use affixed, and later desired; (C) words actually or comparatively recent, with earliest known date affixed, and earlier desired. This last list we print entire below. Contributions should be sent to Dr. Murray, Mill Hill, London, N.W., in accordance with the Society's formal Directions:

Aback (*nautical*) 1762, abashless 1868, abatis 1809, abdomen 1601, abdominal 1746, abduct *v.* (a person) 1837, abductor 1872, abeam 1836, aberdevine 1770, abettal 1861, abey *v.* 1868, abeyant 1866, ablaze 1800, ablaom 1865, abnormal 1840, abnormality 1854, abnormally 1845 abnormity 1859, abnormous 1771, aboard *adv.* 1509, abolishable 1837, abolition (of slavery), abolitionism (Wilberforce), abolitionist 1808, aboriginal 1788, aboriginary 1868, abrase *v.* 1859, abrasion 1740, abreast 1567, absentation 1852, absentee (Irish) 1769, absentness 1858, absinth(e) 1854, absolutism 1854, absolutist 1850, absolvent 1837, absorbed (*mentally*) 1805, absorbedly 1868, absorbent 1794, absorption 1741, absquotilate—absquatulate 1837, abstainer (total) 1850, abstergent 1861, abstinence (total) 1850, abstraction 1660, absurd 1590, abusefulness 1862, abutment 1644, abutment (*arch.*) 1830, abyss 1560, academial 1852, academician 1755, academist 1691, acatallactic 1865, accelerative 1827, accelerator 1861, acceptancy 1856, acceptant *adj.* 1851, accessibility 1818, accession 1646, accessorial 1856, accidentalism 1851, accidentality 1817, acclimatation 1859, acclimate *v.* 1792, acclimation 1859, acclimatization 1859, acclimatize *v.* 1854, acclivity 1614, accommodatingly 1847, accompaniment 1789, accompan(y)ist 1863, accomplice 1600, accordion 1859, accouche *v.* 1867, accouchement 1859, accoucheur 1845, accouchense 1867, account (*lay one's with*) 1852, accountability 1825, accountancy 1879, accountantship 1858, accredit *v.* 1750, accrete *v.* 1784, accuracy 1664, accurate 1621, accusal 1823, acerbate *v.* 1862, acervative 1865, acharnement 1854, achene *n.* 1867, achromatic 1830, acidify *v* 1837, acidity 1656, acidulate *v.* 1794, acidulous 1832, acknowledg(e)ment 1599, acosmism 1860, acosmist 1852, acoustics 1824, acquaintanceship 1827, acquaintancy 1859, acquiesce *v.* 1620, acquirement 1646, acquisitive 1642, acquisitiveness (phrenol.), acreage 1850 acrid 1732, acridity 1859, acrimonious 1646, acrobat 1845, acrobatic 1861, across 1547, acrostic 1587, act *v.* 1500, actinic 1859, actinism 1862, actionize *v.* 1872, actor (= player) *Shakspere*, actress 1623, actuality 1647, actualize *v.* 1817, actuarial 1869, actuarian 1863, actuate *v.* 1609, acuation 1847, acupressure 1865, acute 1592, adagio *n.* 1845, adapt *v.* 1611, adaptiveness 1863, additional 1641, addressee 1864, addressy *adj.* 1870, adduce *v.* 1764, adductor 1828, adeep 1850, adept *a.* and *n.* 1692, adequacy 1853, adequative 1865, adhere *v.* 1597, adhesiour 1646, adhesive 1750, adhesiveness 1860, adiaphorism 1866, adipocere 1820, adiposity 1859, adjudicate *v.* 1851, adjunctive *adj.* 1859, adjuratory *a.* 1815, adjust, v. 1611.

—If Mr. Cahrles H. Allen, the Secretary of the British and Foreign Anti-Slavery Society, has any official superiors, they will do well to repress his activity a little. He sent to the London papers in November last a shocking story, which he said had been forwarded to him by a "friend" in Kansas, of two negroes who had gone back from Kansas to Mississippi to bring their families to their new homes. One was seized on their arrival and had both hands lopped off by the whites, and was then "told with fearful oaths to go to Kansas now and make a living for his family, and the poor, maimed man returned with his wife and little ones." The other had worked hard for some months, laid by $100, and went back to fetch his bride. The very night after his marriage he was dragged from his house, his arms cut off above the elbows, and he was left to bleed to death. Mr. Allen furnished this tale to the British public as absolute truth, with appropriate and harrowing comments. He was speedily assured that it was probably false from beginning to end, so he wrote to Governor St. John of Kansas for confirmation. He has now sent the Governor's answer to the London *Times* with another letter of his own. The Governor says that a colored man named Best did go back from Kansas to Mississippi last spring with $100, "since which time nothing has been heard of him or of his family—save and except reports brought here by refugees, who state that a lot of white ruffians when Best returned caught him and cut off his hands, from the effects of which it is reported that he died." "As to whether this is true or not," adds Mr. St. John, "it is impossible for me to say; I only know that Best was here, for I saw and talked with him last spring." This is all. About the other maimed man with the wife and little ones, who got back to Kansas, not a word. Most men who had circulated the original story in a solemn manner would be a little abashed by this result of a hunt for evidence. Not so Mr. Allen. He writes to the *Times* again with great calm:

"As many persons expressed doubts as to the veracity of some of these hideous stories, this society addressed a letter to the Governor of Kansas asking for some confirmation of the statements made. His reply I now enclose, trusting that you will kindly give it a place in your columns, for it is of the highest importance that the people of America should be aroused to the feeling of indignation that such conduct excites in all civilized countries. In no way can we so easily reach the heart of the great and free people of the Northern States as by addressing them through the pages of the *Times*."

He evidently thinks he has proved his case, and that he is doing good by this sort of work. There is, therefore, evidently no use in remonstrating with *him*, so we must ask his directors, or trustees, or whatever they are, to put some check on him. Sympathy for the negro refugees which shows itself in this way only disgusts people at the North, hardens their hearts, and closes their purses by spreading incredulity with regard to all stories of negro sufferings.

—Not even the society of Holland House is more familiar to the student of polite literature than are the three generations of interesting men and women whose names are associated with the manor-house at Coppet. The first generation we know through Gibbon and Rousseau; the second through Mesdames de Staël and Récamier; the third through the letters of Doudan. Numerous, however, as are the writers who have had more or less to say about this attractive Vaudois society, our knowledge of it is still scrappy and irregular. But in the *Revue des Deux Mondes* for January 1 Mr. Othenin d'Haussonville begins what promises to be a long series of articles, and to give a great deal of long-desired information. To the writer in question has been opened "the iron-bound door of the old tower of the Coppet mansion, in which are kept its archives"; and it is from these documents that his articles are to be prepared. If he had found there only family papers, much that is worth reading might, we doubt not, have been drawn from them; but, in addition to these, he discovered among the twenty-seven volumes of letters addressed to M. and Mme. Necker, and the papers of Mme. de Staël, a great deal that is of interest concerning Buffon, Grimm, Marmontel, D'Alembert, Diderot, and Mesdames du Deffand, Geoffrin, and d'Houdetot. But the present long paper (52 pages) is devoted solely to the youth of Mme. Necker, born Susanne Curchod. As regards her betrothal to Gibbon, "curious documents," says M. d'Haussonville, "allow me to complete the story, and to correct in several points Gibbon's story; I shall be astonished if his conduct gains in public estimation by the new light thrown upon it." Gibbon, it will be remembered, though he "sighed as a lover," yet "obeyed as a son"; but the sighing on his part cannot have been very deep, thinks his French critic, to whom his love-letters (three of which are here printed) appear "but the work of a clever fellow who writes love-letters as he would a French exercise, employing the figures recommended by the rhetoric books." Instead of the engagement being broken shortly after his return to England, as Gibbon gives the reader to understand, it now appears that he kept it up for four years, and that, when finally broken, it caused the girl acute suffering. This last fact is not now stated for the first time, the Rev. Mr. Moultou having written Rousseau to this effect; but the trustworthiness of his view has always been disputed, notably by Mr. Morison in his volume in the series of "English Men of Letters."

THE SPIRIT OF THE EIGHTEENTH CENTURY. *

THE present century is the child of the last, and, as is the way with children, studies but finds it hard to appreciate the character of its parent. Stephen's 'History of English Thought in the Eighteenth Century,' Lecky's 'History of England in the Eighteenth Century,' Miss Wedgwood's 'Life of Wesley,' Thackeray's 'Humorists' and still more his 'Esmond,' Carlyle's 'Essays,' Froude's 'History of the English in Ireland during the Eighteenth Century,' Morley's 'Voltaire,' 'Diderot,' and 'Burke,' and a score more of recent biographies or treatises show that in the present age we are compelled, whether with our will or against our will, to interest ourselves in the acts and thoughts of our fathers. Yet a critic who reads with intelligence the series of essays in which Messrs. Abbey and Overton investigate the condition of the English Church during the last century, can hardly fail to perceive that even writers who have collected together a large amount of miscellaneous information, and who intend to write with the greatest fairness, find an almost insuperable difficulty in really entering into the spirit of the last age. To explain, indeed, the causes of this difficulty would be to attempt a critique on the eighteenth century. All that can be done within the limits of a newspaper article is to call attention to one point of dissimilarity between the present century and the last which, though patent to every one, exerted a far greater influence than is always attributed to it.

In many respects the sentiment of the eighteenth century was, we are convinced, far more like the prevailing feeling of the present time than is often allowed. The idea, for instance, that the Georgian era was marked by a religious coldness quite foreign to the reign of Victoria, is, as any one may see who will study the facts presented by Messrs. Abbey and Overton, grounded on a twofold misconception. It rests on the assumption, which is not borne out by the facts, that readers of Richardson or hearers of Whitefield belong to a generation who did not know what was meant by religious sentiment. It rests on the still more groundless assumption that the latter part of the nineteenth century is characterized by the religious fervor which may, with a certain amount of partial truth, be ascribed to the period of the Wesleyan or Evangelical revival. In

* 'The English Church in the Eighteenth Century. By Charles J. Abbey and John H. Overton.' 2 vols. London: Longmans, Green & Co.

one point, however, the eighteenth century, if one may use that term as a very lax description of an age which does not coincide precisely with any division of a hundred years, differed essentially from the present time. The men who lived during the period which extends, speaking roughly, from the last English to the first French revolution (1688–1789) remembered, and to a certain extent knew, what was meant by religious persecution, and understood, partly from tradition, partly from personal experience, what was the meaning and what were the results of the *odium theologicum*. Few persons now realize the extent to which the demon of theological intolerance tormented Europe. It is hardly an exaggeration to say that from the death of Savonarola (1498) down to the end of the Thirty Years' War (1648) every part of Europe was in one shape or another made miserable by the spirit of religious fanaticism. England, indeed, escaped the miseries which afflicted Germany and France, but the triumph of the Puritans, which, after all, was a mere episode in the religious contests of Europe, produced an effect on the imagination of Englishmen which may be measured by the fact noted by Mr. Pattison, that the popular abuse of the word "saint," as a term suggesting hypocrisy, dates back to the Restoration and the reaction against the rule of Cromwell. It must not, further, be forgotten that if the peace of Westphalia closed the wars of the Reformation, it did not put an end to acts dictated by the grossest theological intolerance. The revocation of the Edict of Nantes (1685) excited at least as much horror at the beginning of the eighteenth century as was still aroused by the recollection of the Reign of Terror at the beginning of the nineteenth; and the Revocation of the Edict of Nantes was indeed the greatest but was not the last act of theological intolerance known, either by immediate tradition or by experience, to the men of what may be termed the Georgian era. The revolt in the Cévennes and the horrors of its suppression took place in the midst of Marlborough's triumphs, and if, as the century advanced, the persecution of French Protestantism languished, mainly for want of victims to persecute, the spirit of intolerance which had been born in a time of religious zeal lived on when Paris was filled with scoffing *philosophes* and unbelieving and scarcely less scoffing prelates. Calas was tortured and murdered after George III. ascended the throne, and Guizot's mother attended Protestant conventicles which were broken up by the fire of dragoons.

Nor are we to suppose for a moment that the intolerance which was rampant abroad was unknown in Great Britain or Ireland. The penal legislation against Catholics is proof enough that theological animosity was not a vice peculiar to Roman Catholic governments, and the intolerant sentiment of the mass of the English people went beyond that of their rulers. One curious phenomenon of the age is the popularity of the Church of England at the period when she reached what, religiously speaking, might be considered the lowest point to which she ever fell. Throughout the eighteenth century the mob were, as Messrs. Abbey and Overton point out, invariably in favor of the Church. They were always ready to break into violence with undiscriminating zeal against any man or party supposed to be hostile to the Establishment. A Presbyterian, a Wesleyan, a Jew, a Papist, or a Freethinker might at any time be liable to popular violence. In 1753 the proposal to naturalize Jews seemed to the multitude to be little less than a scheme for overthrowing Christianity. In 1780 Lord George Gordon and his followers held possession of London and gutted every Catholic Chapel within their reach. Eleven years later the mob of Birmingham destroyed Priestley's house because he did not believe in the existence of the Trinity and did believe in the sovereignty of the people; while the respectable classes, with George III. at their head, pretty clearly thought that if the mob at Birmingham were a little too wild, yet that a freethinker and a revolutionist had not more than a bare right to legal protection.

The facts we have mentioned, and a hundred others of the same kind, are the mere commonplaces of history, but they deserve attention as showing that the men of the last century knew religious intolerance, so to speak, as a living force, and not, like ourselves, as something merely of the past. From this knowledge are derived several characteristics of the age which appear at first sight hardly consistent with each other. It affords, for instance, the explanation of the intellectual brutality which is traceable among men such as Johnson, Swift, or Steele. They carried into conversation the kind of violence which in times not then long past would have led to deeds of active persecution. The whole tendency of the time was to treat an opponent, especially on theological matters, as certainly a fool and probably a knave, and to express one's sentiments about freethinkers and other disreputable persons in the terms which it is natural to apply to scoundrels. Hence, though in England law or custom ensured an amount of liberty of speech which excited the envy of foreigners, the freedom of the last century would, to persons accustomed to the unrestrained discussion of modern times, appear little better than a social tyranny slightly tempered by law. Every month there appear articles in the best English reviews which would in the last century have excited the horror of all respectable persons. It is funny to imagine what Johnson, or Eldon, or Pitt, or, for that matter, Erskine (who occasionally crams his speeches with statements of his religious orthodoxy), would think of a current number say of the *Fortnightly* or *Nineteenth Century*. Freethinkers themselves were curiously influenced by the spirit of the time. Either prudence or, in some cases, real hesitation in speaking out led them to veil their meaning in hints or sneers. Neither Bentham nor James Mill was a coward; but Bentham published, or got published, his speculations on religion under the pseudonym of Philip Beauchamp, and the language even of the anonymous publication is singularly guarded; while James Mill impressed on his son the absolute necessity of keeping private the opinions as to religion in which John Mill was educated. It is probable that in the case of Bentham, the two Mills, and of Austin caution in the expression of unorthodox belief was really unnecessary; but the excessive reticence which marked the way in which these men treated theological topics is, even if it was unnecessary, all the more curious as a survival of a mental habit quite suited to the tone prevailing in the earlier part of the Georgian era.

The most important, however, of the effects produced on the men of the eighteenth century by their knowledge of the evils flowing from the spirit of fanaticism was the importance which it led thinkers of every school to attach to the power of reason. The expressions "rational piety" or the "reasonableness of religion" have now, like many other good things, gone a little out of date, but they admirably express the whole tone of the generation to which they were familiar terms. The confidence in reason, one might almost say in good sense, was not peculiar to any one school. Men who were the pillars of the Church—Tillotson, Butler, or Paley—were quite as anxious as were any of their opponents to show that their religious views were reasonable. This confidence in good sense was closely allied with, or, in fact, was only the other side of, the dislike to "enthusiasm" which was in reality one of the marks of the age. Mr. Abbey's chapter on this subject is well worth careful consideration. He shows conclusively, what indeed scarcely needed proof, that the opposition to enthusiasm was common to all the most celebrated thinkers of the age. This opposition was further obviously based on utter distrust of all those views of religious belief which substitute fervor of conviction for strength of argument. Nor can it be doubted for a moment that the ground why religious fanaticism seemed utterly intolerable to men wanting neither in zeal nor in goodness, was that they dreaded lest the kindling of enthusiasm should relight all the fires of theological animosity which had for ages devastated Europe, and had at last been got under, though they were not yet put out, by the efforts of human reason backed up by the obvious secular interests of mankind. Ten years of Puritan rule would, we suspect, make modern Englishmen feel that what our fathers called enthusiasm was a thing to be carefully held in check. "Sir, this pretending to extraordinary revelations and gifts of the Holy Spirit is a horrid thing—a very horrid thing." These were the words of Butler to Wesley. They are not exactly the language which would be used by a modern bishop to a modern Wesley, but they well present the very sentiment of Butler's age. They would have been approved by Johnson and Richardson no less than by Hume and Gibbon. Till you understand exactly what these expressions mean, and what was the cause of the feeling to which they give expression, you will always find a difficulty in entering into the spirit of the eighteenth century.

HARPER'S LATIN DICTIONARY.*

NEITHER Latin nor Greek lexicography has kept pace with the advance of philological science, but our Latin dictionaries have been behind our Greek. The labor of making or rewriting a complete lexicon is so long and tedious that we cannot expect it to be undertaken many times in a generation. So much the greater need that revisions, when they are made, be thorough-going and intelligent, if lexicons are not to become, yet more than they have been, the repositories of worn-out philological rubbish. Andrews's Lexicon—substantially an abridged translation of Freund's German work (1834–45)—has been since its appearance

* 'A New Latin Dictionary, founded on the Translation of Freund's Latin-German Lexicon edited by E. A. Andrews, LL.D. Revised, enlarged, and in great part rewritten by Charlton T. Lewis, Ph.D., and Charles Short, LL.D., Professor of Latin in Columbia College, N. Y.' New York: Harper & Brothers. 1879.

in 1850 the main reliance of English-speaking students of Latin. It has already been made the basis both of larger and smaller works. White and Riddle's, the chief of these (London, 1862, 2 vols.), contained much added material, but embodied the bulk of Andrews's articles untouched. 'Harper's Dictionary' is the first attempt at anything like a real working-over of Andrews's Lexicon.

The features of the old dictionary which called most urgently for reform were the orthography and the etymologies. In a less degree the definitions needed improvement; yet these were often deficient as regards special and unusual phrases. The spelling of the new work leaves not very much to be desired, and it is a real comfort to see at last in a dictionary *caelum, paenitet, cena, erus, umerus, umidus, nuntius, contio, condicio, incoho,* and many others. This is not a minor point. It has at last dawned on the scholastic mind that there is a right way of writing (and pronouncing) every Latin word; and it becomes an important duty to free the language of Rome from the distortions brought about by a vicious mediæval pronunciation, and to accustom learners from the outset to the right forms of words. Often bad forms should have been rejected more positively: thus "*contio* (less correctly *concio*)." Why not "incorrectly"? On what principle the editors have given *abicio, conicio, proicio,* etc., at the heads of articles, and on the other hand "*adjicio* (better *adicio*)," we are at a loss to say. The quantity in *ōbicio, sūbicio, īnicio,* and others is rightly given, but no provision is made for the exactly similar *ābicio* and *ādicio:* the one is marked *ăbicio,* which is quite an exceptional scansion, and the other left without designation of quantity. Nor is there any sufficient ground for writing *Maius, aio, meio, Velleius* alongside of *Trajanus, major, pejor, Pompejus;* an inconsistency which has led to "*Sejus* or *Seius,*" "*Veii* or *Veji,*" as if these were in any sense different forms. We are glad to see *Raetia* and *Regium* freed from their adventitious *h,* and wish that *Rhea Silvia* might have shared this benefit. *Danuvius* and *Genava* are welcome, but *Suebi* should have received distinctly the preference over *Suevi. Terentina tribus* yet remains to be corrected, but it is pleasant to see *Caius* and *Cnaeus* at least thrust into the background. *Derigo* deserves a separate article. But these oversights are neither very numerous nor harmful, and many can be easily corrected in the plates.

The etymologies are the least satisfactory part of the new book, yet they are greatly in advance of what we used to read in the old dictionary. Some parallel examples, chosen quite at random, will show this:

Old.	*New.*
haruspex: "perhaps an Etruscan mutilation of the Greek ἱεροσκόπος; acc. to others from *haruga* and *spicio.*"	*haruspex:* "Sanscr. hirâ, entrails: Gr. χολάδες, χορδή: cf. *hariolus.* Curt. Gr. Etym. p. 202 sq."
hortus: "weakened from χόρτος, an enclosure for plants."	*hortus:* "cf. heres, co-hors; χόρτος, an enclosure for plants."
sus: "sibilated from ὗς."	*sus:* "Gr. ὗς, O. H. Germ. sû: Engl. sow, swine."
vinum: "digammated from οἶνος."	*vinum:* "cf. Gr. οἶνος."

But how can *amo* have to do at once with "Sanscr. kam=to love" and "ἅμα=Sanscr. sam=German sammt" etc.? *Axamenta* is wrongly derived from *axis* "because they were inscribed on tablets of wood," instead of the verb *axare. Lympha* still figures as kindred with *νύμφη.* The root of *lucrum* is said to be "laf"; that of *verbum* "er," in spite of the citation of "Germ. wort, Engl. word." *Oportet* is said to come from *opus, hornus* to be "contr. from hōrinus=ὥρινος from ὥρα." Under *hora* we read, "kindred with ὥρα, Zend yare year, ayara day: orig. for *F*osara [!] from *Fέαρ,* ver," a strange mixture of two incompatible notions, both equally false. *Solitaurilia* is given as a form of *suovetaurilia:* it is, as Corssen showed long since, an entirely distinct word. *Sodes* "contr. from si audes for si audies," *hamus* "kindred with ἅπ-, ἅπτω," *necubi* from "ne alicubi," are other oversights. The same old preposition is given rather inconsistently as "port-" in *pono* and *possideo,* "por- or port-" in *polliceor,* "pro-" in *porrigo;* under *polluo* and *pollingo* there is no mention of any preposition. For *unde* no derivation is given, though *ubi* is explained as *quobi;* under *similis,* though ἅμα and ὁμοῖος are quoted, the exact counterpart, ὁμαλός, is not. Other expressions savor strongly, to say the least, of bygone modes of thought: *hirundo* "weakened from *χελιδών*"; "*CNAIVOS* for *ΓNAIFOΣ*" (p. 78); *divus* "and (without the digamma) *dius*"; *boo,* "with the digamma *bovo*"; *defendier* an "infin. pass. parag.," *defendentum* "gen. plur. sync." The etymologies seem to have been worked in from Curtius and others without a thorough elimination of older material, and without due discrimination between the certain and the uncertain; the work betrays an insufficient knowledge of phonetics and of the kindred languages cited. Hence misspellings and inconsistent transliterations of Sanskrit words: "dicami, point out," "râgan, king," "hasas" (under *anser,* but on p. 799 "hansa"), "jug-, junagmi" (under *jungo*), but under *jugum* "yuga from yug." "Tah-ja" (under *lacrima*) is given as the Gothic for "tear," a mistake which evidently arose from letting the eye wander to the wrong paragraph on a page of Curtius.

These instances will serve to show that the etymological part of the dictionary is yet capable of much improvement. Respecting the derivation of Latin words from one another, the old dictionary was fairly satisfactory, but the new one shows no improvement; it is true that *judico* is now rightly referred to *judex,* but *vindex* is still said to come from *vindico, index* from *indico, sonus* from *sono, nex* from *neco, lux* from *luceo* (in these last two cases the old lexicon was right). All these should be reversed. The *i* in *alti-sonus, arci-tenens* is still (p. 874) regarded as a "connecting sound." It is to be desired, we may say in passing, that Freund's articles on the several letters ("*C,* the third letter of the Latin alphabet," etc.) had been either cut out or quite remodelled. That on *A* is indeed rewritten by the reviser of the first part of the book, and is brought into tolerable consonance with modern grammatical ideas; but the others remain with very little change, and we may still read very surprising things, as *pulcer* compared with *πολύχροος* (p. 257), short *u* "an obscure sound resembling the German *ü* and the French *u*" (p. 1,922). Here, of course, it is Freund who speaks; but how easy it would have been to prune away these extravagant statements. Even the changes that have been made are not always very happy, as *d* representing "an original *s*" in *medius,* and "an original *l*" in *dacrima,* where Freund spoke only of an interchange.

But we pass to the definitions and illustrations of meaning, and here we see the real value of the work done by the revisers. A careful comparison of thirteen important articles, taken at random, shows in every case but one an increase in length, in all cases the addition of new examples and improvements in the wording, in nine cases new uses or meanings of the word, in one (*bonus*) an entire reconstruction of the article, which is enlarged from two and a half columns to eleven. The student of Horace will now find at least some explanation of *carmina divides* and *quinta parte sui nectaris.* The article *mancipium* shows marked improvement in the legal definitions. Quite aside from the more striking alterations, the number of unobtrusive but excellent changes appears to be very great. We have not noticed many or serious failures to utilize recent researches in this department: *redivivus* ought probably to have been revised in accordance with Lange's recent explanation. We have looked with some interest for the better presentation of the Roman religion as distinct from the Greek, but this seems to be as before. We still read *Juppiter* "a son of Saturn," *Juno* "daughter of Saturn, sister and wife of Jupiter," *Volcanus* "son of Jupiter and Juno." *Mars, Minerva, Saturnus,* and others are, as they were by Freund, more satisfactorily treated. Other oversights we have noted are: *Corinto deleto* (p. 470) strangely referred to an "Inscr. Fratr. Arval." instead of the well-known monument of Mummius: the *Velia* described as "an elevated part of the Palatine hill"; "*anti*" given as an old form of *ante* (should be *antid*); long *ā* in the ablative singular "in consequence of the suppression of the original abl. ending *-d*" (p. 1). No serious omissions have occurred to us: the pronominal forms *sovos* and *tovos* (*suus* and *tuus*), *Covella* as surname of Juno, the (inscriptional) perfect *meissi, missi,* and the participles *essus* and *ussus,* to which some Plautine scholars are extremely partial, might have been fairly expected. The proof-reading seems well done, and misprints are not numerous; we have noticed only *lucifigus* for *lucifugus* (under *lucipetus*). And ought not *Genna* on p. 806 to be *Genua?*

Imperfections are unavoidable in a work of this kind, and in enumerating the above we have not designed to cast the signal merits of the book into the shade. The difficulty of handling so enormous a mass of material is so great that he must be little short of omniscient who should let nothing faulty pass unchallenged. There is no doubt that in the present work we have the most correct and useful Latin dictionary yet published. The book has 2,019 pages to 1,651 of Andrews's Lexicon. Messrs. Lewis and Short have shared the labor very unequally; only the first 216 pages (words beginning with A) are the work of the latter.

Hector Berlioz. Selections from his letters, and æsthetic, humorous, and satirical writings. Translated by W. F. Apthorp. (New York: Henry Holt & Co.)—As compared with the rather uneventful life of most composers, the life of Berlioz may be said to present not a few features of interest. Many of these can be traced to the Bohemian instincts which

he had in common with most artists. Who, for instance, but an artist would ever think of marrying an actress involved in great debt, himself having no more in his purse than a few hundred francs, and those borrowed of a friend? Berlioz did it, and it was not by any means the only anomalous and impetuous act he perpetrated. Mr. Apthorp has touched on most of these in the biographical sketch he has prefixed to the present volume. It was a happy thought on his part to make this sketch consist mainly of selections from Berlioz's own account of his life, connected by explanatory and critical remarks of his own. For even if, like Goethe, Berlioz has doubtless mixed up fiction with truth, he is yet, on the whole, most competent to tell his own story. The selections which follow the introductory sketch all help to give it color; for in a certain sense all the writings of Berlioz are autobiographical. Thus, in one of his letters from Germany, the gossip about himself which he puts in the mouth of the people gives us a vivid idea of Berlioz at a rehearsal:

"What happened at the rehearsal this morning? . . . Is he satisfied? . . . He is a Frenchmen, then? . . . But the French only write comic operas! . . . The chorus find him awfully wicked! . . . He said that the women sang like dancers! . . . He knew, then, that the *soprani* belong to the *corps de ballet?* . . . Is it true that he bowed to the trombones in the middle of a piece? . . . The orchestra boy vows that at yesterday's rehearsal he drank two decanters of water, a bottle of white wine, and three glasses of brandy? What does he keep saying César! César! (*c'est ça, c'est ça*) to the *Conzertmeister* for?" etc.

In explanation of the last line be it said that Berlioz was an incurable punster—a peculiarity which he even exercised in the title of one of his books, 'À travers Chants' (Champs), and which did not tend to facilitate the translator's work. Mr. Apthorp, however, has made an excellent translation. Perhaps it may be called the best translation into English of any foreign musical work we have. Musical people should make haste to buy up the whole edition, so as to induce Mr. Apthorp to publish another volume, for which there is more than enough material left. We have nothing to say against the present selection except that we should have preferred the analysis of Beethoven's symphonies to some of the "Musical Grotesques," good as most of these are. In the "Evenings in the Orchestra" the reader will find some good illustrations of Berlioz's sarcasm. Of his wit and delicate irony a specimen or two may find place here. "Well-written music" is defined as "that which does not spoil anything in an opera"; which reminds one of the celebrated definition of salt as that which spoils the soup if it isn't put in. The manager of the Grand Opera at Drury Lane, in 1848, being at a loss one day what to do next, came to the conductor of the orchestra and said: "Only one thing is to be done, that is to give 'Robert le Diable' next Wednesday. So we must get it up in six days." "All right," answered the conductor, "and we will rest on the seventh." Very amusing also is the account on page 212 of the honest German railway official who took Berlioz for an impostor, because he could not believe that the little, frozen man who condescended to have his own trunk weighed could be Berlioz the composer.

One of the greatest charms of Berlioz's literary work consists in his steady avoidance of descriptive writing. Even in poetry and romance, which usually deal with the world of sight so familiar to us all since childhood, the effect of descriptive writing is, at its best, vague and unsatisfactory. How much more, then, must it be the case in musical criticism, dealing, as it does, with the world of tone, which most people visit only at rare intervals? Berlioz only makes an exception in regard to instrumentation—his specialty. But instruments may, in a certain sense, be regarded as individuals and groups of individuals, and it is, therefore, interesting to read about them, especially from a comparative point of view. In the ten letters which give an account of Berlioz's first journey to Germany, in 184 –1842, and which constitute the most attractive portion of the volume now before us, many curious details are given in regard to the orchestras of the various German cities at that time. In the largest of them Berlioz found a difficulty in bringing together the requisite number of performers, people being moreover indignant that he should ask for more men than sufficed for the works of Mozart and Beethoven, and should even insist on having instruments hardly known in the orchestras of the day. Wagner in Dresden, Mendelssohn in Leipzig, and Meyerbeer in Berlin aided him in his efforts to the best of their ability. What gave him especial trouble was the scarcity of harps. A harpist had often to be sent for from another city at considerable expense and loss of time. It is curious that the harp, though one of the oldest instruments—according to musical legend *the* oldest—should have been one of the last to be added to the orchestra habitually. It remained for Berlioz, Wagner, Liszt, and Rubinstein to show what can be done with this instrument, as well as with brass, in producing rich orchestral tints.

The account of Berlioz's experiences with various German orchestras gives a good idea of the progress these organizations have made since then, thanks especially to the demands made on them by Wagner and his school. It shows, too, that forty years ago certain bad habits were indulged in by instrumentalists which nowadays would be severely punished. A flute-player, if a melody seemed too simple for him, would adorn it with trills and mordants, after the fashion of Italian prime donne. Berlioz seems to have suffered much from this nuisance, to which he repeatedly alludes. One oboe-player, who had a mania for this sort of thing, on being reprimanded for it, abstained at the next rehearsal. But when the concert took place he "began his little scurvy tricks again, giving me a bantering look which all but upset me with indignation and fury" (p. 147). The case of the prima donna, in London, who insisted on singing Madame Sontag's version of the trio of maskers in "Don Juan" instead of Mozart's, "because hers is better," comes under the same head. These things, fortunately, belong to the good old times.

"Alóha!" A Hawaiian Salutation. By George Leonard Chaney. (Boston: Roberts Brothers. 1880. 16mo, pp. x.–299.)—Mr. Chaney, a well-known Boston clergyman, spent the first four months of 1876 in a tour to the Hawaiian Islands, visiting Oahu, Maui, and Hawaii, and seeing as much of the group as any recent traveller has seen except that energetic English tourist, Miss Isabella Bird. He had the usual experience of visitors to these islands, a vivid enjoyment of the two things which, for the heroine in 'Lothair,' made life worth living, namely, "climate and the affections." The Hawaiian climate and scenery are unsurpassed. The joyousness of the aboriginal people, and the hospitality of both aborigines and foreign settlers, are things scarcely conceivable by the American who has not seen the islands. It is the most experienced travellers who find the amiability of the natives and the charm of the foreign society to be exceptional. Rightly or wrongly, Mr. Chaney repeats old testimony when he says: "Honolulu is socially the Paris of the Pacific, the most cosmopolitan city, perhaps, in the Western hemisphere. . . . I question if anywhere in the whole world general society is more attractive than in Honolulu. Nowhere else do so many nationalities blend in harmonious social intercourse." Mr. Chaney enjoyed this society without analyzing it. He might have pointed out that a main secret of its charm is to be found in its isolation. In Honolulu the Anglo-Saxon, the Frenchman, the Chinaman, the German are divided by thousands of miles from their natural battle-fields in politics, art, and religion. The island capital is neutral ground; for a social centre it has its little court; add that as to site and climate it is an earthly paradise, and it would be a hard case if its people could not agree, as they mostly do, to base their society upon their common sympathies, and to let the secular quarrels alone. It is a charming society, and yet there is in it a fault which Mr. Chaney has not recorded, and perhaps did not perceive—an ailment which is chronic, and which is aggravated by this very remoteness, otherwise socially lenitive, from the older worlds: it is the prevalence of personal gossip. The subtilty and energy which in other capitals, large or small, are given to public affairs are in Honolulu devoted to an active, penetrating, and tireless interest in one's neighbor's affairs. It is a simple case of the conversion of forces.

But Mr. Chaney spent great part of his time in the saddle and elsewhere than in Honolulu. The island of Oahu, with its beautiful windward ravines; Maui, with its yet wilder scenery, the "mystery and majesty" of the great gorge of Iao, its broad fields of sugar-cane and its rare *filices* (Mr. Chaney and his family, who accompanied him, fell into the latest island fashion during their stay, and became ardent fern-collectors); and, chiefly, the great mountains and solemn desert uplands of Hawaii, with its greatest of living volcanoes—these were what fully satisfied our traveller's heart after the somewhat unsubstantial nature-worship that he learned in the vicinity of Concord. He describes with enthusiasm the beauty of Hilo Bay, his point of view being the fronting islet, fringed with cocoanut-trees, which forms a part of its barrier from the waves of the Pacific. Mr. Chaney had previously seen many of the famous landscape views of Europe, but he says:

"If there is anywhere else in the world a view in which grandeur and sweetness so conspire to elevate and console the spectator as the view from this island, I have not found it: Byron's Bay in front, its face all smiles—not laughing, far removed from that immeasurable laughter of the ocean which Homer celebrates, and in which there seems something almost sardonic—then the keen edge of the beach flashing over the blossoming waves like a sickle that for ever cuts a field for ever blooming;

. . . the fields of sugar-cane, the uplands covered with rich Hilo grass ; then the belt of forest trees ; and above all, yet in and through all, for we feel its presence even when its form is shut out by clouds, stands Mauna-Kea, the perfect mountain. It has the greatness of angels, above us, yet with us."

Mr. Chaney has the gift of poetic expression, as will be clear from the above quotation, though his book is not free from faults of taste. It deserves to be widely read in this country of unrest ; it is a vivid, enthusiastic, and, from the tourist's point of view, not over-flattered picture of a contemporaneous lotos-land and one of the most charming countries in the world.

Reminiscences of Levi Coffin, the Reputed President of the Underground Railroad. Second edition, with appendix. (Cincinnati : Robert Clarke & Co. 1880. 12mo, pp. 732.)—This work merits and will find a place beside May's 'Recollections of the Anti-Slavery Conflict,' Johnson's 'Sketches of the Anti-Slavery Movement,' the lives of Arthur Tappan and Gerrit Smith ; but especially it connects itself with the earlier 'Life of Benjamin Lundy,' 'Journal of Charles Osborn,' and 'Life of Isaac T. Hopper' with reference to the part taken in the anti-slavery struggle by the co-sectaries of John Woolman during the present century. The caution, however, with which autobiographies should usually be received by the general reader cannot be dispensed with here. The late Levi Coffin began, as he says, to edit his diaries in his 78th year (August, 1876) ; to the larger part of his stories no dates are affixed ; as an Orthodox Friend he instinctively and habitually neglects mention of non-sectarian anti-slavery organizations ; and he is careful to do himself no injustice. The phrase on the title-page—"Reputed President of the Underground Railroad"—is out of place there, though properly introduced in the body of the work, because it seems to be accepted by the author as his just distinction, while at the same time no notice is taken of the Underground Railroad operations east of the Alleghanies, or any comparison attempted between them and those in the valley of the Ohio with which Mr. Coffin was strictly associated. Notoriously the most exciting and important escapes, rescues, and trials occurred in the seaboard States. For the necessary correction of the perspective, one must turn to Still's 'History of the Underground Railroad.' The author's tendency to represent himself as foremost in good works is shown again on p. 651, where he implies that the idea of enlisting English sympathy and aid on behalf of the freedmen was original with him, though on a subsequent page (661) he admits that he had been anticipated, and of course the old anti-slavery connection formed with the Abolitionists had never been interrupted.

Levi Coffin, of the Nantucket family bearing that name, was born at the close of the last century in North Carolina, and the interest of his narrative begins with his boyish experiences of slavery in his own neighborhood and assistance rendered to fugitives, his membership in a manumission society formed (after Osborn's Tennessee example) at New Garden, Guilford County, about the year 1822, and his final removal, in 1826, to Newport, Wayne County, Indiana, whither numerous relatives had preceded him, and about which were gathered many families of free colored people, mostly from North Carolina, the descendants of slaves liberated by Friends years before and sent to the free North at the expense of the N. C. Yearly Meeting—an historical fact which Mr. Voorhees should not overlook in tracing to its origin the present exchange of population between the two States. These circumstances made Newport a natural "way-station" on the Underground Railroad, and here, as after 1847 at Cincinnati, Mr. Coffin lent a generous helping hand to the fleeing victims of slavery, whose total number on this one line he computes at 3,300. A few of the more remarkable cases he describes more or less at length, and it is enough to say of them that they include the Eliza Harris of 'Uncle Tom's Cabin,' and Margaret Garner ; they lack, therefore, neither romantic nor tragic incidents, and have a strange fascination as well for those who have outlived their occurrence as for those born since Sumter was fired on. Nevertheless, they form but a small portion of those recorded during the anti-slavery conflict, and more value attaches to the revelations of Southern white connivance with runaways, partly for the small gain obtainable from the slaves, and partly from a real detestation of the peculiar institution. The career of John Fairfield, who ought to have been one of John Brown's men, is the most striking in this field that we have ever met with. On the other hand the account of two Northern men, Richard Dillingham and Calvin Fairbanks, who ventured South for the purpose of running slaves off, has a peculiar pathos.

The effect of the Fugitive Slave Law in unsettling families of escaped slaves prospering and even long-established on free soil, causing a fresh hegira to Canada, and exposing the free blacks to unlimited kidnapping in legal form, is also to be discerned in these 'Reminiscences.' How remote those times are will appear from the following extract, relating to a Cincinnati journalist convicted of harboring fugitives in that city :

"A number of people visited Connelly every day during his imprisonment. Ladies carried him strawberries, pastry, and other dainties ; the teachers of the public schools formed a procession and visited him, and the ministers of the different churches called to see him. The Methodist Conference was in session in this city when he was imprisoned, and the members of it visited him in a body. The next week the Unitarian Conference met here, and the members composing it formed a procession, headed by Horace Mann, and went to the prison to see Connelly. . . . Connelly's term of imprisonment expired at noon, but as the Turners and other societies wished to form a torchlight procession and escort him from jail, the jailer allowed him to remain till night."

Memoir of Henry Armitt Brown. Together with Four Historical Orations. Edited by J. M. Hoppin, Professor in Yale College. (Philadelphia : J. B. Lippincott & Co. 1880.)—This memoir of a young man who had, before his early death, made no small reputation for himself, is written with an affectionate interest which of itself witnesses the personal charm and attractiveness of its subject. Even the public, for whom it was prepared and whose attention can be asked for it mainly on impersonal grounds, of course, is rarely inappreciative of the sources of a memoir's heightened tone, we take it; and we need only mention the fact that this one is written with the slight over-intensity of a relative naturally distrustful of his power to get the just claims of his subject recognized by strangers, to enable the reader to perceive that the discounting, so to speak, which he is called upon to do is very unimportant. Mr. Brown undoubtedly did possess "elements of greatness worthy of the best days of the republic," and it is probably true that "a power went forth from his short life which will not soon cease to be felt." Whether if he had lived there would ever have been anything more than this high praise to be said of him it is impossible to determine. The spirit of Professor Hoppin's work is such as irresistibly to recall the words of a very famous biography : "His character was not supremely original ; neither was his fate in the world wonderful. What he did was inconsiderable enough; and as to what it lay in him to have done, this was but a problem, now beyond possibility of settlement." And if he does not himself suggest qualifications in what we may call his elaborate eulogiums, it is to be said that they readily suggest themselves. Mr. Brown was, at all events, a fine character, of excellent promise and far more than merely creditable performance. He was a thorough American, and, in his biographer's words, "he represented, as far as in him lay, the best modern political spirit." As a boy he was precocious enough, but in a perfectly wholesome way, and to no extraordinary degree. He went to Yale and in every respect distinguished himself, especially in the literary and oratorical arts, to which Yale College, at that time, at least, gave so much deserved attention. He was as much of a scholar, properly so-called, as a "wooden-spoon man" could have been, perhaps ; but it was in a certain happy adaptedness to occasions demanding grace, eloquence, humor, and the ease which comes of breeding plus a wholesome and confident temperament that he was at his best. After graduation he was in no haste to begin his "life's work"—probably was in no way forced to do so by circumstances. He went abroad, and a mild form of *cacoethes scribendi*, perhaps, is alone responsible for the entertaining letters he wrote thence to a Philadelphia journal. When he returned he studied law, and soon gained a real distinction at the bar. To our mind the best, or, at any rate, one of the very best things which Professor Hoppin reproduces from him, is a post-prandial speech made in response to a toast to "The Juniors of the Bar." The municipal reform movement in Philadelphia engaged his earnest and active sympathy, and he made many speeches against "the machine," whose rule was, at that time certainly, very irksome to every Philadelphian but the professed politicians. His oratory was the more effective because (which is something political orators with us seem unable to learn) it was of the sort technically called "extenuated." He was especially happy in repartee, we are told, though the only instance mentioned by Professor Hoppin, by the way, would be strenuously claimed as personal property by the late Henry Clapp, we fancy : "He said of a political and notably self-opinionated opponent, who on one occasion was accused by a speaker of his own party of being an 'infidel': 'An infidel—not so ; he is a self-made man, and he worships his creator.'" It was long before 1872, if we remember aright, that Clapp applied this remark to the late Mr.

Greeley. What is called "The Centennial Epoch" began soon after, and it seems to have determined the direction of Mr. Brown's main effort in life. His speeches at Philadelphia, Boston, and elsewhere before and during the centennial year are still familiar to most people, we may hope. And it is very likely due to the local pride which he cherished, and the prominence of his native city in the thoughts of himself and others at that time, that he devoted himself to the early history of the republic and produced the four historical orations which Mr. Hoppin appends to his Memoirs. Subsequently, he was a warm supporter of Mr. Bristow for the Presidency. He died August 21, 1878, at the age of thirty-three years, after having won and deserved a success which was not only popular, though it was certainly that also, but was aided by the applause and recognition of thinking men wherever he was known. The details of his life, as we have intimated, are told with a loving fidelity by Mr. Hoppin, and the most casual reader's feeling about them must be that they were eminently worth telling.

Conversion of the West: The Slavs. By the Rev. G. F. Maclear, D.D., Head-master of King's College School, author of the 'Missions of the Middle Ages,' etc. With map. (London: Society for Promoting Christian Knowledge; New York: Pott, Young & Co. 1879.)—This is a little book of very neat appearance, the last of a series of volumes on the conversion of Europe. It is rather pleasantly written, and its contents will probably be found by most readers more interesting than those of the preceding volumes, owing to the general lack of information on early Slavic history. The Englishman's and American's ignorance of the present condition of Slavic Europe is being gradually dissipated by the lurid light which the wars and convulsions of Russia and similar commotions elsewhere from time to time flash upon them, and Bulgarian, Serb, and even Bosniak and Herzegovinian have become universally familiar names; but the origins even of such Slavic countries as Russia, Poland, and Bohemia are known to few, and the popularizing of all knowledge in this field must meet with acknowledgment. The book before us narrates the conversion of Bulgaria, Moravia, Bohemia, Servia (in an undefined wider sense), Russia, Poland, Pomerania, and the Wends, and—going beyond its natural sphere—also of the non-Slavic Hungarians, Livonians (unnecessarily called "Lieflanders"), Prussians, Lithuanians, and Laplanders. The accounts, though plain, are frequently intermixed with quotations from florid and unctuous writers on early Christianity, and there is too much positiveness in the way they are presented, no critical appreciation of the original sources being attempted. Some, though not credited to old chroniclers, breathe all the naïveté and credulity of a mediæval cloister. The story, for instance, of the conversion of Vladimir of Russia is related with minute details of the utmost incredibility, without the least attempt at sifting them. And it is generally only the very conversion of each people which interests the author; the moral conditions of the people before and after that momentous change are, in almost every instance, left unexamined. In this way we obtain much more "Christian knowledge" than historical. The author's modern historical authorities, however, are both ample and good, and, as far as he is inclined to use them, he uses them with sufficient accuracy. The principal inaccuracies which we have noticed are geographical, and all copied from Krasinski's (English) 'Sketch of the Religious History of the Slavic Nations': "Wolkhow" (for Volkhov), p. 15; "Illyria and Carinthia" (the latter is a part of the former), p. 16; and "the Hungarian Drina" (for the Servian Drina), p. 66. To the diligent study of the same authority is to be ascribed also the frequent use of the words *Slavonian* and *Slavonic*, as equivalents not of the German specific *Slawonier* (inhabitant of Slavonia) and *Slawonisch*, but of the generic *Slawe* and *Slawisch* (Slav and Slavic)—a use which is surely improper in a book bearing in its title the word *Slavs*.

The Dartmouth College Causes and the Supreme Court of the United States. By John M. Shirley. (St. Louis: G. I. Jones & Co. 1879.)—Mr. Shirley says that his aim in writing this book has been "to put the reader in the place of the great actors in these controversies." He lacks, however, the gift of clear statement, and though his compilation is a monument of industry, the result is little more than a collection of facts, valuable, no doubt, to students of the history of the Dartmouth College case and of American constitutional law, but not as an original contribution to the literature of the subject. As far as we understand the drift of the book, it is a labored attempt to show that the decision of the Supreme Court was not right, or, at any rate, that it was not based on correct grounds. Unfortunately for the argument, the conclusions of the court are not likely to be disturbed or shaken at this distance of time by the most elaborate examination of the facts on which they rest. The great principle that a charter is a contract, and is therefore under the protection of the constitutional prohibition of laws impairing the obligation of contracts, is so firmly imbedded in American jurisprudence that nothing short of a social convulsion is likely to change it. Even a storm of popular hostility to corporations like that which made itself felt in the Granger laws of some of the Western States, leaves very little lasting effect behind it. Whatever objection there may be to the permanent inviolability of corporate charters is generally now obviated by a reservation of the right to alter and amend, and the Granger agitation showed that this right may itself be abused as much as corporate powers may be.

The fact is that, legal considerations apart, the principle expressed in the Constitution is simply one of general justice, like that prohibiting the taking of private property for public use without compensation. That contracts are sacred and confiscation is odious, would be admitted as axioms in any system of civilized law. The peculiarity given to these principles under our system is that they are not simply moral principles, but restrictions of positive law imposed upon a particular public body—the legislature. In some respects this is an advantageous peculiarity for us. In others it is disadvantageous. On the one hand, it leaves nothing to conjecture and caprice; on the other, it ties up the hands of judges by strict rules which often do injustice in particular cases. The history of the prohibition against "taking" private property for public use without compensation shows that the judges in this country have felt constrained generally to restrict its application to cases where property has been actually *taken*, thus leaving cases where it is subjected to injury, but nothing is actually *taken*, unprovided for, while in England compensation is always given, though there is no written constitutional requirement on the subject.

Calderon. By E. J. Hasell. Foreign Classics for English Readers, edited by Mrs. Oliphant. (Philadelphia: J. B. Lippincott & Co. 1879.)—Mr. Hasell has given in the interesting volume before us a better account of the great Spanish dramatic poet than is elsewhere accessible to the general reader. The admirable monograph by Archbishop Trench, republished in this country more than twenty years ago, is, we believe, out of print, and moreover contained extended analyses of but one play and an *auto*. Mr. Hasell, on the contrary, after a somewhat slight introduction and brief sketch of Calderon's little-known life, gives analyses more or less extended of nearly all the best plays. These analyses are enlivened by quotations from the metrical translations of Shelley, Trench, and MacCarthy, the remarkable versions of the last-named translator being already known to the readers of the *Nation*. Mr. Hasell also employs at times neat and close renderings of his own. His estimate of Calderon's genius is, it seems to us, very fair, and he has acquitted himself well of a difficult task, for such it is to give a reader ignorant of the language an adequate idea of a Spanish dramatist. The interest of a Spanish play is chiefly one of plot and not of character, but besides this there is another interest very hard to represent, that of the purely poetic side. No English translation can ever reproduce pleasantly even the staple metre of the Spanish drama, much less convey a correct idea of the vivid imagery and oriental luxuriance of a Calderon.

A defect in the work before us, and one common to the whole series, is the total lack of all bibliographical details. Although the series is intended for the general reader, some reference to the standard works on the subject, or, at least, the full name and date of the books cited, are very desirable, and in some instances might convert a general reader into a student.

**** Publishers will confer a favor by always marking the price of their books on the wrapper.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 12, 1880.

The Week.

THE Pennsylvania Republican Convention ended, after tremendous "work" on both sides, in a vote instructing the delegation to the Chicago Convention to vote as a unit, and for Grant, by a majority of 133 to 113. There appears to have been bitter opposition on the part of the minority, who were all, or nearly all, set down as friends of Blaine; but it was nevertheless put through unshrinkingly. The general interpretation put on the result by a large part of the Republican press is that the smallness of the majority deprives the victory of all value for General Grant, if it does not convert it into a defeat, as the peculiar nature of his "boom" makes it necessary that his nomination should be made without opposition, and that in order to save his dignity he must now withdraw at once. There is another view, however, which has a good deal of plausibility, which is, that General Grant is not so sensitive and dignified after all, or his friends either; that the victory at Harrisburg *was* a victory and will be accepted as such by the very large body of Stalwarts who wish to be on the winning side, and that its effect will be strengthened by a similar result in the New York Convention which is to meet shortly; and that Blaine and Sherman will before long be so well satisfied that the game has gone against them that they will be found competing not for the nomination but for good terms with General Grant. On either view, however, there is no denying the power and audacity of the Pennsylvania Machine, as worked by Mr. Cameron.

Evidence continues to be published in various quarters that Mr. Sherman is busily working the official Machine, especially at the South, to increase his strength in the Convention. The New York *Times*, with which he seems to have taken the place once held by Tilden as a ubiquitous intriguer and evil-doer, is especially active in producing proofs of his wickedness in this field. A curious trace of it is mentioned in our Washington letter to-day. His denials, it ought to be said, are somewhat faint, and will hardly produce much impression owing to the feeble support they receive from his antecedents. He has never shown any dislike of intrigue, and his performance with Silas B. Dutcher during the late canvass in this State proved that he has little scruple in using the civil service for any end he thinks desirable. His activity in his own behalf is very curious, considering the horror excited in the Republican party in 1876 by Tilden's "seeking the Presidency." The worst incident in Mr. Sherman's career is his officiating as a Visiting Statesman and whitewashing the Louisiana Returning Board; but it is to be said for him, on the other hand, that he is the only candidate now in the field who is identified with any measure of legislation or leading line of public policy. He has one very solid result, in part at least of his labors, to show in the present condition of the finances.

Apropos of this, it is a remarkable fact, and we believe an unprecedented fact, both in American history and in that of other constitutional countries, that the two most powerful men in our politics at this moment, Messrs. Cameron and Conkling, are men whose opinions on all the leading questions of the day are absolutely unknown to the public, and, worse than this, that the public does not care to know them. We are aware that they both dislike and distrust the leaders in the late rebellion, but what they think about finance or taxation or railroads or our foreign relations, or any other matter on which a legislative policy is desirable, nobody has any distinct idea; and there is no evidence that they occupy themselves with these things in any degree whatever.

The mania for "fixing things" seems not unnaturally to have taken hold the other day of Smyth, Mr. Conkling's lieutenant at Albany. In order to make a sure thing of sending up Grant delegates to the State Convention, he issued his calls in the evening for primary meetings the next day at twelve, so that none but the forewarned faithful could get there in time—an old New York trick over which that disillusioned reformer, Mr. George Bliss, lately wept in General Arthur's bosom. The tickets furnished them at the meeting were of pretty pink color, and had "Grant" at the top. The Independents, as well as honest men generally, were naturally a good deal disgusted by this mode of putting "a strong man at the helm," and called an indignation meeting at which the faithful Smyth and his ways were to be denounced, and arrangements made to hold other primary meetings and send a contesting delegation to Syracuse. The third-term delegates elected at the Smyth primaries—one of them the editor of the Stalwart Albany *Evening Journal*—having waited a week in silence, probably to see how the trick would work, on Monday were frightened into resigning in a published card, and fresh primaries are to be held. Smyth, it is thought, will not now be renominated for the Insurance Department; but it will be not for having attempted a fraud, but for having failed to carry it out. The incident is curious as showing how rapidly the Boss system is spreading over the country. For long years it was confined to New York, and Boss rule and management were spoken of as peculiarities of the poor Irish, but now every State is getting to have its head Boss who distributes the offices, and "fixes" the conventions, with sub-bosses in the districts and counties to carry out his orders and "fix" the primaries.

Commissioner Hayt's removal has been approved by the Board of Indian Commissioners, on the principal ground which we mentioned last week, namely, of having pigeon-holed charges against a corrupt Indian agent, and of having connived at the sale by this agent of a mine to or through Edward Knapp Hayt, his son, passing as his nephew under the name of Knapp. The Board stated that they found no trace of any other official in the Indian Bureau being concerned in the transaction except the inspector Hammond, who filed the first affidavits of malfeasance against Agent Hart, and afterwards became his accomplice. Strange to say, Hayt's appearance at the examination "with counsel" seemed to make an unfavorable impression on the Board. The Commissioner's fall, we are told by the Washington correspondents, has greatly elated "the old crowd," consisting of Belknap, Babcock, Shepherd, and the rest, who say that the reformers now know how it is themselves. Naturally, too, we find papers like the Boston *Journal*, which could not for the life of them see any parallel between Maine and Louisiana, unable to see how Belknap abused Grant's confidence otherwise than Hayt abused Mr. Schurz's. We must remind the *Journal* that the contrast should be sought not in the unfaithful officers but in the victims of misplaced confidence in the two cases. Mr. Schurz did not, when disabused, permit the culprit to resign, but turned him out incontinently, nor did he present him with an autograph letter of regret at parting with him. Moreover, he dismissed him "when under fire"—that is, while the Board's enquiry was still in progress—an act which every boomster must regard with loathing.

Boston sympathy for the Poncas has, or had a month ago, sufficed to raise six or seven thousand dollars towards the sum deemed necessary to test in the Supreme Court the right of the tribe to be reinstated in their old Dakota home. At this juncture a benevolent lady offered to raise instantly, or herself give, the remainder if Secretary Schurz could be induced to lend his support to the movement. Mrs. Helen Jackson, the poetess, undertook this mission; and the four letters which make up the correspondence have just been published with the Secretary's permission. Mr. Schurz states

that the appeal from the habeas-corpus decision of Judge Dundy, entered by the United States District Attorney, at Omaha, was dropped on his (the Secretary's) representing to the Attorney-General that he did not approve the principles on which the argument was based, so that no money is needed to resist this appeal. Nor can any be usefully employed in testing the right to the original reservation, since "the Supreme Court has repeatedly decided that an Indian tribe cannot sue the United States or a State in the Federal courts." To this Mrs. Jackson rather naïvely objects, that "lawyers of skill and standing" are "found ready to undertake the case"; and the Secretary can only reply, "Of course there are such. You can find lawyers of skill and standing to undertake, for a good fee, any case, however hopeless; that is their business." He strongly recommends that the money be applied "to the support and enlargement of our Indian schools, such as those at Hampton and Carlisle." Mrs. Jackson expresses her surprise at the suggestion, seeing that the money was given for a different and specific object. Mr. Schurz, therefore, has to explain that he did not mean that the subscribers to the fund should not first be consulted. He assures her that the greatest hope of the Indians lies in the success of his policy of getting them established in severalty on land in fee-simple, and that he has good grounds for expecting the passage of a bill to this effect at the present session, several having been introduced. Being very desirous that the present revival of interest in the Indian question should be maintained and directed to attainable objects, he cannot favor a course which is certain, by ending in failure, to dishearten the philanthropic.

Mr. Voorhees's committee has had two colored men on the stand testifying to the North Carolina emigration, one being the agent Perry, who has probably done more than all other causes combined to disturb the blacks. Among the reasons enumerated by him for a desire to leave the State was the fact that Northern men who had settled there had been driven out by bad treatment; but he had better ones, in which prejudice against the negro and unjust laws played the chief part and political violence the least. He explained the selection of Indiana as accidental; indeed, his first advice was to the effect that "if he owned a lot in Indiana and one in h—l, he would sell the Indiana lot and reside in h—l." He did not state how he came to change his mind. He was "now on the retired list of politics." The other witness blamed Perry for his mercenary speech-making and distribution of circulars, and took a rosy view of things generally in North Carolina. In Morgan Co., Georgia, two emigration agents have just been arrested and fined $150 each for "enticing" negroes to migrate—to Mississippi, under an obviously unconstitutional law passed last summer, and which Mississippi is now preparing to imitate. What does the Planters' Association say to this folly? From Kansas the reports of hardships among the refugees continue to be very distressing.

The House has passed a joint resolution appropriating $20,000 for a proper representation of the United States at the Berlin Fishery Exhibition in April next; and has done little else worth mentioning. Mr. Conger trifled with its time by objecting with Stalwart frothiness to some circumlocution about the rebellion in a petition for the removal of political disabilities, but failed to produce a row. In the Senate, personal jealousies have prevented an agreement as to the proposed committee on the Panama Canal. On Tuesday, Senator Davis spoke at considerable length and well on the Thurman Geneva Award Bill, the keynote of his position being the truism that "the money should be appropriated to the purposes for which it was awarded, or, if wrongfully recovered, should be returned." This seems a plain proposition in morals, but large numbers of moralists, and at least one theologian, have failed to grasp it.

During the week the public credit, as expressed in U. S. 4 per cents, advanced to the highest point yet attained, these bonds having sold at 106 to 106½. Several large railroad capitalists have been taking them by the million, and the market responded in an unusual manner to their purchases because concurrently news came from Washington that the Committee of Ways and Means will authorize the issue of no new bonds for refunding which bear a higher rate of interest than 3½ or 3.65 per cent. per annum. The bonds which mature this year and next advanced because the Treasury advertises for $11,000,000 of them to be placed in the Sinking Fund; the money which the Treasury has to pay for these bonds represents the surplus revenues of the Treasury this calendar year. If the imports of foreign goods and articles continue as large as is now expected, it will cause no surprise if the Treasury has a surplus during the present fiscal year of at least $40,000,000 to invest in this way. The week at the Stock Exchange was a quiet and, comparatively speaking, uneventful one, but prices have been well sustained. The market for foreign exchange was strong, and the rates for sterling bills advanced 1½ to 2 cents. The price of silver bullion in London was steady at 52½*d.* to 52⅝*d.* per ounce. At the close of the week the bullion value here of the "buzzard dollar" was $0.8778.

The South Carolina Legislature assembles this week in extra session to consider the Supply Bill, but will probably have brought before it the important matter of the registration of voters. The Charleston *News and Courier* is advocating with great insistence and no small ingenuity a measure which will certainly disfranchise a large portion of the negroes, and indeed the *News and Courier* avows that this will not only be the result, but that it is the intention, of the proposed legislation. The act provides, in brief, for the disqualification of all voters who cannot register their own names, unless they have been voters for twenty-five years. Of course it would be idle to deny that this is aimed at the blacks, and it is not denied. The reasons assigned are that since the war and up to 1874 South Carolina suffered cruelly from the rule of an ignorant and rapacious black majority; that by "a gigantic effort" this rule was replaced by that of the intelligent white minority to the undisputed advantage of the State (at least of the taxpayers); that nevertheless it is not only disagreeable to undergo the "nervous strain" of repeating "gigantic efforts" at every election, but "the moral sense of the Southern people revolts against" them; and that an educational qualification enforced under the sanctions of law would answer just as well practically and would hurt the party at the North very much less. The only difficulty seems to be a doubt as to the constitutionality of such an act; it could, of course, be made as an amendment to the constitution, but in that case it would have to be popularly approved, and that would take time. The chances are that it will be passed by itself, and also tacked on to the constitution to be submitted to the people as an amendment at the same time that it is in operation as a statute, in which case it is difficult to see how it is to be defeated.

The Democrats of Georgia are having a heated controversy over the appointment of one Simmons as a census supervisor, which, if it does not display marked progress in personal amenities, serves to show in how much more flourishing condition the Georgia "independent movement" is than that of Mississippi, say—or, if you please, how much less "solid" the South is in the former than in the latter State. The appointment of Simmons is now before the Senate Census Committee, and is warmly supported by Senator Hill and Representatives Stephens and Felton, and opposed with equal warmth by Senator Gordon and Representative Hammond, backed by many prominent Georgia Democrats of the regular wing. Simmons is said to have based his application on the ground that his appointment would be a victory over "the corrupt secession traitors," and this remark and his acknowledged illiteracy Senator Gordon and his friends look upon as unfitting him for the position. Senator Hill and Mr. Stephens, on the other hand, argue that, though illiterate, he knows enough for the duties he will be called on to discharge, and are greatly alarmed about the effect on "the party" at the North if Simmons should be rejected for stigmatizing

Southerners. This strikes us as an admirable instance of Saul among the prophets, considering the caution for the welfare of the party at the North that Mr. Hill has all along exhibited. But it is alleged that Messrs. Hill, Stephens, and Felton are only endeavoring to "conciliate" the Republicans in order to get their help in beating the regular faction at the next State election; and at any rate all the Georgia politicians are quite as much excited over the quarrel as its merits seem to deserve. Both Mr. Hill and Mr. Stephens are such irrepressible Independents by nature, however, that it seems a pity that they cannot be transplanted to some other Southern State, of which there are several now suffering badly from too much "harmony."

Mr. Parnell's enemies and critics continue to follow him up with remorseless pertinacity, and every week get the better of him in "conflicts of veracity." In a late speech at Newark, N. J., he declared that in the Irish famine of 1847 the money raised for the relief of distress "was used for proselytizing purposes, and Catholics who would not turn Protestants were allowed to die." Now comes Mr. Jonathan Pim, a member of the Society of Friends, and one of the oldest, most respected citizens of Dublin, who writes to the *Herald*, giving the assertion "the most unqualified contradiction," as the surviving member of the relief committee of the Society of Friends, through whose hands $750,000 of the money which came from America passed. He contradicts Mr. Parnell with equal confidence as regards the Central Relief Committee of Dublin, by whom $400,000 were dispensed, and also as regards the British Association, who dispensed $2,350,000. Mr. Parnell also denied that his Balla Relief Committee had refused relief to tenants who had paid their rent, but the *Herald* correspondent enquired into the matter on the spot and discovered that the order of the President of the Association that no such persons should receive relief *was* confirmed by a majority vote of the committee, and the relief refused. Even if these savage philanthropists were trustworthy on other grounds, this performance alone should prevent their receiving contributions from Christian people. Messrs. Drexel & Morgan, the bankers, who had agreed to receive and transmit the contributions for the Parnell fund, have peremptorily withdrawn from the duty, and on Mr. Parnell's publicly ascribing it to pressure exerted on them by their financial friends in England, they promptly floored him again in a published letter, in which they declare that their sole reason was Mr. Parnell's mixing ferocious politics with the charity. In his present plight the advice which reaches him from every quarter, that he should go home, can hardly fail to make some impression on him.

Mr. Elbridge Gerry and the Society for the Prevention of Cruelty to Children, which has been instrumental in bringing Cowley, the Manager of the "Children's Fold," to justice for cruelty to the children in his charge, ought to be reminded that the Chinese Government has announced that it will not permit the mutilation of Yakub Beg's children, and also that their father was not killed in battle, and when he died was not engaged in an insurrection, but in lawful war, and that nothing is known with certainty as to the manner of his death. Also that Cowley, however bad a man, was, in the eye of the law, innocent until tried and convicted, and that in requiring enormous and undoubtedly unnecessary bail of him, a severe penalty was inflicted on him before trial, and that the permission given to his fellow-prisoners in the Tombs to mock and jeer at him out of their cells was a great outrage. The Society might, we think, very well have interfered to protect Cowley against the undoubted wrong of punishment and insult before conviction. Public feeling was sufficiently excited against him, and the presumption of law that a man is innocent until he is found guilty by a jury, is intended for the benefit of the wicked as well as of the good. The condition of the children was undoubtedly bad, but the evidence of children, like that of grown people, needs sifting, and there was from the beginning a possibility that Cowley had been led into his offence, partly at least, by undertaking to support more children than he had money for, and not wholly by cruelty and greed. Charitable associations do a great work, but they need discretion as well as zeal, and the treatment of Cowley before trial has been a somewhat painful spectacle to the lovers of fair play.

It was very gross "journalism" on the part of the *Tribune* to give people to understand in a denunciatory article last week that Mr. Bowker, the Chairman of the Independent Republican Committee, had at one time had the receipt of ten dollars a week from that paper for "collecting publisher's announcements" as his sole earthly dependence. Mr. Bowker, we believe, at one time contributed a weekly column of "Literary Notes" for that sum, although, like every other column in the *Tribune*, it was worth $100 on a moderate valuation, and Mr. Bowker was, like scores of excellent men, a contributor simply, and relied on the honor of the editor not to make his private affairs a weapon of political attack. It was also "journalism" for the *Tribune* to give out that there were two sets of Independents or "Scratchers"—one a respectable and even glorious body of men led by Mr. George William Curtis, and the other a wretched little clique of nobodies led by Mr. Bowker. The fact is, there is only one body of Scratchers, but there are two divisions—a general committee and a local association. Mr. Bowker is chairman of the former, and Mr. Horace White president of the latter. Both are filled with lusty young fellows, well paid in their several callings, who will give our Venerable Contemporary much trouble during the coming canvass, and furnish him with plenty of literary notes gratis.

The Liverpool election, which was expected to throw some light on the respective prospects of the Tories and Liberals in England at the general election, has come off, but without furnishing either encouragement or discouragement to either side. The Tories have elected a Tory to succeed a Tory by about the old majority, in spite of the Liberal candidate's having made a certain amount of concession to the Home-Rulers, who muster 10,000 votes in a constituency of 50,000, by promising to support enquiry into their subject. If he had carried the day it would probably have led to the resignation of the Ministry without waiting for a dissolution, as Liverpool is and always has been a Tory stronghold. The London *Times* treats his failure as a sign that the Liberal diatribes against the Ministry have made no impression on the country, because Liverpool has now and then returned Liberal members. But this theory will hardly hold water, for we believe it to be true that Liverpool has never yet failed the Tories in exciting times, and has never returned a Liberal except in what is called here "an off-year." Although a great commercial constituency, it has always been for what Lord Derby calls "gunpowder and glory," and during our war was fanatically Confederate in its sympathies. Sir William Harcourt, who once a month or so mauls the Ministers unmercifully, has staked his reputation as a prophet on the assertion that the first day of the new Parliament will be the last of the Beaconsfield rule. But this is dangerous.

It looks a little as if the Ministers were much embarrassed as to the best mode of getting out of Afghanistan, and still refrain from saying what they are going to do, which keeps the country in a very unsettled condition. As long as the future is uncertain the safest thing for every Afghan chief is to fight the British, and Mohammed Jan seems to be preparing steadily to try his luck again. The Ministry, on their side, appear to be thinking of another bold stroke by releasing Persia from the obligation imposed on her in 1857, at the point of the bayonet, not to seize Herat. It was then feared she was acting under the influence of Russia; it is now believed that she can be held by British influence and made to seize Herat as a British catspaw. But, as the English Liberal papers are pointing out, if permission to seize includes a guarantee for its possession afterwards, the scheme may contain the seeds of endless trouble.

THE GRANT MOVEMENT THOUGHT OUT.

THE action of the Republican Convention in Pennsylvania, by which the delegates to the Chicago Convention were instructed by a majority of twenty to vote as a unit for General Grant's nomination, is generally acknowledged to be rather a victory for Mr. Cameron than for the ex-President. It has always been somewhat ostentatiously given out by General Grant's friends that he would only allow himself to be renominated in case the party desired it with unanimity, or all but unanimity; and that he would under no circumstances go into the ruck of Favorite Sons and First Choices and struggle for a nomination. If this were true, the refusal of almost half the Convention of the State in which he was supposed to be the strongest, to put him in the field, even under the most powerful pressure, would make it almost a necessity for him to withdraw his name absolutely from the competition. But it is possible, and some say probable, that he may not look at the matter in that light; that his friends, who are not generally thin-skinned men, may persuade him that the opposition in the Republican ranks shows that the danger to the country is even greater than it was supposed to be, that the contingency which was to force him to disregard personal feelings and tastes has clearly occurred, and that he must now go into the arena at any sacrifice of dignity or comfort. Indeed, considering the nature of the rôle which his chief supporters have marked out for him, there would be something mawkish in allowing his "boom" to be checked by the fact that a large minority of any State convention were unwilling to pledge themselves to him in advance. This rôle was described by Colonel Quay, one of Mr. Cameron's henchmen, before the Convention met, in terms with which we have been made very familiar during the last year: "If he knew he was elected by the people he would take the office in spite of Democratic counting-out schemes."

We doubt, however, whether many persons, even among General Grant's warmest supporters, have taken the trouble to picture to themselves in detail what this rôle is to be. They keep saying that they wish to elect him in order to maintain order at the South, but they refrain from describing the mode in which he is to do so without violating the law. They do not tell us how he is to punish crime in any State without the intervention of the courts or the aid of acts of Congress, without exposing himself to impeachment. When he was in office, however, he did so many arbitrary things at the South, and the relations of the South to the rest of the Union have long been so abnormal and disturbed, that it is easy to see how a good many well-meaning men, in whose minds the memories of the war are still fresh and whose notions about the conditions of constitutional government are vague, should not form to themselves any clear idea of what they mean when they propose to make him President again in order to protect life and property in that region. But this explanation will not cover the use to which it is proposed to put him when it is said that he must be nominated and voted for by the Republican party because he is the only candidate who has the nerve and ability to see that he is not counted out by the Democrats. We think it safe to assert that of the thousands who use this language probably not one dozen have thought out the idea it contains—that is, pictured to themselves in detail the way in which it would work in practice and the results it would have. The counting of the electoral vote after the Presidential election is now lodged by law and precedent in the two Houses of Congress, through a procedure framed by themselves. Next year Congress will perform this duty as usual. There is under the Constitution no appeal from its decision in any particular case. It may exclude votes which some may think ought not to have been excluded, and count votes which many think ought to have been excluded, but no mode is provided for altering the result thus reached. If Congress grossly and plainly abuses its power it exposes itself to punishment at the polls at the next election, but to no other punishment. The theory on which the American Government rests is that this punishment will be, on the whole, found sufficient, even where members of Congress are *en masse* grossly wanting in conscientious patriotism, but that at all events it must in all cases be tried thoroughly before any other measures are resorted to.

Now, what General Grant's supporters propose is, in fact, that in case he—one of the candidates—should not be satisfied with the decision of Congress, he should count the votes himself, admitting such as he thought entitled to admission, and rejecting all others, and that if the result thus reached satisfied him he was elected, he should take possession of the White House with an armed force, and should set the majority in both Houses of Congress at defiance, and begin the discharge of executive functions. There are probably not many of them who like to see the plan set down in this way in black and white beforehand, but there is no denying the correctness of this description of it. This is what is meant, and the only thing that can be meant, by choosing a military man for the Presidency because if elected (in his own opinion) "he will see that he gets the place." In plain English, it means *revolution* It means the introduction into the government of the practice of having each candidate pass on his own claims to the Presidency, and then fight in order to assert them. It means that we have reached a stage in our politics in which strategical skill and military courage are the best qualifications for our chief officer, as they were for the kings of the Huns, Visigoths, and Lombards.

Let us now carry the process one step further. Suppose General Grant were to declare that he was not satisfied with the Congressional count, that he had been elected, and then, with the aid of his armed followers, to install himself in the White House, and the majority in Congress were either sufficiently overawed by the force at his disposal or sufficiently appalled by the prospect of civil war, to submit and accept him as the President. The moral pressure on them to do so, especially from the moneyed interest of the country, would probably be very powerful. They would remain, however, in a very exasperated state of mind. Their constituents, comprising a numerical majority, or at least half, of the American people, would feel that they had been the victims of a monstrous outrage. They would resolve that the same trick should not be played on them again, and that their candidate at the next election should not be a timid, elderly civilian like Mr. Tilden, or Mr. Seymour, or Mr. Hendricks, but a military man also, who likewise would do his own counting, and that they would see that he had force enough at his disposal to make it good against all comers. The ensuing Presidential canvass would then become literally what it is now only metaphorically, a "campaign." It would consist, in the main, of the collection of arms and ammunition, and the organization and discipline of troops, and of State legislation in preparation for an armed encounter. These preparations, too, would be carried on amidst the crumbling of the public credit and the suspension or rapid decline of every branch of business, and the rapid transfer of timid capital to more settled regions. It is hardly necessary to say that in a game of this sort the man in possession would have many and great advantages. He would have on the army and the civil service the hold which actual authority always gives, and would have the open or secret support of that large class which always likes to be on what seems the winning side. To these and to the timid generally, it would become apparent long before his term had expired that it would be madness to nominate anybody else to succeed him, that the public peace and safety required that he should stay in power as the only defence against anarchy, and that, in fact, he should use all the means at his disposal to secure his re-election under the forms of law if possible, but if not under the forms of law, somehow. All "the best people" would insist on this—the ministers of the Methodist Church, * the most widely circulated newspapers, the great bankers and railroad men, and so on. Although it was deplorable, they would say, that the regular working of the Constitution should be interrupted and our country brought to shame before the world, the responsibility lay with the Democrats, who had for fifty years been an element of treason and disorder. In short, in one way or an-

* A Methodist bishop, recently deceased, compared Grant's Administration to the Transfiguration on the Mount in a prepared oration delivered last summer. Utterances almost as extravagant have emanated from other ministers of the same denomination.

other, without any mention of "empire" or "Cæsarism," it would come about that the election of 1880 was probably the last of the old régime, and that the Republic had provided itself with a Protector, who would see that the good men stayed in power.

The force of the foregoing description of the Grant programme would be much diminished if it were true that he was presented to the party as a successful soldier of whose qualities as a civil administrator nothing was as yet known, but of whom as a civil administrator much might fairly be expected; or if, having been tried as a civil administrator and found not altogether satisfactory, he had shown himself nevertheless a capable party manager, whose Administration, whatever its defects, enabled the party to retain its hold on the voters; or, lastly, if the country had, since he went out of office, been passing through a period of disorder and malaise, from which it was fair to suppose the presence of "a strong man" in the chief executive office would relieve it. But it will puzzle the future historian of the country greatly, to find that the Grant movement had none of these things behind it. General Grant has been tried as a civil administrator, and it is not disputed that his two terms were marked by great corruption at the seat of Government, by great violence and disorder at the South, and by the loss of fourteen States by the Republican party. Since he left office outrages at the South have diminished in number, and industry of every kind has improved in that region. Scandals in the civil service, such as were revealed almost weekly in his day, have ceased; specie payments have been restored; the credit of the Government has been raised and used in lowering the interest on the public debt; the tide of emigration towards the country has again set in, and so has the flow of foreign capital towards American investments; and industry in all its branches has revived. In fact, peace and order reign in every direction; consequently General Grant can only be produced as a candidate in his capacity as a fighting military man. Nothing else can be claimed for him. He can, in short, only be produced with a view to some sort of violence or illegality. It may be, as we have said, that he will not allow himself to be turned to account in this way; but if he does, those who have not reached the conclusion that our political system is a failure will see that his candidacy imposes on them a duty such as Americans have never before been called on to discharge towards any man.

THE PROPOSED COMMERCIAL TREATY WITH FRANCE.

WHILE a possible disturbance in our foreign relations in consequence of M. de Lesseps's operations on the Isthmus is obvious to every one, the objections to the proposed commercial treaty with France have not, in Congress or out of it, so far as we have observed, been based on any but domestic considerations. Its international bearing will, however, appear on a little reflection. Hitherto the American public has heard scarcely more than one side of the question. The movement, it will be remembered, originated in France, where the great decline in the exports to the United States during the last ten years, correctly ascribed to the introduction of our highly protective tariff, contrasted strongly with the great increase of the exports to England that had resulted from the commercial convention made between those countries in 1860. It was not unnatural for the French to suppose that the ground they had lost on this side might be recovered if a similar treaty could be made with the United States; nor was it to be expected that the French, having that hope before their eyes, would consider closely whether and how far concessions on their part could make such a treaty acceptable to this country. Early in 1878 a number of prominent manufacturers and merchants, aided by sundry senators, deputies, journalists, and others, organized a committee, having its headquarters in Paris, for the purpose of agitating the question, and sent a delegate to this country in the person of M. Léon Chotteau, whose name has since become familiar to us as that of a gentleman enthusiastically active in his mission. Being charged to present an appeal issued by the committee to the Americans, and to invite us to form a similar national committee on this side and to send delegates to a conference to be held in Paris during the Exhibition of 1878, he addressed himself to the chambers of commerce and other commercial organizations in this country. The novelty of his appeal, and the sentiments of national friendship with which he urged it, secured him a polite reception wherever he appeared, and, by carefully refraining from any specific demands or propositions, he avoided calling out any opposition. Resolutions more or less favorable to his project were passed by nearly all those bodies, and by many of them delegates to the Paris Conference were appointed.

When this meeting was held in August, 1878, the number of American delegates that appeared was suspiciously small, but there was no difficulty in filling it up from the crowd of American visitors to the Exhibition, and in passing by acclamation a memorial to the French and the American governments which had been prepared by a committee. A banquet held on December 1 gave the necessary *éclat*, and M. Chotteau returned to this country full of anticipated success. He was received by the President, and members of Congress listened to his statement. In April, 1879, a resolution requesting the President to consider the expediency of negotiating a treaty of commerce was offered in the House by the chairman of the Committee of Ways and Means, Mr. Wood, and was passed without debate. In the Senate, a joint resolution of a similar tenor was offered and referred, but not passed. In his renewed appeals to the commercial bodies M. Chotteau entered slightly into details, from which it appeared that a reduction of our duties on French manufactures and products by about fifty per cent. was expected, while we were promised participation in the French so-called conventional tariff, as established by the Cobden treaty and by several later conventions with European nations. Beyond this we were promised such other reductions of duties as our negotiators might be able to secure. Statistics not wholly relevant to the question were freely used to prove the immense advantages of such an arrangement, and the trebling or quadrupling of our exports to France was to be the assured effect of the treaty, while all free-trade tendencies were disclaimed when the reduction of our duties was mentioned.

The result of M. Chotteau's second campaign was a pretty general repetition of approving resolutions passed by our commercial associations—not, however, without some significant exceptions. The New York Chamber of Commerce declined to commit itself to the support of the plan. The Silk Association of America, having its central organization in New York, resolved to oppose any such treaty, vigorously and at every point. The San Francisco Chamber of Commerce, alarmed for the safety of its wine interest, took the same ground, and issued an elaborate report, from which M. Chotteau may gather the kind of opposition his project is likely to meet with from American protectionists, whenever Congress or the Executive attempts serious action. M. Chotteau, however, was not discouraged, and returned to France convinced, as he expressed it, that the opposition to his plans would vanish like a mist before the rays of the sun. The presence in Paris of Mr. Fernando Wood soon furnished the opportunity for another flourish of trumpets. At a banquet given in his honor on October 5 he was made the hero of the day. It was there reported and resolved that the American Congress had by the above-mentioned resolutions taken the initiative, which the French Government was bound to follow by the immediate appointment of negotiators. The American mind was depicted as being in the most promising condition, and the assertion was amply proved by the material brought home by M. Chotteau. Mr. Wood extricated himself rather skilfully from his embarrassing position; without committing himself in favor of any treaty he vigorously denounced the French and the American tariff, and inspired his hosts with the conviction that he was with them heart and soul, and that their cause was in good hands.

While awaiting his further action we may now be allowed to examine the project from our standpoint, which, our readers are aware, does not coincide with that of our protectionists, even though in this case we may be found on their side. Placing a very different value from what M. Chotteau does on resolutions passed

on the spur of the moment by commercial associations, or even on resolutions passed but not considered by Congress, we need hardly explain the curious contrast between the enthusiasm exhibited in France and the indifference manifested here. Evidently, very few people on this side have given the matter any serious consideration or believe in the practicability of the project. For this there are very good reasons quite independent of any opposition on the part of our protectionists. First of all, such a treaty is impracticable, because it would throw nearly all our commercial relations with other European countries into confusion. It does not seem to have been known to our French allies that since Benjamin Franklin offered to make a commercial treaty with them on behalf of the United States, we have long abandoned that sort of policy, and have entered into treaties of friendship with numerous European and other countries, agreeing to the so-called "most-favored-nation clause," which forbids any commercial favor to be granted by either party to other states that shall not immediately become common to the other party. If we remember aright, our Government some twenty-five or thirty years ago negotiated a commercial treaty with Mexico, which had to be abandoned when, on being laid before the Senate for confirmation, it proved to be in conflict with other treaties containing that clause. The Hawaiian treaty of March 18, 1875, granting the free entry of the Sandwich Island sugars into the United States, was possible only because our treaties with other sugar-producing countries, like Spain and Great Britain, do not contain the clause. Very different would be the case if any special favor were to be shown to French silks and woollens, wines and other goods, of which a considerable portion of our imports comes from Germany, Austria, Italy, Russia, the Netherlands, and other countries, all of which, in some form or other, are protected against discrimination by their treaties with us. The result, therefore, would be a general reduction of those duties, or we should be compelled to cancel all those treaties and expose ourselves to all sorts of retaliation. The latter course might suit the French best, but it would involve us in inextricable difficulties, and by simply destroying a large trade we are now doing with other countries, and forcing it into French hands, we should be inflicting the greatest damage on ourselves.

In either case our compensation will have to come from France, and from France alone, since other countries, if allowed to participate in the reduction of our duties, will have that participation thrust upon them unless we make special treaties with France and all the other countries simultaneously. As the compensation held out by France we are promised participation in the conventional tariff of that country, which, as it now stands, offers a considerable reduction from the ultra-protectionist duties of the general tariff now applicable to importations from this country. But, unlike the case of England, we export to France, and we shall for many years continue to export, chiefly raw materials and common food articles; and when we examine that conventional tariff, and look for its advantages, we find that France has taken good care, in her general tariff, not to impose duties on those necessaries which could be used as objects of compensation in any conventional tariff. Such articles as cotton, breadstuffs, meats, lard, and other produce which we now export largely to France are, under their general tariff, either free or subject to the same duties as under their conventional tariff; tobacco, being a Government monopoly, would not be affected at all; petroleum would pay a lower duty; but the conventional tariff maintains the much higher duty on refined petroleum and naphtha, as compared with crude oil, which now limits our exports of petroleum to France to crude oil, and keeps the consumption there of this product far below that of any other European country. Our exports of this article, which, by abandoning the protection to the French refiners, could probably be made the most important subject of compensation, would by the conventional tariff not be increased to any great extent.

What increase we might expect from participation in the conventional tariff would, according to M. Chotteau's own statements, consist of butter and cheese, some sole-leather, agricultural machines and tools, perhaps some coarse cotton goods and small manufactured articles. But, without making common cause with the protectionists, we may well ask, Would that be reciprocity for admitting their silks and woollens, their wines and spirits, their canned food and fruits, their glass-ware and fancy goods at so great an advantage over other countries? The fact is, two highly protective countries cannot possibly enter into any such treaty without one or the other abandoning that policy. When our people have learned enough they will surely take this step, and we believe that that time is approaching; but when it does come, we hope that our tariff will be reduced in the accustomed way, not by indirection and under the guise of a misguided sentiment, but for our own benefit and with justice to all friendly countries. Whether M. Chotteau acknowledge it or not, his project for us is a movement in the direction of free-trade, and the best advice we can give him is to change front, try and break down the French general tariff, and rely on such a good example being followed on this side.

RULES OF THE HOUSE OF REPRESENTATIVES.

THE principle on which the Committee proceeded in making the revision of the rules which has been recently under debate was one which ensured useful work in the main, though it excluded action in cases where there was danger of party division. They tell us that they determined in beginning their work "that their reported revision should be the unanimous action and agreement of the Committee, leaving intact only such rules as the Committee could not agree unanimously to adopt or amend." We have therefore the simplification and codification of the rules, and only such changes as the most experienced members of both parties could agree upon. They have very considerably reduced the bulk of the manual, and made the system much more intelligible and easy of reference, eliminating what had become practically obsolete, and embodying formally some things which had become by tacit consent the practice of the House.

One little change, however, has provoked a lively discussion, and has threatened to defeat the adoption of the report. It is the recurrence to what was at one time the rule of the House in regard to the River and Harbor Appropriation Bill, by requiring the report and recommendations of the Committee of Commerce after they are perfected to be passed upon by the Committee on Appropriations, who shall report it like the other general appropriation bills.

The argument by which this is supported is that the general appropriations must be in some definite proportion to the revenue collected, and if retrenchment be made necessary by decrease of revenue or a wish to have a surplus to apply to reducing the public debt, the diminutions of various expenditures must have reference to each other and be planned by some one controlling purpose and authority. If the Committee on Commerce may report a bill appropriating eight millions when the public revenue will only admit the expenditure of four, and when the Appropriation Committee may have spent weeks in scaling the distribution of money to the several departments of the Government so as to avoid a deficit, how, it is asked, can there be anything like statesmanship in the financial legislation of the House? The argument looks very like a "knock-down," for everybody who has watched the House proceedings knows that even if the bill in question were before the House for debate it could never be modified in any symmetric manner, and would be subjected both to capricious slashing and to equally capricious increase.

But this is by no means the whole of the difficulty, and one may look in vain into the debates in the House for any clear recognition of the real trouble in the case. The simple truth is that the River and Harbor Bill has become a great log-rolling job, and is deliberately planned with the purpose of having two-thirds of all the Congressional districts interested in the expenditure, so that it may be passed on a Monday morning under suspension of the rules, without being read, with amendments inserted by the Committee after it has been printed, so as to gain or keep the vote of this or that

member and so secure the two-thirds vote which is necessary to take these millions out of the Treasury in this summary fashion. Here is a bill which contains items of expenditure so numerous as to make a printed book of considerable size, and amounting to from three to six or eight millions of dollars, passed in the lump, and not a soul on the floor of the House outside the Committee, and perhaps not one of them but the chairman, knowing what the bill actually contains; and yet two-thirds of all the people's representatives vote *aye* on the roll-call, because each one of the two-thirds has the assurance that the long list contains an appropriation of money to be spent in his district, it may be on a great harbor or it may be on an insignificant trout-stream in the mountains. The same influences which from year to year secure the passage of the bill under suspension of the rules were strong enough to override the Committee on Revision and the Committee on Appropriations, and defeat the change which was proposed.

Yet thoughtful people must see that the revised rule is right. The only method of getting anything worthy of the name of a budget, under our system of government, is to have the Congressional Committees of Ways and Means and of Appropriations assume the duties devolving upon the ministry in other legislative bodies, and bring order out of chaos by reporting bills for revenue and expenditure which may be based upon a careful study of the public resources as compared with the public necessities. The standing committees of the House have the right to introduce measures which, if adopted, will become the law for the Appropriation Committees in their schedules of expenditure and for the Committee of Ways and Means in their bills to provide revenue. If, however, these various committees have direct control of the appropriation they will generally take pride in building up their own departments, and will certainly be most liberal to them when the Administration is in political agreement with the Congressional majority. No one who has any familiarity with the *esprit de corps* that grows up in these committees, and between them and the departments, can doubt that in the divided responsibility which would allow each to allege that its appropriations were reasonable and only the rest were extravagant, we should see a prodigality of expenditure that would be reckless beyond any precedent. The fact that the Appropriation Committee stands before the country bearing the official responsibility for the general public expenditures as a whole, is the strongest guaranty we have that any approach to reasonable economy will be practised. To emphasize this responsibility and make it more deeply felt is the plain dictate of common sense. To remove it by scattering the appropriation bills among the numerous committees is to open the door to shameless raids on the Treasury. It would court the repetition of the practice in the River and Harbor Bill and make every partial appropriation the vehicle of jobbery beyond anything yet dreamed of. That the Appropriation Committee has the leadership of most important business of the House is naturally the cause of a good deal of jealousy, which is constantly shown in the flings at it, as if it were trying to absorb the whole business of legislation. When these attacks come from members of the political majority they may safely be attributed to envy and jealousy. The minority has usually a mixture at least of better motives, and their criticisms would have more real weight than they have were it not for the sad truth of history that minorities have been majorities and zealously did the things they now condemn.

The theory of the action of the Appropriation Committee is that it takes existing laws and frames its appropriations to meet the statutory provisions wherever they are definite and specific, and uses sound judgment to effect the purpose of the law when this cannot in terms direct the exact sum to be expended. But the rules of the House provide (and this is one of the things the Revision Committee could not agree to change) that whilst no original legislation may be tacked upon an appropriation bill *in general*, it may be done by the Committee in such cases as may be germane to the subject of the bill, and directly tend to economy and retrenchment. Here is the Trojan horse alluded to in the debates, out of whose bowels come, if not armed men, the reduction of the Army, the suspension of salaries of marshals, a like omission in regard to diplomatic officers abroad, the docking of the pay of the railway auditor, and the whole troop of measures which, in obedience to the dictates of party, and, as we think, contrary to their own judgment, the Committee has tacked to appropriation bills, as if for the very purpose of giving its enemies weapons to slay it.

Let us speak the truth plainly. The desire of economy has had nothing to do with the class of measures referred to, and therefore to introduce them under the cover of the proviso we have mentioned is one of the legislative abuses which are sure to return to plague the inventor. Because party leaders could not pass measures against the tactics of a strong minority they have thought to force the Appropriation Committee to do their political work for them, and, under pretext of an apparent reduction of expense, overturn the established system of an army, of a diplomatic or of a judicial service, though the statutes which declared these to be the only lawful ones were entirely unrepealed.

It is said that Republican majorities as well as Democratic ones have done this, and it is true. But it does not make it the less a gross abuse of power, and, what is more to the purpose of our present discussion, it does not make it less certain that it endangers the most necessary and salutary powers of the Appropriation Committee, which is thus made the scapegoat of party sins, by assuming the odium of usurpation of legislative prerogative, when it has only obeyed the dictates of the party caucus. One would think the stupidest partisan might by this time have learned the lesson so often taught, that there is no way to party defeat so absolutely sure as the greedy abuse of power when it is held. And yet session after session the clearer heads of a party see the extremists press and carry measures which, with the regularity of clockwork, are followed by party defeats in the recess. All who long for real progress in the art of self-government will hope that moderation, the quintessence of political wisdom, may so far assert itself in the House that the abuses which have brought odium upon the Appropriation Committees may be corrected without resort to a practice which, as we have tried to show, will bring in a period of wild extravagance in expenditure, with the legislative demoralization almost inseparably connected with it.

THE HARRISBURG CONVENTION AND ITS CONSEQUENCES.

WASHINGTON, Feb. 9, 1880.

SENATOR DON CAMERON'S exploit at Harrisburg last week is still the principal topic of conversation here. Opinions differ as to its effect upon the Republican conventions of other States, but some facts are settled and agreed upon as regards the event itself. One is that the Pennsylvania Convention did not want to renominate Grant, but that Cameron compelled them to do so. Another is that Blaine could have beaten Cameron—that is, could have prevented the adoption of the Grant instructions—if he had had the spirit or the wit to fight for his rights. A third is that the leaders of the third-term movement are going to nominate Grant at Chicago, even by a majority of one, if it is possible to do so, and that they would do this even if they apprehended he would be beaten at the polls. Consequently, evidence offered to them that Grant is a weak candidate—and there could be no better evidence than the Harrisburg Convention itself—weighs not a feather in their calculations. They do not want another Republican Administration that they cannot control, and in preference to it they will take a Democratic one cheerfully, and trust to the chances of the next four years. Conkling would have preferred Tilden to Hayes before the latter was installed in office, and he went so far toward bringing the former in that the Democrats conceive that they were betrayed by him when, at the critical moment, his nerves gave way. Party rage, which has so often served his turn, appalled him in that instance, but it did not prevent him from disclosing that he wants no more Republican victories of that kind. As for Cameron, he has introduced himself to the public as a sort of Barbary corsair or Roman proconsul entertaining a well-grounded contempt for the people whom he slashes—that is, for his own party in his own State. It is spoken of as a remarkable thing that 113 delegates out of 246, although stoutly backed by public sentiment at home, dared to call their souls their own in presence of this

terrible fellow. For there is not a more fearful wild-fowl than your Cameron living! Blaine really represented the vestiges and remains of popular sovereignty in party government at the Harrisburg Convention. I doubt if there will ever be so strong a show of opposition to personal government in Pennsylvania again, until the party has been soundly thrashed at the polls. It is a ludicrous waste of energy to send sixty or seventy able-bodied men to Chicago to make a unit and to cast one vote. That this is done is but another instance of the survival of forms after the substance has vanished. Perhaps the most startling sign of the times is the ease with which such things are done—the facility and *abandon* with which the State of Pennsylvania is lowered from the attitude and character of a commonwealth to that of a province under the government of a prætor. Doubtless Mr. Blaine was an unfit man to bear the standard of the commonwealth in the recent engagement; nevertheless he did bear it, and when the wheels of the "machine" rolled over him it was the commonwealth's blood that gushed out.

The Blaine men here in Washington, however, prefer to be considered cunning fellows rather than victims. They say now that the course of the Harrisburg convention ran parallel with their intentions; that it was not their purpose to kill the Grant movement suddenly, because that would have drawn all the anti-machine fire upon them; that they prefer to have the batteries of the Independents directed against the third term during the next four months rather than against their man; that the moral effect of the Harrisburg massacre must tell in their favor throughout the country; that Cameron's victory was virtually a defeat because his majority was so small, etc., etc. The third-term people, on the other hand, say that all they wanted at Harrisburg was all the votes; that they were not so grasping as to claim any more than the whole number, and consequently they are satisfied. What they expect is that the impetus gained in Pennsylvania will produce an exactly similar result in New York, and that the momentum of these two States will carry Illinois *and Massachusetts*—perhaps also Indiana—and that anything more which they need they can easily obtain from the South. If the Blaine men have any programme as well defined as this, I have not heard of it. They talk vaguely about Illinois as the bulwark and breakwater that is to roll back the third-term flood. Gen. Logan, however, is quoted for the third term, and Gen. Grant, as it happens, has a nominal residence in Illinois; the supporters of Washburne do not oppose the third-term movement, but do serve to divide the opposition to it. Gen. Logan's machine in Illinois is not the same thing as Cameron's in Pennsylvania, or Conkling's in New York. It is less subject to the one-man power. It was wholly in the hands of the Blaine men four years ago, and it dragged Logan along with it. It would probably do the same now but for the adventitious circumstance that Gen. Grant has a house in Galena, where he occasionally spends a week's time. Something will really depend, as regards Illinois, upon public opinion. Any such demonstration of hostility to the third term as took place at Harrisburg would be fatal to it, because it would point to the loss of the State in the election, and the managers there have not reached the state of mental equipoise which can look calmly upon such a contingency. Illinois is not a sure State by any means, and an adverse result in Ohio in October would be likely to deluge it. Meanwhile it is among the possibilities that Blaine may surrender to the third-term movement and become as good a Grant man as anybody. But the third-term men will never surrender to him. They have the great advantage of knowing exactly what they want, and it is a mistake to suppose that they have any second choice.

On the 12th of December last, as appears from a letter signed "C. W. Moulton," which has mysteriously got into print, Mr. Conkling did have a second choice, and that second choice, as among candidates having any strength, was Secretary Sherman. Of course Conkling would prefer Sherman to Blaine. This letter is curious enough to pass into history, and as the columns of the *Nation* are well adapted to preserve it for that destination I append it:

"A.M., Friday, Dec. 12.

"My Dear Mr. Sherman: The result of my conference is that Mr. Conkling will look upon his personal relations as not broken; that he prefers Grant, and cannot change that relation; that after Grant is out of the way he prefers you to any one now spoken of; that he will not make or allow to be made any effort to control New York against you if you are nominated, and that he will not allow his name to come before the Convention, but that he *cannot* allow your friends in New York to muster him as in your favor. This comes from the source which you are aware of. I am to request that no steps be taken by you for a day or two.
—Yours, C. W. Moulton.

"P.S.—I rely upon this, but of course I cannot *know* that it is true; it is probably one of those beginnings that should be looked after. The situation of the parties makes the negotiation slow as well as very delicate. I shall say to my informant that I have stated this to you, so as to prevent mistakes. I will call on you before I leave the city."

Many minds in Washington are racked at this moment to discover how this letter got into print, and who, besides Moulton, acted as a means of communication between Sherman and Conkling. To answer the first interrogatory it is necessary to enquire what person having control of the letter had any interest in publishing it. The person having control of it was Mr. Sherman. Had he any interest in publishing it? I do not undertake to answer this question, but bearing in mind that one of the most effective arguments used against Mr. Sherman at the present time is that he could not carry New York, because Conkling would throw the State over to the Democrats, I conclude that any evidence calculated to combat and counteract that argument would be very advantageous to Mr. Sherman. As for the other question, I am informed that Mr. Moulton's family is on exceedingly intimate terms with a lady who is known to be Mr. Conkling's client, and who has an inherited and decided genius for politics. A third conundrum—Why does this letter appear now instead of a month ago or a month hence?—must also be susceptible of an answer, but I pause.

Returning to the Harrisburg Convention, I remarked that the third-term leaders know what they want. They have no set purpose to undermine the Republic by paving the way for Grant or a future President to go in for a fourth term or any other number of terms. But a third term happens to fall in with their system of prætorship. General Grant gave that system full swing, and he was the only man who could do so with tolerable safety, having a military reputation to fall back upon to serve as a screen for civil disorder. They know perfectly well what they can do with him because they have tried him. His methods are their methods. Given four years more of this species of license and they calculate that they will not be troubled again with the presence of 113 dissenters at a Harrisburg convention. As regards the election, they set much store upon the pride and self-reliance of the American people, which leads men to say, "Who's afraid? If we don't like a President can't we change him every four years?" The answer is: "No, unless you can get more than 113 delegates into your nominating convention." Horace White.

MEMOIRS OF MME. DE RÉMUSAT.—VOL. II.

Paris, January 23, 1880.

After the battle of Austerlitz the Emperor Francis asked for an interview with Napoleon. He was received under Napoleon's tent. "This is," said the latter, "the only palace which I have occupied for two months." The Russian Emperor consented to return to Russia with his army, and Napoleon seemed anxious not to push his victory too far. Talleyrand, who had been sent for, pressed him in this sense, and insisted upon the necessity of preserving Austria for the equilibrium of Europe. Napoleon had been much flattered by the visit of the Austrian Emperor; at times, however, he seemed uneasy; he was afraid of Talleyrand. He established himself in the palace of Schönbrunn, and seemed astonished to find that his presence produced little effect on the Viennese; on the other hand he was struck by the affection shown by the Austrian people for their sovereign. "What a people!" he exclaimed. "If I returned to Paris I should not be received in this manner." While the Emperor was in Vienna an *émigré* named M. d'André sent his wife to General Mathieu Dumas, and asked to be struck off the list of the *émigrés* and allowed to return to France. M. de Rémusat saw Madame d'André, and consented to ask Napoleon if he would receive her.

"At the name of D'André the face of the Emperor darkened: 'Do you know,' said he, 'that you are speaking to me of a mortal enemy?' 'No, sire,' said M. de Rémusat; 'I am unaware that your majesty has reason to complain of him; but in that case I ask for his pardon. M. d'André is poor and proscribed; he wishes to go and die quietly in our country.' 'Have you any relations with him?' 'None, sire.' 'Why do you interest yourself in him?' 'Sire, he is Provençal, he was at school with me, he followed the same career, and he is my friend.' 'You are very lucky,' said the Emperor, with a terrible look, 'to have such motives as an excuse. Never speak of him again, and know well, that if he was in Vienna and in my possession, he would be hanged in twenty-four hours.' Having said this he turned his back on M. de Rémusat."

After this interview General Savary, who was at the head of the police, came to M. de Rémusat and complimented him. "Come, come," said he to him, "I must congratulate you on the fortunate opportunity which

is offered you, and I advise you not to let it escape. You ran a great risk a moment ago when you spoke to the Emperor of M. d'André, but all can be repaired. Where is he?' 'He is, I believe, in Hungary; that, at least, is what his wife says.' 'Bah! don't dissimulate. The Emperor believes him to be in Vienna; he is persuaded that you know where he is, and he wishes you to declare it.'" M. de Rémusat felt indignant at this proposition; he sent word to Madame d'André that his mission had failed. Madame de Rémusat says that from that time she and her husband fell into a sort of disgrace; that the Emperor became cold, even icy, towards his chamberlain. This Savary, who played such a singular part in the story we have told, "was not," says Madame de Rémusat, "absolutely a wicked man." The Emperor used to say: "If I ordered Savary to get rid of his wife and children I am sure that he would not hesitate." He was fond of money and he trembled before Napoleon. Duroc, who also lived with the Emperor, was silent, cold, and impenetrable; he was the ideal of the slave: the Emperor was his *master*, and that was enough; his probity has never been attacked. Such men as Napoleon need such men as Savary and Duroc (who was made Duke of Friuli; Savary was Duke of Rovigo).

The treaty of peace was signed on the 27th of December, 1805; it gave Italy to Napoleon; it recognized the Electors of Bavaria and Würtemberg as kings, and abandoned Tyrol to the King of Bavaria. The 'Memoirs of Metternich,' which have just appeared, show conclusively that from that very moment the struggle began between Europe and Napoleon; they said peace and there was no peace. In the interest of their peoples the sovereigns were obliged to make temporary sacrifices to the crowned head of the Revolution, to the new Cæsar. A Bavarian princess was given to Prince Eugène Beauharnais. Napoleon announced it in these words to him: "My cousin, I have arrived at Munich. I have arranged your marriage with the Princess Augusta. It has been published. This morning the princess has made me a visit, and I have talked much with her. She is very pretty. You will find with this her portrait on a cup, but she is much better-looking." Napoleon liked his step-son Eugène, who was modest, obedient, devoted to him.

"While the Emperor was at Munich it entered his head to refresh himself from the great fatigues which he had gone through during several months by a certain *fantaisie*, half *galante*, half political, towards the Queen of Bavaria. This princess, second wife of the king, without being very pretty, had an elegant waist, and agreeable yet withal dignified manners. The Emperor feigned, I believe, to be in love with her. Those who witnessed this spectacle say that it was rather curious to see him struggling with his sharp temper and rather common manners, in the desire to succeed near a princess accustomed to the sort of etiquette which is never departed from in Germany under any circumstances. The Queen of Bavaria knew how to hold at a distance this singular lover, but seemed, however, amused with his homage. The Empress found her more coquettish than she would have liked."

After the campaign of Austerlitz something heavier was felt in the rule of Napoleon; he became more unapproachable; he adopted the German etiquette; the German princes trembled before him; the young hereditary Prince of Baden had been obliged to ask of him humbly the honor of marrying a person of his family. In France the old parties seemed quite dead; the court of the new Cæsar became the most sumptuous in the world. Despréaux, who had been dancing-master of the unfortunate Queen Marie-Antoinette, had to give lessons to the ladies of the new court, and taught them how to make courtesies with long trains. It was while the Emperor was at a gala representation at the Théâtre-Français that he received the news that his troops had forced the Queen of Naples to fly to Palermo; the play was stopped, and Talma announced to the audience the fate of "the modern Athaliah." Napoleon ceased to keep on intimate terms with anybody; the more numerous his court became, the more isolated he was himself. The Empress herself became a stranger to him; she knew absolutely nothing of the great schemes which kept his mind occupied. She became so estranged from him that she even ceased to be jealous, and her complacency to all his caprices became complete.

"The Emperor, absolutely convinced that the empire of woman had often weakened the kings of France, had irrevocably decided in his mind that they should never be at his court anything more than an ornament, and he kept his word. He was persuaded, I don't know why, that in France they have more *esprit* than the men (at least he often said so), and that the education which they receive gives them a certain cunning against which it is well to be on one's guard. He feared them a little, and for this reason he kept them at a distance."

He exiled Madame de Staël and Madame de Balbi for some innocent pleasantries; his fear of Madame de Staël was real, and his police had a constant eye on her. Madame de Rémusat seems, however, to have continued to receive from time to time confidential communications from the imperial woman-hater. "One day," she says, "I spoke to him of the conquest of the kingdom of Naples, and I dared to say that I felt moved by this policy of dethronements which we seemed to adopt. He answered with the tone which he assumes when he wishes to receive no answer: 'Madame, all this will only end when there is not a single Bourbon on a throne of Europe.' These words pained me. I thought but little of our royal family, I must confess; but still, when I heard that name, it seemed as if the memories of my youth revived."

The court of Napoleon was now full of the great names, the Montmorencys, the Mortemarts, the Chevreuses. Madame de Rémusat gives some curious details about the household. The "civil list" amounted to twenty-five millions, independently of the crown forests, which yielded three millions, and of the Italian civil list, which amounted to eight millions. The net revenue of the Emperor was nearly thirty-six million francs. He disposed besides of the secret-service money of the Foreign Office, and of the theatre fund, which was equal to one million eight hundred thousand francs. The war contributions formed an extraordinary domain, in which the Emperor was absolutely sovereign; he sometimes used them for war. The greatest order existed in the household; the great officers of the crown received forty thousand francs a year; the *dame d'honneur* of the Empress received as much; the *dame d'atours* thirty thousand. Eighteen chamberlains received from three to twelve thousand francs; the equerries had twelve thousand francs; the *préfêts du palais* or *maîtres d'hôtel*, fifteen thousand francs; the masters of ceremonies, fifteen thousand francs. Each aide-de-camp had twenty-four thousand francs. The expenses of the grand equerry amounted to three or four millions; there were always twelve hundred horses in the stables. Napoleon's expense for his toilette was forty thousand francs a year. He wore an enormous amount of clothes and of linen; he constantly burned his shoes or boots playing with the fire; he threw away a coat or any article of clothing when he found it in the least inconvenient. In his campaigns he wanted to find fresh linen and clothes everywhere. He generally rose at seven, shaved himself, received a few visits, and breakfasted at eleven; he ate only of two or three dishes, very rapidly, and took a large cup of black coffee. The Councils of Ministers took place in the afternoon. He dined generally alone with his wife. He went to bed early. There often was a small ball, but the Emperor always looked fatigued and took no interest in it. Nobody slept in his room; his famous Mameluke slept in the anteroom.

He gave Josephine six hundred thousand francs for her personal expenses; this sum was insufficient and Josephine was always in debt. She had also twenty thousand francs for her charities. Josephine did not like the German etiquette; she was very affable and liked to converse with shopmen; she was always being painted, and presented her portrait to everybody. Her life was a perpetual dressing and undressing. She had as many as four hundred Cashmere shawls, which were then a great rarity. She never opened a book, never took up a pen, and she was never bored. She kept till the end her passion for dress, and this passion absolutely filled her life. Napoleon was no hero to her; he simply was the man who had opened to her innumerable accounts with innumerable hairdressers, jewellers, dressmakers. She kept the same habits after her divorce; at Malmaison she died in a gown of pink satin, all covered with ribbons. She was good, she had been handsome; she was not frivolous, she was frivolity itself. She had at bottom a preference for the persons of the *ancien régime*, and she cared little for the new marshals and their wives. The Napoleons were hostile to her, as she was a Beauharnais; but she suffered more from Bonaparte's sisters than they suffered from her.

SPIRITUALISM IN GERMANY.

LEIPZIG, Jan. 2, 1880.

NEAR the end of the last century Professor Gauss, of Göttingen, one of the most distinguished of modern mathematicians, attempted to show that the familiar axiom of Euclid, that parallel lines might be infinitely prolonged without meeting, could not be proved, was unnecessary, and impaired the certainty of geometrical reasoning. Under the new and more generic mathematical method of treating surfaces which he originated, cases might occur of a so-called negative measure of curvature in which this axiom was false. In a paper published in 1868 Pro-

fessor Riemann generalized the common formula by which the position of any point in ordinary space may be determined by measuring three co-ordinates, by supposing the number of these co-ordinates to be represented by *n*, or to be indefinite. If this were possible, the magnitude—in this case space—would have *n* dimensions, to each of which all Gauss's laws respecting surfaces are applicable. This gives a new mathematical conception of space. Helmholtz in 1870, not intimidated by the failure of the famous Italian mathematician, Beltrami, to do so, attempted to make the matter intelligible to the ordinary understanding. We may conceive, he says, creatures of only two dimensions living on a surface. If this surface were spherical they would know nothing of straight, and if it were saddle-shaped, or pseudo-spheric, they would know nothing of parallel lines. If they developed a geometry it would be planimetry. They would really have no conception of solid bodies. Now, as these organisms or intelligences are related to ours, which live in ordinary tridimensional space, so he infers we may conceive our relation to beings living in extension of four dimensions. Thus it is proved that our knowledge—of space, as he then said ; of the axioms, as he now says—is purely empirical.

With but two respectable exceptions the whole subject is ridiculed by French mathematicians. In England only Clifford seems to have fairly comprehended it, but in Germany further mathematical deductions have been made and text-books of "absolute geometry" written. The largest astronomic parallaxes have been remeasured with the greatest precautions to see if space was really "curved," and whether triangles might not be obtained the sum of whose angles was more or less than two right angles ; and many have declared that they found by these methods a radically new way of conceiving the infinitely small and large which revolutionizes the Newtonian conception of the universe. On the other hand, Lotze regards the whole matter as a "logical jugglery," or a "grimace of science to intimidate the ordinary mind by useless paradoxes." Many others no less outspoken in their condemnations might be quoted.

The chief result thus far, however, is that under the lead of the Leipzig astronomer, Professor Zöllner, the spiritualists have appropriated the notion of the fourth dimension of space, in which they argue all conceivable impossible things may be done. For a generation or two about the only circle of believers in magnetism and spiritism in Germany has centred in Leipzig, but since the conversion of Zöllner and the partial conversion of two of his associates by the "manifestations" produced during the visit of the American medium Slade, who was here just after his London imprisonment, the infection has spread considerably among students and the half-cultured, well-to-do business classes. The 'Harmonic Philosophy' of A. J. Davis has been translated, and one reads sketches of the author's life, sometimes published with some sort of apology, in periodicals and daily papers, one of which adds a regret that Germany is becoming "Americanized in yet another respect."

The battle has been very bitter. Some, who condemn Zöllner, accuse Helmholtz of unintentionally occasioning the movement by an indiscreet attempt to make "meta-mathematics" intelligible to scientific laymen. He has, therefore, published an open letter, addressed, I think, to Zöllner, protesting most vigorously against the utterly unwarrantable use made of his illustrations. A distinguished Berlin alienist emphasizes certain reported tendencies to insanity in Zöllner's family, and does not hesitate to diagnosticate Zöllner himself as insane. A young *Docent* who bought, at a shop where magicians' arts and wares are sold, Slade's famous slate-trick and others by which Zöllner declares he was converted, performs them with much skill at evening parties, where he has become in great request. Although his classes have diminished to half-a-dozen, Zöllner keeps up the fight, attacking, in four immense volumes within twenty months, a score of eminent professors, including some of his own faculty, in the most bitter and personal way, and seeking at present, as he says, not so much to prove or inculcate his doctrine as to conquer for spiritualism a free and open field among great "scientific" themes. Although extravagant condemnation of Helmholtz for causing a "scientific scandal," encouraging "mathematical mysticism," "making an indiscreet appeal to the scientific imagination," was one of the many violations of collegiate decorum for which poor, blind Professor Dühring was, justly enough, no doubt, dismissed from his chair in Berlin, yet none of his best-abused colleagues want Zöllner dismissed, but wish him to retain his chair as a conspicuous monument of the principle, almost universal in Germany, that a professorship is for life.

Zöllner's reputation rests largely on his book 'On the Nature of Comets.' Here he argues, from the conditions of the stability of the aggregate state of bodies composed of fluid drops, that space must be at least infinitesimally curved, and therefore finite. All matter, even the most solid, he says, must slowly suffer volatilization if its temperature is above the absolute null point. This he illustrates by the vaporization of ice and the smell of metals and minerals. Infinite time having already elapsed, he continues, since the beginning of the world, all bodies would have vanished if space were infinite. To the argument that if the number of light and heat-diffusing bodies or fixed stars were actually infinite the whole arch of heaven would shine, he objects that this the laws of absorption would prevent. He quite forgets that it is by no means proved that all parts of the universe are above the temperature of an absolute zero, and that there are forces which act against volatilization. But this by the way.

Every one knows that spiritualism is a word of very manifold connotations. Not only are its disciples of all degrees of respectability, from the Woodhull-Claflin type up to the so-called Christian spiritualists, who, believing in the Bible and in church institutions, simply hold that Christ was the best of all mediums, and even to the large class of Nicodemuses who are almost persuaded although they do not break their orthodox church relations ; but its doctrines and motives are no less varied. All sorts of primeval and half-outgrown yet clinging superstitions have clustered together and warmed each other into new life under this name. Conjurers, skilful and otherwise, with a shrewd eye to business; women with shattered hysterical nerves and spoiled romantic minds; social revolutionists and even free-lusters have made common cause with those who, with noble impulses toward a freer moral, intellectual, and religious life, boldly abandoned the narrow orthodoxies in which they were reared, yet, all untaught as they were to live without a creed, were led to a faith more mystic, a cultus more gross, than before. There is, however, at last some hope that the central mystery of spiritualism will be thoroughly investigated by competent scientific men. An eminent professor here, who attended the Slade séances, explained to me with much plausibility how he believed the slate-writing was done. Sleight-of-hand performances are cultivated by amateurs to an extent which threatens to dispel all the mystery of prestidigitation. Nearly all tricks which are not performed exclusively by their inventors can now be bought by those who are willing to pay beforehand, and solemnly pledge themselves never to perform the trick until they have learned it so thoroughly as to defy detection, or even unless they can satisfy the salesman to that effect. Other elements of spiritualism are now known to belong to a distinct and typical chapter of neuro-psychal disease, and may be studied in every large hospital.

My main object in this letter, however, is to call attention to a series of very promising experimental observations lately made by an unimpeachable authority.* These were begun with the cordial co-operation of the Danish magician Hansen. Physiologists have long known, even before the experiments of Preyer, that by holding frogs, hens, etc., gently but firmly in a certain position for two or three minutes they could be put to sleep for a quarter or half an hour. Weinhold has investigated these phenomena in man, and finds that, by causing a subject to look fixedly at a bright point for ten minutes, by making passes with warm hands over a sensitive skin, sometimes not touching and sometimes rubbing with great strength according to circumstances, by compelling him to give up his own will entirely, by walking him up, down, and around, at all paces and angles, till he is perfectly passive to a gentle but irresistible force, by appealing strongly to the imagination, by means of solemn music and an array of mysterious apparatus—by one or all of these means, in short, abnormal inhibition of the will is caused. This begins generally in the gradual loss of taste, touch, and the sense of temperature. Next colors are not distinguished, then forms grow indistinct, and then the eye is immovable and nothing is seen. The ear never sleeps in these experiments, and the subject believes, and at last does, all that is told him. The transfer of taste, calling or influencing from a distance by the will alone, etc., are ascribed purely to the imagination of subject or magnetizer. Not all persons can thus influence or be influenced, although either power is not specifically different from powers which all possess. The identification of this phenomenon with hypnotism is a very important step toward explaining mediumship, and visible spirits are likely to be physiologically accounted for, as is the halo of "odic" light, which often seems to the subject to surround the hypnotizer, and which is a real and a natural creation of his fancy out of the "subjective light" (*Eigendünkel*) of his own eye.

*'Hypnotische Versuche. Von Prof. Adolph F. Weinhold.' Chemnitz. 1879. Pp. 28.

Correspondence.

INTERNATIONAL GUARANTY OF THE PANAMA CANAL.

To the Editor of The Nation:

Sir: The article in the last number of the *Nation* entitled "The United States Government and the Panama Canal" suggests these enquiries: In view of the fact that the Governments of Colombia and Nicaragua have by treaty conferred the same powers, respecting a canal across the Isthmus, upon each of the governments, the United States, Great Britain, and France, would not the interests of our own country be subserved, as well as those of all civilized nations, if our Government, instead of making haste "to seize the day," and obtain a monopoly of the proposed canal, should invite concurrent action on the part of the European Powers whose rights are identical with ours, and thus secure not only the construction, but the perpetual internationality of this great highway? Are the civilized Powers not sufficiently advanced in the principles and methods of peace that they can safely trust to the honor of each other in a joint effort to open and maintain this canal as a highway for all nations? or must the old methods still prevail whereby national greatness shall be promoted by strategy or fraud, and when thus secured be protected by human butchery? J. T. Brooks.

Pittsburgh, February 9, 1880.

THE HARVARD DIVINITY SCHOOL.

To the Editor of The Nation:

Sir: The Harvard Divinity School, I notice, is again a subject of discussion. It is true that with the resignation of Prof. Young, President Eliot's plan of making the school unsectarian is more possible than formerly. Some injustice is done the Harvard Divinity School in calling it Unitarian. Its aim is to be unsectarian, and in a partial degree it is succeeding in this. It is doing this in opposition to the wishes, on the one hand, of the conservative element in the Unitarian societies, which would have it Unitarian, and on the other to the radical element, which would have it pronouncedly radical. But the way in which President Eliot is trying to make it unsectarian is one which will hardly lead to success. The school aims to be both conservative and radical at the same time. It would take hold upon both horns, and thus be in favor with neither tendencies of thought—the conservative or radical. The teachings of the professors by no means harmonize, nor is it desirable that they should. But it is necessary that we know for what the school stands. We may be told that it stands for free enquiry in the field of theology. To this we give a most emphatic denial. Neither in the school nor out of it is this felt to be the fact. This freedom is not felt by the students, either in the choice of studies or in the pursuit of those selected for them. No one can have the degree (B.D.) unless he pursues the course laid out for him. No equivalent will be taken for any single study. It is, take the course exactly as laid down or go without the degree. And let it be said that to leave without the degree is anything but a good recommendation. The writer knows men who are very far advanced in the study of theology, who by the course in the Divinity School are compelled to go over studies for which they have no aptitude or liking, and which, under the circumstances, are a positive waste of time. If the course of study is intended for young men of eighteen or twenty, then is it a partial success. If, however, it is intended in any way to meet the wants of men who desire to study theology as a science, it is an absolute failure.

If the Harvard Divinity School wishes to become a complete success in the first of these—namely, to become a school for the training of young men for the ministry—then let it show itself sectarian and for what church it intends to train its young men; for to train young men for any church is to train them for none. It can hardly be said that it is now training young men who will fill the Unitarian church pulpits. If we are to judge from the past, the coming Unitarian ministers are being trained in some orthodox church.

If the Harvard Divinity School aims at the study of theology as a science the first thing to be done is to allow the young men choice in their studies, and to offer the degree for honest work in these studies. With all its talk about liberty and freedom it is to-day as much bound by some of the old and outgrown notions as any school in the land. Despite anything to the contrary up to date, the Bible of the Jews has not been studied as literature, but in the "good old way our fathers trod." And the outlook is that in one department this "good old way" is to be continued. Instead of a fair and candid study of the book, as illustrated in the works of the "Dutch school," a system of repression was and may now be in vogue. And as to who or what Jesus was or is, nobody in the school seems to have any idea. The philosophy of some of the professors would lead them to take advanced humanitarian grounds on the question, but for some reason they fail to speak out.

Again, there must be a modification (or something else) in the present scholarship system. Without doubt it is hurtful to the school as a school and to the students as men. If the men who go there are studying for the ministry and need aid, let the scholarship be given for preaching. At present the school uses the scholarships as a means of repressing the free thought and expression of the students. (The writer does not modify this sentence.) Students who go to Harvard with the idea that there are scholarships and freedom soon find out their mistake, and, to the detriment of their manhood, keep quiet. We trust that the *Nation* will continue the work it has begun until we have *one* free theological school in our country. Harvard, with all its faults, is the best theological school now in the country, and is the one for those interested in the matter to force into its proper place—"a school for the study of theology as a science."

X.

Feb. 5, 1880.

STEEL RAILS AND THE TARIFF.

To the Editor of The Nation:

Sir: In your issue of January 22 you have an article on the "The Railroads and the Tariff," in which you go into some statements purporting to be the facts in the case, and arrive at the conclusion that "The steel-rail makers will probably exhibit a new lot of public advantages to result from maintaining the present rate of duty, but the failure of their former predictions, *both as to their ability to supply the home demand* and to supply it at as low a rate as the foreign article, ought to disqualify them as witnesses."

I do not propose to go into any argument upon the questions of public policy involved in Protection *vs.* Free-Trade, but I have reason to believe that it is your intention to present a statement of facts as they exist and have existed, and not an imaginary condition of things merely to sustain the ground taken in your argument. The petition of the railroad companies to which you refer alleges a state of things in regard to the price of steel rails, both in this country and abroad, that does not now exist. At the time when steel rails sold in England at $22 per ton they were sold here at as low as $38 per ton at the mills; but while the price in this country may now be quoted as $80 per ton, it has advanced in England to $50 per ton, and the $28 per ton duty which in the railroad companies' petition is alleged to be 120 per cent. on the foreign cost of the rails, is now only 56 per cent. of that foreign cost. A comparison of the prices at various dates since the advance began will show that the price abroad has steadily followed the advance of price here, and there is no reason to believe that if the duty were reduced to $10 per ton, the price abroad would not be immediately advanced $18 per ton, the amount of the reduced duty. On the contrary, there are reasons for believing that it would be so advanced.

When the duty on blooms was fixed by decision of the Treasury Department at 45 per cent. ad valorem the price of foreign blooms immediately advanced in the foreign market, so that it was but a short time when the cost of importation of blooms with the reduced rate of duty made them cost as much as the domestic article. Some three weeks ago English rails advanced in one day from £8 10s. to £10 10s. per ton, and it is alleged that the date of the advance coincided with the date of the information reaching England that a bill had been introduced in Congress to decrease the duty on steel rails. If the introduction of a bill suffices to advance £2 per ton, it is not unreasonable to believe that the passage of the bill would result in a much greater advance.

You say also: "The Western and Southern roads require large quantities of steel now and are actually importing it from abroad, but the price of the domestic rail remains (as was intended) $28 per ton above the foreign." Now, although you do not distinctly say so, it is a fair inference from your statement that the price of the domestic rail has remained all along (as you say was "intended") $28 per ton above the foreign; but this is not the fact, and because it is not the fact your statement is not a fair one. When the foreign rails were selling at $22 per ton, the domestic rail should have sold, on the basis you name, at $50 per ton plus the freight, insurance, brokerage, etc., or about $53 per ton, whereas it is notorious that steel rails were then sold at from $38 to $42 per ton all over the United States, and I believe it is also true that at no time during the

years 1877, 1878, or the first half of 1879, was the price of domestic rails $28 above that of the foreign rail. This being the fact, shows that the price here was regulated by home competition and not by the foreign price.

Again, you say: "On the other hand, the public must recognize the fact that the actual cost of railway transportation has to be paid for, at all events, by the goods and passengers transported, whether railway shareholders get much or little, *and that the chief item of cost is in the rails that support the traffic.*" This statement is very far from being true. In the report of the Pittsburgh, Fort Wayne & Chicago Railway Company to the State of Pennsylvania for the year 1878 the total operating expenses amounted to $4,138,137 01, while the expense for iron and steel rails amounted to $124,653 53, or a little over three per cent. of the total operating expenses. On the Philadelphia & Reading R. R. the total operating expenses were $7,786,282 79, and the expense for rails was $173,429 85, or about $2\frac{3}{10}$ per cent. Many other cases could be cited to prove that your statement in this regard is highly inaccurate.

In your final paragraph, first above quoted, you intimate that the steel-rail makers have entirely failed "as to their ability to supply the home demand," and yet at no time from the beginning of 1873 to the fall of 1879 has there been a sufficient demand to keep all the American mills in operation. Another important factor in the case now being urged by the railroad companies is that of the large amount of rails sold by the American mills for delivery in 1880 a very large proportion, probably more than half, are sold at the prices prevailing in the early part of 1879, while the railroad companies are holding their old iron rails at prices in some cases higher than those at which they have contracted for their steel. The actual cost of steel rails to an operating railroad is the difference between what it pays for its steel rails and the amount received for the old iron rails taken out of the track. It is within my personal knowledge that railroad companies who paid $44 per ton for their steel one year ago were glad to sell their old iron rails at $18 per ton, the actual cost to them of steel rails being about $26 per ton. Those companies are now able to get $45 per ton for old rails, and a sale of 1,000 tons old rails has been reported at $50 per ton, spot cash. Should the railroad company which made the sale last referred to buy steel at the present quotation of $80 per ton, such steel would cost it but $30 per ton, or an advance of but $4 per ton over the price paid by the same company one year ago.

These are facts which should not be ignored in any discussion of this question. Why, then, is an exception proposed to be made of steel rails on the ground that the duty upon them is excessive? The steel-rail makers are not getting the benefit of that duty. The real reason is that certain railroad companies, notably the New York Central, Lake Shore and Michigan Southern, Chicago and New Orleans, with a number of other subordinate lines, have bought large quantities of rails abroad, not because they could not get them in this country, for many of these purchases were made before the mills of this country began to fill up, but because they saw an opportunity to buy them at low prices abroad and intended to trust to luck to get through with a "whoop" a reduction of the duty on steel rails, which will inure in the beginning solely to their benefit, but in the end to the benefit of the foreign manufacturer of rails, who will thereby be enabled still further to advance his price so long as the "boom" lasts.

The effect during 1880 of a reduction of duty on steel rails to $10 per ton will be merely to rob the public revenue of $18 per ton on from 100,000 to 200,000 tons of rails *now* bought from foreign mills for delivery in this country, while it is not probable that it will reduce the cost of steel rails for delivery in 1880 to any railroad company that has to purchase them hereafter. It is safe to say that the estimate of the writer in the *Herald* "that the demand in this country for work already laid out exceeds by 1,000,000 tons the capacity of the American mills to supply," is at least double and possibly treble the actual excess in the demand over the domestic supply. Two of the largest Bessemer-steel works in this country are already hard at work doubling or more than doubling their ability to make output, while a third is awaiting the issue of this proposed reduction of the tariff, as, if the tariff is to be reduced, they do not wish to invest any more money in what will be in a future time of depression a losing business. A fourth contemplates spending a half a million of dollars this year in increasing its capacity fifty per cent., which will likewise be abandoned if the tariff is reduced.

The free-traders, or those who argue a reduction of the tariff to a revenue basis, claim to be the friends of American labor, and yet they never explain how labor is to be compensated for the reduction in wages necessarily involved in bringing down the price of the domestic to that of the foreign article. They insinuate or intimate that the duty goes into the pocket of the capitalist. If that be so, the American manufacturers should grow in wealth many times faster than their English competitors, yet where in this country will you find an estate left by a deceased iron manufacturer rivalling that of the late Mr. Bolckow, M.P., who came to England some forty-five years ago a poor clerk and died last year at the head of a larger iron and steel manufacturing establishment than any two of America's combined? Numerous other instances might be cited where foreign manufacturers have been immensely more successful in accumulating wealth than those of this country, the fact being that American labor, from the mining of the ore, through its transportation to its manufacture into pig-iron, and thence into steel, receives by far the larger proportion of the difference in price which is due to protection.

These you may say are trite remarks, but they are true, and your article ignores them. The readers of the *Nation*, who are not restricted to any one set of political opinions, are entitled at your hand to a true statement of the facts, which, I doubt not, you intend they shall have, and with this in view I beg to ask room in your paper for this communication.

W. P. S.

St Louis, Mo., January 27, 1880.

[Several of the objections advanced by "W. P. S." to our article were anticipated in the article itself. We said, for instance, that "the demand [for steel rails] may possibly be equal to, or in excess of, the world's present power of supply, in which case the total abolition of the duty would not immediately lower the price, and hence would not lessen the profits of the American manufacturer." It is superfluous, therefore, for "W. P. S." to tell us, by way of criticism, that if the duty were now lowered to $10 per ton the price abroad would be advanced $18 per ton. It is not unlikely that that would be the immediate effect. The public interests, however, are not to be measured by the immediate effect, but by the future permanent effect. If "W. P. S." had believed that the permanent effect would be to maintain the price in the foreign market at $18 per ton advance he would undoubtedly have said so, and have added that the American manufacturer would therefore be in no worse position by reason of the reduction of duty.

It is not a fair inference from anything we said that the price of the domestic rail has at all times been $28 per ton above the foreign. We stated that the price in England in 1879 was as low as $22 per ton, and in the United States as low as $42 50. If the American price was at any time as low as $38, it was not much noised about; but whether it was so or not, we never insinuated that $22 added to $28 produce only $42 50.

In saying that "the chief item of cost [of railway transportation] is in the rails that support the traffic" we had in mind the maintenance of railway property, and not the salaries of officers and the wages of train hands. In some years the cost of renewal of track on particular railways may be nothing; in other years may be greater than all other expenses added together. But the force of our argument would not be impaired by substituting the words "one of the items of cost" in place of the words used—the drift and purport of the argument being that whatever be the actual cost of transportation, whether from duties on steel or any other cause, the public must pay it, that neither Granger laws nor State commissions can release them from that necessity, and hence that it behooves the public to take a lively interest in this question. It should be added that the railway companies undoubtedly confuse the public mind as much as possible as to the proportion which the cost of rails bears to the total cost of transportation, just as the rail-makers confuse members of Congress with statistics of puddlers' wages and the prices of bacon and flour and house-rent. These are technical questions affording ample room for deception, and so complicated in their nature that the last word is never uttered and nobody is ever convinced. The judgment of the public and of Congress, if good for anything, must be based upon broad and patent facts, one of which is that the goods and passengers transported must pay the whole cost of transportation, and that one of the items of cost is the duty on steel rails.

The statement of "W. P. S." that the New York Central and certain other railroad companies named bought rails abroad, expecting "to get through with a 'whoop' a reduction of the duty on steel rails which will inure in the beginning solely to their benefit," is manifestly absurd, since it implies that these companies, after their orders are filled, put their rails into warehouses abroad to await the uncertain action of Congress on the subject of the duty. The New York Central's large contract for English rails was made nearly a year ago, and it is not to be supposed that the rails have been stored in England pending a debate on the American tariff.

It happens just now that the Government is deriving an income from the duty on steel rails, and that fact makes it worth while to consider the duty of $28 per ton in the light of a revenue tariff. The Secretary of the Treasury has estimated a surplus for the coming year of ten millions, after applying thirty-eight millions to the sinking fund; and in this estimate he did not make much account of receipts from steel rails, which for some years back had been a mere trifle. The surplus of ten millions presumably consists of receipts over and above any sums derivable from this particular source, and the question to be considered from a Treasury standpoint is whether a tax ranging from 56 to 120 per cent. upon the means of transportation is a wise tax for a government to maintain which has more money than it needs.

We should be glad to be informed how much the steel-rail manufacturers have advanced the wages of their laborers since the date at which American rails were selling at $38 per ton. As they are now selling at something over $80, it might be inferred from the remarks of "W. P. S." that wages had been raised in a corresponding ratio, and also that there has been no advance in wages abroad. But for reasons indicated above we decline to enter upon such an investigation.—Ed. Nation.]

Notes.

PETER G. THOMSON, Cincinnati, has issued the prospectus of a 'Bibliography of Ohio,' to be published only by subscription. It will have some unusual features, such as, in addition to the descriptive notes, a list of prices at which the several works have been sold at auction or privately since 1860, and a valuable index of subjects. Mr. Thomson is his own bibliographer, and has left no principal library unvisited. The result is some 1,400 numbers, State documents not included.——A. C. Armstrong & Son have repaired the defect of the index to Mr. R. H. Stoddard's edition of Doran's 'Annals of the Stage,' so that it now embraces the added as well as the original matter. The same house have brought out a compact edition, at a very low price, of their Hallam's Complete Works, in six volumes.——Charles Scribner's Sons publish immediately 'The Theatres of Paris,' by J. Brander Matthews; 'The Antagonisms of Scientific and Theological Thought,' two lectures by Dr. Asa Gray; and 'The Science of English Verse,' by Sidney Lanier.——D. Appleton & Co. have published the second volume of the Hoey-Lillie translation of the 'Memoirs of Mme. de Rémusat.'——Daudet's 'Kings in Exile,' translated by Virginia Champlin, is published by Lee & Shepard.——George Routledge & Sons have just ready a new impression of the 'Life and Letters of Frances, Baroness Bunsen.'——Macmillan & Co. send us 'Dickens's Dictionary of the Thames,' a companion work in all respects to his original and successful 'Dictionary of London,' and therefore strictly confined to what appertains to the stream itself. For oarsmen and yachtsmen, as well as for the needs of commerce, the river is thoroughly mapped in sections. Under Henley and other regatta headings the records of the races for 1879 are given; under Oxford City and University, a full summary of the sights and institutions of the place; under Great Western Railway, rates and other information, etc.——Judd & Detweiler, Washington, have issued a 'Visitor's Guide to the Smithsonian Institution and the National Museum,' edited by W. J. Rhees, chief clerk of the Institution. It opens with a life of Smithson. The execution of this pamphlet can hardly be praised, but it will serve a temporary purpose while the new Museum is building.——Parts 10 and 11 of the new edition of 'Stieler's Hand-Atlas' (B. Westermann & Co.) contain maps of the south polar hemisphere, the moon's visible surface, Spain and Portugal west of 5° W. from Paris, the southeastern corner of France, nearly all of Mexico, and the usual profusion of side-maps.——G. P. Putnam's Sons announce an historical treatise on 'The Interoceanic Canal and the Monroe Doctrine.'——Wm. Wood & Co. have in press a practical treatise on 'Nervous Exhaustion,' by George M. Beard, M.D.——From Jameson & Morse, Chicago, we have a prospectus of the *Oriental and Biblical Journal*, to be published quarterly under the editorship of the Rev. Stephen D. Peet, editor of the *American Antiquary*, also published by them. Its object is "to give results of latest researches in all Oriental lands," including Italy and Greece.——The *Independent* of January 29 contains a noticeable editorial reply to Canon George Rawlinson's defence of his brother's translation of the Standard (Assyrian) Inscription with reference to the madness of Nebuchadnezzar. Dr. Ward shows that Sir Henry Rawlinson himself at one time explained the passage differently, and that no French or German scholar ever confirmed his original version.——In the *Penn Monthly* for February Prof. Robert Ellis Thompson has an article on "Spiritualism in Germany," which may be profitably read in connection with our (delayed) Berlin letter on the subject on another page.——A special edition of the 'History of the Menhaden,' that much-named fish (known as "the American sardine" or "shadine" when used as an article of food), as prepared for the fifth annual report of the Commissioner of Fisheries, has been published by the Orange Judd Company. An introduction serves approximately to bring the observations down to the present time. The volume is freely illustrated, and possesses a more than economic interest and readableness.——Houghton, Osgood & Co. have published the fourth volume of 'Reports and Papers of the American Public Health Association,' for the years 1877 and 1878. The papers relating to yellow fever are most numerous, but perhaps do not outweigh in value the rest of the contents of this handsome volume.——Mr. John Fiske's morning lectures on "America's Place in History" are appointed for February 16, 17, 23, and 24, at Chickering Hall. The same course will be delivered in Washington in the intervening days, by invitation of the President and other high officials at the capital.——According to the *Athenæum* Mr. Halliwell-Phillipps has been reminded and convinced that "the character following the letter *k*" in Shakspere's autograph is "the then well-known and accepted contraction for *es*."

—Dr. James Phelan writes us from Memphis, under date of last month:

"As your columns are always open to those who would correct any inaccuracy of statement on your part, I beg leave to call your attention to a slight error in No. 759 of the *Nation*. In speaking of the contributors to the *Anglia* you say 'one is an American (Dr. Phelan, of Memphis, *lately deceased*).' This is certainly a mistake, and one which I take great pleasure in correcting."

—The U. S. Geological Survey has just issued one of the most important contributions ever made to science in this country. We refer to Professor Leidy's monograph of the 'Fresh-water Rhizopods of North America,' being the twelfth volume of the quarto reports, and consisting of upwards of 300 pages, beautifully illustrated with 48 colored plates. This is the mature fruit of several years' original investigation of these extraordinary animals, the lowest of all in the scale of organisms—representing "the very beginnings of life"—yet of marvellous beauty, and of an interest beyond that which attaches to many creatures of more complex structure. The Rhizopods are mere specks of protoplasm, mere particles of animated matter, without definite form or structure, which nevertheless exhibit all the essential functions of life—namely, motion, alimentation, reproduction, sensibility, and volition; and have the power in many cases of constructing calcareous or siliceous shells of great complexity and symmetry. The study of these animals, of which the common *Amœba* may be taken as the type, tends to an insight into the broadest possible biological questions, and sheds light upon many a dark corner of our ignorance of the conditions of life and of the possibilities of organized matter. The bearing of Prof. Leidy's work, therefore, upon the "question of the day" can scarcely be overestimated. Both the nature of the subject and the manner in which it is handled carry this treatise far above ordinary descriptive or technical writing. It is the work of a master, written with no less wisdom than erudition, and in a style so perfectly plain that no one can fail to understand it. To most readers the revelations of Professor Leidy's microscope will seem not less fascinating and marvellous than an Arabian Nights' entertainment.

—In speaking of the second number of the *American Art Review* recently we expressed the hope that its editorial "Chronicles" at the end would be accurate and that there might be found in them the art-news of the day, so sifted and chosen that it could be relied on. It is with great

regret that we find in the third number, in the "Bibliography" and under the signature of the chief editor himself, what seems an awkward piece of "journalism." It happened a year ago (Dec. 12, 1878) that our columns contained a review of the Boston edition of Falke's 'Art in the House,' which book has upon its title-page the words "Illustrated by Chromolithographs, Albertotypes, and Typographic Etchings," and that in the course of that review these words occurred :

"The illustrations to this part of the book are seventeen pictures in the text, looking like not very delicate woodcuts, but probably typographic etchings, which certainly are not etchings at all."

Out of these innocent words—words which are not inaccurate, as we mean to show, and certainly not offensive—the editor of the *Art Review* makes up the statement that we "gave the lie to the publishers of a well-known book," and that we asserted that these prints were "not etchings at all, but simply coarse woodcuts." Now, in the general language of art an etching is a design engraved on a plate (usually of metal) by means of acid. By an extension of the term, plates that have received work with the dry point, and even with the burin, are still considered as etched. The work is all engraving in the literal sense—that is, incised or cut or eaten out of the plate : the design is depressed and not in relief, and the printing from the plate is done with the copper-plate press, the paper being forced into the grooves or sunken lines, and the ink drawn thence to the surface of the paper. But the prints of which we were speaking are interspersed in the text, and, therefore, apparently the originals were *in relief*, and the printing done as if from wood-blocks or electrotypes of wood-blocks. We objected and still object to the fashion of coining names for new processes which tend to confuse people as to those processes. One of the monthly magazines had once a page or two of comic matter at the end, a few verses and anecdotes with a picture or two, the whole entitled "Etchings." It is not unusual to hear pen and-ink drawings called "etchings." Our objection to these fashions of speech and to the name "typographic etchings" given to relief-blocks for printing (even if made by means of the corroding power of acid acting on metal) is the same : they are misleading. Those prints are not from etchings in the proper sense, if they are, as we assume, from relief-blocks. But at the same time we did not intend to bear on so heavily as all this. It was the gratuitous attribution to us of ignorant haste and rudeness, all based on a misquotation, that has caused the discussion to occupy more than the two lines of the original statement.

—The *International Review* has, in its February number, been made the victim of "lifting," in the Highland sense of the term, of an unusually audacious character, by the writer of an article on "Universal Suffrage in New York." After clearing the ground about him with much solemnity, he comes to the gist of his argument—the distinction between State and municipal suffrage, concerning which he says "there is apt to be a complete confusion of ideas," and he announces that "there is a wide and impassable gulf between them, as we shall speedily see." He then proceeds to reproduce, with much padding, the description of this distinction and the reasons of it contained in the report of the Municipal Commission of 1877. This done, he describes the functions of municipal governments, following in this also, on all fours, the report of the Commission, and finally reaches his remedy for the evils of universal suffrage in municipal affairs, which is the restriction of the suffrage to taxpayers, which he introduces by much trite exposition about the incidence of taxation ; in other words, after having adopted the arguments of the Commission he adopts their plan. All this, however, convicts him of nothing disreputable. A reader of the article, who had also read the report, would conclude that the author was simply trying to support and spread the ideas of the Commission with a little added illustration of his own, if he had not appended the following amusing foot-note :

"A word on the constitutional amendments proposed by Governor Tilden's Municipal Charters Commission is in place here. Those amendments were defeated even before they could be directly voted upon ; and it was well for this city that they failed of adoption. The scheme they proposed was crude, and in practice must inevitably and disastrously fail of the purpose intended. The machinery they set up was of such a character as to make its control a prize of great value to any political party ; and, once obtained, the task of taking it from their hands would have been one of much time and difficulty, so elaborately was it guarded by constitutional restrictions. The gentlemen who framed the scheme thought they had guarded against such a capture by restricting the constituency to tax and rent-payers ; but any practical politician could have told them that this restriction would not stand the strain of two consecutive elections. Its evasion could be accomplished so easily, that this guarded constituency would have scarcely been recognizable from the constituency of universal suffrage."

This note puts the article in the category of unnatural crimes. Most plagiarists, if not all, conceal carefully the source of their ideas. To mention it boldly, with depreciatory remarks, is something new in the history of this species of immorality. "A word on the constitutional amendments" was not bad, coming from a writer who had made a twelve-page article out of the Commission's report and was going to draw pay for it. We trust the editors will look sharply after this monster of ingratitude in future.

—The fourth soirée of chamber-music by the Philharmonic Club was chiefly remarkable for a very satisfactory performance of Saint-Saëns's pianoforte Quintet in A major, Op. 14. This interesting composition has not been heard here since Von Bülow introduced it about four years ago. The pianoforte part is exceptionally brilliant, and was admirably performed by Mr. S. B. Mills, whom we do not remember to have heard to greater advantage. The second part, a lovely andante sostenuto, followed by a jubilant presto, is the gem of the composition. In this movement the stringed instruments have the greater importance, and here Mr. Müller, who had undertaken the violoncello part in Mr. Werner's absence, produced some charming effects. The last part, an allegro assai, is of a broad and majestic character, and was given in excellent style. Beethoven's great Quartet in E flat, Op. 74, received a rather cold and conventional interpretation, but it was played correctly as regards the mechanical part, and that is saying a great deal, for it abounds in difficulties for every instrument. The three remaining numbers, though not strictly belonging to the domain of chamber-music—they are only arrangements for string quintet with flute obligato—were little gems in their way, and received more favor from the general public than any of the other numbers. Two, a Romanza by Krug, and Beethoven's "Turkish March," had to be repeated in answer to the enthusiastic demonstrations of the audience.

—No more striking proof is needed of the steady popularity of Haydn's oratorios than the distinguished audience which crowded every available corner of Steinway Hall on Saturday last to listen to a performance of the "Creation" by the New York Oratorio Society. And, indeed, many of the airs and choruses that are familiar to us as household words appeared as fresh, young, and graceful on Saturday last as if they were heard for the first time. At this last performance the work of the chorus deserves to be mentioned with unqualified praise. Dr. Damrosch has gained a complete control over his singers—more so, we feel inclined to think, than over his instrumental forces. The finest shadings of pianissimo, crescendo, and decrescendo were produced with admirable effects by this chorus, consisting of more than two hundred voices. Such results can only be attributed to long and conscientious training by an intelligent and accomplished master, and for this Dr. Damrosch deserves the highest credit. That he feels rewarded by the success he has gained is evident from his having undertaken to produce this season two such great works as Berlioz's "Faust" and Bach's "Passion Music," neither of which has ever been performed in this country. Mr. Whitney sang his bass part on Saturday night in excellent style, but Miss Fritsch, the soprano, and Mr. Graff, the tenor, were totally unqualified for their task. The same judgment may be passed on both : their voices are insufficient for a large hall, their manner inartistic, their interpretation lacking in taste and spirit.

—It is nearly a year since we reviewed (*Nation*, No. 709) Mr. Charles E. Pascoe's useful and well-made book of theatrical biographies called "The Dramatic List," and now the second edition, revised and enlarged, comes to us bearing as a sort of secondary or optional title the new name of 'Our Actors and Actresses' (London : David Bogue). The new edition has been wholly remade ; it contains 432 single-columned pages, as against 358 double-columned pages in the earlier issue; the size of type and of the pages is about the same in each case. Mr. Pascoe—as is the wont of cataloguers—learns his business by hard experience, and his second edition is a great improvement on his first, though that was not at all a faulty book. Over a hundred additional actors and actresses now find their careers set forth in these pages, and the volume contains more than three hundred dramatic biographies, all of which have been submitted to the subjects for correction. The first edition was not more free from minor errors than first editions of books of reference generally are ; but in the second edition they are singularly few. A careful examination has only shown two : on p. 267 "La Marquise des Roues" should read "La Marquise des Rues" ; and on p. 128 Mr. Tom Taylor is said to have written "Plot and Passion," "in conjunction with Mr. John Lang."

Mr. Taylor has always strenuously denied this, declaring that Mr. Lang's sole share in the play was the gratuitous suggesting of the historic fact which was taken as the starting point of the play. These are trivial blemishes. Not only in the giving of fuller information, and about many more performers, and in the correction of trifling errors has Mr. Pascoe improved his book, but also in literary compactness: the long quotations from newspaper criticisms of new plays, giving at length their plots, have been omitted for the most part, and only important criticisms upon actors and actresses of some standing are retained. In short, Mr. Pascoe has done very well a thankless and difficult task of distinct utility; and it is to be hoped that his success may call forth a similar work about the chief dramatic artists of America.

—Simultaneously with the new edition of the 'Dramatic List' comes the first of what, it is hoped, will be an annual series of 'Dramatic Notes,' also edited by Mr. Pascoe. It is an application of Mr. Henry Blackburn's idea of unpretentiously illustrating the catalogue of the annual picture shows. 'Academy Notes' has seen its example copied not only in this country, always quick to take up new suggestions, but also in France. 'Dramatic Notes' does for the theatrical year much what 'Academy Notes' does for the art exhibition. In a little less than a hundred pages Mr. Pascoe goes the round of the London theatres, giving the history of each for the year, with fifty-one drawings by Mr. Walter Wilson (reproduced mechanically but very effectively) showing us the leading situations and scenes and characters of the important plays. Some of the slight sketches are very good portraits; in the scenes from "Hamlet" and the "Merchant of Venice," tiny as the faces are, the features of Mr. Irving and Miss Terry are distinct and life-like. Just before the index at the end are eleven pages of the "casts" of the chief plays of the past year—a record of much utility.

—The proverbial ignorance of the French in matters geographical is about to become a thing of the past. Not that the character of the race was changed during the German war, or that the lessons then received were particularly heeded in this respect. It cannot, however, be denied that of late the study of geography has been taken up in France with great activity—witness, among other works, Vivien de St. Martin's great geographical dictionary, noticed in the *Nation* of January 29. Now the Government, through the Minister of the Interior, has authoritatively—and everybody knows what that means in France—taken the matter in hand, and under his direction a fresh survey of the French territory has been begun, the results of which are to be made known in a new map of France and Corsica, on the scale of 1:100,000 in nearly 600 sheets of 17x11 inches, each covering 38x28 kilometres of ground. Five thousand agents are constantly engaged, all over France, in sending in corrections, especially with regard to public highways and roads, the map being made by the "*service vicinal*." It is apparently got up after the pattern of the Prussian *Generalstabskarte*, and, to judge from the specimens received by B. Westermann & Co., is a neat piece of work in four colors, the population of each town, village, and borough being given, and the different stages of construction of roads and highways. Forests, water-courses, canals, post and telegraph-stations, churches, wind and water-mills, factories, etc., are clearly indicated. Twenty sheets were issued as a first instalment at 75 centimes each. Nearly all of the remaining ones are in preparation and over a hundred of them in the engravers' hands, so that ere long French generals will have maps of their own country, should another invasion take place, and will be spared their curious experiences at the beginning of the last war, when the commander of the Second Corps had to telegraph from St. Avold to the Secretary of War: "We receive large quantities of maps which for the moment [they were maps of Germany] are entirely superfluous. We have, on the contrary, not a single map of the border departments of France." We may add here, as a fact not generally known, that, probably in consequence of some such appeal, and there being no available French maps, the Secretary sent an order for several thousand of the little route-maps from Baedeker's guide-books to a German book-importer in Paris, who, however, patriotically declined to fill the order. The French fleet labored under the same difficulties, to judge from a despatch from Brest to the Navy Department: "There are no maps of the German and Baltic Seas here, and we shall need eleven sets," etc. The twenty maps thus far ready are devoted to the Departments of Vendée and Marne.

—There are indications that the Zola school of scientific realism has found disciples even in Norway. We refer especially to a young author, Alexander L. Kielland, whose first book, a collection of novelettes, has been received with great favor by the Scandinavian public. What especially impresses one in this book is its exquisite workmanship, which reminds one of the best things that Daudet has written in the same vein, such as 'Lettres de mon Moulin,' and 'Contes Choisis.' Mr. Kielland's little stories all have a certain Parisian finish and epigrammatic sparkle. The old school in Norwegian literature was bombastic, declamatory, and ready to shout on the smallest provocation for "Old Norway." The reaction against this hollow vainglory was begun by Ibsen, who in his 'Peer Gynt' mercilessly lashed the narrow but loud-voiced patriotism of his countrymen. Mr. Kielland shows this same tendency to explode patriotic and sentimental shams. He is intellectually a descendant of Ibsen and Welhaven rather than of Björnson and Wergeland. He satirizes with admirable *esprit* the innocent provincialism which makes the Norseman so contented within his narrow social horizon, and fills him with gratitude to Providence whenever (as he frequently does) he draws the contrast between the moral purity of his own surroundings and the altogether deplorable condition of the great and corrupt society abroad. Nevertheless, the very inevitableness of the sad *dénouement* in Mr. Kielland's stories would make them positively disheartening, if the author's piquant style and dainty humor did not absorb the reader's interest almost to the exclusion of the incidents of the plot, which are of a quiet, every-day character, and neither startling nor sensational.

—After long silence Professor Müllenhoff has resumed his publications on the subject of German mythology and *Heldensage* in the *Zeitschrift für deutsches Alterthum*. The article (xxiii. 1–22) entitled "Irmin und seine Brüder" discusses exhaustively the etymology of the names Irmin, Istvaeones, Ingvaeones. A shorter article treats of the goddess Tanfana (Tabana), whose name Grimm could not explain: Müllenhoff connects it with *δαπανος*, Latin *daps*, A.-S. *tiber*. A third article of nearly twenty pages deals with the alleged historical connection between the Sugambri (of Cæsar, Tacitus, etc.) and the Salic Franks. After collating all the passages from Latin and Greek authors Müllenhoff, in opposition to Waitz, rejects the generally assumed connection. Article number four—very short—disposes of an obscure passage in an old Latin commentary on Luke, which Krafft ventured to attribute to the Gothic bishop Vulfila. The passage ends with the word *hore*, which Krafft and Grimm were disposed to regard as the mutilated form of a Gothic word, horeanda (haurjanda). Stüdemund and Krüger, having re-examined the manuscript, declare that *hore* is *not* mutilated in the manuscript, but the rest of the line merely left blank. Consequently we have no right to assume a Gothic form, much less to attribute the text to Vulfila. The creation of a Gothic divinity is without foundation. More interesting is a fifth article, of sixty pages, on "Sigfrid's Ahnen." It is the first of a projected series on the *Nibelungen-sage*, and aims at defending the integrity and *Ursprünglichkeit* of the sage against the recent destructive criticism of Symons, in Paul u. Braune's 'Beiträge' (iii. 200–303). Any résumé, however brief, of such an article would far exceed our limits. The author's reputation as an investigator is so high that no utterance of his will fail to receive careful attention. So far as we are competent to pronounce an opinion, we must think that Symons and Müllenhoff are both correct in principle; the former in maintaining that the component parts of the Eddas are of very unequal value, and that the present office of the Edda-scholar is to ascertain with reasonable precision the several degrees of *Ursprünglichkeit*; the latter in claiming for the Sigfrid-sage in particular the highest antiquity and a distinctively German (*i.e.*, Continental) origin. Müllenhoff's article discusses with singular acuteness a number of the knottiest points in the *Heldensage*, and is unquestionably the most valuable essay that has appeared for many years.

—Even since the above was written we have received additional evidence of the danger of trusting too much to the Eddas. In a recent number of the *Academy* (Nov. 29) Mr. Sweet gives an extract of Bugge's recent paper on the composition of the Eddas. Prof. Bugge holds that the greater part of them is not of common German origin at all, but borrowed through the English-Celts from Greco-Roman or Jewish-Christian sources. Thus, the Baldermyth, usually regarded as the bright peculiar flower of Scandinavian mythology, is, according to Bugge, a curiously modified version of the Greek Paris-legend. A. Bang, also, maintains that the Völuspa, instead of being the most archaic embodiment of German belief, is only an adaptation of the Latin pseudo-Sibylline prophecies. It is evident that we shall probably have to reconstruct our entire system of Germanic mythology.

—Arturo Graf, Professor of the Romance languages in the University of Turin, published in 1878 an interesting lecture on one of the best-known mediæval legends. It is entitled 'La Leggenda del Paradiso Terrestre,'

and contains a careful examination of the various versions of the legend which was such an important factor in geographical discovery until a comparatively late date. The notes, which fill sixty pages, are a mine of legendary lore, and their value is increased by an extract from an Old-French poem of the thirteenth century, on the journey of Seth to Paradise, published for the first time. This poem, of which three hundred and sixty-seven lines are given from the MS. in the National Library of Turin, forms part of one of those poetical paraphrases of the Bible so popular during the Middle Ages, and is in decasyllabic *tirades monorimes*. The version of the story which it presents belongs to the second class established by Mussafia in his article on the wood of the Cross ('Sulla Leggenda del Legno della Croce,' Vienna, 1869), in which Seth brings back from Paradise three seeds of the apple eaten by his parents. These seeds are placed in Adam's mouth when he is buried, and from them springs the tree which afterwards furnishes the wood of the Cross. The poem offers many interesting peculiarities, such as a description of Purgatory, "qui garde paradis," and the statement that God gave the tree of the forbidden fruit to "the enemies" for a service done in draining the land at the Creation. Prof. Graf's work shows careful research.

—Nothing is more remarkable in German political and social history than the inconspicuous part played by lawyers as supporters or opponents of the crown, or, aside from active politics, as centres of public attention and influential members of society. A glance at German legal history, however, such as is given by Mr. J. Baron in a recent number of *Nord und Süd*, provides us with a key to the puzzle. Till the period of the Renaissance, the development of German law was essentially the same as that of English; but at this time a sudden and complete revolution took place, far surpassing in importance any legal change before or since. "In art and philosophy," remarks Mr. Baron, "the ancient world stepped forth as a teacher; but in jurisprudence as lord and master." Not only were the old laws and the old administration of law swept away, but the change was so entire as completely to destroy among the people that most effective sanction of law—its traditional and customary character. Hitherto the only duties of a judge were to call the court together and preside at the meeting; the verdict was given by representatives of the people (called *Schöffen*), whose opinion he was obliged to ask. This procedure not only secured confidence in the administration of justice, but made a general knowledge and understanding of law well nigh universal. With the introduction of Roman and canon law, however, all elements of the court, except the judge, were abolished; while this officer, instead of being a popular functionary, as before, was now a mere book-lawyer, administering principles often at variance not merely with the habits, but also with the ideas, of the parties interested.

—By the legislation of 1876–77, which has just come into operation, popular courts are in large measure restored. The law, as advocated by the Prussian Government, divided criminal cases into three classes, all to be tried by so-called Schöffen-courts, but the clamor of the press against these and in favor of jury trials led to a compromise. A Schöffen-court consists of a judge assisted by two Schöffen—*i.e.*, men chosen by the Crown in the same manner as jurymen. Their functions are not divided, and their votes are of equal value. By the code as adopted, cases of the first (least important) description are decided by tribunals thus organized; those of the second class by courts of the old (*ante* 1848) pattern; those of the third by bench and jury together. The latter body consists of twelve men, and their powers are limited to the decision of guilty or not guilty, the bench (of three judges) using its own discretion in the matter of punishment. The same system is followed in civil cases, the court of first instance being formed of a judge and two shop-keepers or artisans. Another important change is the abolition of the monopoly of the Government attorneys. Hitherto these officers have united to their other functions that of our grand juries, and there was no redress for a complainant whose case the crown attorney refused to take in hand. Now, however, a plaintiff to whom the latter has granted leave to withdraw can apply to the court for a mandamus compelling him to undertake the case. But, as regards the professional character and social position of lawyers, the most important improvements are the provisions which abolish the bar as a privileged class, admittance to which was as much dependent upon official favor as upon personal qualifications, and which made lawyers almost as much Government servants as were its paid officials. Complementary to this increased liberty is a new rule requiring every litigant to employ counsel. While these regulations will tend to promote greater ability and independence among the bar, another change is likely to encourage forensic display and individual reputation. Though the Prussian code allowed oral arguments, in practice only written pleas were in use. The counsellor heard his client's story (unless he was a busy man; in which case his managing-clerk did this part of the business), whereupon he (or his clerk) wrote out a plea, which was presented to the court. The presiding judge then handed over the two pleas to one of his assistants (called the *Referent* in the case), who condensed them into a paper called the *Referat*, which, at the hearing of the case, he read aloud, the other proceedings being purely formal. This procedure, derived from that of the canon law, lasted in Prussia in criminal cases down to 1849, and in civil cases, in the greater part of Germany, till the 1st of October last.

METTERNICH.*

THE Ahitophel of the Emperor Francis and Mentor of the Emperor Ferdinand, who guided the destinies of Austria from the days that followed the disaster at Wagram in July, 1809, to the day of his own downfall, March 13, 1848; the man who coped with Haugwitz, Stein, and Canning, and more than once led Hardenberg, Nesselrode, and Talleyrand; who dazzled and irritated Alexander I. by his sagacity, subdued Frederic William III. by his consistency, and won the admiration of Napoleon by the astute use of his tongue; who, after surrendering his master's daughter to his French conqueror, sealed the latter's doom by joining his foes on the eve of the battle of Leipzig; who was the leading genius, the great wire-puller, of the Congress of Vienna, and the dictator of reaction at Carlsbad, Troppau, Laybach, and Verona; who guarded the equilibrium and peace of Europe against Russia under Nicholas and against France under Louis-Philippe; who supported the bloody absolutism of Ferdinand of Naples, of Ferdinand of Spain, of Dom Miguel, and of Sultan Mahmoud; who, always eager to stifle every popular movement within his reach, kept Silvio Pellico, Ypsilanti, and Kossuth prisoners in his fortresses; whose systematic conservatism and cunningly procrastinating policy preserved the prestige of Austria abroad, but made her glide toward dissolution from within—Prince Metternich has revealed himself in autobiographical sketches, reports, and notes, selected and published by his son: who should not hasten to read them? Two volumes from the pen of a man who made so much history, who held all the threads of European diplomacy in his hands through half a century, ought to be a mine of historical information, of political wisdom of some sort or other, of piquant revelations.

For our part we feel greatly disappointed. We have read and digested Metternich's posthumous history of his time down to 1815, with his contemporary communications, and our gain for the general knowledge of that extraordinary period is—compared to what we were entitled to expect—exceedingly slight. The two volumes before us hardly contain a fact that was not known a great many years ago, hardly a reflection that is seriously worth pondering, hardly a personal sketch that has not been better and more faithfully executed by many a writer of less exalted standing. These papers—the reports especially—are certainly worth reading, but, to those familiar with the history of the period, merely for the sake of refreshing impressions obtained from other and more copious sources. Hundreds of striking events are touched upon, and scores of historical characters lightly drawn, by Metternich, and yet hardly an event or a character is modified in its aspect from what we long ago learned it to be. The writer himself, though he labors hard to paint himself for posterity, and, besides, betrays himself by many an unguarded stroke of the pen, remains the Metternich whom Europe knew when he guided Francis and covered Ferdinand. The principal satisfaction which these memoirs give us is the knowledge that so great an authority has so little to teach us. To make things clear, let us follow him a while in his autobiographical narratives:

Born at Coblentz in 1773 (he died in 1859) his youth coincided with the period which immediately preceded the "social revolution" in France—that is, the revolution of 1789. He grew up under the influences of the position in which he was born: his father's public station in the German

* 'Aus Metternich's nachgelassenen Papieren. Herausgegeben von dem Sohne des Staatskanzlers, Fürsten Richard Metternich-Winneburg. Geordnet und zusammengestellt von Alfons von Klinkowström. Autorisirte deutsche Originalausgabe.' Vols. i. and ii. Vienna: W. Braumüller; New York: G. Stechert. 1880.

'Mémoires, documents et écrits divers laissés par le Prince de Metternich, Chancelier de Cour et d'Etat. Publiés par son fils, le Prince Richard de Metternich. Classés et reunis par M. A. de Klinkowstrœm. Première partie: Depuis la naissance de Metternich jusqu'au Congrès de Vienne (1773–1815).' Two volumes. Paris: E. Plon et Cie.; New York: F. W. Christern. 1880.

'Memoirs of Prince Metternich, 1773–1815. Edited by Prince Richard Metternich; the papers classified and arranged by M. A. de Klinkowström. Translated by Mrs. Alexander Napier.' Two volumes. New York: Charles Scribner's Sons. 1880.

Imperial service, French social life, and "the moral laxity which characterized the smaller German States, before the storm burst forth which was soon to annihilate them." This candid admission—which, however, is to cover many sins of this and other periods of his life—is followed by little-interesting remarks concerning his teachers and student years at Strasbourg and Mainz, his early-acquired abhorrence of Jacobinism, his presence at the successive coronations of the Emperors Leopold and Francis at Frankfort, and his experience among the *émigrés* who flocked to Coblentz. "In the latter part of the summer" of 1792 he went to Brussels. "The war was at its height." He "passed to and fro between Brussels and the army. . . . On one of these occasions," as he was returning to that city, an adjutant of the Austrian army informed him that Dumouriez had just seized the commissaries of the Convention, and sent them to the Austrian outposts, whither that French commander himself soon followed them. This event, however, took place neither in the summer nor in the fall or winter of 1792, but in the spring of 1793, and this chronological inaccuracy is only a specimen of the old Chancellor's loose way of narrating his remembrances. In the following winter Metternich accompanied a high official on a mission to England, where he was cordially received by George III., and "came to know William Pitt, Charles Fox, Burke, Sheridan, Charles Grey," and also "the Prince of Wales, afterwards regent of the kingdom, and at last king under the name of George IV." This is a sample of close identification, and the following is one of, perhaps, less exact portraiture: "The Prince of Wales was one of the handsomest men I ever saw, and to an agreeable exterior he added the most charming manners. He possessed a sound intelligence, which alone preserved him from being corrupted by the bad society in which he moved with ease himself, without permitting the slightest want of respect in others."

Metternich was appointed in 1794 imperial minister to the Hague, but the French conquered Holland. The greater part of the estates of his family, lying on the left bank of the Rhine, "had been confiscated by *the great nation*." So he went to Vienna, where, in 1795, he married a granddaughter of Kaunitz. Home duties and study continued for a time to be his occupation. He attended lectures on geology, chemistry, and physics, and followed with attention the progress of medical science. "Man and his life," he wisely remarks, "seemed to me objects worthy of study." And so they have seemed to others. He "loved the fine arts, too." Happy in the society of men of science and art, he "allowed the Revolution to rage and rave without feeling any call to contend with it." Yet he tells us elsewhere that he studied law at Mainz for the very purpose of contending with the Revolution. He yielded to the ruling of Providence, he says here. The Congress of Rastadt drew him out of his retirement. He attended it in an official capacity, and remained at Rastadt till the middle of March, 1799. A short time after his return to Vienna he "learned the catastrophe which signalized the end of the Congress"—that is, the massacre of the departing French envoys by Austrian hussars for the sake of getting at secret papers. The gentle allusion is apologetic, and there is much of the same kind in these memoirs. The writer knows that, in his long career, he has often been accused and suspected of originating acts disgraceful to the annals of Austria—even the later *Jacquerie* in Austrian Poland (1846) was charged to his anti-revolutionary preventive machinations—and he is, therefore, very anxious to clear his skirts.

When he was young, "inaccessible to prejudice, and seeking only the truth in everything," his "modesty did not allow" him to find fault with persons in power. The diplomatic career might certainly have flattered his ambition; "but during all my life," he says, "I have never been accessible to this feeling." "I had far more prospect of succumbing materially than of succeeding; I say materially, for I have never been afraid of failing morally." Yet he accepted the embassies to Dresden (1801), Berlin (1804), and Paris (1806): "I did not, indeed, fear to go wrong, as so many had done, from a heated imagination or self-love, for I felt myself free from these failings." He was face to face with the then ruler of the world: "I had the courage never to offer to mere circumstance a sacrifice which I could not defend to my conscience, both as a statesman and as a private individual. This voice of conscience I followed." After the peace of 1809 he was made curator of the Academy of Fine Arts in Vienna; it was "a most congenial sphere of activity, in which there was full scope for my strong consciousness of duty." He had baffled Napoleon in 1813: "Napoleon thinks of me continually; of this I am certain; I must appear to him like a sort of conscience personified." And wisdom personified he was to Francis, a congenial monarch, "in everything loving and seeking only the truth, firm in his principles and just in his opinions." Many "extraordinary results" were due only to Francis's "energy, his determination, and his virtues." "The Emperor Francis united in himself the most valuable positive qualities"—"calmness, impartiality, soundness of judgment," etc. Let us add that the Emperor Alexander, too, had for Francis "a feeling of devotion which almost resembled the veneration of a child." That Russian monarch is depicted in a "portrait" (of 1829), which agrees much better than the preceding pictures with the verdict of history. Here is a part of it:

"Alexander's character showed a peculiar mixture of masculine virtues and feminine weaknesses. . . . Alexander certainly possessed mind, but his mind, refined and keen as it was, had no depth; he was as easily led astray by an excess of distrust as by an inclination to erroneous theories. His judgment was always influenced by fanciful ideas; he seized upon them as if by sudden inspiration, and with the greatest eagerness. . . . Such ideas soon came to be regarded by him as systems; quick as his mind was, even to an extraordinary versatility, these systems did not assimilate, they followed one another in rapid succession. . . . Alexander's life was worn out between devotion to certain systems and disappointment in their results; the feelings prompted by both moods were spontaneous and vigorous, and, strange as it may sound, their course showed a certain periodicity. . . . In 1805 I found him liberal in the widest sense of the word, and a bitter enemy of Bonaparte; he loaded him—in the double quality of despot and conqueror—with execrations. In the year 1807 a great change came over his mode of thinking. In 1808 his personal feelings even inclined toward the Emperor of the French. The year 1812 brought a new change in his mood; even if Napoleon had not made war on Russia, Alexander's feelings for him would have died away. The old ideas of philanthropy and free-thinking had not only regained their power over his mind, but they even took fire from the spirit of the time. In 1814 they had reached their highest point. In 1815 they had already given way to religious mysticism. In the year 1817 this new turn of mind underwent a great change; and in 1818 I found the Emperor a zealous champion of monarchic and conservative principles, a declared enemy of every revolutionary tendency, and already on his way to return to religious mysticism. He followed this direction till 1823. . . . The monarch who in his own empire worked so much into the hands of the revolutionists, succumbed mentally and bodily in the fight. The Emperor Alexander died of weariness of life. . . . Before his time the germ of a false civilization had been sown on the soil of his vast empire. Well-known revolutionists, after having guided his education, exercised an evil influence on the mind of the young monarch. Alexander, without experience and full of vain theories, caused evil where he only intended good. He deceived himself, and the discovery of his errors brought him to the grave."

This extract may serve as a specimen of Metternich's best and subjectively truest delineations of character. His "portrait" of Napoleon, drawn in 1820, and complemented by "contributions to the portrait" of various dates, is, perhaps, equally correct; but while his sketch of Alexander may still have some value as confirming sound views on a character less generally known, the picture of Bonaparte contains no features which would now be new to anybody, though it may have had some merit at the time when it was drawn. Napoleon the Austrian Chancellor always and justly considered his enemy, even when Austria's daughter had displaced Josephine on the throne of France; hence the Corsican's character and policy are always, though perhaps not fully, exposed in their villany. That the Corsican's genius also appears in its true light is not surprising, if we consider that that genius in 1813–14 succumbed to the cool and intrepid cunning of the Austrian diplomatist. Spain's fanaticism and Muscovy's winter exhausted Napoleon's thunderbolts, and Wellington and Blücher finally broke his sword; but it was in reality Metternich's dogged fidelity to the interests of his master and empire which triumphed over him. Napoleon is never lost sight of in these Memoirs, but the great historical page in them, in the writer's estimation, is that which describes Metternich's meeting with Napoleon at Dresden, in June, 1813, when the decision between Europe and the French Empire was to be rendered by the oracle of Austria. This page of history, were it new, would suffice to make the book valuable; but Metternich made it known in 1820, Thiers reproduced it *mutatis mutandis* in his 'History of the Consulate and the Empire,' and Helfert gave it entire in his 'Marie Louise.'

After the destruction of "the grand army" on the frozen plains of Russia, Metternich had strenuously prepared Austria for the rôle of armed mediator between Napoleon and northern Europe. Napoleon had as strenuously armed anew for maintaining his hold on Germany and recovering his military prestige. But his resources were crippled and his armies were raw levies, while the forces of Austria had strongly recuperated since Wagram, and were now gathering in Bohemia on the flank of the French. The respective positions were well known to both Napoleon and Metternich, when they met and conversed for nine hours at the Marcolini palace; but the conqueror, elated by advantages gained over the Russians

and Prussians at Lützen and Bautzen, was again inclined to deceive himself, and tried by turns to cow and coax the representative of his father-in-law, while Metternich was fully prepared both for his Jovelike menaces and almost cringing appeals, and cruelly bent on wounding and humbling him. He certainly achieved the one and the other, but it is hard to say *cui bono*. If a rupture was the foregone conclusion, what use was there for him in the prolongation of the armistice between the French and the allies, which was the small result of the great scene? If the real aim was the forcing of Napoleon into accepting the armed mediation, which would have at once raised Austria to the position of arbiter of Europe, a less vindictively arrogant, less venomously provoking way of treating was certainly demanded. The whole affair seems to have been the great pride of Metternich, but it strikes us that it is in reality the great blot on his well-merited reputation for cold shrewdness; that Thiers is right when he ascribes the advantage gained to the opposite side; that Napoleon, with all his passion, feigned and real, succeeded in overmatching his adversary, who this time was satisfied with a sentimental gain. Fortune, it is true, had already abandoned Napoleon, and his gain was illusory. The die was soon cast, and Kulm and Leipzig followed.

Great, indeed, must have been Metternich's proud excitement when he came out of the Marcolini palace, leaving Napoleon impotently raging behind him. But this feeling is not described or alluded to. Nor can we discover any other personal feeling of his own expressed in Metternich's autobiographical narratives. He writes of Austria's defeats and successes, of her deepest disgrace or sudden recovery, with the coolness of a diplomatic machine. He writes so of himself—in 1829, in 1844, in 1853. His own fortunes were closely bound up with those of Austria, and he zealously, assiduously, cleverly labored for the promotion of her interests, as he understood them; and in so doing he seems to have sincerely believed he was also working for the general good of Europe. His reports reflect both his sincere zeal and great ability. The restoration of the preponderance of Austria in the centre of the continent; the establishment of a universal equilibrium of power through the curbing of France and Prussia as disturbing elements; the subsequent preservation of peace at any cost; the guarding of all states against democratic movements; the prevention of all shocks from within or without—these were his public aims, and no sentimentalism—we were almost inclined to say, no sentiment—of any kind obstructed his way towards his goal. What were to him the national aspirations of Germany, Italy, Hungary, or Poland? He knew no nations, no peoples; only states, or rather empires.

We may have done some injustice to the book as a literary production by quoting, for the sake of convenience, from the English translation before us. This translation, which is identical with that published in London (by Bentley & Son) as the authorized English version, cannot exactly be said to be bad, but the inaccuracies which disfigure it here and there are really shocking. They are, of course, mainly the result of the publishers' hot haste in pressing toward the market, but they are in every way unpardonable. Let us see a few of them: the autobiographical parts and the notes of the original being in German, and the documents, which fill the whole second volume and a part of the first, in French, we have mistranslations from both languages and curious discrepancies. The same Russian who is always called Alopäus in the first volume is always Alopéus in the second; Ratisbon is always Regensburg in the first, in the second it is Ratisbonne (*sic*, ii. 20). Piacenza appears as Plaisance, Lorraine as Lothringen, Murat as grand-duke "de Bergh," Maria Ludovica as grandduchess "von Este," Bremen as Brême ("Brême and Hamburg," ii. 158), the canton of Valais as La Vallée (i. 216), and ancient Lacedæmon and Phalerum as Lacedemonia and Phalera (ii. 595). We read of the "province of Wieselburg" (i. 107), of the Hungarian "Palatin" (i. 97), of the Austrian "internonce" (ii. 330, 332), of "the ribbon of St. Etienne" (i. 299), of "the question of the Pay Bas" (ii. 186), of "bandits known as 'The Marseillaise'" (*sic* for *die Marseiller*, i. 6), and of troops comprising "the Saxons and the Polonese" (*les Saxons et les Polonais*, ii. 218)! Scores of times the German words for empire—*Reich* and *Kaiserreich*—are rendered by *kingdom* (i. 77, 89, 90, 163, 262, 263, 332, 343, etc., etc.), and thus we read again and again of the Austrian kingdom, of the kingdom of Alexander, of the kingdom of Napoleon. We also hear that "the Reign of Terror destroyed its own commanders just as cartridges [*die Kartätsche*] destroyed the soldiers." For *Jahrhunderte alte Republiken*—referring to Holland and Venice, the latter more than a thousand years old—we have "the republic of a hundred years" (i. 164). Of the many bad misprints one is worth mentioning: that which changes the Austrian *Hof- und Staats-Vice-Kanzler* Cobenzl into a "Vice-Chancellor of Courland State" (i. 64).

GENERAL POPE'S VIRGINIA CAMPAIGN.*

IN No. 554 of the *Nation*, upon the occasion of the appearance of the third part of General Gordon's 'History of the Second Massachusetts Regiment of Infantry,' we told our readers who he was, what he had written, and what manner of man and what manner of writer he was. His last publication is a large volume of nearly five hundred pages. The man is the same man that he was when we last spoke of him; he is as earnest as ever to find out the truth, and as ready to tell it, not only without fear or favor, but with a positive pleasure in hitting certain heads whenever he sees them. The writer has changed a good deal. He writes better than before; he has been very successful in suppressing the egotism which disfigured his last book, and he is less confused and obscure in his descriptions of fighting. Having been a participant in the campaign which he describes, being a graduate of West Point, a man of industry and intelligence, a vehement hater of certain men and yet a lover of truth and justice, he possesses many qualifications for the performance of the work which he has undertaken, and it must be conceded that this last book of his is one of very considerable interest and of considerable value.

The great trouble with General Gordon is that he writes too easily. It is plain that it is much more congenial to him to use his hand than to use his brain. He does not stop to think over his facts, to digest them, and to marshal them, but collects material from every quarter with active industry, and sends it off, superficially arranged, to the printer. The idea of adopting the *nonum prematur in annum* principle must seem inadmissible to him. This way of doing things leads to some careless writing, but it leads to some worse things. In the first place, there is not only nothing like compression, but there is intolerable expansion. We stagger under the weight of nearly five hundred large pages devoted to the account of three weeks' operations conducted by John Pope. There is no mystery about these operations now, and there has been none for a long time. A prodigious quantity of dust was thrown in our eyes at the time of the Porter court-martial by Pope and those who were his accomplices or dupes, and our sight was impaired by it for a good while, but the truth began to appear and our vision to clear at least as early as 1866, and ever since that time the facts have been getting to be more and more fully known and understood, great numbers of reports and letters of Confederate officers have been appearing in print, and at last we have had the voluminous "Proceedings and Report of the Board of Army Officers . . . in the Case of Fitz-John Porter," and there is probably no period of equal length in the war of secession of which so much is now known or knowable as this period of three weeks from the day of Cedar Mountain to the beginning of September, 1862.

If General Gordon had been contented or willing to take all this new material, and examine it, and collate it, and digest it, and to give to the public a work which was the result of this process and of the use of his own recollections, expressed in his straightforward and outspoken way, he would, in our judgment, have done much better than he has done. He seems too ready to think that what he meets with in print must be true. Thus, we find him making frequent citations, and with approval, from at least one book which we should have thought he would have distrusted from internal evidence. This experience causes a certain feeling of hesitation to attach to our reception of all the matter which he offers as new, and it is not easy to know what to accept or reject without following him to his authorities. Fortunately there is nothing in this case to call for the performance of so laborious a task. We have no doubt that General Gordon has apprehended accurately the main features of General Pope's campaign. He has told the story with perhaps unnecessary fulness and at least sufficient accuracy, while his book is almost always agreeable and some passages in it deserve higher praise, notably his eloquent tribute to General Meade, and his spirited account of Grover's charge on the 29th of August.

It is hardly worth while to print specimens of the carelessness of style to which we have referred. They are numerous, but not usually very serious. So of the author's sarcasm; there is a good deal of it, and it is generally superfluous and tedious, but we can pardon a good deal for the sake of the delightful statement that on a certain occasion Sigel's infantry "were

* 'History of the Campaign of the Army of Virginia under John Pope, Brigadier-General U. S A., late Major-General U. S. Volunteers, from Cedar Mountain to Alexandria, 1862. By George H. Gordon, . . . First Colonel Second Regiment Mass. Infantry; Brevet Major-General U. S. Volunteers.' Boston: Houghton, Osgood & Co. 1880.

evidently enjoying the purest delirium of New York militia achievement." Another evil effect of Gen. Gordon's letting his pen run away with him is that it leads to his filling page on page with denunciation of Halleck and Pope and ridicule of Sigel and Milroy. We are inclined to agree with him in his estimate of all these officers, but no one of them occupies such a pedestal in the temple of history that such *ingens molimen* is needed to dethrone him. Grant that Milroy was a lunatic, that Sigel and his troops were alike undisciplined and inefficient ("there should always be deducted from the divisions of this corps, except at meal times, a brigade at least of stragglers"), that Halleck was incompetent and arrogant and malignant, and that Pope was only less incompetent and equally wanting in other qualities of the higher manhood, it is not necessary to say these things over and over again, still less to indulge in long tirades as often as the name of any one of these unfortunates presents itself. Indeed there is little need to speak of Milroy and Sigel at all. As for Pope, the report of the Board of Army Officers has left him and the members of the court-martial which tried his charges against Porter in a position which makes it a charity to leave them unmolested, while Halleck stands condemned by the simple record of what he did and what he did not do. At the beginning of August, 1862, he was commander-in-chief. The Army of Virginia, under General Pope, was at and near Culpepper, and numbered some thirty thousand men, which force was increased soon after by the arrival of Reno with eight thousand men of the Ninth Corps, and of King with his division of about seven thousand. McClellan, at Harrison's Landing on the James, had an effective force of about ninety thousand men. It would not be easy to say how many more men there were in the defences of Washington, at Harper's Ferry, at Yorktown, at Fortress Monroe, etc., but it is probably not excessive to say that the commander-in-chief had one hundred and fifty thousand men disposable at this time, after leaving adequate garrisons in all places to which garrisons were indispensable, and that no one of these men was more than one hundred and twenty-five miles in a straight line from Washington. Lee was in the neighborhood of Gordonsville, confronting Pope and protecting Richmond. He had the control of such forces as to make seventy thousand a liberal estimate of the maximum which he could use, not only in any one field but in any one series of operations. If any trained soldier should be told this, and reminded that the resources of the United States in money, stores, munitions, ships, etc., were practically unlimited, and then should be shown the map of Eastern Virginia, with its frequent rivers and bays and all its water in the undisputed control of our navy, and, finally, should be informed that General Hallock so bore himself in his high office that in one month these masses of Federal troops were driven to the protection of the defences of Washington, with heavy losses of killed, wounded, prisoners, guns, munitions, and stores of all kinds, while the victorious Confederate army betook itself to the fresh fields of Maryland, he would say that there was little need of denouncing such a man of war. For those, however, who wish to hear what Halleck was besides being incompetent, we may say that General Gordon declares him contemptuous, meddlesome, morose, revengeful, jealous, bitter, relentless, wrathful, arrogant, curt, timid, self-indulgent, splenetic, envious, discourteous, crafty, malignant, savage, scolding, ill-tempered, shirking, selfish, ignoble, and false.

We cannot spare the time to collect with the same diligence which we have employed in the case of Halleck the adjectives applied to Pope. Our own opinion is that Pope was a man of considerable ability, both as a soldier and as a man, but that the qualities of his head were superior to those of his character and heart. He was both deceived and beaten, but he had very able commanders opposed to him; he was not so badly beaten as some of the other commanders in Virginia; he was always ready to fight, and he wrote a very able report of his campaign. General Gordon pays his compliments to him throughout this volume with great vigor, with great persistency, and great fulness; but while we incline to agree with much of what he says about him, we still think that, though Pope may have been as black, he was not so incompetent, as he is painted.

We must add to the list of ill-consequences attendant on indulgence of easy writing the frequent appearance of objectionable eloquence. Thus the Confederates are spoken of once as "driven" and twice as "hurled" across the Potomac by McClellan at the battle of the Antietam. This is quite wrong. The most that can be said of that battle is that we gained a little ground, and that for an invader not to win is to fail—or, in other words, that for an invader a drawn battle is equivalent to a defeat. Most of the hard fighting of the 17th of September, 1862, was done early in the day. The Confederates held their positions the rest of that day, all that night, and all day of the eighteenth, and crossed the Potomac in retreat, quietly and without molestation, on the night of the 18th. The only "hurling" that was done was done by them to some of our men who crossed to the Virginia side of the Potomac a day or two after the battle. So General Gordon speaks of Porter as "first of all from the Army of the Potomac hurrying forward to reinforce Pope"; of his own brigade as "crouching under blankets in the dismal hours of that night of horrors [to wit: the night of the first of September, in the Southern State of Virginia], in cold, in flood, and hunger, in such bodily torture that even the battle-field would have been a relief"; of McClellan as "hastening with his wearied and half-famished troops" upon the Maryland campaign, etc., etc. All this is exaggerated and untrue, and some of it puerile. Porter could not "hurry forward," if he wished to do so. A corps commander, like other officers, must obey his orders. There was no "bodily torture" on the night after Chantilly. There was some heavy rain; but those of us who had blankets and no wounds thought we were very well off. Wet nights without fire or food were not very rare occurrences in those days. McClellan's army was neither weary nor hungry at the time named. We were well rested and well fed when we began our march through the lovely Maryland country. Such statements mislead those who do not know and nettle those who do. Sympathizing as we do with General Gordon's spirit, respecting as we do his character and his personal history, and admiring as we do his industry, we regret that so much good work should be so burdened with superfluities and so disfigured with blemishes. His faults are such that the reviewer cannot help noticing them, and yet there is real merit in the book. The volume before us is the only tolerably complete work on Pope's campaign, and it is thoroughly readable. It is so good that we are vexed that it is not better.

The story of the battle of the Antietam has never been adequately told. Gordon's noble regiment fought there, within three weeks of the date at which the present volume closes. Let him tell the tale of that short but tremendous struggle with the fidelity with which he has portrayed Pope's campaign, and with as much improvement upon his 'History of the Campaign of the Army of Virginia' as we recognize in that volume when compared with the third part of his 'History of the Second Massachusetts Regiment,' and he will deserve and receive the thanks of his countrymen and take a high place among the writers on our war.

RECENT WORKS ON FINE ART AND ARTISTS.*

IN noticing, some weeks ago, 'Illustrations of the History of Art' we spoke of it as calculated to be useful if people only knew how to use it. A large collection of woodcuts of buildings and parts of buildings, statues and groups, bas-reliefs, paintings and pieces of decorative design, but without text by way of analysis, discussion, or even detailed description, has a status something like that of *Punch's* favorite answers to conundrums that have not yet been composed; they are illustrations to a book that has not been written. Now, if the publishers will have prepared a skeleton treatise on the fine arts, following the order of the woodcuts in these folios, and avowedly written to fit them, there will then be a text-book which every school might advisedly possess. Weekly talks about these pictures by the teacher to the pupils would be good; but the teacher in most instances will be found as uninformed about the objects represented as the pupils themselves, and it is into the teacher's hand that our imagined treatise should be put. The children being interested by any one of the illustrations, the teacher consults the index of the text-book and develops from what is found there her little lecture on the subject. These remarks are apropos of the third part, which treats of "Architecture and Sculpture of the Renaissance Period and of Modern Times."

The text which we desire to see written to accompany the last-named work must not be at all of the character of 'Great Lights in Sculpture and Painting,' which contains little discussion of art or of works of art, but is devoted almost wholly to gossipy anecdotes about artists. Here we have the old scraps of legend about Apelles and Zeuxis, entertaining old stories, whose ill-luck it has been to mislead moderns wofully and to help

* 'Illustrations of the History of Art.' Series III. Boston: L. Prang & Co.

'The Early Teutonic, Italian, and French Masters. Translated and edited from the Dohme series, by A. H. Keane, M.A.I.' With Numerous Illustrations. London: Chatto & Windus; Philadelphia: J. B. Lippincott. 1880. Large 8vo, pp. xvi.–559.

prove how the writers of a great art-epoch misunderstand the arts. Here are the well-known stories about Giotto and Andrea, bits of Cellini's autobiography, and traditions about Titian and Charles V.—all amusing enough for the new generation which is coming on and has not read them yet, but valueless, or perhaps worse than valueless, for the study of fine art. The book pretends to be nothing more than pieces prepared for dictation to pupils. It is only to be wished that the stories had been selected for their bearing on art itself, or as characteristic of an artist or of a school, and also as probably true instead of merely legendary.

A book more novel in character, and far more likely to do good in one way or another, is 'Common Sense in Church Building.' The author has published works of similar character before. In the present one it is supposed that a city church is to be built, that the clergyman writes to an architect who is an old friend of his, that different influential members of the congregation also take part in the debate by means of letters to the same architect and in other ways, and that the architect answers all these letters and appeals quite at length, earning his commission, or nearly so, before any plans are submitted. Some interesting little plans are enclosed in his letters, indeed, but these are rather to illustrate the theories he is busy developing than to embody his ideas of the church building needed in the particular case in hand. A little country church comes up also for discussion. In all of this tossing back and forth of the shuttlecock of common sense and practical requirements there is a great opportunity for stating sound principles and suggesting improvements upon modern church-planning. The book is too small and too familiar to allow anything to be discussed thoroughly, but it is sensible and good as far as it goes.

Among the soundest contributions to the modern popularization of fine art are certainly the "Illustrated Biographies of Great Artists." Eight of them have been noticed already in these columns; we have now to mention the volumes which treat of Hogarth and Rubens. Of these the latter is probably the most important, because containing much information new, or nearly new, or at least inaccessible to most readers. But each is good, sufficiently full for its purpose, sympathetic in criticism, and evidently the work of a true student and admirer. The Hogarth volume has, like most of the volumes of the series, a tolerably full list of the author's works, both paintings and engravings. The Rubens list is declared out of the question because necessarily too long, but the general index names a number of the most important of the pictures described in the text. The illustrations are the weak point in all these volumes. It is impossible to avoid wishing them away. In the case of the Hogarth they are fac-similed from his prints, very sensibly giving a section at the full size rather than a reduced copy of the whole, but the process employed is far from being faultless.

The comprehensive work on 'The Art and Artists of the Middle Ages and of Modern Times,' edited by Dr. Dohme, and carried out as it has been with the assistance of many of the most eminent German students of the history of art, well deserves, notwithstanding its size, a complete and careful translation into English. The subject is treated for the most part in biographies of famous artists, each written by some one specially competent for the task, and each embodying the results of the latest investigations and criticism. In spite of the variety of authors and the diversity of style in its different sections, the work is uniformly good, and some portions of it form genuine and remarkable contributions to knowledge. Springer's elaborate Lives of Raffael and Michelangelo, for example, are by far the most valuable existing biographies of these artists; they are the result of studies pursued for twenty-five years, and join to accurate and abundant knowledge judicious criticism and discriminating taste. If no other portion of the work is to be compared with this in fulness and importance, yet the minor biographies, by such writers as Semper, Woltmann, and Alwin Schultz, display hardly less thoroughness of research and familiarity with their subjects. A translation of the whole work is, therefore, much to be desired, and if issued in parts of reasonable size and at not infrequent intervals, it could hardly fail of a wide circulation among the increasing numbers of the students of the history of the arts, who at present are destitute of trustworthy guides in English. The lack of works in English of any substantial value upon the history both of ancient and modern art is surprising, considering how general the desire for information upon the subject has become in a large class of English readers.

In the absence of a complete translation, a volume of selections from Dohme's series is welcome. Mr. Keane's principle of selection is tolerably arbitrary, and the title he has chosen of 'The *Early* Teutonic, Italian, and French Masters' does not correctly represent the substance of his volume, since the earliest Italian master whose life he has translated is Masaccio, and the earliest French master, Poussin. The choice of lives of the masters of these two countries which Mr. Keane gives us is perhaps such as a general reader might make, but is by no means satisfactory to a reader with some preliminary information as to the significance of the artists whose lives are translated or omitted. Another point to be noticed is that they are all of painters; so that while we have Masaccio and Filippo Lippi, we miss Brunelleschi, Donatello, and Luca della Robbia. And among the painters the motive of choice is not always clear; the lives of Fra Bartolommeo and Sodoma are translated, while those of Fra Angelico, Perugino, and Verrocchio are omitted.

The translation itself is perhaps better, a little better, in character than that to which we have been accustomed in recent versions from the German of books relating to the arts. It is not so blundering as the translation of Grimm's 'Michelangelo,' or of Lübke's 'History of Sculpture,' for example. The translator has plainly tried to do his best, but he is not very sure of his German, and his English is not always exact. In one of the most interesting sections of the volume, that on the "German Minster-Builders," considerable confusion results from carelessness in the translation of the terms by which an important distinction is marked among the master-builders and stone-masons of the later Middle Ages. There were two separate categories of these masters, those who belonged to local guilds and had settled places of abode and of work, and those who belonged to one or other of the Masonic lodges which had their origin in the workshops of the great cathedrals, and who were employed in church-building from time to time in different localities according to the demand for work. It was not till the sixteenth century, when the building of great churches had for the most part ceased, that the important distinction between these two classes was gradually effaced.

In the life of Mantegna an error, very frequently repeated and annoying to a cultivated reader, is the constantly calling Ludovico Gonzaga of Mantua "the Margrave," and his wife, Isabella of Ferrara, "the Margravine," and for this blunder the original affords no excuse, as Herr Woltmann gives always, properly, *Marchese* and *Marchesa*. The same life affords a good many instances of English much finer than the German, as where in the German it is said that Correggio "got his wife from Mantua," in the English we find that there Correggio "contracted a matrimonial alliance." And just after, on the same page, where Dr. Woltmann says of Mantegna, in regard to his influence on the German masters, "He was infinitely instructive to them," his translator, instead of putting this simple phrase into good English, tells us that "he constituted for them a store-house of information."

On page 78 it is said, "In the sixtieth year of the fifteenth century the predominance of the Flemish school of painting was still undisputed even in South Germany"; it should have been said, "In the years from 1460 to 1470 the victory of the school of painting of the Low Countries was decisive even in Upper Germany." On page 83 it is asserted that "It is beyond all doubt that centuries before Schongauer handled the graver copper-plate had been discovered," which is to be corrected as follows: "It may be confidently assumed that the art of engraving on copper had been discovered at least twenty or thirty years (*schon mehrere Jahrzehnte*) before Schongauer handled the graver." The book is full of oversights like this. But while a more careful translation is waited for, the English reader may be glad to have even this, for it contains much information which he will hardly find in any other English publication.

William Lloyd Garrison and his Times; or, Sketches of the Anti-Slavery Movement in America. By Oliver Johnson. With an introduction by John G. Whittier. Portrait and illustrations. (Boston: B. B. Russell & Co.; New York: Charles Drew. 1880.)—The major part of this work was written for weekly publication in the *Tribune*, and probably no other living actor in the anti-slavery struggle could have performed such a task so easily and so well as Mr. Johnson. He was one (and is the only survivor) of the twelve founders of the first Garrisonian organization in January, 1833; for the next ten years he was in close and almost daily intercourse with the editor of the *Liberator*, which he often conducted in Mr. Garrison's absence, and he subsequently edited himself the *National Anti-Slavery Standard* in this city and the *Anti-Slavery Bugle* in Salem, Ohio, so that the range of his experience and acquaintance was very wide. These qualifications, nevertheless, would have counted for more than they do here if his object had been to write personal reminiscences exclusively, and to be less careful of the order and proportions of his narrative—if, in other words, he had chosen to follow more or less closely the example of the Rev. S. J. May in his invaluable

'Recollections of the Anti-Slavery Conflict' (1869). As it is, he has scrupulously kept himself in the background, and his account of the formation of the New England Anti-Slavery Society, above alluded to, is perhaps the single positive contribution to the history of the movement to be found in this volume. In general, the incidents and events treated have been described in easily-accessible works; but some of the less-known, though in their time efficient, agitators are here commemorated as perhaps nowhere else.

More or less consciously the burden of this summary retrospect is a defence of the Abolitionists, and of Mr. Garrison in particular, not so much in their attitude towards the churches as in the attitude of the churches towards them—a distinction which should not be overlooked. Mr. May was under the same compulsion. "Many of my readers," he says in his preface, "may wish that I had not reported so many of the evil words and deeds of ministers and churches. I have done so with regret and mortification. But it has seemed to me that the most important lesson taught in the history of the last forty years—the influence of slavery upon the religion of our country—ought least of all to be withheld from the generations that are coming on to fill our places in the Church and in the State." Mr. Johnson had not the professional incentive that Mr. May had to vindicate religion against its time-serving expounders, but the same week in which the *Liberator* was launched saw the first issue, from an adjoining office, of the *Christian Soldier*, edited by Mr. Johnson and presently printed on the *Liberator* press; and the intimacy thus fostered was based on a common religious sentiment and a common orthodoxy. In defending Mr. Garrison he defends himself, and in no other phase of the controversy does he appear more at home. The serial mode of publication naturally led to clerical attacks, neither well-considered nor weighty, and if the replies, which are incorporated with the main history, detract somewhat from the literary form of the work, they abundantly confirm Mr. Johnson's position.

Three-fourths of this volume are devoted to the period ending with the division among the Abolitionists and the rise of the Liberty Party in 1840; and this again corresponds with the necessity of treating the religious issue with fulness. At that date the anti-slavery professors of religion who could not co-operate with "infidels," negatively reinforced the pro-slavery professors who had invented the term; and the greatest moral reform of the age came to be identified exclusively in the popular mind with come-outers. In that year, too, the decision was made by the anti-slavery societies to seek no political preferment and to enter into no political organization. The reasons for this are set forth in chapter xviii., which we incline to regard as the best in the book. We can also praise the exposition of the obstacles prepared for the Abolitionists by the Colonization Society, which artfully satisfied the scruples of the North on the subject of slavery by enlisting them in behalf of a pseudo-charity. In recording the differences and dissensions in the anti-slavery ranks Mr. Johnson speaks throughout with moderation and an evident desire to be candid; and he passes over some which a biographer of Mr. Garrison would have to face.

We Four: Where we Went and What we Saw in Europe. By Miss L. L. Rees. (Philadelphia: J. B. Lippincott & Co. 1880.)—Four young ladies of Philadelphia determined in the summer of 1878 to make the trip to Europe. They "planned and anticipated and talked," and their friends "looked scornfully on" till all their arrangements were made and they started June 18, on the *Canada*, with the world all before them, and a feeling that an escort would have been an encumbrance. They visited London and Paris, and made a rapid progress through Switzerland, Germany, Scotland, and Ireland, and evidently had a very jolly time. The book which chronicles their experiences is of less value than a guide-book, but though not as complete, so far as information goes it is of the same sort. The personal reflections, however, will be found of interest to every one who cares to get an intimate view of somewhat piquant and thoroughly indigenous feminine character, without more trouble than is involved in turning over the leaves of Miss Rees's volume. The "four" are called, for convenience of identification, Artemis, Clio, Erato, and Pomona; which the author is, the reader will find some difficulty in deciding, but it is not important. The voyage over was not eventful, but it is told with conscientious fulness. As they passed Dover one of the passengers, "who had been making the part of *King Lear* in Shakspere's play of that name an especial study," quoted some passages, and, generally speaking, sunrise and sunset occupy a good deal of attention. The four were rebuffed on arrival in London by "the lady (?) clerk of the Portland House," which it happened was full. This is how they "got square" with her after a slight and, on her part, brutally phlegmatic altercation: "A parting shaft had to be given. It is very strange you do not know the Langham Hotel, one of the handsomest in London, and in Portland Place also. Good evening, madam." When they heard that Billingsgate was "no place for leddies" they were only restrained from visiting it by a policeman's authoritative warning. A surly Briton in a railway carriage, who "did not offer any reading matter to his fellow-companions," grumbled so much at the slowness of the train that the author was obliged to say: "That is just what I was thinking, sir; but as this seems to be your regular style of travelling in England I concluded to put up with it"; to which the man made no reply, as he "could not decipher whether I spoke from sarcasm or ignorance," although he "looked savagely" at her. At Paisley the four met a Scotch peasant, who, when she learned that they were without "a manly escort," seemed astonished, "but, I am sorry to say, did not appear to admire our courage." Of observations on "what we saw" the following may be given as an example: At Versailles "we traced Napoleon I. from the earliest record with his Bonaparte brothers and sisters until last a granite statue of the dying man—no semblance of royalty now, but with an emaciated countenance and swollen abdomen, that causes a feeling of pity for the sufferer to rise in the heart, while we cannot but condemn the principles of action that had governed him." Miss Rees also speaks of "the pure brow" of Josephine, and Charles's "persecutor, Cromwell," but in the main she shuns statements not sanctioned by lapse of time, and suggests the Rollo books tinctured with a slight alloy of kittenishness.

Dictionary of Terms and Phrases used in American or English Jurisprudence. By Benj. Vaughan Abbott. 2 vols. Vol. i., A–K, vol. ii., L–Z. (Boston: Little, Brown & Co. 1879.)—According to Mr. Abbott's preface, this work is intended rather as a "Law Dictionary" than as a "Dictionary of the Law." By this he appears to mean that he has not concerned himself with the substantive rules of law, but has chiefly endeavored to make his book a compilation of authoritative *definitions*, with illustrations of their application and use. The work has been done with a great deal of thoroughness and care. It seems to be more comprehensive than Bouvier's dictionary, which has hitherto been the chief resource of lawyers in this country, and will, without doubt, fill a useful place in the economy of the legal profession. There are some defects which might in a new edition be easily removed. To begin with, Mr. Abbott's passion for Latin sometimes gets the better of his judgment. Of course every law dictionary must contain explanations of technical Latin terms. But there is no need of going beyond these, and crowding its pages with ordinary Latin words, abbreviated phrases, and trite maxims, which have little more connection with law than they have with theology or medicine. Several instances of what we mean may be found on the first page of Mr. Abbott's first volume. *A posteriori*, *a priori*, *a quo*, and *a quâ* are all no doubt Latin expressions, but what have they to do with law? "*A verbis legis non est recedendum*" is put down by Mr. Abbott as expressing "a familiar rule of statutory construction," viz.—that the language of a statute is the primary guide in construction. The phrase, however familiar (and as to this we have serious doubts), is of little importance as a guide in statutory construction, and would find its proper place in a collection of legal maxims rather than in a dictionary. Occasionally doubts as to Mr. Abbott's entire familiarity with the language of which he is so prodigal force themselves unwillingly upon us, as, for instance, when he tells us that a person incapacitated from business is said to be "*ab agendo*." Again, a great many English words are given which are in common use wherever the English language is spoken, and have no technical legal meaning. *Adverse possession* is a technical term, but *adverse* is not. The same may be said of *public economy* and *public*. In cases like these Mr. Abbott always gives a definition of the epithet, which may be found in Webster quite as well. These blemishes, however, are slight, and do not detract from the real merit of the work, which will be found of considerable value both by students and practising lawyers. As a collection of authoritative definitions supplied by the courts it stands quite by itself, and the practical value of such a collection can hardly be overestimated.

The Egotist. By Henry T. King. (Philadelphia: Claxton, Remsen & Haffelfinger).—Mr. King's sub-title is perhaps a good enough explanation of his work; it is "Essays of Life: its work and its fortunes, its joys and its sorrows, its success and its failure." It thus appears that the subject with which he deals is one of reasonable comprehensiveness; the spirit in which he deals with it may be inferred from one of the short para-

graphs of which his book is composed: "What I write in this book are no fine-spun theories, the production of contemplation, but they grow out of what I see in life; what I see of men and their doings as I sit in my office, hearing and advising my clients. . . . Not what I have read in books, but what I have seen and know." We are not prepared to say that this is not the best line for Mr. King to take in writing about life, but it is clear that it involves the repetition of a good deal that he might have "read in books" and thus avoided. He would thus have been even more original than he is. Still, he has a distinct flavor of his own. For example, this seems thoroughly individual in the light of a Rochefoucauld maxim: "Some persons simply have the capacity of holding fast to any money they may get" (page 135); or this: "With regard to meeting obligations, there are two classes of persons" (page 106).

Being a Catalogue of the Books and Pamphlets relating to the History of the State, with Collations and Bibliographical and Critical Notes, together with the Prices at which many of the books have been sold at the principal Public and Private Sales since 1860, and a Complete Index by subjects.

By PETER G. THOMSON.

A prospectus of 20 pages, describing the work, giving specimen pages, etc., will be sent free to any address.

PETER G. THOMSON,
Cincinnati, Ohio.

READER, BUY

ALOHA. "Mr. Chaney's visit to the Sandwich Islands deserves to be widely read in this country of unrest," says the *Nation*. Price $1 50.

MRS. DELANY'S AUTOBIOGRAPHY. "Her experience of court life was very remarkable, and her memoirs should be much sought after by ladies' reading circles," says the Philadelphia *Press*. Price $4.

ARNOLD'S "THE LIGHT OF ASIA." "We have read it, read it with exceeding pleasure, as we would listen to exquisite music." Ninth edition. Price $1 50.

CAUSERIE. "His little work is made up of wit and wisdom in due proportions, spiced with lively anecdotes, with a dash of mild, good-natured satire, which is sharp to the touch, but bears no venom in its sting," says the *Tribune*. Price $1.

Sold by all booksellers. Mailed, post-paid, by the publishers,

ROBERTS BROTHERS,
BOSTON.

The Master of Red Leaf.

The entire edition of this Novel, by Mrs. Meriwether, was sold within twenty-four hours after it came from the binder. Another edition, of which a considerable portion is sold, will be ready on Tuesday next. E. J. HALE & SON, 17 Murray Street, New York.

Europe and the Holy Land.

Tourjee's Third Educational Excursion, 1880.

All Travel and Hotels first-class. More furnished for the money than in any Excursion ever offered. Special advantages of an extraordinary character secured for Sight-Seeing and visiting the grandest centres of Art and Historic interest in the Old World. COMPANY SELECT. Numbers limited. 32-page Prospectus sent free. Address E. TOURJÉE, Boston, Mass.

G. P. PUTNAM'S SONS,

182 FIFTH AVENUE, NEW YORK,

Have just published:

THE INTER-OCEANIC CANAL
and the Monroe Doctrine. A treatise presenting in concise but comprehensive form the historical record of the various plans for a canal across the Isthmus, and showing the responsibilities of the people and the Government of the United States in regard to any such enterprise, and especially in connection with the present undertaking of M. de Lesseps. 8vo, cloth, $1.

"At an epoch which we can call near, since it concerns the life of a people, the Anglo-Americans alone will cover all the immense territory comprised between the polar ice and the tropics; they will spread from the shores of the Atlantic Ocean even to the coasts of the Southern Sea."—*De Tocqueville.*

Also, a Second Edition of

FREE SHIPS. By John Codman,
Shipmaster of the late American Merchant Service. To which is appended a review of the plans of Senator Blaine and Secretary Sherman for the restoration of the American carrying trade. (Economic Monographs, No. 6.) 8vo, paper, 25 cents.

Nearly ready.

A FORBIDDEN LAND: Voyages to
the Corea. Numerous Illustrations and Maps. By E. Oppert 8vo, cloth extra.

This country has hitherto been hermetically closed to foreigners, and M. Oppert claims for his work that it is the first work based upon personal observation which has been written on this curious and interesting country. In addition to the author's personal adventures in the interior, the work embraces the geography, history, production, and commercial capabilities of the country.

LAMARTINE AND HIS FRIENDS.
By Henri de Lacretelle. Translated from the French by M. E. Odell.

Gives a bright, picturesque view of the character and opinions of the social, literary, and political circles which surrounded Lamartine.

A new Volume of the "Knickerbocker Novels."

THE HEART OF IT. A Romance of
East and West. By W. O. Stoddard. 16mo, paper and cloth.

HIS MAJESTY, MYSELF,
is the sensation of the day. You cannot get it at the libraries; it is always "out" and a long list of names waiting. "We are not surprised to learn that the book is having an immense sale," says a critic. "It is a powerful and manly book, full of bright, keen, audacious orthodoxy," says Joseph Cook. Price $1. *Sold by all booksellers.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 19, 1880.

The Week.

THE doubts which still lingered in the minds of the public as to whether General Grant would take the nomination if it were not offered unanimously and without a contest, were removed last week by an authoritative announcement through the New York *Times* that he would take it in any way he could get it, like the other candidates. This puts some of his supporters—the more delicate and high-minded—in an awkward position, but we have no doubt that to the bulk of the working boomsters it is very welcome. They never quite liked what they probably called the "dignity game." It made General Grant seem too far removed from them—

"Too bright or good
For human nature's daily food."

The Philadelphia *Bulletin*, a Stalwart Grant paper, is much dissatisfied with our sketch of the way the Grant movement would work in practice, and thinks it "libellous." It mentions as a fatal objection to the programme that the only "armed force" on which General Grant could rely to put him in the White House after he had done his own counting is the United States Army—a very small body. But the *Bulletin* is evidently not well informed, for another leading boomster paper, the Chicago *Inter-Ocean*, says in a recent issue that if "Grant is chosen *he will take the office*, and all talk of a conspiracy [to prevent him] will melt away under the influence of a man whose simple word would call to his side a half-million of veteran soldiers." So that he will really, it seems, have a very large force at his command when he begins his count. The "boom" has been reinforced during the week by Mr. Henry Ward Beecher, who demands not only a third term, but five terms in all, thus leaving the other boomsters eight years in the rear. Mr. Beecher is evidently determined to make himself "generally useful," as the advertisements say.

The *Tribune*, not wholly discouraged by the action of the Harrisburg Convention, is making an effort to discover the true sentiment of Pennsylvania, which seems, so far as the *Tribune's* test is of value, very decidedly anti-Grant and in favor of Blaine. The difficulty with ordinary newspaper attempts at popular political diagnosis is, as the *Tribune* very justly remarks, that the people applied to are wholly irresponsible, and represent no one but themselves. Accordingly in this instance each of the 2,600 local committeemen of the Republican party throughout the State was addressed by postal-card and asked for a brief statement of his preferences as to the Chicago nomination. To these the *Tribune* has so far received 1,051 replies, of which 812 are for Blaine, 188 for Grant, 14 for Sherman, and the rest scattering. Many of the writers are reckless enough to allow their names to be published, which was optional with them, from which it is fair to conclude they are tired of their "representative" positions, or else that they know that Senator Cameron does not read the *Tribune*. But before concluding with that journal that "Maine will be jealous of Pennsylvania presently," we may as well bear in mind that it is a fortnight since the *Tribune's* postal cards were sent out, and that up to the present time no answers have been received from nearly two-thirds of the persons addressed, that comparatively few of the Grant men would be likely to reply, and that all of the Blaine men would.

Secretary Sherman has been busy throughout the week debasing the public service to further his own selfish plans over a pretty wide stretch of territory, we judge from the reports of the New York *Times*, which keeps him under the same strict surveillance that it used to exercise over the similar movements of Mr. Tilden. It has discovered his hand in what it sarcastically alludes to as a "spontaneous" popular uprising of Boston merchants, and, in connection with that dissatisfied marplot, Secretary Schurz, in some ugly manipulations of the civil service in St. Louis. In this city he has compelled Surveyor Graham to attempt to decoy the business men into "spontaneous" support of him, while at the same time he has kept Collector Merritt away from his business at the Custom-house in order to "manufacture sentiment" in the northern part of the State. Of Ohio, singularly enough, unless he regards it as already "fixed," he has been very neglectful. A meeting in his favor at Columbus Friday night was characterized by "utter absence of enthusiasm"; "frequent complaint of the lack of organization in his interest" is heard from his friends, and Governor Foster dejectedly observed to a *Times* correspondent, "Sherman is not working here at all," adding that the fact was "unaccountable" to him, considering Sherman's skill and adroitness. As if all this were not enough, the *Times* brings forward that eminent patriot, ex-Senator Dorsey, of Arkansas, as a witness that even Little Rock is not outside the circle of the Secretary's malign influence, which, on the promise of future favors, is endeavoring to undermine the sturdy morality of Arkansas Treasury officers. Dorsey also contributes a bit of what he calls "secret history" to the effect that Sherman opposed the Resumption Act in caucus, and now wants to claim all the credit for it; he adds characteristically that "caucus proceedings are always secret, and each member of the caucus is bound in honor not to reveal them," but that the infamy of Sherman's conduct has "unsealed his lips."

There has been a good deal of curiosity of late to see whether Governor Cornell would nominate Smyth, the Insurance Superintendent, for another term, in view of the exposures made about him when he was tried by the Senate, and in view of his late attempted fraud in the holding of the Albany primary meetings. Mr. Cornell, it was thought, might feel some hesitation about it himself, but the question was, Would Senator Conkling allow him to refuse? The answer has come, for Smyth has been renominated, probably under orders from Washington. Nothing more discreditable has occurred in State administration for a good while, but all friends of good government ought to be glad of it. The more true to themselves, and their system, and their chief the Conklingites are, the sooner will the public's eyes be opened to the absurdity of electing these men on Mississippi and Louisiana issues. It gives a New York election the air of a "confidence game" in a fair. One operator reads horrid accounts of murders and outrages and piracy on the high seas to the crowd, with appropriate and harrowing comments, and, having thus absorbed their attention, his confederate "goes through" them and takes their valuables.

The Albany Republicans who were indignant with Smyth's attempt to cheat them at the primaries have refused to take part in the second election, because it was only held to fill the places of six delegates who were shamed into resigning, the tenure of the remaining majority being also tainted with fraud. The malcontents have held a meeting and issued an address, in which they denounce the General Committee savagely, but say that instead of sending up a second and contesting delegation to the Convention they will lay their griefs before it, and if they get no redress the Convention "must take the consequences." We doubt if this promises much result. They will be heard with much courtesy, and will then be furnished with lists of Southern murders, and requested, in view of these horrors, to forget their wrongs for this once, and help the Machine to win a glorious victory in November. Privately, Mr. Conkling would call this "letting 'em squeal as much as they please, if they don't bolt."

The Fitz-John Porter case has begun to excite so much party feeling in Congress that it is not likely that any bill giving effect to the President's recommendation for his relief will be passed this session. In the first place, the surviving members of the court-martial which convicted him—of whom the chief is General Garfield—feel that the finding of the Advisory Board casts a slur on them; in the second, it has become with many people one of the sacred legends of the war, which they cannot bear to have attacked or criticised, that Pope was betrayed by the McClellan set in the army. There was, however, so much fresh evidence produced before the Advisory Board, not simply in the shape of Confederate testimony and reports but of new and accurate surveys of the battle-field, that its finding really casts no reflection at all on the verdict of the court-martial. With the legend it is impossible to deal by any process of ratiocination, and the same thing may be said of the belief held by many that a Confederate Brigadier is sure to tell lies if examined even on oath with regard to the facts of the war. Nothing but time or death disposes of prejudices of this sort.

General Logan made a minority report against the bill in the Senate for himself and Mr. Plumb, in which he took the remarkable ground that the sentence of a court-martial is so final and absolute that neither the President nor any power on earth can set it aside or annul or undo it; from which it would seem to follow that if a court-martial were to sentence a man to be shot, and the clearest evidence of his innocence were afterwards produced, such as proof of an alibi or of mistaken identity, he would have to be shot all the same. General Burnside made a report for himself, in which he took the much more rational ground that as the Advisory Board was in no sense a legal tribunal, and the proceedings before it were to a certain extent *ex parte*, but nevertheless did produce new facts tending to show General Porter's innocence of which he ought to have the benefit, the proper course to be followed now is to authorize the President to convene a new court-martial and give General Porter a fresh trial upon the old charges and specifications. Another bill has been introduced in the Senate by Mr. Randolph authorizing the President to commission Porter as a colonel of infantry, the commission to be dated in 1863, with pay and emoluments from that date, and to put him on the retired list immediately afterwards. This is thought likely to meet the objections to the bill now pending.

We do not, as a rule, think it worth while to follow the Chicago *Tribune's* financial utterances; but we must call its attention to the fact that when it says legal tender paper in England "may be issued to an indefinite amount by a mere order of the Government," and that this is the way that "England provides against a scarcity of debt-paying paper," it does what the editor would call "telling a deliberate lie," but what in these parts is called committing a gross blunder. The Government has no power to order an issue of legal-tender paper to the smallest amount, or even to allow the Bank of England to issue one dollar beyond the amount of the Government debt to the bank—$75,000,000—and the bullion it may have in its vaults. Moreover, bank-notes are only legal-tender as long as they are redeemable in coin. What the *Tribune* is lying or blundering about is the promise which, on two or three occasions in commercial crises, the Government has given the Bank, that if it did issue beyond the legal limit it would get an act of indemnity passed by Parliament. The *Tribune* ought to confine itself to the protection of down-trodden silver.

Early in the week the Treasury bought $11,474,000 of United States bonds of 1881 for the sinking fund, and gave notice that hereafter it will buy $1,000,000 on Wednesday of each week. These bonds are purchased with the surplus revenues of the Treasury, which, on account of the increase in foreign imports and the improvement in domestic trade, are steadily rising. The Committee of Ways and Means of the House have agreed to authorize the resumption of refunding, the new bond to run forty years, although redeemable after twenty years, and to bear 3½ per cent. annual interest. Since this decision was arrived at by the committee the market price of the 4 per cent. bonds has advanced to 107¼, a price which warrants the sale of 3½ per cent. bonds at about par. It is, therefore, likely that within a few weeks refunding operations will again be in full blast. The expectation of this has advanced the prices of choice railroad investments, and has given a fresh start to general speculation at the Stock Exchange, the experience of last year being that while refunding will work in favor of an easy money market it will also turn a good deal of money now in United States 5 and 6 per cent. bonds into railroad securities. The foreign-exchange market has been firm, and rates for sterling bills are nearer to the point at which gold can be exported than that at which it can be imported. The price of silver bullion in London declined to 52¼*d.* per oz.; and here the "buzzard dollar" had a value at the close of the week of only $0.8759.

The imperative need of a strong man at the head of the Government in order to restore to the South the peace and prosperity it enjoyed under the Grant régime is occasionally somewhat obscured by accounts published by the Southern press of flourishing industries and general progress. The Charleston *News and Courier* has recently been defiling the political graves of Moses, Scott, Chamberlain, and the rest, by implication at least, in giving its readers a statement of the present condition of the cotton manufacture of South Carolina, which, notwithstanding the pusillanimity of the Hayes Administration, is far better off to-day than it has ever been heretofore. There are now in the State seventeen factories engaged in the production of cotton yarns and cloths, with 95,438 spindles and 1,933 looms in operation. The daily consumption is 54,049 pounds of cotton, and the daily production 101,338 yards of cloth, and 17,183 pounds of yarn. They employ 2,296 operatives, who in turn support 7,913 persons. The monthly pay-rolls amount to over $38,000; the capital employed is $2,288,600, and their estimated worth $2,844,000. The profits range from 18 to 25½ per cent., one factory making 50 per cent. This, except in the percentage of profit, is not a showing which compares favorably with that of many New England towns to be sure, but it indicates the practicability of manufacturing on a large scale at the South, and the possibility of persuading the Southern people of it. It involves, of course, a saving in the cost of the raw material, in commissions, in transportation charges, and in waste; to which should be added the saving in the rental of land and in the wages of operatives.

The elections which are occurring here and there in England to seats accidentally made vacant by death or otherwise in what remains of the present Parliament, are watched with the greatest interest for the indications they give of the result of the general election which is to take place within the present year. That of Liverpool, which occurred recently, was not, for reasons which we gave last week, very valuable as a sign. Liverpool has always been a Conservative stronghold, and especially in exciting times. In 1868, after the passage of the Reform Bill and the increase of the constituency, the Tories carried it. In 1873 they carried it again at an off-election. In 1874, at the general election, they carried it by still heavier majorities. It was, therefore, not surprising that they won the vacant seat again the other day, now when the Jingoes are on their mettle, but they did not win it by a majority which gave much encouragement to either side as to the condition of public opinion. During the past year fifteen elections have been held, not counting the recent ones of Liverpool and Southwark, and in these the Liberals lost no seat and gained two, though that of Sheffield is considered a somewhat doubtful triumph. In Southwark, however, they have during the past week sustained an undoubted defeat in a place where they had no good reason to expect it, as Southwark has always been a strong Liberal constituency. It is true the Liberal forces were divided—the Workingmen running a candidate of their own, who drew off nearly nine hundred votes, with which the Liberal would have been almost on an equality with his opponent—but

the fact that the Workingmen did run a candidate must be taken of itself as a sign of Liberal weakness, or, at all events, as a sign that the Tories have not been losing ground lately even in a kind of constituency in which they have hitherto enjoyed little favor.

The distress in Ireland is reported to have abated, the measures of relief proving more than equal to the emergency. In fact the crisis has never been anything like as serious as that of 1847. The population, instead of being 8,000,000, as it was then, is only 5,000,000, and neither the potato nor any one article of food is as much relied on as it was then. Means of transport and communication of all kinds have also greatly increased, so that no district is as hard to get at as it was thirty years ago. The most picturesque and remarkable incident in the efforts to combat the famine has undoubtedly been the magnificent donation of the New York *Herald*, and the response it has called forth from other quarters, so that the fund already raised by this means amounts to over $200,000. It has completely crushed poor Mr. Parnell, who doggedly refuses to take a place on the *Herald* Committee which that journal urges on him with remorseless persistence. His own collections, obtained by abuse of the landlords and of everybody who does not agree with him, must be very small.

There is no fresh news from Afghanistan, and no announcement from the Government as to what its policy is to be. Lord Beaconsfield has denied in Parliament that permission has been given to Persia to occupy Herat, but refuses to say that no such step is contemplated. The project clearly excites alarm among the more moderate supporters of the Ministry, because it is plain that if Persia is to take Herat she must be guaranteed the possession of it both against the Afghans and the Russians. That place has long been considered "the key of India," but it is now discovered that there is a key to Herat, a place called Mymeneh, in the Uzbeg region, north of the great mountains, and there is little doubt that Mymeneh has a key too, and that the real outside key which opens the whole of Central Asia will not be found short of Moscow or St. Petersburg. Things in Herat are in a bad way. It is held by Mohammed Ayub Khan, the brother of Yakub, but his rule does not seem to amount to much, as his troops amuse themselves by fighting in the streets and pillaging the inhabitants. There is a curious article in the last *Nineteenth Century* by Sir Henry Rawlinson, the great Jingo prophet on Indian matters, whose predictions broke down so wofully about the Gundamuck Treaty. He says now that things have been going on beautifully, barring the murder of the envoy, but that Kabul must continue to be garrisoned by a force lodged in the refortified Bala Hissar, leaving the chiefs to govern the country as best they can under British superintendence; Jalalabad and Kandahar must be retained, and Herat given to Persia, and finally, if Afghan-Turkestan is to be abandoned entirely "to the insatiable grasp of Russia, the Indian frontier will be as faulty as before," so that it appears it was by no means "rectified" when he last said it was, and probably never will be "rectified" as long as the Russians are in Central Asia. Sir Henry's recommendations have hitherto been followed very closely by the Beaconsfield Ministry.

Dr. Russell, the well-known correspondent, formerly of the London *Times* and lately of the *Telegraph* in South Africa, sent home some unpleasant accounts some time ago of the disorderly conduct of the British troops in that region. This excited the ire of Sir Garnet Wolseley, who does not like to believe a newspaper correspondent under any circumstances, and he pronounced them exaggerated and untruthful, and intimated that Dr. Russell had been made the victim of a hoax. This appears to have roused the latter, and he has appeared with a full bill of particulars in the *Telegraph*, giving a shocking picture of the indiscipline of the troops in the Transvaal, which Sir Garnet has taken possession of with some unnecessary violence of language, as conquered territory. The main cause of the disorder seems to be drink, but it must be added that experienced observers have already frequently pointed out the difficulty of keeping any troops well in hand which are employed as much as the British army is in burning and ravaging barbarians, whom they despise as "niggers." In fact, the infliction of tribal punishment—that is, visiting communities with fire and sword for the offences of individuals or chiefs, as we do in our treatment of the Indians and as the British have done in Africa and Afghanistan, brutalizes or demoralizes any army. No soldier who burns a village over the heads of women and children ever gets over it thoroughly.

The European press is filled with groans over Prince Bismarck's demand for an addition of 27,000 men and many batteries of artillery to the German army, to be taken from a class not now drawn on. Everybody is asking what this can mean, in the present trying condition of German finance and industry, and with one province—Silesia—actually desolated by famine. There is, of course, much speculation of a wild kind, but the prevailing opinion is that he is afraid of France and Russia, which, he thinks, have a strong tendency to combine, and would be really formidable if combined. France is recovering rapidly from the war, and will have next year a larger army than Germany, and Russia is smarting under internal troubles and the incompleteness of her victory over Turkey. All parties in the meantime talk peacefully, but there is a strong feeling in commercial circles that the mere existence of these armaments must tend to bring on a collision. The strain on the nerves of watching each other becomes after a while too much for military powers, and they rush at each other's throats so as to have an end of their fears. Germany will now call out 190,000 men every year, making her army under arms about 600,000 men, and about 1,500,000 with the reserves. France calls out every year about 168,000, and Russia 210,000. The Russian army is supposed to amount to 1,829,880 men; that of Germany and Austria combined to 2,500,000. The four great Powers, in fact, France, Germany, Austria, and Russia, have over 6,000,000 men under arms, and either wholly or partly withdrawn from industrial pursuits. The Russian press denies stoutly that it is Russia that Germany is afraid of, and insists that it must be France, while Baron Haymerle, the Austrian Minister, says he considers France the most peaceable country in Europe.

France in the meantime seems busy with the work of internal reorganization. The bill reorganizing the State Board of Education—the most interesting feature of which for foreigners is that it excludes the bishops and all clergymen who have hitherto had *ex-officio* places on it—has passed the Senate after a severe struggle, in which the Duc de Broglie made a speech, after a long retirement, in the character of a pious but despondent Catholic. The Minister of Public Instruction is to have the nomination of nine members of the Board, and it was proposed that he should be compelled to nominate clerical representatives of the various denominations, but the Government resisted this successfully. The other members are elected by various teaching bodies, and they may choose clergymen if they please, but clergymen are not to have seats *ex officio*. A bill regulating the right of public meeting is also under discussion, which makes meetings possible, on written notice to the police of time, place, and object, without formal permission; but periodical meetings in the same place are not to be permissible, as this would be a club in disguise, and French Conservatives dread clubs. These precautions against orators, absurd as they seem, are fairly justified by French history ever since the Revolution, because no French orator of the Radical school ever spouted long without recommending action, which always means some sort of appeal to physical force, either in the way of open insurrection or in the form of a big procession ready for insurrection. In fact, among the Radicals an orator who has no thought of fighting in his mind is looked on with a certain contempt. A remarkable feature in the debates, and instructive as an illustration of the spirit which the Monarchists bring into politics, was that the Right voted heavily against the Government with the extreme Radicals on the Public Meetings bill, of course with the view of discrediting the Republic.

GENERAL GRANT'S POLITICAL EDUCATION ABROAD.

WE spoke last week of the kind of rôle which the more ardent of General Grant's supporters had marked out for him, in saying that they desired to have him superintend and revise the counting of the electoral vote for his own benefit. Senator Cameron's reason, given just before the meeting of the Pennsylvania Convention, for wishing to re-elect him—that the people are "tired of the uncertainties of government"—would seem to indicate that they also already contemplate as probable and desirable those remoter results of their action which we set down last week as possible. That is, they seem really to demand a permanent, or nearly permanent, President, and have selected General Grant for the place, and prefer the plan of packing nominating conventions as a means of attaining their ends to the passage of a constitutional amendment.

The argument which they have used most effectively with those who do not share their dislike of the "uncertainties of government," and are not attracted to General Grant by the prospect of his doing his own counting after the Presidential election, is, however, that the scandals which discredited his Administration during his two terms are not likely to recur, should he be elected again. He has, they say, learned so much during his tour abroad, both about politics and men, that he would certainly not be again betrayed into the indiscretions the remembrance of which constitutes with a large body of voters such a formidable objection to his candidacy. We have always thought it very unlikely that a man of peculiarly set character and by no means wanting in self-confidence, such as he is, should be convinced at the ripe age of fifty-seven by two years of foreign travel that he had acted under wrong motives and influences during his Presidency. His journey abroad was that of a sight-seer with extraordinary advantages. He stayed a few days or weeks in each place, looking at the curiosities and dining with the most distinguished people, all of whom treated him as a hero and poured out flattery on him without stint. That he bore himself under all this with exceeding modesty and good taste every one admits. But his tour was not a period of study and reflection, or deep observation of any kind. He was altogether rather less than three months in England and Scotland, and the time was passed in incessant fêting. In the remainder of the two years he accomplished a journey round the world, which took in Egypt, India, China, and Japan, so that it was on the face of things very unlikely that he saw or heard anything on his way calculated even to raise doubts in his mind as to whether his mode of administering the United States Government had been in any degree objectionable. He was enjoying the leisure and freedom from care, and the congratulations and compliments, to which the part he had played in the war fairly entitled him; but he was not studying institutions or comparing experiences with foreign statesmen. A full account of his trip has been published in a large and handsome volume by a sort of historiographer who accompanied him throughout, and we have looked through it in vain for any account of an attempt on General Grant's part to go below the surface of things or lay aside the character of a much-fêted guest in any country which he visited. There is no trace of his having given any time or attention whatever to an examination of the mechanism or principles of administration anywhere. From first to last he amused himself, as he had a good right to do, and almost resented any attempt on the part of his hosts to instruct him, or to show him anything on the ground that it was "in his line."

The book does, however, contain one feature which gives it a good deal of interest just now as a "campaign document," in the shape of reports of conversations between General Grant and the author on "questions connected with American politics and history." These reports are the more valuable because it is expressly declared that they were not printed until they had been submitted to General Grant and had obtained the benefit of his revision. Many of them relate to the civil war, and to the character, capacity, and achievements of the various officers who served under and against him, and these are not only interesting and instructive, as the reminiscences of a great commander are apt to be, but are characterized by all the magnanimous good sense, and the sound judgment of military capacity, which contributed so much to his military success by enabling him not only to put good men in responsible places, but to get from them their very best work. Some of his eulogies on his old comrades may sound extravagant, as when he places Sheridan as a soldier in the same category with Napoleon and Frederic; but a general who rates his lieutenants in this way is sure to have the highest order of co-operation always at his command, and to have the love as well as obedience of those who serve under him. In fact, one has only to read General Grant's talk about his fellow-soldiers, those of his own army as well as of those of the enemy's—such as Lee, Jackson, Longstreet, and Johnston—to see plainly enough where the source of his failure in civil administration lay. His strong feeling of *camaraderie* was in the Army displayed always towards a picked body of men, who had either risen into the sphere of his notice and influence by a severe process of selection in active service, or been known to him all through life as schoolfellows at West Point. He ascribes, indeed, his success on several occasions, and notably at Fort Donelson, to his long and thorough acquaintance with the opposing generals in the old army. In trusting and standing by his military subordinates, therefore, he was dealing with a small class whose peculiarities he understood, and with whose motives of action he was familiar from his boyhood. He might, perhaps, have carried the same predisposition into the management of a highly-organized, severely disciplined, and permanent civil service like that of Prussia without doing any mischief, but when brought to bear on the very heterogeneous body who present themselves as candidates for offices, high and low, to an American President, the result could not help being what it was in General Grant's case. The "fire rule," by which no man was to be dismissed or even investigated as long as public opinion assailed him, covered at last a considerable number of very unworthy, not to say disreputable, persons.

We find in his talk about those who served under him in civil life, even at the close of his trip when he was on his way home in the China seas, none of those signs of cleared perception or changed standards on which the Independents are now assured by the promoters of his "boom" that they may confidently count. Upon the question of civil-service reform he stands just where he stood when he nominated Shepherd for the chairmanship of the District of Columbia, and gave Butler the control of the Boston Custom-house and Conkling control of the New York Custom-house.

"Civil-service reform rests entirely with Congress If members and senators will give up claiming patronage, that will be a step gained. But there is an immense amount of human nature in members of Congress, and it is in human nature to seek power and use it, and to help friends. An Executive must consider Congress. A Government machine must run, and an Executive depends on Congress. The members have their rights as well as himself. If he wants to get along with Congress, have the Government go smoothly, and secure wholesome legislation, he must be in sympathy with Congress. It has become the habit of Congressmen to share with the Executive in the responsibility of appointments. It is unjust to say that this habit is necessarily corrupt. It is simply a custom that has grown up, a fact that cannot be ignored. The President very rarely appoints, he merely registers the appointments of members of Congress. In a country as vast as ours the advice of Congressmen as to persons to be appointed is useful, and generally for the best interests of the country. The long continuance of the Republican party in power really assures us a civil-service reform."

. . . . . .

"Notwithstanding all that is said by the newspapers, I am convinced that our civil service, take it all and all throughout the country, is in as high a state of efficiency, and, I think, higher than that of any other nation in the world."

It does not appear that while at home or abroad he ever made any examination of the civil service of any other country; so that this opinion is about as valuable as that of the late Senator Morton, who said ours was the "best civil service on this planet."

"I can see," he adds, "where our service can be amended. But every day the Republican party remains in power amends it. As to

competitive examinations, they are of questionable utility. One of the most brilliant candidates before the Civil-Service Board was in jail very soon after his appointment, for robbery. The way to achieve the best civil service is, first, to influence Congressmen and induce them to refrain from pressure upon the Executive; then pass laws giving each office a special tenure; then keep the Republican party in power until the process of education is complete. As it is now, the only danger I see to civil-service reform is in the triumph of the Democratic party."

The suggestion here that persons who pass well in examinations are likely to become robbers is very rich. There is, of course, a good deal of justice in the remark about Congressmen, but it is quite evident he does not think the President is called upon to take any pains to help in bringing Congress over to this desirable state of mind. Of Mr. Conkling he says he is "fond of him, and holds his great character and genius in profound respect." "No man is more trustworthy than Logan," most of whose protégés in office while he was in the Senate went to the penitentiary or fled to avoid prosecution.* Mr. Fish he places with the three other great statesmen of his age, Cavour, Gortchakoff, and Bismarck, which would be a very high compliment, and, even if extravagant, like his rating of Sheridan, not wholly unwarranted, if he did not soon after describe Butler as not only a man of great ability, but "a patriotic man, and a man of *courage, honor, and sincere convictions.*"

In fact, of all the men he had to deal with in civil life, and to use for the high and low offices of state, the only one to whom he expresses a decided antipathy is Mr. Bristow, the Secretary of the Treasury who broke up the Whiskey Ring, brought some of its chief members to justice, and traced its ramifications to General Grant's confidential aide-de-camp, General Babcock. He does not make use of a single expression in these authorized conversations to show that he felt he had, during his eight years, made any mistake in the men he trusted, except in the case of Mr. Bristow, or that there had been anything wrong in his methods or policy. His allusions to Mr. Curtis and other reformers are either sneering or positively condemnatory. He insinuates in more than one place that these men are insincere, and once characterizes all persons belonging to what the Boston Simmons calls jeeringly the "better element" as "dangerous."

Now, whatever we may think of these views of public life and public men as those of a mere observer who has unusual opportunities of observing closely, we have absolute knowledge, in his case, of what they lead to in practice. We know what kind of machine a civil service is which is carried on under their influence, and which is handed over without let or hindrance to the control of members of Congress. We know what motives influence members of Congress in filling places in the public service with their protégés. We know what is the practical working of a standard which makes Butler "a man of courage, honor, and sincere convictions," which treats Belknap's disgraceful retirement from office as a cause of "regret"; which leaves Shepherd still fit for one high office after he has been legislated out of another for corruption; which ascribes to Mr. Conkling "great character and genius"; which sets Logan down as a good dispenser of patronage; which treats all who struggle to put public life on a higher plane, and raise the character and capacity of those who serve the state, and improve the conditions under which they serve it, as hypocritical Jeremiahs. Nor need we look for any strenuous effort towards reform from a President whose chief remedy for administrative abuses is to keep his own party in power indefinitely.

REMEDIES FOR IRISH DISTRESS.

THE recurrence of another famine in Ireland after an interval of over thirty years, and when the population has been diminished nearly one-half and the outlet for its products has been greatly increased by improved means of communication, is causing a wider interest in the question of Irish poverty than was probably ever displayed before. The remedy which naturally first suggests itself to the American mind is emigration to this country. There is in this country a vast body of Irish who have by emigration permanently improved their own condition, besides adding to the resources of the United States. Let those who are suffering at home, and find that their own soil does not afford them a subsistence, come out here, it is said, where there is still room for ten times the population of Ireland to live in comfort, and the Irish problem, now two centuries old, will be completely solved. There are two answers to this. One is that no country in the world has tried emigration as a remedy for poverty and over-population so thoroughly as Ireland. During the eighteenth century there was a steady drain of enterprising young men into the French military service so great that the archives of the French War Department show that between 1689 and the French Revolution 200,000 Irishmen perished on French battle-fields—an enormous contingent of the bone and sinew of the people, considering that in Swift's day the race from which these recruits were drawn did not number over 800,000. Since the beginning of this century there has been a steady and, down to 1860, growing tide of Irish emigration to England and this country. There were in the United States at the last census close on 2,000,000 persons of Irish birth. The emigration from Ireland to all parts of the world between the years 1851 and 1878 was 2,500,000, or nearly one-third of the population of 1847.

In the second place, it is useless to talk of emigration as a means of effecting a radical change in the condition of the Irish population who remain at home, and it is with this that both philanthropy and legislation have to occupy themselves. About the fortunes of those who leave Ireland there is and need be no concern. In fact, we may safely go further than this, and say that the emigration of the last fifty years has been positively detrimental to the Irish in Ireland. Every community owes a large part of its progress and prosperity to the presence and activity of its most industrious, pushing, and energetic members, and these are the ones which every community in each generation loses by emigration. It is these that Ireland has been losing since 1851. Their departure, so far from helping to raise the standard of living among those who remain behind, either leaves it unaffected, or tends to lower it, and their places are apt to be filled rapidly by a less bold and enterprising breed. At this moment it would appear that in spite of all the emigration the standard of living among those who have remained at home has not been materially raised, and they are still dependent on the success of each crop for protection against absolute famine.

The remedy of emigration having proved unavailing, the question of a change in the tenure of the land by which the whole people may be said to live, has assumed greater interest and importance than ever. The *grande culture* does not grow up in Ireland; large farms are rare and do not increase in number. The *petite culture* is the rule—the great bulk of Irish farms are under thirty acres—but it does not succeed. Agriculture in nearly every branch is still in a very poor condition. Thirty years ago, after the last famine, it was thought that the burdened condition of a large number of the estates, a legacy of the fast living of the eighteenth century, preventing the landlords from making improvements and forcing them to exact high rents, was the chief cause of Irish poverty. The Encumbered Estates Court was therefore established, in which any estate could be sold, in spite of settlements, on the petition either of the owner or his creditors, and in parcels to suit purchasers. A very large quantity of land—one-fourth of the island, it is said—has been thrown into the market in this way, and it was hoped that it would be purchased to a considerable extent either by tenant-farmers or by capitalists who could afford to improve their property and deal liberally with their tenants. These expectations have likewise been disappointed. The purchasers have been mostly sharp attorneys, money-lenders, or small shop-keepers in search of a good investment, and

* We may as well give the exact language of the Stalwart Chicago *Tribune*, which said of Logan, at the time of his last election to the Senate, a year ago: "He was opposed to all reforms in government; he was the embodiment of the worst phase of machine politics, and helped to bring scandal and reproach upon Grant's Administration; a majority of his appointments turned out to be corrupt and faithless; a number were indicted, some fled the country, others escaped through flaws in the law, many passed under a cloud, and some, who are out on bail, have yet to be tried"

ready for any amount of rack-renting that would bring them in a high rate of interest, but without a particle of the feudal interest in the inhabitants of the property which the old class of landlords, in spite of their extravagance and thriftlessness, could hardly help taking to a greater or less degree.

This having failed, Mr. Gladstone's Land Tenure Act was tried. This secured the tenant compensation under certain conditions for his improvements in case of arbitrary eviction; but it did not give him security against eviction, or against the raising of his rent. It provided that when estates were sold by the Encumbered Estates Court a preference should be given to the tenants if they were ready to buy, but only if they were *all* ready to buy, and were ready to give as much for the whole estate as any outsider, a contingency which, of course, rarely happened. So that in point of fact the condition of the Irish tenant-farmers, though better than it used to be, has not been radically improved by any recent legislation. There are at this moment 500,000 of them, representing probably 3,000,000 of population, who hold as tenants at will, and they are not, as in England, the tenants of landlords to whom they are bound by ties of blood, religion, and old association, but for the most part of landlords from whom they are separated by the most serious differences by which a community can be divided. Public sentiment, both in England and Ireland, therefore seems to be coming rapidly to the conclusion that some strong effort, and on a great scale, must now be made to increase gradually the number of peasant proprietors, and see whether the "magic of property" will not produce the extraordinary effect on the small farmer in Ireland which it has produced on him in France and Belgium and the Channel Islands. It is said of the French and Belgian small farmer that he is not scientific or neat, and does not produce as much per acre as the large farmer in England; but it is not said, and it cannot be said, that he is unhappy or discontented or improvident, or is ever threatened with famine.

There are two ways of bringing about this result. Mr. Parnell has made himself the advocate of one, which is by rousing a furious, vindictive, and communistic spirit among the tenants and treating the landlords as public enemies, to frighten Parliament into buying the latter out wholesale and handing the land over to the tenants on easy terms, in fee simple, with a Government lien on the land for the amount of the purchase money. There is to this, however, the objection that any change in the ownership of landed property effected through the rousing of fierce anti-social passions and class hatreds would inevitably give a severe blow to the security of all property, and cause capital to avoid a country on which such a curse had descended; that, moreover, when the Government became at one stroke everybody's landlord it would be impossible for it to avoid incurring the animosity under which the landlords were expropriated, and at the same time it could not claim for its rights the traditional sanctity which surrounds those of private owners. Combinations to resist payment of its claims would in troublous times become a favorite political enterprise, and if it asserted them by force it would have land on its hands which nobody would occupy, and for which, like Cromwell, it would have to import tenants from England or Scotland.

Mr. Bright, in a recent speech, supported a wiser and more enlightened scheme, the working of which would be gradual, which would assail no rights of property, and owe neither its inception nor success to class hatred. It consists, in brief, of the establishment of a Government Commission armed with powers and funds to buy such estates as come into the market, either through the will or misfortunes of their owners, and resell them on easy terms to the occupying tenants. This would make the number of Government debtors at any one time or place comparatively small, and the work of collecting its dues comparatively easy. The plan has been tried to a limited extent with great success by the Commission which was charged with the disposition of the Irish Church temporalities. They sold land largely to occupying tenants, and the default in the payment of their dues, even during this year of distress, has only amounted to about three and a half per cent.

There is no country in Europe to-day in which a greater responsibility is incurred than in Ireland by the man who advocates or instigates revolutionary or violent modes of settling social or political problems. Irishmen in Ireland have been educated by the atrocious circumstances of their history into a fatal distrust of the law, and into the disposition to turbulence which long distrust of the law always generates. The experience of Pennsylvania in the matter of the Mollie Maguires furnishes a fair illustration of the baleful tendency to engage in anti-social organizations which the average Irish peasant carries with him everywhere. To attempt to use this tendency for purposes of either political or social reform is absurd as well as detestable.

SOME OF THE REASONS WHY SO FEW STUDENTS ATTEND THE AGRICULTURAL SCHOOLS.

ATTENTION has often been called to the small results obtained at the agricultural colleges founded under the Act of Congress of 1862; but, in so far as we have noticed, little heed has been given to the causes why so few young men devote themselves to agricultural study. There are, in fact, many reasons why the farmers make so little use of the schools of agriculture, some of which apply particularly to one or another locality or latitude, though most of them are common to all places where land is cultivated. It is not from any lack in the community of opinions or of convictions as to the methods to be pursued in teaching it, that the diffusion of agricultural knowledge is so slow. Indeed, it is a noteworthy fact that there are few subjects about which so many men are ready and anxious to give advice as upon the methods by which agriculture should be taught. The interest evinced in the matter by persons of the most varied callings and degrees of culture would be cause for great encouragement to the faculty of an agricultural school if there were any experience to show that the spirit of work lay behind it, or indeed that it amounted to anything more than empty words. It is plainly evident that much of the current advice to teachers cannot be spoken of as founded upon abundant knowledge. Not a little of it seems to be based upon that vague longing for country life which is apt to come home at times to most residents of towns and cities here in America, as it could hardly fail to come to people of English blood so recently descended, as many of us are, from cultivators of the land.

But, whatever may be thought of it in other respects, there can be little doubt that this attitude of advice stands in the way of action. A school needs students first of all. If good students are sent to it the chances are that it will do them good service. Advice and criticism of its methods may come later; but material, and good material, to work upon is a prime necessity of the case. A school, like any other organism, grows by what it feeds on. It is a good old agricultural maxim that "silken purse cannot be made from sow's ear." In one word, it may be said that the best way to study agriculture is to study it. It is a natural inference that the intelligent parent will choose for his son the place of study which has the best reputation and the soundest traditions.

Foremost of all, perhaps, among the influences adverse to the agricultural school is the widespread conviction that farming is a business that can only be learned by long-continued labor at the farm, and that any interruption of such labor is likely to spoil the lad. There is a constant drain of active and vigorous young men from the farms toward the cities, and common experience teaches that while the boys who are kept at work at home sometimes become farmers, those who are permitted to leave the homestead are apt to be lost to agriculture. Hence the not unnatural fear that systematic study at an agricultural school will but lead the young man to adopt some other calling and carry him no one knows whither. The fear that the boy may be diverted from the farm is curiously complicated with a spirit of self-conceit and narrowness which makes the parent doubt whether his son would really be taught much of anything useful if he were sent to the agricultural school. The very fact that he possesses so much natural shrewdness and sagacity and good judgment, in respect to the affairs of daily life, tends to give the American farmer an unreasonable confidence in his own opinion. It makes him over-confident upon subjects which are quite beyond his scope, and indifferent to or even disdainful of scientific knowledge. He sees so many men of his own class rise to prominence, or the semblance of it, with no other education than that of the newspaper or the printing-house, that he is apt to doubt the merit of systematic training.

But besides the doubt whether the lad would learn, and the fear that he may never return to the farm, there is the well-nigh universal difficulty of want of pecuniary means. Our yeomanry are for the most part

too poor to provide an agricultural education for their children. They can neither afford to spare hands that are useful on the farm, nor have they the ready money wherewith to provide board and clothing for the college student. The plan adopted at several agricultural schools, of paying the students for work done upon the college farm, is a clumsy and expensive attempt to meet this patent difficulty. It is hard to say what would be the best method of encouraging worthy lads, from the poorest of the sandy and hilly districts of New England, for example, to study agriculture. Provision has already been made at several of the schools for the remission of tuition-fees in such cases, but the difficulty with respect to food, fuel, books, and clothing remains, and has never been satisfactorily met. Perhaps a somewhat liberal system of scholarships, —or, rather, of direct gifts of money—to be allotted in the final years of schooling to students who have proved themselves worthy of such aid by their success in the first year's studies, would be a help. There are happily not a few country places where a really able lad of good character could borrow money enough to support him for a year at school, if there were a fair prospect that he could gain enough in the years immediately succeeding not only to sustain himself but to repay a part at least of the debt. There can be no question that situations could be found after graduation for young men thus educated and not afraid of farm-work. The only trouble is that these situations would generally be less remunerative than those obtainable by men of similar age who have been equally well educated in other departments—that is to say, for a given amount of time spent in study, and of pecuniary sacrifice made for the sake of the study, more money can usually be gained in the years immediately succeeding graduation by the students of other branches than agriculture. For the agricultural graduate, moreover, there is little chance for prizes, whether of position or of emolument, such as may be hoped for in most professions.

But while in the older States many of the farmers are too poor to think of giving their sons an agricultural education, and lack of capital deters from all agricultural enterprise, there are some sections of the country where the farmers are too well off to care for any man's teachings. There is small hope of getting many graduates in agricultural science from those Western districts where climate, fertility, cheap land, and easy tillage conspire to make farming a mere matter of the management of gang-ploughs, headers, and steam threshing-machines. The mere fact of the existence of cheap land at the West is of itself a well-nigh fatal impediment to the agricultural schools. To many minds it seems little short of absurd that a strong, healthy lad should give time to study, or that he should even remain in the older States, when a few years of faithful labor at the frontier will ensure to him independence and a thorough knowledge of the art of farming as practised in his place of settlement. It is clear, however, that there cannot always be open lands at the West, to be had almost for the trouble of taking; and that, consequently, there must soon come a time when the motive for emigrating from the East will be much feebler than it has been hitherto. There can be no doubt that the agricultural schools will profit when the tide of emigration slackens and the country begins to settle down upon a more natural basis of living than the one to which we are now accustomed. Meanwhile, however, it would seem to be plain that there must be somewhere, between the Californian grain-lands and the New Hampshire pastures, a class of farmers so situated that they can appreciate agricultural science, and can afford to have their sons study it. It is precisely this conviction which inspires and at the same time exasperates the agricultural teacher. He knows that some day this class of students must frequent the agricultural schools, and his hopes and fears alternate as he speculates whether the day will be reached during his own lifetime. Assuredly it will be a great gain for the Republic when the spirit of these well-to-do but easy-going and too quiescent farmers is stirred within them, and they are impelled to take action in their own behalf.

While the bone and sinew of agricultural schools must always come from the farming population proper, there is another class of men to which these schools appeal, and from which they should certainly derive a fair share of support. There is in this country an incessant though slow and feeble reversion from city to country life. A few capitalists retire from business to farms, and a good many sons of capitalists are established upon farms by their parents. These young men ought, of course, to obtain the best agricultural education within their reach, and many of them are conscious that it is their duty so to do. But they commonly labor under the disadvantage that they are unfamiliar with rural affairs. They are consequently compelled to spend a comparatively long apprenticeship upon farms, in order to become acquainted with a mass of practical details, such as are familiar to the country boy almost from his birth, but which cannot well be learned at the schools. Devotion such as this, at the beginning of adult life, to the merely practical side of the business not only brings that side into undue prominence, but is apt to fix the man in rather narrow ruts; and it is commonly found indeed, when these terms of pupilage have expired, that a good many traders of horses and of fancy cattle have been produced, but comparatively few farmers, in the proper sense of the word.

No doubt much good has been done everywhere throughout the country by these city-bred farmers through the introduction of improved stock and new appliances, and by the employment of better methods of dairying, or the like, than were known to their neighborhoods before. But in all probability one might search in vain among them for examples of the best possible farming which their several localities would permit. If the best of these men had but given zealously during two or three years their winters to the agricultural school and their summers to the apprenticeship at the farm, they would have gained an ampler store of the knowledge which is power, and their aims and works would have been correspondingly high and important. Example is a force of paramount importance in agriculture, and it is but natural to look to the farmers in easy circumstances for model practices. As Sir Humphry Davy said long ago: "It is from the higher classes of the community, from those who are fitted by their education to form enlightened plans, and by their fortunes to carry such plans into execution—it is from these that the principles of improvement must flow to the laboring classes."

Correspondence.

THE AGRICULTURAL DEPARTMENT OF BOSTON UNIVERSITY.

To the Editor of The Nation:

Sir: It affords me pleasure to relieve your uncertainty, and to assure you that the Massachusetts Agricultural College has been and is open to women who are matriculates in Boston University. Our commonwealth is not so far behind your own Empire State as you seem to suggest.

With high respect, yours cordially,

Wm. F. Warren.

President's Office, Boston University,
Boston, February 10, 1880.

To the Editor of The Nation:

Sir: Why be so severe on Boston University for including the Agricultural College in its departments? Harvard for several years included among its advertised "departments" the Episcopal Theological School, which had no more to do with it than has the Agricultural College with Boston University; and the list of students in the Episcopal Theological School still figures in the Harvard catalogue. All colleges like to glorify themselves by numbers.

T. S.

Boston, February 8, 1880.

HARVARD DIVINITY SCHOOL.

To the Editor of The Nation:

Sir: In the letter of your correspondent "X.," published in your issue of the 12th inst., I find several statements referring to the Harvard Divinity School, some of which call for explanation and some for denial. The confident tone of the letter indicates the familiarity of the writer with the details of the life of the Divinity School, hence are the mistakes more dangerous. I do not wish to discuss the question of the possibility of "unsectarian" theological instruction; that has been done by abler pens than mine; I wish only to correct the very misleading statements of your correspondent.

The letter opens with "a most emphatic denial" of the assertion that the school "stands for free enquiry in the field of theology." We are told "neither in the school nor out of it is this felt to be the fact. This freedom is not felt by the students, either in the choice of studies or in the pursuit of those selected for them." The two statements in the last sentence must be answered separately. First, with regard to freedom in the choice of studies. For lack of means the courses in the school are not sufficiently numerous to admit of choice, there are only enough to occupy a man's time; the proposed fund of $130,000, which the *Nation* has felt it to be its duty so persistently to oppose, is designed to remove, amongst others, this very difficulty. As soon as the funds permit more courses of

study, choice will become possible and will be permitted. But besides this, the assertion of your correspondent is not strictly accurate; several students have been permitted to substitute other Old Testament studies for the Hebrew language, on account of physical inability to pursue it.

Secondly, with regard to the statement that, in the pursuit of those studies selected for them, the students do not feel free, any one who is at all familiar with the school will instantly reply that if they do not, it is entirely their own fault. But they certainly do; *absolute freedom of enquiry and speech* is everywhere permitted. We have men of all shades of belief, from the most radical to orthodox, and in the lecture-room, at conference and debate, at the regular religious services, each one speaks with perfect freedom. At every conference the most varying opinions are freely pronounced and discussed. This double assertion of your correspondent is, therefore, incorrect.

Again: we are told that "to train young men for any church is to train them for no church." This is one of those peculiar sentences that sound axiomatic but mean nothing; it is, perhaps, not necessary in this case to point out its absurdity.

Again: "Instead of a fair and candid study of the book (the Old Testament) as illustrated in the works of the Dutch school, a system of repression was and may now be in vogue." Justice to Prof. Young demands a denial of this statement also. Although Prof. Young himself holds what are considered conservative views—views not accepted, perhaps, by a majority of the students—he invariably presents the opinions of the Leyden school, stating at the same time his reasons for dissenting from them. I have heard him say again and again: "I have given you the reasons and the authorities for my own views; these are the views of Kuenen and Oort; it is for you to consider both sides and decide for yourselves." Thus your correspondent is again mistaken.

The next statement is a most remarkable one: "As to who or what Jesus was or is, nobody in the school seems to have any idea." A more unjustifiable or ridiculous statement would be difficult to make. Prof. Ezra Abbot, to whose department the question mostly belongs, has very definite views on the subject, and takes every opportunity of expressing them to the students. I have heard him express himself freely at least fifty times. Prof. Everett, in the course of lectures on "Systematic Theology" which he is delivering to the Senior Class, has not yet reached the subject, but will certainly not hesitate to express very definite views when the time comes. It is, moreover, very easy to find his position from his published sermons on the subject. As before intimated, the students express their own views on this question with complete freedom. The rash positive statement of "X." is, therefore, utterly incomprehensible to me.

But your correspondent reserves his most tremendous assertion till the last. I must be excused for quoting it entire: "At present the school uses the scholarships as a means of repressing the free thought and expression of the students. (The writer does not modify this statement.) Students who go to Harvard with the idea that there are scholarships and freedom soon find out their mistake, and, to the detriment of their manhood, keep quiet."

Before characterizing these statements let us examine them. The facts in the case are that, with one exception, the scholarships are given absolutely *without conditions*. (That is, only the very moderate requirement is made—to which even "X." probably would not object—that the recipients shall be of good moral character, etc.) The exception is the Williams Fund, which specifies that its incumbents must be studying for the Protestant Christian ministry. There are no sectarian conditions. This fund is administered by a society having no connection with the University. Now, sir, the assertion that the school "uses the scholarships as a means of repressing" freedom of thought and enquiry is absolutely false. I have been connected with the school for four years, and have known intimately men of all beliefs who have received aid (I may state that I am not a recipient of any scholarship, and cannot, therefore, be charged with coming to my own rescue), and I have never heard the slightest suggestion that would bear out your correspondent's statement. I know that the Faculty makes aid in no way dependent on belief. The wholesale insult to the students, in the last sentence quoted, is contemptible. Strong language is needed with regard to these assertions in such widely-circulating columns. If they be not made from gross ignorance they are simply falsehoods.

I feel sure, sir, that you will wish to give to this reply the same publicity as to the attack of "X." I regret to have taken so much of your valuable space. When, however, such crude and exaggerated assertions are publicly made with such an air of information, the reputation of the Divinity School, the honor of the professors, and the manliness of the students all unite in calling for a prompt and vigorous denial.

A Member of the Divinity School.

Cambridge, Mass., February 16, 1880.

CARE FOR RAILROAD EMPLOYEES.

To the Editor of The Nation:

Sir: Enclosed I send you a communication I have recently received from a gentleman in immediate charge of a Western railroad. I do not know how I can bring the matter more directly to the attention of those who alone can give effect to the plan suggested—I mean the Eastern owners of these properties—than through your columns. That in itself the plan is not only perfectly practicable, but one dictated by the soundest considerations of pecuniary interest, I have no doubt. The employees of the Western railroads should be made at any reasonable cost the close allies of the owners. That by a little foresight and even less money outlay they could be so made I know perfectly well. As a rule, however, the absentee managements of the Western roads are on these points singularly short-sighted, not to say selfish. I have only to add that this letter, though written without a thought of publication (for which reason I withhold the writer's name), comes from one of the most capable and business-like, as well as liberal-minded, of the men it has been my fortune to meet in railroad circles. I very strongly commend it to the thoughtful consideration of such of your readers as may also be directors of railroad properties in the West.—I am, etc.,

Charles F. Adams, Jr.

Boston, Feb. 2, 1880.

January 22, 1880.

My Dear Sir: I have thought that possibly you might be interested in a subject which has frequently impressed itself upon me in the last ten years, the importance of which, however, has become more apparent to me in the last year, during which I have been brought nearer to the matter.

It will pay the owners of Western railroads to give more attention to the personal welfare of those of their employees whose vocation lies in the lower walks of the profession—their machinists, engineers, firemen, conductors, brakemen, telegraph operators, and clerks in the various offices; the train-service employees perhaps more than others.

There is no business or profession where the interests of the employer and employed should be more closely identified. There is none where this is less the case than is to be found on most of our Western roads. The life is one full of continued excitements. Sudden and repeated calls are made for great efforts. The strain on the nervous system is severe and excessive. Even under the best circumstances the wear and tear will use up the most vigorous man in a shorter time than in any other business. We need for the work men sound in mind and body, and we ought to give them every reasonable opportunity and advantage for leading such a life as will keep them in sound condition.

Where railroads are directly under the control and supervision of the owner or owners this is understood, and to some extent, I believe, action has been taken. Out West, where we have the Grange element to contend with, and a middle class who rise to political power through the injustice and prejudices of the Grange element, we especially need the moral support and political help of our men in all contests against corporations. We do not get this support by merely paying the daily wages earned.

Apart from these considerations there are reasons founded on humanity and morality which it is perhaps unwise to advance, as the only arguments which in this day seem to have any force are those founded on the doctrine that "it will pay." Speaking, therefore, from that standpoint alone, I venture to say that if the Boston owners of railroads in the West would give some attention to advancing the personal welfare of those of their employees of the laboring class it would pay them quickly and handsomely.

You may say that that is a question which lies chiefly with the local management. I answer that is true only in theory; for the course of a management is shaped by the spirit which animates and proceeds from the board of owners, and where the success of a management is measured by large immediate net earnings alone, very little time or thought will be given to the considerations I have suggested.

You may ask what I mean by "advancing the personal welfare of employees." I mean a consideration of the welfare of the men *beyond their working hours and outside of their duties for which they are paid.*

I mean the adoption of systems for helping the men in their private lives, *all of which can be accomplished at a trifling outlay.*

In order to make myself clear I shall speak somewhat in detail of one system against which more can be said than against other systems relating to questions of promotion, life-insurance, care of wounded and sick, providing rooms for rest and reading at division-stations, etc., etc. The system of which I would speak is one for assisting employees in securing homes. Place aside a fund to be loaned at four per cent. per annum. Loans to be made only for the purpose of erecting homes. Only to men who have done three or more years of meritorious service and from the various departments of the service. No loan to exceed $1,000, and no time to be in excess of five years. The borrower must have saved one-third of the cost of the homestead, so that the loan, secured by first mortgage on the homestead, shall not be in excess of two-thirds of its actual cost. The loan to be made solely as a reward for past service, the borrower to be under no obligation for future service, but simply bound to repay the money in accordance with the terms of the mortgage. A fund of $100,000 in ten years would enable three hundred or more men to secure homes; for as fast as the principal was repaid in instalments by the first batch of borrowers it could be loaned to first applicants in a second batch, and so on. This is no expenditure of money, but is simply transferring a certain sum of, say, $100,000 from the "call loan" fund at two or three per cent. to a "Special Employee Loan" fund at four per cent.

As I have said before, objections can be made against such a plan, as indeed objections can be and generally are raised against any innovation of established customs; but in a small way, and to retain and interest men whom I wanted to keep, I have personally made several such loans in the past three years, and now have about $10,000 loaned out to thirteen men on the terms and under the conditions briefly outlined above, and can speak with certainty of the good which has arisen to both sides, and I have felt but one drawback—that I have not been able to lend to a hundred others.

A railroad man who makes suggestions of this character from the Western end of the line renders himself liable to have his ideas ranked as "utopian," "visionary," etc. I have, however, been through the mill myself, and believe that a little attention to these matters would give our owners a more zealous and earnest service, would foster and encourage a high *esprit de corps*, would breed a strong attachment to the line and its owner, would remove the possibility of strikes and riots, and would lead to the securing of a better grade of men. All this means increased efficiency and increased net earnings; and it can be secured at small cost and with little trouble to the local management.

I may never be able to get any one who has the power to put into execution such plans to agree with me as to the desirability of doing so; but, like the ambassador in James's 'De Lunatico,' I shall continue to believe that I am not the crazy fellow because the majority differ with me. If you would interest yourself in the matter, you could give a strong helping hand. Yours truly, * * *

C. F. Adams, Jr., Esq., Boston.

THE INDEPENDENT VOTER.

To the Editor of The Nation:

Sir: There are hosts of people outside of New York watching the movements and progress of the Independent Republicans, or "Scratchers," with interest and hope; for, to men who think on political subjects without partisan bias, it has become painfully certain that the country has nothing to hope from either of the great political parties, and much to fear from both of them, as they are now organized and led. Until some change comes we must look for safety in the future to the "independent voter." To persons to whom a party name is dear this will seem extravagant language. Let us see if it is justified by facts.

There are before the nation many important questions in which its future well-being is deeply involved, and which demand immediate solution, and yet are neglected and avoided by both parties—or, to say the least, neither party will commit itself, continually and unreservedly, in power and out of power, to either side of them. Perhaps the most ominous fact about this state of things is that it is perfectly understood and admitted that neither statesmanship nor patriotism has anything to do with it; that it is simply the result of a struggle for place and power, promoted by party leaders, who thus use the nation for the advancement of selfish ends.

That we may not seem to deal in loose and general accusations, let us specify two or three of these questions:

1. The currency. Nearly all men who are practically acquainted with the requirements of business, or who have studied the subject in the light of history, and at the same time are neither speculators nor office-seekers nor partisans, concur in the opinion that the future safety of the country requires that its currency should be placed at once beyond the danger of being swept, by a change of the balance of trade or other cause, from the solid basis where alone, as we are taught by the experience of all the past and the consent of all mercantile nations in the present, it can safely rest. And yet neither party will commit itself to the attainment of this end.

2. Civil-service reform. All parties out of power insist upon its vital importance and pledge themselves to it. In 1876 the Republicans made it the most prominent article of their creed. In fact, in view of the scandals of the preceding four years, had they failed to do so, there was little hope that the people would trust them again with the power they had abused. All honor to President Hayes and his Administration for what has been done towards the redemption of the pledge then given! But how far the party is true to it may be seen in the fact that at this moment its most prominent candidate for the Presidential nomination is the man whose last Administration has the unenviable distinction of furnishing three Cabinet officers generally believed to be guilty of peculation in office, and of being, on the whole, the most corrupt the country ever saw; and, further, that two out of the three next after General Grant the most prominent have opposed the Administration of President Hayes in every attempt at reform, if it interfered with patronage. As for the Democratic party, it is enough to say that fifty years ago, under its great leaders, it utterly debauched the civil service of the country, till that time pure, and that, out of power or in power, it has never since done anything to repair the mischief then done.

3. Counting the votes for President. In 1876 we were brought dangerously near to civil war by the disagreement of the two parties as to the manner in which the result of the Presidential election was to be ascertained. The appointment of the Electoral Commission saved us for that time. No one supposes that experiment can be repeated. We are rapidly approaching again the same danger, and that under circumstances which greatly intensify it. Thoughtful men are oppressed by the prospect, and earnestly desire that our lawgivers should take measures for our safety before the excitement growing out of a pending election or of partially-ascertained results shall render agreement upon any plan impossible. But nothing is done. Each party seems afraid to propose, still more to agree to, anything, lest in its application it shall tend to defeat party ends.

These specifications might be extended, but it is needless. It is often said that this devotion to party and selfish ends, although to be regretted, is not dangerous to the country—that it has existed from the foundation of the Government, and yet at the end of a hundred years the nation is safe. The answer is obvious. In the past, parties divided upon great questions of statesmanship and public policy, and fidelity to one side or the other of these questions was the party test. The success of a party was the success of a principle. It is not so now, and hence our danger. Upon what one important question of national policy are the parties divided by lines so distinct that we can say this is a Democratic or that a Republican measure? Each party devotes itself to showing how dangerous would be the ascendency of the other, and to efforts to get the other "on record" in some way which will show its dangerous tendencies. This state of things cannot long continue. The great mass of voters, while vitally interested in having a good government, have no interest in the success of either party, as parties are now constituted. They are neither office holders, office seekers, nor contractors. To many, doubtless—to most, perhaps—the party name will continue to be all-sufficient for some time to come. But not so with men who have the capacity and will take the trouble to think.

How to get and keep a good government—how to avoid the tyranny of rulers, civil and ecclesiastical, on the one hand, and the tyranny of the mob on the other—has been the "conflict of the ages." Only the careful student of history knows what the conflict has cost. Our Government is far from perfect, but its attainment has cost those who went before us a great price, and for the present we know nothing better; so its preservation seems to call on us for careful consideration, persistent effort, and self-sacrifice. Those of us who were old enough thirty or more years ago to participate in political affairs remember that no successful opposition to the aggressions of the slave-power could be made so long as we re-

mained in the old party organizations. Now, as then, if we will be useful citizens, we must be content, if circumstances require it, to be come-outers. J. C. D.

CAMBRIDGE, MASS., Feb. 2, 1880.

Notes.

A HISTORY of the Baltimore and Ohio Railroad was published in 1853, and now we have a handsome volume, privately printed (and printed on laid paper at the Chiswick Press, London), a 'Bibliography' of the same company, from 1827 to 1879, compiled by Mr. John W. M. Lee. It embraces, including the publications relating to the branch roads, 644 numbers, most of which are prosaic enough, and attractive only to specialists, statisticians, or the legal profession. But in 1828 we notice "The Railroad, a Characteristic Divertimento for the Piano Forte" (No. 17), and Nos. 28, 307, and 516 are out of the common. Some famous names, like Wm. Wirt, J. P. Kennedy, Reverdy Johnson, and Henry Winter Davis, give a literary, or at least intellectual, flavor to the catalogue; and both as concerning the oldest passenger railroad in the United States, and that with whose prosperity the great foundation of the Johns Hopkins University is so intimately connected, this 'Bibliography' seems to justify the pains spent upon it.——The same may be said of the 'Memorial of Caleb Cushing,' published at the expense of the City of Newburyport, Mass., and for sale by A. Williams & Co., Boston. The tributes of funeral orators, historical societies, of bench and bar, suggest without solving the question why Mr. Cushing was not the first man in Massachusetts during his lifetime; though as regards his early defective oratory there is a significant passage on p. 154, in the memorial of the Essex Bar Association, than which there is nothing more critical in the book. A fine portrait in carbon photography serves as frontispiece.——The second volume of *Le Musée Artistique et Littéraire* (J. W. Bouton), the "annex" of *L'Art*, to use the phrase of the day, contains articles on Cham, Viollet-le-Duc, Hogarth, Poussin, and other masters, and the usual profuse assortment of illustrations in all the branches of art. Some of the American paintings at the Exposition are here reproduced, including Mr. Vedder's 'Cumæan Sibyl,' this time referred to in the text without abuse. The public, by the way, should not lose the present opportunity of viewing this fine work and the 'Young Marsyas' at Mr. Vedder's gallery, No. 39 Union Square.——Mr. Frederick Martin's 'Statesman's Year-book' for 1880 promptly takes its place in the invaluable series to which it belongs, with the customary alterations to date.——We have so recently reviewed Dr. Maudsley's 'Pathology of Mind' that we need say no more of the new edition just published by D. Appleton & Co. than that it is in many respects the best general book on insanity in any language. It is a pity that we have not in this country in that branch of the profession some men of Dr. Maudsley's intellectual calibre. The Messrs. Appleton, by the way, have just removed to their new quarters at Nos. 1, 3, and 5 Bond Street.——Harper & Bros. have in press Dr. Henry M. Dexter's 'Congregationalism of the Last 300 Years,' with its invaluable Bibliographical Appendix.——S. C Griggs & Co., Chicago, will shortly publish 'Preadamites; or, a Demonstration of the Existence of Men before Adam,' by Prof. Alexander Winchell, of the University of Michigan.——A 'History of the Cincinnati Society of ex-Army and Navy Officers' (Cincinnati: Peter G. Thomson) is a handsome pamphlet of two hundred pages. It contains an account of the formation of the society, full reports of its proceedings, and a brief statement of the military history of all its members. It may be as well to state that it has no connection whatsoever with the Society of the Cincinnati formed at the close of the Revolutionary War, and that its name is owing simply to its locality.——The history of the Smithsonian Institution is continued in the thick volume of 'Journals of the Board of Regents, etc.,' and the pamphlet 'Scientific Writings of James Smithson,' edited by Mr. W. J. Rhees, chief clerk of the Institution. As in the former volume of 'Documents,' the indexing is a curiosity. Here is an example, ludicrous in itself, and containing two errors—of fact and of alphabetic arrangement: "Angelo, Michael, personification of 'Thought' by a soldier, 298"; "Thought, personification of, by Thorwaldsen, 298." A medallion portrait and other illustrations accompany Smithson's scientific papers.——Five "Circulars of Information" of the Bureau of Education for 1879 relate to training-schools for nurses and of cookery, proceedings of the National Education Association, etc. The Bureau gives notice of the annual prize of the King of Belgium, which, for the ensuing year, will be awarded "to the best work on the means of improving ports established on low and sandy coasts like those of Belgium." The prize is $5,000. Manuscript or printed works must be sent to the Minister of the Interior at Brussels before January 1, 1881.——Bulletin No. 3 of the U. S. Entomological Commission is Dr. C. V. Riley's Report on the Cotton Worm, pp. 144, with numerous woodcuts and one full-page colored illustration. On pp. 68–74 Dr. Hagen's yeast-fungus remedy is unfavorably criticised.——The Minnesota Historical Society will celebrate the two-hundredth anniversary of the discovery of the Falls of St. Anthony on July 3, 1880, on the University Campus at Minneapolis.——Mr. L. W. Schmidt, who has lately removed to No. 7 Barclay Street, has received the catalogue of the remarkable library of the Comte Octave de Béhague, to be sold at No. 5, Rue Druot, during the fortnight beginning March 8. It embraces nearly 2,000 numbers. The bindings are of great value, more than five hundred having been executed by the late Trautz-Bauzonnet, a complete list of whose mosaic bindings from 1838 to 1878 is appended to the preface to the Catalogue.——Prof. A. Gazier, we learn from *Polybiblion*, has printed the hitherto unpublished letters to the Abbé Grégoire from correspondents whom he had consulted for particulars about the various patois of France (Paris: Pedone-Lauriel).

—Our readers are acquainted with the result of last year's competition for the prizes offered by the proprietors of the *Sanitary Engineer* and others for the best four plans for workingmen's tenements. A similar series of prices, since offered for the best designs for large city schools, has resulted in nearly as active competition. Over one hundred plans were exhibited last week at the Academy of Design. The conditions imposed were hard of fulfilment; and although the verdict of the committee is not published, it may yet be anticipated that no thoroughly satisfactory answer will have been rendered to the problem—how to provide airy and well-lighted rooms for a school of eight hundred children on a city lot of one hundred feet square, enclosed on three sides by four-story buildings. An inspection of the plans shows that no one allows more than about one hundred and thirty cubic feet of air-space for a scholar. We need not say that this is entirely inadequate for a "model" school. The architect is, of course, not to blame for this deficiency under the circumstances. The question of securing sufficient light is a peculiarly difficult one, and has been met with much ingenuity in a variety of ways. There are a number of other points of great interest—as the arrangements for heating and ventilating, the security against fire, the convenience for school work, and the latrines; but the most difficult problem by far is the introduction of sufficient light. The offerers of the prizes will have conferred a great service if they succeed in impressing the public with the disadvantage at which the most intelligent school architects have to work in this city.

—The February *Macmillan* has an account of the Zulu nation and the recent war, taken down from the lips of Cetywayo himself by Captain Poole, R.A., who has charge of the august prisoner. It does not turn out to be a sensation, and we doubt if the enterprising *North American Review*, which some time ago had an article from the pen of Chief Joseph, is at all jealous. As history it contains very little of value, much of it being already well enough known and the remainder rather rambling. The editor also observes with great justice that it is "in some respects one-sided." The Zulus have no idea of chronology, and Cetywayo complicates this difficulty by proving himself, as we judge from sundry interpolated notes, a great liar. Moreover, though the Zulu annals are the reverse of peaceful, they are in the highest degree monotonous, and Chaka, the founder of the nation, seems to have been the only remarkable man it has produced. As a literary curiosity, however, Cetywayo's story has an interest, and suggests the valuable additions to literature and the general information we should now possess if there had been enterprising magazines long enough ago to afford defeated barbarian lions an opportunity of painting the picture themselves. The "commentaries" of Ariovistus or Arminius, say, would make an interesting series of articles.

—The first number of the new series of *Unsere Zeit* contains an article by H. B. Oppenheim on the history of the parties now represented in the German Parliament—groups, for the most part, so vaguely defined as to make the details of German politics extremely confusing to the foreign observer. The present party system Mr. Oppenheim dates from the formation, in the reactionary period following 1848, of the "German Progress" party. Then was formed, he says, for the first time a liberal party, founded not on general principles, but upon the basis of definite historical precedents, and with practically attainable objects. By call-

ing itself a German party it secured the valuable support of those outside of Prussia who hoped for national unity, and inspired its active members with the enthusiasm engendered by an ideal aim. For a series of years, in spite of repeated dissolutions, this party had a strong majority in the lower house, but even before that brilliant move of Bismarck's which ended in Sadowa it had begun to disintegrate. Those who placed German above Prussian interests wished to come to terms with the Government, for, as they thought, progress towards national unity implied, first of all, harmony between king and people in Prussia. This fraction, headed by Twesten, Von Forckenbeck, Von Unruh, and Lasker, proposed accordingly a compromise with the Government; but, as it was not accepted, the other element won the upper hand, and kept it till, after the Austrian war, the former seceded to start the National-Liberal party. The two bodies were now divided not only with reference to the relative importance of local and national interests, but also with respect to the German policy to be followed; the new party advocating immediate federal union with the non-Prussian states, the old, under Waldeck's lead, the gradual absorption of them.

—It was a fortunate time for separation, because the liberal representatives of the annexed states (Hanover, Hesse, etc.), without denying their liberalism, wished to be on livable terms with the Government; for, on the reorganization of the local authorities, their districts would lose much if they were at odds with it. During the conflict period there had been practically but two parties; now there were three, and there were soon to be more, for, the necessity of union among the Conservatives being gone, their party also disintegrated. The seceders, however, under the name of Free Conservatives (in the Imperial Parliament they are called the *Deutsche Reichspartei*), formed and have maintained a separate organization corresponding to the Right Centre of French politics, as the National-Liberals do to the Left Centre; but they have never acquired anything like the relative strength of the latter. Their intention was to form a kind of parliamentary body-guard around Bismarck, and to swallow Tory prejudices so far as he might think desirable. The leader of this fraction was Count Bethusy-Huc, and it was composed chiefly of the high nobility, especially of Silesia, the great province for entailed estates. From this body have been taken most of the appointees to diplomatic positions, and some middle-class members of it have been made *Fach* (that is, business) ministers, as distinguished from the holders of the portfolios for military, judicial, and foreign affairs. The lesser nobility, however—the *Junkerthum*—remained firm in their adherence to the principle of stand-still in church and state. Both branches of the Right are distinguished from the Right in other parliaments by the fact that they are not allied with the Catholic Church, and hence derive no considerable support from the lowest class. After 1866 the Progressists steadily lost ground, and a new party appeared, which was destined to play a highly important part. This was the so-called Centre, or Catholics, who had obtained but fifteen seats in the Prussian election of 1866, but in 1870 had already increased the number to fifty-nine. For the federal election of the same year the Centre, headed by Windthorst, Reichensperger, and Karl von Savigny, issued their platform, advocating state rights and local privileges against centralization, and, "as political, so also ecclesiastical freedom, and the rights of religious bodies against possible encroachments in the way of legislation." In the same House the other parties were represented respectively in the order in which we have named them by 50, 123, 116, and 55 members. The increased power of the Centre is, to a large extent, attributable to the provision of the federal constitution ordaining manhood suffrage. When this was under discussion, says Mr. Oppenheim, "no one imagined the depths of ignorance, prejudice, superstition, and narrow-mindedness which now are, and for a long time to come will be, so potent a force in many parts of Germany." And, aside from the efforts of Poles, Danes, Alsatians, etc., our author deems the strength of particularism to be still very great. It was this, he says, more than anything else which carried the tariff of 1879.

—It is seldom that a musical composition has attracted so much general attention and interest as Berlioz's "Damnation de Faust," which was performed for the first time in English on Saturday last. It is difficult to imagine why this beautiful composition has only of late years been publicly performed in the composer's own country, why it is very seldom heard in Germany, and why it has never been brought before an American or English audience until now. That the doors of the Conservatoire de Musique of Paris have remained obstinately closed to Berlioz is no matter of astonishment. The programmes of its concerts are to this day almost exclusively confined to the works of the classical school. Schubert and Mendelssohn have been admitted, Schumann is but rarely heard, and this is the last concession which the solemn and dignified guardians of the public taste in France who rule at the Paris Conservatory have made to the exigencies of modern art. Berlioz's "Faust" cannot fail to produce an immediate and dazzling effect upon the hearer, whether a professional musician or an advanced amateur, or a concert-goer of merely ordinary cultivation. The best qualities of the composer are present in it. A fulness of beautiful melodies, poetical and original ideas, highly dramatic effects, with a brilliant and bold instrumentation and thoroughly artistic form, combine to produce a work of art of the very highest order. Berlioz was inspired by Gérard de Nerval's translation of Goethe's 'Faust.' He selected the words himself, and treated the text in his own original and thoroughly independent manner. He looked at the poem only from a musical point of view, omitting and adding whenever he thought he could by this means secure the most powerful musical effect. In the very first scene he leads *Faust* over the plains of Hungary, at early morning, for no other purpose than to introduce the Rákóczy march, which he does with striking power. The short first part opening with *Faust's* melancholy greeting to the coming spring, followed by the bright and joyful strains of the village festival, and concluding with the thrilling phrases of the famous Hungarian march, is, as a whole, the best of the work.

—The second part opens with the first scene of Goethe's drama: *Faust* in his room, restless and disgusted with life, and about to put an end to his misery, when he is interrupted by the solemn harmonies of the Easter hymn breaking in upon the quiet night. *Faust's* monologue moves in the gloomy mysterious key of C sharp minor, which at its climax is changed by a daring and unexpected modulation into the bright and comforting key of F major. After a noisy, strikingly realistic scene among the carousing students in Auerbach's cellar, in which the "Song of the Rat," followed by a burlesque requiem, and *Mephistopheles'* "Song of the Flea" are the most characteristic features, the demon carries his victim to the banks of the Elbe, to a field of roses, and there, bedded among the blooming flowers, he and his spirits sing the weary *Faust* into sleep and oblivion. Though one may look in vain for fields of roses on the banks of that cold, inhospitable, and most uninteresting river, Berlioz has made of this scene the gem of the whole work. It is impossible to describe the tender grace of this lovely number. After a soft introduction for baritone solo, which was admirably sung by Mr. Remmertz, the separate parts of the double chorus come in one after the other until, united and sustained by a most poetical orchestral accompaniment, they swell to a magnificent crescendo and then gradually sink to the softest pianissimo, when the weary sleeper is left to his dreams of peace and happiness. In the third part *Faust* and *Margaret* meet. The duet between the two lovers is also of indescribable beauty of melody and harmony. The fourth part contains a number, "Ride to Hell," which, for wild and overpowering orchestral effects, is perhaps unequalled in the whole history of music. The following chorus of the pandemonium, celebrating in wild discordant shrieks *Mephistopheles'* triumph, is even terrible. In magnificent and most comforting contrast to the dissonant shouts of the infernal hosts follow the solemn, majestic harmonies of the heavenly choir, receiving and welcoming *Margaret's* spirit to the abode of everlasting happiness. The performance of this immensely difficult work was excellent in almost every respect. The work of the chorus and the orchestra was admirably done, and no praise of Dr. Damrosch's untiring energy and rare skill and intelligence can be too high.

—Mr. Steele Mackaye's new theatre in Twenty-fourth Street was opened week before last to a full house, with a nondescript play of his own called "Hazel Kirke." The innovations introduced into the theatre itself are numerous. There is above the stage a lofty vault and beneath it a profound abyss, and in this space works up and down an elaborate framework in three stories, each one containing—or capable of containing—a fully set scene. Of course when the curtain is up, and there is a scene before the audience, the other stories are not visible at all, being either above or below the stage, but new scenes can be set in them while the play is going on, and so be ready whenever they are wanted. The object of all this machinery is to avoid long "waits" between the acts, though whether it is worth while to take so much trouble to obviate this objection to the ordinary method may be doubtful. That Mr. Mackaye's device, whatever its value, is a complete success, there can be no question. Everything works smoothly and noiselessly, and the "waits" are as long or as short as it seems advisable to the manager to make them. Another change is that the orchestra, instead of being placed in front of

the foot-lights, is perched up in a small gallery at the centre of the stage-arch. This, in a theatre as small as the Madison Square, is no bad plan, as it gives more room for seats. The floor is given a very steep incline, so that everybody in the house has a clear view of the stage. To all the details of the interior Mr. Mackaye has devoted a great deal of taste and thought, and the result is that the Madison Square Theatre is really worth seeing, if only for the prettiness of the spectacle. The curtain we will not undertake to describe; it was designed by the well-known artist, Mr. Louis C. Tiffany, whose assistance (to judge by the pleasing result) must have been called in for many of the scenic details also. Altogether, Mr. Mackaye is to be congratulated on his venture, but he is not by any means to be congratulated upon "Hazel Kirke." Whether it will run or not we should dislike to undertake to predict, but we trust that it may not, for its success will encourage Mr. Mackaye to believe that he is a dramatist, and this, of course, would encourage him to write other plays. He has a good stock company, and has it in his power to produce well any play that does not require a large stage. The strength of his company is in comedy, though many of his comedians evidently think that their line is tragedy. Miss Ellsler, a new actress to us, is given in "Hazel Kirke" an extremely difficult part, which any young actress might be pardoned for spoiling altogether. To say that she makes it go off at all is almost to call her a genius, and her talent for a certain kind of pathetic acting is very marked. Mr. Dominick Murray has acted Irish melodrama so long that the "brogue" still lingers in his speech, and produces an effect a little inconsistent with the rôle of the fine old English bachelor assigned to him in the play. Mr. Whiffen's *Pittacus Green* is a disappointment, as almost anything must be after Mr. Whiffen's *Sir Joseph Porter*. But the fault lies mainly with the part, which is more often silly and vulgar than it is funny. *Dunstan Kirke*, as the self-willed old farmer (suggested by the obstinate father in "Dora") is well, though somewhat monotonously, played by Mr. Couldock.

—The "Royal Middy," as given at Daly's Theatre, is an American adaptation of the "See-Cadet," recently produced at the Thalia Theatre in the original. The "See-Cadet" is a comic opera of the lightest sort; the libretto being almost bouffe in character, and the music certainly far from profound. The choruses are generally very good, and many of the airs, particularly the mask song and *Don Januario's bolero* in the first act, are pleasing and linger in the memory. But most of the score is not very original, and is music of a sort that might give rise to a dispute as to whether it was or was not commonplace. In the original the libretto and the situations of the plot are the main things. The absurdity is much heightened by the introduction of snatches of French here and there, the contrast with the prevailing German being often very comical. But in the American version all this disappears, and the plot is so altered for propriety's sake that the situations lose half their force. In the original, *Don Lamberto's* relations to *Fanchette*, and the complications arising out of them, are perfectly natural, though they cannot be reconciled with the canons of strict morality. In the American version morality is saved, but reason and probability are both thrown overboard. The singing at Daly's is not by any means what it should be; indeed, very little attempt is made at singing, except in the choruses, which are very well given. The acting is inferior to that at the Thalia some weeks ago. Mr. Alonzo Hatch acts *Don Lamberto* in a way to make the judicious grieve, while Miss Lewis's *Fanchette* is not by any means a success.

—Swiss dredgers last December brought up from the bed of the river Rhone a carved and polished jade *strigil* which at once attracted the attention of savants, from the well-known fact that jade is rarely if ever found in Europe. The London *Times* has had a number of letters upon the subject, among others from Prof. Max Müller, who believes the "scraper" to have been "the property of the first discoverers of Europe." He does not deny that such an announcement is enough to make one feel a "little giddy," but he maintains that any justifiable giddiness experienced in reflecting upon it bears small proportion to the giddiness which should be felt in reflecting upon some of the ascertained facts of philology. If one is to be giddy, his argument is, he should think of the portentous circumstance that the numerals are the same in Sanskrit and in English. Of all the numerals from one to ten, moreover, only *saptá* (seven) and *ashtáu* (eight) have the accent on the second syllable in Sanskrit, and the same is true of ancient and even modern Greek. "Any one who can look without a tremor into the depth thus suddenly opened before our eyes" and perceive that we are using the tools of language which came from Asia at the time of the great migration, ought to be able to keep a steady head, he thinks, in the presence of a theory that jade tools used in the Europe of the Stone Age "were brought from those well-defined areas in Asia where alone jade has been found," leaving America and Oceanica of course out of the question. It is evident that somebody has been ridiculing this theory, since Prof. Max Müller is never so derisive as when deriding the derision he has met with so frequently at the hands of a perverse generation. But it may be pointed out that (we are tempted to add as usual) his argument is in favor of a probability only, and tends to likelihood rather than certainty. In the words of the *Times*, which his letter has thrown into a spasm of awed speculation the like of which would make the fortune of a young editorial writer, he "opens up so many suggestive and profound ideas that the question on the nature and origin of manufactured jade, which was the basis of them all, is in some danger of being buried under the pile of riches of which it has unlocked the doors." The "theory" that jade was once produced in Europe, as it is in Asia, America, and Oceanica, and that it may be rediscovered there, is also, we suggest, one that it demands no excessive giddiness to contemplate; more especially as it is said already to have been found at Potsdam and Schwemsal. It need hardly be added that Prof. Max Müller alludes to these finds as "a few and somewhat apocryphal exceptions," and that it does not occur to him that they may indicate possible finds in future.

SIBREE'S MADAGASCAR.*

MADAGASCAR deserves indeed the first part of the title which the author has given it. The island is a thousand miles long, and has nearly the same area as France, but upon our maps it is dwarfed by its proximity to the neighboring continent. Although it is only three hundred miles away from Africa, it has far less in common with it, either in fauna or flora, than would be supposed. Mr. Alfred Wallace says that it sustains "a similar relation to Africa as the Antilles to tropical America, or New Zealand to Australia, but possessing a much richer fauna than either of these, and in some respects a more remarkable one even than New Zealand." Dr. Sclater, in his account of the mammals of Madagascar, concludes, 1st, that Madagascar has never been connected with Africa as it at present exists; 2d, that Madagascar and the Mascarene Islands must have remained for a long period separated from every other part of the globe; 3d, that some connection by land must have existed in former ages between Madagascar and India. From this it will be seen that it is by no means very clear that Madagascar is an *African* Island.

In the present volume, and in an earlier one entitled 'Madagascar and its People,' Mr. Sibree has given a very good popular account of the peculiarities of the fauna of the island, and he has furnished some interesting notes respecting its more curious plants. His style is not wholly free from obscurities; for instance, we are told (p. 88) that one species of yam has an edible root which "attains the size and thickness of a man's leg. The inside is white and has a milky juice; it is soft as a watermelon, but without seeds, and is eaten raw." It is doubtful whether we might not infer from this that some edible roots *do* have seeds. It must be further said that a few of the statements relative to the natural history of the island are unworthy of the author. On page 83, at the close of an attractive account of a species of opuntia, or prickly-pear, we read:

"It is perhaps not superfluous to remark that, except in old trees, there are no proper *branches* in the prickly-pear; all the thick, fleshy leaves grow from the edge of the others, and the flowers and fruit also grow in the same position. They possess great vitality, so that a single leaf laid on the ground soon develops a number of tendril roots, takes hold of the earth, and rapidly increases."

To which it might be rejoined that the foregoing remark is not only superfluous but is wholly misleading. As an exercise for correction by a botanical student it might serve a good purpose, albeit the errors are a little too obvious. What the author calls *leaves* are, in truth, fleshy, flattened branches, bearing other branches still more disguised under the form of spines or thorns.

For the most part the descriptions which the author gives of the animals and plants are accurate and graphic. As an illustration of this the account of the "traveller's tree" may be cited. This is a plant of the banana family, possessing a crown of broad and long leaves arranged in two rows, at the top of the stem, like a fan. In the common banana what appears to be the stem is made up of the bases of the leaves rolled firmly together, but this near relative of the banana has a trunk of soft

* 'The Great African Island. By Rev. James Sibree.' London: Trubner & Co. 1880. 8vo, pp. 372.

wood which frequently attains in crowded forests a height of eighty or ninety feet, although in the swamps it is only ten to twenty feet high. Of this plant the author says:

"In proceeding along the coast we had an opportunity of testing the accuracy of the accounts given of the water procurable from the traveller's tree, about which I had always felt rather sceptical, as somewhat of a 'traveller's tale.' In fact, I had never before seen the tree where plenty of good water was not procurable; but here there was none for several miles except the stagnant water of the lagoons. We found that on piercing with a spear or pointed stick the lower part of one of the leaf-stalks, where they all clasp one over the other, a small stream of water spurted out from which one could drink to the full of good, cool, sweet water. If one of the leaf-stalks was forcibly drawn down, a quantity of water gushed out, so that we afterwards readily filled a large cup with as much as we needed. On examining a section of one of the stalks a hollow channel about a quarter of an inch in diameter is seen running all down the inner side of the stalk from the base of the leaf. This appears to collect the water condensed from the atmosphere by the large, cool surface of the leaf, and conducts it downwards. After three hours' walking along the shore in the heavy sand, with a hot sun overhead, we were glad to draw from these numberless vegetable springs, and thanked the Giver of these living fountains in that thirsty land. We afterwards found that in some villages the people supply themselves constantly from this source."

Mr. Sibree, as we learn from an earlier work, went to Madagascar in 1863 as an architect to superintend the erection of four churches in memory of the martyrs who perished during the terrible persecutions in the island between 1837 and 1857. During a residence there of four years he had an excellent opportunity of becoming acquainted, under favorable circumstances, with the character of all classes of the natives. For this reason the chapters upon the customs, art, folk-lore, and popular superstitions are of exceptional interest. The inhabitants of the island, the Malagasy, closely resemble in many of their ways the Malayo-polynesian peoples, rather than those of Africa. This similarity suggests very startling questions relative to the period when the island first became peopled; and everything bearing upon traditions, habits, and language possesses an importance which Mr. Sibree has fully realized. The islanders have nominaliy embraced Christianity, and their rude customs are happily giving way; but a study of these and kindred ethnological subjects must be made now or never. At the capital of the island, Antananarivo, an annual is published, to serve as a repository of information respecting topics of anthropological interest, and for three years this periodical was under the charge of the author of the present volume. This fact is mentioned to show the zeal with which Mr. Sibree has undertaken his task. The volume closes with a fair and very interesting statement of the progress of missionary operations in the island. By a series of political changes the Hovas, the most intelligent and energetic of its numerous tribes, have gradually obtained the supremacy over all the rest:

"The policy of the present Government has in many points been greatly in advance of that of all preceding ones. In their anxiety for education, in the repression of the traffic in intoxicating drink, in the upholding of the Sabbath, and in the amelioration of cruel customs and laws and warlike usages, they deserve the praise of all; and in what they do to extend Christianity, although they do not always see the possible difficulties this may involve, the personal influence of the highest personages in the state has been exerted from the best motives and from a deep and sincere interest in the extension of the Gospel. Civilized and Christianized, a great future lies before Madagascar; and as it has become famous for the faith and devotion of many of its sons and daughters, so also, from its commercial importance, its inexhaustible fertility, and the mental capabilities of its people, it will eventually take an important and honorable place among the nations of the world."

MRS. DELANY'S CORRESPONDENCE.*

"IF all the world were prudent and regular," wrote Mrs. Delany in 1742, "it would not be half so diverting as it is now." The world certainly was anything but prudent or regular in her day, and she certainly found it very entertaining. She lived in a society where deans and virtuous ladies read 'Roderick Random' aloud in country-houses; where at dinner-parties they had plum-pudding and roast-veal for the first course, creamed apple-tart and collared pig for the second, and no dessert; where little girls were taught, as their first lesson in deportment, to "bridle" on entering a room—that is, to hold up the head and draw the chin back; where fine ladies amused themselves with making grottoes of shells in their gardens, or with "sugar-plum knotting" in-doors; where people took as cough-medicine two or three snails boiled in barley-water; where a queen at her coronation was not ashamed to wear, in addition to her own jewels, all that she could borrow of the court-ladies and all that she could hire of the Jews and jewellers. It was a time of gorgeous magnificence and of brutal grossness. For instance, Mrs. Delany writes thus to her sister in 1750:

"The present talk of the town is of an affair between Lord Hervey and Lord Cobham. Lord Hervey was at a drum of Lady Cobham's; he held his hat under his arm, the inside upwards; Lord Cobham laid a wager with Mr. Nugent of a crown that he would spit in Lord Hervey's hat, *and did*, asking Lord Hervey's pardon for doing it, and telling him the reason, upon which, with the utmost composure, Lord Hervey offered him his hat to win as many crowns as he pleased, but next morning sent Lord Cobham a challenge" (i. 365–6).

If such were the manners of gentlemen, it can hardly be supposed that their lackeys behaved better. Mrs. Ann Granville writes in 1737 of an "affair of importance" which consists in "the footmen being turned out of the playhouse; they have a strong party of ladies on their side; they were very impertinent, but the gentlemen were to blame also." It seems that these footmen were excluded from a certain gallery where they had congregated, in Drury Lane Theatre; and they collected with sticks and other weapons to fight their way into the stage-door. The Prince and Princess of Wales and others of the royal family were present, and great alarm prevailed; but the riot was not suppressed until twenty-five or more persons had been severely wounded (i. 155).

Mrs. Delany spent much of her life in Ireland. Perhaps nothing that she tells is so amusing as Lady Morgan's descriptions of the gay society of her youth, where a leading man of fashion in Dublin used to enter drawing-rooms by turning a somerset, in full dress, at the door; but Mrs. Delany's tales are wonderful enough. She informs us, for instance, that after the Lord Lieutenant's banquets, as the guests withdrew, the doors of the castle were always flung open, and the mob from the streets swept in to carry away every remaining fragment. The wife of the Bishop of Clogher, going to a dinner-party in her own sedan-chair, soon found both her bearers to be too intoxicated to proceed farther, and had to borrow a "hackney-chair" and finish her journey. More serious illustrations of the condition of that unhappy country were the narratives of young heiresses who had been forcibly abducted and married by villains, just as is described in Froude's 'History of Ireland.'

There is a delightful letter from Dean Swift to Mrs. Delany, then Mrs. Pendarves. He tells her with magnificent gallantry that when he "received the honor and happiness" of her letter he was suffering under both giddiness and deafness, but he did not "value" his deafness for three days, because her letter was his "constant entertainment during that time." He writes to her: "A pernicious heresy prevails here among the men, that it is the duty of your sex to be fools in every article but what is merely domestic; and, to do the ladies justice, there are very few of them without a good share of that heresy, except upon one article, that they have *as little* regard for *family business* as for the *improvement* of their minds." But to this sweeping charge he makes his fair correspondent a triumphant exception. "I know you never laugh at a jest before you understand it, and I much question whether you *understand a fan* or have so good a fancy *at silks* as others" (i. 135). These letters leave, on the whole, a very agreeable impression of the gifted and wayward Dean; and there is a good postscript in a letter to him from Lord Carteret who says: "P. S. When people ask me how I governed Ireland, I say that I pleased Dr. Swift" (i. 157).

Mrs. Delany's career included nearly a century of English history, from 1700 onward; and she passed through the social and public life of a frivolous period, being herself not only without stain, but a perpetual example of high aims, varied cultivation, and refined virtue. Of her wit and wisdom these letters everywhere give proof; they show her a devoted friend and the faithful wife of an adoring husband. She had tastes and knowledge far beyond those of the ordinary Englishwomen of her time; she studied eagerly the habits of animals and plants; she arranged a drama for an oratorio of Handel, the theme being taken from 'Paradise Lost'; she painted in oils, and on one occasion, being detained by weather at an inn, persuaded a sign-painter to let her do his work for him, and left the sign of "The Swan" behind her. She was a guest at gorgeous houses, and when she journeyed from Bulstrode with the Duchess of Portland they had four coaches-and-six, with twelve horsemen attending, besides "apothecaries, bakers, butchers" that joined in the procession to escort them part of the way. Yet she was utterly simple and unspoiled, and Edmund Burke said of her: "She is not only the woman of fashion in her own age, she is the highest-bred woman in the world, and the woman of fashion in all ages." She has been hitherto best

known to American readers through the 'Diary' of Madame d'Arblay; and it is pleasant to hear that the editor of these volumes, Miss Woolsey, is about to make a similar abridgment of that very amusing book.

LATE STUDIES OF ORIENTAL CYLINDERS.*

IT is time that a more careful and scientific study were made of the little seal cylinders of which there are hundreds scattered about in the public and private collections of Europe and America. They are an inch or two long, half or three-quarters of an inch in diameter, pierced the length of the axis so as to allow them to be held by a string, and the surface is covered with mythological or other figures, often with the name of the owner added. Made of various hard stones, they are well-nigh imperishable, and as every gentleman in the older and later Babylonian empires, in the great Assyrian empire, and in those of Armenia, Susa, and Persia, carried one on his wrist or about his neck, it is not strange that hundreds even have been discovered whose inscriptions cover a period of more than two thousand years. They are valuable for the study of history, palæography, art, and mythology, but they have for the most part hitherto been looked upon as curious puzzles or as the toys of a museum.

The published material for their study is considerable, but very imperfect. Cullimore's 'Oriental Cylinders' (London, 1842) is a collection of 174 figures, without a word of description or conjecture, as at that time, indeed, conjecture would have been worthless. Lajard's 'Culte de Mithra' (Paris, 1849) contains a larger and finer collection, thrown together, like Cullimore's, with no understanding of the nationality, even, of the cylinders, and made to serve the purpose of a baseless notion of the worship with which they were imagined to be connected. Passing by numerous earlier and later works, in which one or two are figured, the next collection of any importance is Ménant's 'Catalogue' of the cylinders in the Royal Cabinet of Medals at the Hague, which contains thirty-five photographs of cylinders, besides seals of the cone form, which are far less interesting. Apart from scattered notices here and there, the only considerable studies of these cylinders are by Lenormant in various portions of his 'Essai de Commentaire des Fragments Cosmogoniques de Bérose,' and by Ménant in the works cited below. We may say here that Ménant is still pursuing this study, and that he desires to obtain impressions of cylinders owned in America. Any such sent to this office we will undertake to forward to him.

So much is now known of the Assyrian language that the translation of the inscriptions on the cylinders generally offers few difficulties. Even in the Armenian and Susian cylinders, the language of which still baffles translation, it is easy to read the name of the owner. The commonest form of inscription is in three lines and generally of one type, as in the following: "(1) Hisimilasu, (2) Son of Butur-Sin, (3) Worshipper of the God Martu." These inscriptions thus give no clue to the explanation of the accompanying figures, there being no evidence that even the god worshipped by the owner is more likely to be engraved. It is a peculiarity of Ménant's interpretation of these figures that he is very chary of allowing them to be gods. He accepts George Smith's identification with Izdubar and Heabani of the hero with side curls and the man-and-bull monster that fight together against wild beasts; and he calls the seated male figure Belus, and the nude female figure with crossed arms Beltis; but the other figures he generally regards as human. It is, however, difficult to conceive why the Chaldeans should have covered their seals with "priests," "pontiffs," "sacrificers," and "initiators" in preference to the gods to whom these officials were devoted. A notable case is that of perhaps the commonest of these figures, which Ménant calls a priest, probably because its hands are lifted in an attitude which might be adoration. But this figure, which appears fifty times in Cullimore's, Lajard's, and Ménant's collections, is always beardless, and presumably female rather than a eunuch. It wears a long flounced dress, never found on a standing male figure, with a flying loop in the coiffure behind the head (cf. Cull. 'Oriental Cylinders,' Fig. 106, where it appears in connection with another having a similar flounced dress and coiffure, unmistakably feminine; also Fig. 90, where four female figures, *not* Chaldean, have a similar headdress; and again the headdress of the female figures in the remarkable seal found by Schliemann and described in his 'Mycenæ,' p. 354). Another mark of distinction is the peaked hat, rarely if ever found on a bearded figure, but found on indisputably female figures, as in the goddess armed with the long-handled scimitar, generally worn by Bel Merodach, in 'Culte de Mithra,' xxxvi. 1. It can hardly be doubtful that this beardless "priest" is really a goddess, as a figure in precisely the same dress, but with a front view, represented in Cullimore's 'Oriental Cylinders,' Fig. 56, as resting on two lions, is identified by one of the inscriptions which speaks of "Ishtar on the lions," who is the Ishtar of battle, while the more common figure is most probably the Ishtar of love, and her attitude is hardly that of adoration but of invitation.

There is on the cylinders a quite common group, consisting of a seated male figure, to whom a standing figure, often with the horns of a god attached to his headdress, is leading a humbler figure held by the hand. These Ménant calls Belus, the *initiateur* and the *initié*. But it would seem that this sitting figure can hardly be Belus, as it has sometimes the emblem of streams falling from the shoulders, which it would seem must belong to Hea, the god of the ocean and the under-world. If this be so the two other figures would probably represent a soul being brought to the King of Hades for judgment. The figures of a "warrior" and a "sacrificer," as they are called by Ménant, seem to us to be almost certainly those of gods.

It must be confessed that Ménant throws considerable doubt on the accepted explanation of a somewhat famous cylinder (given in George Smith's 'Chaldean Account of Genesis,' p. 91), which represents a male and a female figure, one on each side of a tree whose fruit they are about to pluck, while behind the woman is an erect serpent. Smith, the younger Delitzsch, and Baudissin agree that this must represent a Chaldean legend of the fall of man, but there are other cylinders of the same general type which invalidate this explanation; although since the discovery of the tablets containing the story of the Deluge we need not be surprised to dig up a Chaldean version of any of the stories which precede it. A remarkable cylinder in the possession of Professor S. Wells Williams, of New Haven, seems to confirm the current explanation, as it takes up the story after the fall, and represents the serpent—*not* the ordinary dragon or griffin—as now being pursued and punished by Bel Merodach.

Much study yet remains to be given to these cylinders before they can be fully understood. Their hundred or two figures of gods, men, heavenly bodies, and symbolic objects can be but slowly identified and explained. It seems already certain what a few of the chief figures are, and also that the inscriptions, of which Ménant has here satisfactorily translated a goodly number, can give us no help in identifying the figures of the gods. As a general thing the engraver seems indiscriminately to have put on two or three favorite figures, each in its conventional attitude, and after engraving the name of the owner and his filiation, with the name of the god to whom he was devoted, to have filled up the field with such minor objects as there remained room for. With our increasing knowledge of the Babylonian pantheon we may expect to be able soon to understand these extremely interesting figures much better than at present. We may notice that in these, as in other of Ménant's works, there are some annoying typographical errors. Thus, in the "Catalogue" we notice that on p. 23 the reference to "Cullimore, Pl. 20" should be Pl. 17, and on p. 59 "Cullimore No. 17" should be No. 7.

RECENT NOVELS.*

THE *Saturday Review* says in a recent number that the literature of the present day consists mainly of ephemeral novels or of forms of journalism—"reporter's work in disguise." 'Under the Tricolor' is an unhappy combination of both: nine parts of "reportage" to one of novel. The one part of novel is made up of the commonplace moralizings of the Paris correspondent of an American newspaper, a middle aged, unattractive, and impecunious woman, who lives in a well-known Franco-American boarding-house, and acts as confidential manager of an improbable love-passage between two young dwellers in the same *pension*. The real object of the book is to give a sketch of the members of the American Colony; they pass before us thinly disguised under pseudonyms. First come the "low Americans" of Mme. Magne's boarding-house, utterly unable to appreciate any life beyond that of their homes, with their bad French, their love of bargains at the *Bon Marché*, and their provoking persistence in teasing the Legation for tickets of admission and for redress when they are overreached in shops. Then we have the widow with small means and a mysterious past; the mother and one daughter, so often seen abroad, whose man remains at home, or is missing altogether;

* 'Under the Tricolor; or, The American Colony in Paris. A Novel. By Lucy Hamilton Hooper.' Philadelphia: J. B. Lippincott & Co.

and two young women who have come to Paris for culture in various directions—one "with as much voice as a mouse in a cheese," who insists upon being a prima donna, and another who has entered "Vinoy's class of young men to draw from the nude living model, while the unkempt Bohemians were laughing and jesting about her."

We are then taken to the quarter of the *Arc de Triomphe* and shown the American nobility, "mortified at the fact that they were born under the stars and stripes," "the only foreigners in Paris who are ashamed of their nationality." They adore fashion, and rank, and title, and try their best to live near the rose if they cannot quite be it—even turning Catholic sometimes to win this social heaven. Why not? As Henry IV. said: "Paris vaut bien une messe." Another method—but more expensive—is to buy vicomtes and barons as husbands for their daughters. Some of them, however, prefer to adopt English manners and talk, and to prostrate themselves at the feet of English swells; this class is increasing. An interesting matter for observation is the position of this aristocratic American colony, as Mrs. Hooper describes it, encamped on the outskirts of French fashionable society, gazing longingly upon a promised land into which they cannot hope to enter, despised by the people they most admire and despising each other. We should mention that among these lost sheep who have erred and strayed from their country and their country's ways, Mrs. Hooper has found two ladies "who are still truly and nobly American," and who have not been injured by transplanting. "The finer growths," she tells us, "do not change their nature with the soil. Potatoes vary in quality and flavor with the earth in which they are planted and the skies beneath which they grow, but the diamond remains unaltered and unalterable whether washed by the waters of an African river or blazing on the bosom of a northern queen." What an admirable subject the American Colony might be for a good hand Mr. James has shown us in his most recent sketches. Mrs. Hooper's long residence abroad has given her the opportunity to collect good material, but in this book it is wasted, and the taint of the reporter clings to it. Mrs. Hooper is not a close or discriminating observer; she lacks imagination, and the literary gift has been denied to her.

The American publishers are promptly in the field with the first part of Zola's 'Nana,' which we believe is still running in the *Voltaire*. Nana is, readers of 'L'Assommoir' will remember, the child of Coupeau and Gervaise, and takes early to the pavement. At the opening of 'Nana' she appears on the stage at the Varieties Theatre as "the Blonde Venus," and captivates all Paris that is dissipated and disreputable, and even that frequent visitor, the Prince of Wales, to whom the book must be singularly interesting reading, we should say. At the end of this volume she is at the summit of her vogue; the next will probably take her down the decline. So far 'Nana' is indisputably M. Zola's worst book. Curiously enough, the impression that it must leave upon every reader, whether blasé or inexperienced, is that it is unreal and amateurish. This is unfortunate, for M. Zola has certainly never chosen a theme better capable of illustrating his great theory that there is no sunshine anywhere in life, and it cannot fail to be disappointing to so distinguished a moralist to make so slight an impression with so potent a subject. Compared with the conviction conveyed in such a sentence as "He knows not that the dead are there, and that her guests are in the depths of hell," 'Nana' seems trivial. There are some "facts of life" which can be estimated quite accurately without experience of them, and it might be objected to this book that the misery of the life of a "Nana" is one; but it is a sufficient objection to it that, judged by M. Zola's own standard, it fails in verisimilitude.

Few writers of novels who have so distinct a call to their profession as Mr. Julian Hawthorne are so uneven in their execution. In taking up a new book by him we are in doubt whether we are to be delighted by the fulfilled promise of 'Bressant' and of 'Garth,' or whether we are to be annoyed with the grotesque unreality of 'Idolatry.' We are prepared for the one state or the other, since Mr. Hawthorne's genius is untempered by the critical faculty or by any sense of humor; but we are unprepared to find in the author of 'Saxon Studies' defects that hint at a want of perception and betray a lack of general observation. Sebastian Strome is the son of a country parson, after the type of the good bishop in 'Les Misérables.' While studying for his father's calling he becomes the victim of sceptical doubts, and, feeling strangled by the bands he is about to assume, his liberty and his reason lay violent hands on all the moralities; he lives fast, gambles, betrays the maid of the young lady to whom he is afterwards engaged, entices her to London, and deserts her. This, we believe, is an entirely new complication in the history of the novel; Sebastian's taste is throughout deplorable, however, and is, if anything, inferior to his morality. He is suddenly called home to find the girl he had ruined fatally injured by a passing railway-train, together with his father, who had endeavored to save her, and himself left with a little daughter, whom he may recognize or not, as he chooses. His heart, it happens, has remained sound at the core by virtue of the sceptical pickle in which it has been immersed; he feels that he needs punishment, and proceeds to administer it in his own fashion. He first confesses to his fiancée, and though she wants to forgive him he refuses to accept her sacrifice, declaring he can never have loved her; in which statement he is much mistaken. Having performed this duty, he returns to London, sells his effects, and retires to the slums with his baby to maintain her by honest toil at wood-carving. The lady, meantime, who may be described as of the strapping order of heroines, marries out of pique a genuine villain, and not a sceptical simulacrum of one. Having reason to reflect, she is on the point of murdering her husband in a fit of emotional insanity when he suddenly dies unassisted. (Previous to this, we should mention, he has accidentally killed Sebastian's baby.) She is under suspicion, however, when Sebastian emerges from his retreat, converted from scepticism, accepts a Government position that is all ready for him, goes to the Crimea, finds a witness who can prove Mary's innocence, and the book closes with an intimation that the two lovers have got back to where they started from, and will marry and be happy. This is not the kind of thing many people who read 'Bressant' ten years ago thought Mr. Hawthorne would be doing ten years afterwards.

'A Strange Disappearance' has the incontestable merit of being interesting, though it is absurd enough in certain particulars, and has nothing to do with the people and events that belong to this world. It is a detective story, of the sort that Mr. Collins is fond of, and, being by a lady, excites some surprise that its machinery should be so well managed. The mystery, which involves the marriage of one of the wealthiest and proudest citizens of New York and the daughter of a low German burglar, her subsequent disappearance, and the attempts of the police to find her without knowing anything of her history, is disclosed little by little, and we find clues and lose them again in just the way needed to keep our attention. 'A Strange Disappearance,' in other words, is one of those novels which once beginning you read through, and then lay aside with a feeling of wasted time.

The Indian Mutiny is now so far removed from us in time that a tale like 'The Serpent-Charmer,' relating the fortunes of a Franco-Indian family involved in it, seems almost to belong to the domain of historical fiction. The book, the plot of which appears to be founded on fact, is rather a boy's book than a novel, and is filled with an uninterrupted series of wild adventures told in an agreeable and interesting way. Many European households at isolated stations in India were placed at the outbreak of the revolt in the position of the Bourquien family, though few of them came through the terrible interregnum of anarchy, rapine, and slaughter as well. We have often wondered why Indian adventure and life have not been more utilized by English producers of fiction. The returned nabob and civil-servant and half-pay officer are familiar characters to all novel-readers. They necessarily figure, however, in European scenes. But the life of these familiar types as it went on in India, in their first stage of existence, is nearly a sealed book to us. So, too, is native Indian life. Here and there some rash intruder, like Mr. Wilkie Collins in his 'Moonstone,' has endeavored to lift the veil from the latter and shown us a wild melodrama of Oriental passion and religion which he has labelled India, though he might perhaps as well have called it China or Assam. The explanation of this is probably two-fold. The novel-producer, English and American, knows little or nothing of Indian life, and the class which is directly interested in it is so restricted and so little literary that it has never given rise to a school of fiction of its own. As a field for juvenile fiction India presents many advantages. It is a country remote, little known, picturesque, and mysterious; peopled with strange and interesting figures; an ancient, splendid, but conquered civilization, existing side by side with that of the invading and resistless European. It is a theatre of adventure, danger, heroism, and crime—of everything which is exciting to the adolescent imagination. Precisely how much M. Louis Rousselet really knows about India we do not undertake to say; but he knows, at least, a good deal about boys, and that they

like a hearty meal of pillage and carnage, and are not easily surfeited with stories of snakes and alligators, and with this he has provided them in 'The Serpent-Charmer.'

Cyprus. As I Saw It in 1879. By Sir Samuel White Baker. (New York: Macmillan & Co. 1879.)—The interest in Cyprus awakened by the English occupation bids fair to be satisfied, if the making of books about that island can accomplish it. Among the many that have been published Sir Samuel Baker's will probably be the most popular, for the results of personal inspection, directed by the most trustworthy sources of information obtainable, are given in his natural and easy style, so that the most lazily disposed are entertainingly provided with an amount of knowledge that is, in general, to be had only by the study of statistics and the expenditure of much time. The narrative, probably constructed from a diary of each day's journey, is agreeably diversified by incidents of a personal nature which, however, are not allowed to encroach upon the main purpose of showing Cyprus as it stands, its needs present and future, and the difficulties attending its government and development under the terms exacted by the Porte. The first year's occupation, although disastrous to the agricultural interests from drought, has shown the revenue to be easily collectable, but the surplus, which the treaty gives to the Porte, has been calculated on the Turkish basis that all necessary expenses of government are included in the salaries of the various orders of tax-collectors, needed public works of all kinds having been entirely neglected under Turkish misrule. It would be singular if England should long contentedly accept the position of tax-collector to the Sultan, even if the office be rendered less irksome by the secret knowledge of having gained some ulterior object by the occupation; she certainly does not require the sense of being a very ill-paid official to awaken her to the crying wants of the people whose care she has assumed. There is a pressing need of money for the development of every native industry, and the capital that would naturally flow into the island is frightened away by the uncertain tenure of the English, whose withdrawal, though based on the unlikely contingency of Russia's removal from Kars, Batum, and Ardahan, may still take place, it is supposed. The hands of the Government are tied, the people, until relieved, being unable to bear farther taxation; and a revision of the taxes as a method of relief must be undertaken with extreme caution to avoid a painful deficit in the revenue.

The wine trade, which has been rigorously taxed—almost to its destruction—on account of Turkish prejudice, could, by encouragement, be made to take its proper place as the principal industry of the island. At present the wine-grower struggles under different forms of taxation, aggravated by ruinous delays inflicted by dishonest tax-farmers; there is a first tax of two per cent. on the value of the land, a tax of one-tenth on the grapes, which must be appraised before the crop can be gathered, and ten per cent. ad valorem on the wine made. Then, before the wine can be taken to Limasol for sale, a permit for the removal of a stated quantity must be obtained, and at Limasol it must be again weighed to see that the permit has not been exceeded, an excess being punished by a fine double the amount of the whole tax. The transportation is in goat-skin bags made impervious with tar, and the journey under a broiling sun seriously debases its quality, as does also the unnecessary but required delay at Limasol before it is allowed to be sold. The only relief which the Government has yet been able to afford is the abolition of the tax-farming. The construction through the roadless wine-district of narrow roads, so that the wine can be transported in barrels from the grower to the merchant, is urgently advised by Sir Samuel Baker. The improvement in quality would at once make the tax less onerous. A wide military road already constructed at too great expense is, he says, unsuited to the habits of the people, besides having no branches into the wine-district. Until cheap roads are made the wine will taste of tar and goat-skin, and the laden mule and his driver will clamber around and over the English highway seeking shorter cuts to their destination.

A still greater necessity is a system of irrigation. It should be modelled on a simple plan, suitable to the simple character of the people, and such an one is entirely practicable; the dreary plain of Messaria is underlaid at the depth of five or six feet with the water needed by the perishing crops. If the Government, which can borrow money at four per cent., will advance loans at six per cent. for the construction of water-wheels, the crops would be assured, and Sir Samuel Baker is convinced that the first year's crops would repay the loan. The subject of a water-supply for the towns and villages should be placed in the hands of competent engineers, but with an emphatic caution against elaborate and expensive methods; in a place where the half-starved cattle prefer to die while they wait for the grass to grow rather than to wax fat on English prepared cattle-food, no caution in introducing improvements, one would say, could be too great. But the numerous remains of ancient aqueducts show that, though the disappearance of the forests may have affected the rain-fall, Cyprus has always had to depend upon artificial works for her water-supply. A renewal of the forests with stringent and enforced forest laws, the compulsory planting, by proprietors, of trees of fruit-producing varieties, which have been greatly neglected, would ensure great profit. In fine, England has acquired a property which with great economy of administration will yield after a time a large revenue, and, perhaps, equal the sanguine expectations of the first speculators who hurried to the island only to hasten away yet more rapidly.

But before that time there are plenty of disappointments in store for the Government. The crown lands, which have been confidently predicted to be of great agricultural value, have been encroached upon with the connivance of fraudulent officials, so that proving titles will involve endless litigation; when the occupation took place there were forty thousand unsigned fraudulent title-deeds, for example. It is a mistake to suppose there is any considerable quantity of cultivable land unused; and though there may be undeveloped mineral wealth, there are no obvious indications of it. Besides the works necessary for the progress of the people, others more costly are needed to render Cyprus the strong strategical position which was the reason for its occupation. The arsenal and harbor of Famagosta should be restored, the Pedias river enclosed in a narrow bed to increase the velocity of the current, and so prevent the formation of malarious marshes at the mouth; and farther expensive engineering works will be required to carry the silt beyond the harbor and prevent the growth of an impassable bar. Other harbors at Kerynia on the north coast, at Karavastasi in Morphu Bay on the west, and at Limasol and Larnaka on the south require various improvements differing in expense. The climate, with due precaution against encampment in malarious districts and the avoidance of the central region in summer, when the mean temperature is 72° and the maximum 115°, will not be found unhealthful, though the sufferings of the army which came provided with copper warming pans and cast-iron coal-boxes (could anything be more characteristically national than that?) have spread an impression to the contrary which Sir Samuel Baker considers extremely unfortunate. The book as a whole leaves a very distinct impression upon the reader's mind of just what Cyprus is, and what its reasonable prospects are, and it is unnecessary to say, we suppose, that the author has abundantly proved his trustworthiness heretofore. It does, however, need a map, and the reader will find it to his advantage to obtain one for himself and use it in connection with the volume.

The Cradle of the Confederacy; or, the Times of Troup, Quitman, and Yancey. A Sketch of Southwestern Political History from the Formation of the Federal Government to A.D. 1861. By Joseph Hodgson, of Mobile. (Mobile: 1876. Cincinnati: Robert Clarke & Co.)—The Northern public has, we believe, in spite of the date on the title-page, only just begun to have an opportunity of making the acquaintance of this work. It will be found by the patient reader to be a valuable contribution to the history of the doctrine of secession, and perhaps the only one in which the fate of the Whig party in Alabama and the successful efforts of Wm. L. Yancey to force his adopted State and the rest of the South out of the Union—efforts persevered in for many years—are set forth with so much detail and with so much candor. Mr. Hodgson seems divided between his admiration for Yancey and his sense of the folly of the idea that secession could be peaceable; and apparently was one of the Conservative Whigs who were reluctant to consider Lincoln's election a sufficient grievance to justify withdrawal, and who were stung into acquiescence in the ordinance of secession by Yancey's taunting them as Tories, and intimating that they would yet be hung for treason. In still another particular this book is an important source of information: a great deal of attention is bestowed on the complications of Georgia with the Cherokees and of Alabama with the Creeks in ousting them from their reservations—a crime which was expiated at Mission Ridge, and which is here made interesting by a discussion of the Constitutional issues raised between the States and the Federal Government over a conflict of jurisdiction, from Washington to Jackson. In a discursive and disorderly way, indeed, Mr. Hodgson may be said to show the two-fold strain upon our form of government of the anomalous condition on the one hand of the aborigines, on the other of the blacks, under the Constitution. The two

causes were united in Northern Georgia and Alabama, for the objection of these States to civilizing and adopting the Indian was that, according to Governor Troup, "the utmost of rights and privileges which public opinion would concede him would be a middle station between the white man and the negro slave"; and "there was no place for him intermediate between the slave and his master."

It is instructive to observe that in all this Indian controversy, as in the attempt to make slaveholding safe in any part of the Union, the term "right," so freely and so ardently used, had a purely abstract signification. The existence of a moral sentiment at the North was a standing puzzle to the South, and was so thoroughly disbelieved in that even Mr. Hodgson talks of the editor of the *Liberator* as a "British subject" and "agent of Exeter Hall," and reports George Thompson as "repeating in conversations that 'every slaveholder should have his throat cut.'" So when Roger A. Pryor, opposing a resolution in favor of reopening the slave-trade, at a Southern commercial convention held in Montgomery, May 10, 1858, had said: "This proposition, if endorsed, would shock the moral sentiment of Christendom," Mr. Yancey replied: "The gentleman from Virginia refers to the opinions of Christendom upon this subject—they are rather the opinions of devildom."

As far as it goes, the book points to the genuine simplicity of those fire-eaters who, while professing their readiness to sacrifice their lives in behalf of State sovereignty (and sometimes the lives of their fellow-slaveholders, as when Yancey tells Brownlow he hopes some day to bayonet him), expected the North to be cowed and to yield peaceably to the inevitable. One anecdote is offered in evidence: "General Clanton was accustomed to tell how when, a few months later than the election, a cavalry regiment of militia of which he was a field-officer was offered to President Davis, the reply was that the Confederacy would not need cavalry, that it would be an infantry war, and that a few regiments of infantry would be sufficient." Mr. Yancey, however, had long before worked out a plan of campaign, which he wrote of as "a well-considered Southern policy—a policy which has been digested and understood and approved by some of the ablest men in Virginia," and in which the Border States were to remain in the Union at first, and save the Southern Confederacy from having "a long abolition, hostile border to watch," besides interposing a barrier to armed suppression of the disunion movement.

Cox's Popular Romances of the Middle Ages. Large 12mo, $2 25.

"The most important tales of the mediæval legendary lore, . . . to a great extent faded from the memory of the present generation, are reproduced in this comprehensive volume. In many cases they are found only in books that are not easily accessible or have taken monotonous or wearisome shapes. The version now offered to the public cannot fail to be received with curiosity and interest."—*N. Y. Tribune.*

"A book of the rarest interest to all lovers of literature. . . . Will have a cordial welcome."—*N. Y. Eve. Post.*

"In no English book has so rich a store of great legends ever before been collected. To praise this wonderfully delightful volume is a mere waste of words."—*Phila. Times.*

Rydberg's Magic of the Middle Ages. 12mo, $1 50.

Mrs. Brassey's Sunshine and Storm in the East. 8vo, $3 50.

Escott's England: Her People, Polity, and Pursuits. 8vo, $4.

The Young Folks' Cyclopædia of Common Things. 8vo, illustrated, $3.

NEW BOOKS.

KINGS IN EXILE. Translated from the French of Alphonse Daudet, by Virginia Champlin. 12mo, cloth, $1; paper, 50 cents.

"The superiority of this story to even the best of merely clever—even if supremely clever—stories is most marked. One is pleasing in just the way that paper is pleasing; the other is something taken from human life. As to the way in which the characters are drawn, too much cannot be said in praise. They are all set vividly before us by their position, while the pathetic story is one that is every day repeated before our eyes in other circles of society."—*Atlantic Monthly.*

ABOUT GRANT. By John L. Swift. Red cloth, price $1.

"It runs through the war with brief, meaty chapters, setting forth all the great captain's glories, his snatching of victories from defeats, his comprehensive view of every situation, and his conquering persistence from Belmont to Appomattox; all these are excellently presented, and they furnish the indestructible ground of Grant's popularity, his hold on the regard of the nation, his title to historic fame; thence also all the arguments for him as the needed 'strong man' are drawn."—*Springfield Republican.*

*ARITHMETIC for YOUNG CHIL-*dren. By Horace Grant. American edition. Edited by Willard Small. Cloth, 35 cents.

This book was originally published under the superintendence of the "Society for the Diffusion of Useful Knowledge." The author adopted as a primary rule that no illustrative lesson should be inserted which had not been variously tried and found to sustain attention by its own interest in the minds of the pupils. Children, he says in his instructions to teachers, ought not to be perpetually harassed with dry questions. *The grand object is to cause them to exert their minds with pleasure;* and for this a lively conversation is the most effectual means.

AUTHORIZED FOR USE IN BOSTON SCHOOLS.

SIX POPULAR TALES. Second Series, uniform with the First Series, lately published. Selected and arranged by Henry Cabot Lodge, and illustrated from original designs. Price 20 cents.

**** For sale by all Booksellers, and sent by mail, post-paid, on receipt of price.

THE
Historical Poetry of the Ancient Hebrews.

TRANSLATED AND CRITICALLY EXAMINED.

By MICHAEL HEILPRIN.

Volume I. (Volume II. in press.)

Extracts from opinions of the Press.

"One of the strongest and most original contributions to the theory of the Dutch school."—*Rev. S. J. Barrows, in the Boston Christian Register.*

"There is probably no work in English from which so clear and accurate a view can be gained of the leading results of modern rationalistic criticism."—*London Academy.*

"We have here the ripe result of a whole lifetime's careful and enthusiastic study and investigation."—*New York Nation.*

"The 'critical' portion of the volume is deserving of severe condemnation."—*New York Churchman.*

"Because Kuenen is as undogmatic in his realm as Darwin is in his, and because Mr. Heilprin, like his leader, has the humility as well as the boldness of science, they, and such as they, are our best present guides in the tangle of early Hebrew literature."—*Rev. W. C. Gannett, in the Chicago Unity.*

"M. Heilprin . . . een geestverwant. . . . Een Joodsch geleerde, voor die Taak wel berekend."—*Prof Kuenen, in the Leyden Theologisch Tijdschrift.*

"Sophistries and shallow arguments."—*Chicago Inter-Ocean.*

"Heilprin's Arbeit ist recht nützlich, nicht nur für amerikanische und englische Leser, sondern auch für deutsche, da die grosse Belesenheit des Verfassers eine sorgsame Zusammenstellung der verschiedenen in der englischen, wie in der deutschen, holländischen und französischen Litteratur vorgetragenen Anschauungen bietet."—*Count Baudissin, in the Leipzig Theologische Literaturzeitung.*

"A good deal of vigorous criticism in detail. . . . adds to the interest of the book."—*Prof. J. H. Allen, in the Boston Unitarian Review.*

8vo, cloth, price $2.

☞ For sale by all booksellers, or sent by mail, post-paid, to any address in the United States, on receipt of price.

1, 3, and 5 Bond Street, New York.

Important Works,

IN PRESS AND IN PREPARATION,

BY

D. APPLETON & CO.

(Messrs. D. APPLETON & CO. announce that they have removed to new quarters, Nos. 1, 3, and 5 Bond St., a few steps east of Broadway.)

MEMOIRS OF MADAME DE RE-
musat. Third and concluding volume.

ROSCOE'S and SCHORLEMNER'S
Treatise on Chemistry. Vol. II., Part 2.

THE CRAYFISH: An Introduction to the Study of Zoölogy. By Prof. Huxley. International Scientific Series.

A THOUSAND FLASHES OF
French Wit, Wisdom, and Wickedness. Collected and Translated by L. G. J. De Finod.

RODMAN THE KEEPER: Southern Sketches. By Constance Fenimore Woolson.

GEIKE'S LIFE OF CHRIST. A cheap, popular edition; large type, 8vo, price in cloth, $1 50.

THE ROMANCE OF AN HONEST
Man. From the French of Edmond About. (Advance sheets.)

A STROKE OF DIPLOMACY. From the French of Victor Cherbuliez. Handy-Volume Series.

THE RETURN of the PRINCESS.
From the French of Jacques Vincent. Handy-Volume Series.

MARTIN'S LIFE OF THE PRINCE
Consort. Fifth and concluding volume.

THE ART OF SPEECH. Vol. II.
Studies in Oratory and Logic.

CLASSICAL WRITERS. Edited by John Richard Green. SOPHOCLES, by Lewis Campbell. VIRGIL, by H. Nettleship.

COOLEY'S CYCLOPÆDIA OF
Practical Receipts. Vol. II.

HOURS WITH THACKERAY. With a Biographical Sketch. Handy-Volume Series.

A SHORT LIFE OF CHARLES
Dickens. With Selections from his Letters. Handy-Volume Series.

FOURTEEN SERMONS. By the late William Rollinson Whittingham, late Bishop of Maryland.

CEREMONIAL INSTITUTIONS.
By Herbert Spencer. Forming Vol. II., containing Part IV. of 'The Principles of Sociology.'

THE PRACTICE OF MEDICINE.
By Roberts Bartholow, M.D.

RECOLLECTIONS and OPINIONS
of an Old Pioneer. By Peter H. Burnett, the first Governor of the State of California.

A TREATISE on ORAL DEFORMI-
ties as a Branch of Mechanical Surgery. By Norman W. Kingsley. With over 350 illustrations.

A MANUAL OF GYNÆCOLOGICAL
Operations. By James B. Hunter, M.D.

DISEASES OF THE RECTUM.
By W. H. Van Buren, A.M., M.D. A new, revised, enlarged, and illustrated edition.

TEXT-BOOK OF PRACTICAL
Medicine. By Dr. Felix von Niemeyer. Translated by Drs. Hackley and Humphrey. New edition. With Additions.

SCIENTIFIC BILLIARDS. Garnier's Practice Shots, with Hints to Amateurs. By Albert Garnier. With 106 illustrations, printed in colors.

LETTERS AND LESSONS IN
Language. By J. H. Stickney. Part I. Invention. Part II. Conversation. Part III. Literature.

HISTORY AND CRITICISMS OF
the Fundamental Concepts, which are essential to the Controversies of the Present Day. By Rudolph Eucken, Ph.D., Professor in Jena. With an Introductory Essay by Noah Porter, D.D., President of Yale College.

APPLETON'S ANNUAL CYCLO-
pædia and Register of Important Events of the Year 1879.

A PRACTICAL TREATISE ON
Electricity and Magnetism. By J. E. H. Gordon, B.A., Assistant Secretary of the British Association. With numerous illustrations.

MANUAL OF COMMERCIAL COR-
respondence in French. By Prof. H. M. Monsanto.

GREEK FOR BEGINNERS. By Rev. Joseph B. Mayor, M.A., Professor of Classical Literature, King's College, London.

THE FIRST THREE BOOKS OF
Homer's Iliad, according to the Text of Dindorf; with Notes, Critical and Explanatory, and References to Hadley's, Crosby's, and Goodwin's Greek Grammars, and to Goodwin's Greek Moods and Tenses. By Henry Clark Johnson, A.M., LL.B. Head-Master of St. Paul's (Cathedral) School.

APPLETON'S AMERICAN
Standard Geographies. Based on the Methods of Progressive Educators, and giving special prominence to the Industrial, Commercial, and Practical Features.

Messrs. D. APPLETON & CO. have also to announce in preparation a magnificent work, a companion to 'Picturesque America' and 'Picturesque Europe,' entitled

Picturesque Palestine, Sinai, and Egypt,

Which will be issued in forty parts, and superbly illustrated on steel and wood, from drawings made expressly for this work on the spot, by HARRY FENN and J. D. WOODWARD. This work has been over two years in preparation, and will prove altogether the completest, most faithful, and finest pictorial delineation of the Lands of the Bible yet produced. The publication will begin in the course of a few months.

D. APPLETON & CO., Publishers, 1, 3 & 5 Bond St., New York.

NEW BOOKS.

Labor.

Seventh volume of "Boston Monday Lectures." By Joseph Cook. With Preludes on Current Events. 12mo, $1 50.

This book contains the important lectures on the Labor Question delivered last year by Mr. Cook, which attracted much attention by their bold and comprehensive treatment of a most difficult and perplexing question.

Confidence.

A Novel. By Henry James Jr., author of 'The Europeans,' 'The Americans,' 'Daisy Miller,' etc. 12mo, $1 50.

A story of great interest, which cannot fail of a very wide reading. The London *Athenæum* speaks heartily of its delightful narrative, and says: "Siena, Baden, the Norman coast, are all brought before the reader with that seemingly light but really careful touch of which Mr. James, more than any living English writer, possesses the secret."

History of Materialism,

AND CRITICISM OF ITS PRESENT IMPORTANCE.

Vol. II. By Frederick Albert Lange. Translated from the German by Ernest C. Thomas. English and Foreign Philosophical Library. Crown 8vo, gilt top, $3 50.

"Raised far above the level of ordinary controversial writing by its thoroughness, comprehensiveness, and impartiality"—*Contemporary Review.*

The Princeton Book.

The History, Organization and Present Condition of the College of New Jersey. In a Series of Papers by Officers and Graduates of the College. Illustrated with 69 Views and Portraits. Large quarto, price, in sheets, $18; in cloth binding, $20; in half-morocco, $25; in full morocco, $30.

A work similar in scope and character to 'The Harvard Book.' It is in all respects a book to be valued and cherished by every graduate of the College of New Jersey, and by all who hold in honor the noble work Princeton has done.

*** For sale by Booksellers. Sent, post-paid, on receipt of price, by the publishers,

HOUGHTON, OSGOOD & CO., BOSTON.
21 Astor Place, New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 26, 1880.

The Week.

THE nomination of Smyth has not been confirmed at Albany, and the temper of the Senate is such that the chances of winning over that body seem hopeless. How much this is due to his abuse of his office, and how much to his late indiscretion in packing the primaries, is not clear. Smyth's career curiously illustrates the condition of parties. He owed the postmastership at Albany to Senator Conkling, and his friendship for that great man was the only recommendation he had for appointment to the responsible and technical office of Superintendent of Insurance. The fact that he was nominated by Gov. Robinson seemed to point to a bargain between Conkling and Tilden, or the Tilden wing of the Democracy. On his trial, however, in the spring of 1878, for extorting from insurance companies the costs of inspection without audit as required by law, he was acquitted by the combined votes of Republican and Tammany Senators—an alliance which was revived last fall so successfully. His renomination now is attributed by the *Times* to the dictate of Conkling, which may be true, but should not make the public think that Cornell needed any dictating. In the meantime Smyth had become more conspicuous as a "worker" than ever, and, relying upon the autocratic power of his patron and the *Tribune's* account of the extreme youth and feebleness of the Scratchers, he went a step too far and roused something like genuine indignation "within the party."

We regret that we cannot share the *Times's* surprise at the Governor's action. "Mr. Cornell," we are told, "can no more afford to act as the political dummy of Mr. Conkling than Mr. Robinson could afford to surrender his Executive conscience into the keeping of Mr. Tilden." But, innocent and esteemed contemporary, how could Mr. Cornell have got his present office except as Mr. Conkling's dummy—the phrase was in everybody's mouth during the late canvass—and can you persuade him that that did not pay, or that he can "afford" to be anything else than subservient to the hand which made him what he is? Can you even make him forget, while reading your daily contributions to the Grant boom, that there is no essential difference between the renomination of Smyth and that of Boss Shepherd, and that a respectable daily cannot afford to condone in a President the lawlessness which it finds "disgraceful" in a Governor?

One of the immediate results of the affair has been the retirement of Mr. Charles E. Smith from the editorship of the Albany *Evening Journal*. Mr. Smith was one of the most active Conklingite "workers," and was one of the delegates chosen by the fraudulent Smyth primary meetings, but resigned some days afterwards. The paper has been for many years the central organ of the Republican managing power, whatever it might happen to be, and its defection is a somewhat serious matter. The editorship passes into the hands of Mr. George Dawson, one of the proprietors and an influential Republican, who was one of the principal speakers at the malcontent indignation meeting the other day in Albany. In the meantime the result of the Convention at Syracuse will be known before this reaches our readers, and it is not at this writing very doubtful. Three-fifths of the delegates elected are third-term men, and the only question which seems to occupy their minds just now is whether they will repeat the Pennsylvania process and "instruct" the delegation to Chicago to vote as a unit for Grant, or leave them to the guidance of their own enthusiasm when the time comes. They have clearly not much to fear by way of opposition within the party machinery. Mr. George William Curtis has been defeated at the election of delegates on Staten Island, and in his absence nobody is very likely to offer any outspoken opposition to Mr. Conkling's arrangements in the Convention. Mr. Curtis has fallen a victim to his faith in "reform within the party," to which he has held with extraordinary tenacity against the teachings of political history everywhere. The party will probably be reformed, if ever, at the polls, by crushing defeats at the hands of men who care more for ends than for means.

The object of calling the Pennsylvania and New York Conventions so early as February to prepare for the nomination in June is, of course, the obvious one of forestalling the working of popular reflection on the Grant "boom." That it will fail to accomplish its purpose we still believe. The very nature of the trick stimulates opposition to Grant, and will continue to do so between now and summer. The Germans all over the country are preparing to oppose him to a man, and though we perceive Mr. Boutwell, who apparently wants a nice, compact little party, would like to get rid of the Germans altogether, the rest of the managers will probably perceive, as time goes on, that nothing is so necessary to a party as votes, and that the Republican party has none to spare. Strong native opposition is being organized too, both in this State and Pennsylvania, and it will grow stronger, as the weeks run by, in view of the fact that there is no such dearth of unexceptionable candidates, who would see that the laws were faithfully executed and whose character is above reproach, as the Grant movement seems to assume.

We have discussed Mr. Sherman's qualifications elsewhere; but there are also Mr. Edmunds and Mr. Washburne, on whom personally there does not rest the shadow of reproach, whose associations are of the best kind, who do take an interest in national affairs, and who have had long and varied experience of public life. How is it we do not hear more of these gentlemen from the pastors and church-members who were so shocked in 1876 by Tilden's being such a bad man, and who call so much in sermons and prayers for personal purity and integrity in politicians? And suppose that, after all, the Democrats should, in a lucid interval, nominate Mr. Bayard, does anybody believe seriously that fear of the "Brigadiers" and the "Solid South" will continue strong enough to prevent his receiving the vote of a large and growing body of Republicans who are sick of trickery? Side by side with the demand for "a strong man" in the Presidency there has grown and is growing another demand, and one which has a larger future, for a man of stainless character, who keeps good company, and believes in a government of law; and it may get imperious enough to make such a candidate welcome, no matter from what party he comes. Now is the time to think of these things.

The attitude of the *Times* and *Tribune* towards the "booms" is just now an interesting subject of observation. Both are playing a very close game for the organship. The *Times* seems to have definitively taken up the Grant boom, and maintains stoutly the celebrated proposition "that if the people want him they will have him." The *Tribune* is as zealously working for Blaine, and both are exploring the country for statistics in support of the prospects of their respective candidates. If Grant should be nominated and elected the *Times* will have the organship which it held from 1868 to 1876, and the *Tribune* will be once more "independent," and thunder against "the Machine," as it did during those years. If, on the other hand, Blaine should be nominated and elected the *Tribune* would be more of an organ than ever, and the *Times* would continue to "expose" the Administration. The inconveniences of the struggle to the readers of both papers are very great, owing to the way in which it colors not only the editorial articles but the correspondence and reporting, at a time when people are more than usually

in need of real news and impartial comment. What the advantages of being "an organ" are to a well-established metropolitan newspaper it is hard to say. There is probably little or no advantage in it, as regards either advertisements or circulation. There is a decided loss of real weight and influence in the long run

The Democratic National Committee met at Washington on Monday, and selected Cincinnati as the place and June 22 as the date for the next national convention. Chicago and St. Louis were competitors, but it does not appear that the choice of Cincinnati is in any way significant. Neither did anything occur at the session to indicate the preferences of a majority of the Committee. The most unblushing moral that we have seen drawn is that of the *World*, which says "it means hard money," as a convention of sane men at Cincinnati "could no more fail to meditate the lesson taught by the defeat of Ewing in Ohio than it could fail to meditate the lesson taught by the defeat of Robinson in New York."

The Senate has done nothing during the week which would imply a greater concern for the conduct of the Government than for the coming Presidential contest. The House, on the other hand, has occupied itself still further with the rules, and Mr. Wood has reported a new bill to facilitate refunding. It has also listened with some animation to a report from the Committee on Foreign Affairs, which at the request of Mr. Acklen, of Louisiana, had been investigating the charge brought against him by a Detroit paper of having presented to the House and got printed, as if a report of that Committee, a report of his own in regard to some Nicaraguan claims he has long been pushing without success. The Committee found the charge to be true in all the essential particulars, but declined to decide upon Mr. Acklen's motives—evidently not because they were in doubt about them. The Committee on the Judiciary was instructed to renew the enquiry if necessary, and to report what action the House should take in the premises. The debate over Rule XXI. was a contention between those who wanted to remove and those who preferred to keep the power to add political legislation to appropriation bills. In the end the latter prevailed. The only speech of any length was Mr. A. H. Stephens's, deferentially allowed to pass the time-limit, and it was a manly and statesmanlike protest against the corrupt practice of attaching foreign "riders," and against that form of coercion as an attack on the veto power of the Executive.

The Refunding Bill extends the existing provisions of law to any bonds bearing more than 4½ per cent. interest which may hereafter become redeemable. But in lieu of the bonds authorized under the various refunding acts of 1870-79 the Secretary of the Treasury may issue bonds to an amount not exceeding $500,000,000, bearing 3½ per cent. interest, and redeemable after twenty and payable after forty years; besides notes to the amount of $200,000,000, bearing the same interest, and redeemable after two and payable in ten years. Of the latter, not more than $40,000,000 shall be redeemed in one fiscal year, and they shall be redeemed by lot. Provision is also made for the exchange of outstanding bonds of a higher rate than 4½ per cent. for the new bonds and notes at not less than par, with an allowance for difference of interest in the two classes up to the maturing of the former. Certificates of deposit outstanding at any one time must not exceed $50,000,000, and the interest on them is fixed at 3½ per cent. for one year only, when the certificates shall be convertible in sums of $50 and its multiples into the registered coupon bonds of the new issue, and, being so converted, shall be destroyed. Penalties are affixed for combining to procure these certificates for sale or as agents of others; which is futile.

As might have been expected, General Logan has come out in support of the third term, and seems to be in a nervous condition. He says "there is danger, and great danger, to be apprehended to our country in the near future." "The evidence of this has been accumulating for some time," he adds, "and thoughtful people must have observed it." Unfortunately, most thoughtful people, when collecting evidence of "danger" ahead for our country, find the General himself one of the most alarming bits of it. That he should have got back into public life is justly regarded by thoughtful people as a very grave symptom. The remainder of his argument is that General Grant is a safe man "who wants proper laws, and, if President, we know he will execute them." Now for General B. F. Butler. What does he say? He is a thoughtful person also. In fact, we should like to hear from all the thoughtful boomsters, or such of them as are at large, on this third-term scheme.

M. de Lesseps with his family arrived here on the steamship *Colon*, on Tuesday morning, and was met at once by an invitation to a public dinner, and another to discuss the question of intercceanic canal routes with the American Society of Civil Engineers. Some doubt, which we believe has troubled the minds of several of his proposed hosts, as to whether assisting at a dinner in his honor may not impugn the Monroe Doctrine, is scarcely to be considered well founded, we should say. Whether he is right or wrong in his choice of routes across the Isthmus of Panama, and whether his preference is for European or American capital in the execution of his enterprise, makes, of course, very little difference to the reception which should be accorded him and which he will undoubtedly meet with. M. de Lesseps is certainly one of the most eminent men of the day, and as he is to the last degree a "practical" and more or less of a self-made man, he should have a warm welcome at the hands of Americans. He entered the consular service of France in 1825, and six years later became Vice-Consul in Egypt, whence he went to Rotterdam, Barcelona, Madrid, and Rome, withdrawing from the latter post into what he supposed would be "obscurity" about thirty years ago. Having, however, during his first Egyptian consulship meditated the scheme of cutting through the Isthmus of Suez, he set about executing it as early as 1852. With his triumphant success and his subsequent career, his notion of turning the desert of Sahara into an inland sea, his ship-canal through the Isthmus of Corinth, his scheme to connect south-eastern Europe with India, and his Panama aspirations, every one is familiar. What will be the practical result of his visit upon his latest enterprise of course remains to be seen.

The speculative fires continue to burn brightly at the Stock Exchange, and the week witnessed a further advance in speculative stocks of 1 to 33 per cent. The money market has been made easy by the Treasury purchases of bonds, and the New York banks, while somewhat curtailing their accommodations, added about $2,800,000 to their surplus reserve. On account of the continued large foreign imports and the check in the export movement, foreign exchange has advanced and is getting uncomfortably near to the point at which gold can be exported. In the natural course of events, however, gold should not be exported for several months, but it might suit the purposes of some of the "bears" in stocks to force shipments for effect before the close of March. General trade continues active, and in nearly every department what is called the spring business is expected to be the largest on record. In London money has been in better demand, but the discount rate is not yet up to the posted rate of the Bank of England. Silver in London declined to 52*d.* per ounce, and closed at 52⅛*d.* Here the bullion value of the 412½-grain dollar at the close of the week was $0.8759.

Miss Scott, a student of Girton College, England, in a recent examination on the same papers used in Cambridge University by the men for the Mathematical Tripos, has obtained marks which would have given her the eighth wranglership, were she eligible. Last year three students from Newnham Hall, the other woman's college near Cambridge, reached a first-class standard also, one in the papers of the Moral Sciences Tripos and the other two in the Historical Tripos. Miss Scott's feat in mathematics is an unprecedented one for a woman, and the only allowance to be made against her is that she is somewhat older than the successful male wranglers. The main value of the incident to the world lies in the sug-

gestion it contains that by far the most effective contributions to the solution of the "woman question" are made by women who do things, and not by women who say that women could do them if they tried. A first-rate piece of work by a woman is worth five hundred lectures maintaining that women can do first-rate work. It must be observed, too, that ever since women began to demand higher education, although there has been much serious opposition to their getting it in company with young men, there has been none to their getting it alone, and there has been from men the heartiest appreciation of all their remarkable intellectual feats. The prejudices with which Mrs. Somerville had to contend, and which were then as strong among women as among men, and had their roots largely in religious feeling, now obstruct no woman's path.

In the British House of Commons the obstructive policy which the Irish members have resumed seems not unlikely to force on a dissolution very soon. The Chancellor of the Exchequer has moved the adoption of a new rule, not unlike that which the French Chamber has had to frame to keep the Right in order. Under it a member censured by the Speaker as obstructing the business of the House will be suspended for the day, and three successive censures will lead to suspension for a week. In France, however, censure carries a pecuniary penalty through the stoppage of pay. How this will work remains to be seen, but probably effectively; but it puts the Speaker in an unenviable position. The loss of the Liverpool election by the Liberals seems now to be generally ascribed to their candidate's concessions to the Home-Rulers, which was more than many good English Liberals could stomach. But an examination of the returns after all shows that the result was really encouraging to the Liberals in spite of their defeat. In 1874 Lord Sandon, the Conservative candidate, now a member of the Cabinet, who stood at the head of the poll, had 20,206 votes; Mr. Caine, his Liberal competitor, 15,807. At this last election Mr. Whitley, the Conservative, had 26,106; Lord Ramsay, the Liberal, 23,885. So the Conservative gain was 5,900; that of the Liberals, 8,078.

On the Continent there seems to be little talked of or thought of but the probability of a great war, and this causes the coming general election in England to be looked for with unusual interest, and even anxiety. If the Tories are beaten, there is clearly an end to Jingoism, and there will probably be something in the nature of an accommodation with Russia, which will leave her freer by far for the ventures of Continental politics. An article in the *Grenzboten*, a German review, whose editor is thought to be inspired by Bismarck, has attracted a great deal of attention for its supposed expression of German solicitude about the fortunes of the Beaconsfield Ministry. It urges England to contribute to preserve the peace of Europe by guaranteeing the independence and neutrality of Belgium, Switzerland, and Luxembourg. As these things, however, seem to be in no sort of danger, the only effect of such a declaration would be to offend and alarm France, and if Bismarck had anything to do with the publication of the article this is probably all he looked for from it. The crisis is bringing Italy for similar reasons somewhat more into prominence. Her army is worth something, and she has in the *Duilio* the most formidable ironclad now afloat. So people wonder whether the visit of the Crown Prince to Rome is not made for the purpose of sounding her. But another theory of it is that it means an attempt to come to terms with the Pope. There is thus far no change in the relations of the German Government with the Church, except that the Falk laws are now administered with somewhat less rigor.

The explosion under the Czar's dining-room in the Winter Palace at St. Petersburg is the strongest proof the Nihilists have yet given of their ferocious determination and of their marvellous ingenuity. The recklessness with which the soldiers in the guard-room underneath were sacrificed is nothing new, because it was shown in the throwing of the Fieschi and Orsini bombs; but the attempt to blow up the whole imperial family at their dinner-table is a declaration of war against a dynasty such as no conspirators or traitors have ever before made. That it should have come so near success, too, in a period of extraordinary vigilance, cannot but shake the nerves of the family, as well as of the Czar himself, to a degree which will deprive him of much of the moral support necessary to a policy of defiance and repression. If the story be true that the commandant of the palace has had a stroke of paralysis, it shows with what appalling force the blow struck the inmates. The unaccountable thing about it is, that after having failed once through haste, on the railroad near Moscow, the conspirators did not wait longer this time, as they were sure of having their prey within their reach for probably two hours. They apparently made some allowance for accidental delay, but not much. The difficulty of the Czar's position lies, first, in the danger of appearing to yield anything to men capable of employing such means of terrorizing; and, secondly, in the difficulty of knowing what, of all possible things, would satisfy them. In their manifestoes they ask for a complete revolution, or probably for a period of anarchy. The nearest they have come to a definite programme is in calling for a single assembly elected by universal suffrage and with complete power. But, then, in the absence of any organized expression of public opinion, or, one may say, of anything that can be called public opinion, there is no knowing whether such a programme would find favor with anybody but the few thousands, it may be, who are carrying on the operations against the life of the Czar and his chief officers.

The activity in extending the frontier on the side of Central Asia offers a curious contrast to the uneasiness and apparent feebleness of the central authority in St. Petersburg. A new expedition has been organized against the Tekke Turcomans, to be commanded by General Skobeleff, of Plevna fame, and, besides avenging the late repulse, to obtain some foothold from which they could be permanently held in check. They are the most formidable and ferocious of the Central Asiatic tribes, and are dreaded by their brethren of the desert to such a degree that it is said the horses of the other tribes become uncontrollable when they scent in the breeze the faintest odor of the Tekke watch fires. There is one delicate feature in the enterprise. The Tekkes frequent the Persian border of the great Khiva Desert, in which there is no real resting-place south of Khiva short of the oasis of Merv, which, however, only lies fifty miles, or about three marches, from the Afghan frontier, in the direct road to Herat, and under two hundred and fifty miles from Herat itself. The seizure of Merv would therefore seriously rouse English susceptibilities, if it did not precipitate hostilities, which the Russian Government has every wish to avoid, at least at present. One of Skobeleff's recommendations for the command is said to be his willingness to undertake the job without going to Merv. In 1874 Lord Granville warned Prince Gortchakoff that the occupation of Merv might lead to serious difficulties; but to this the Prince made no definite reply. The Russian diplomatists have, however, within the present year warned Lord Dufferin that they might have to go there as a necessity for the punishment of the Tekkes. That there will be trouble about it yet is one of the most likely contingencies of the Asiatic turmoil. It is an oasis once of great fertility, and was supposed to contain 1,000,000 inhabitants in the fifteenth century. At present it has a few hundreds, and only in the spring and harvest, when the wandering Turcomans come to sow and reap and fatten their horses.

There is news from Afghanistan, in the meantime, that General Roberts has made a proposal to Mohammed Jan, looking to a settlement, which is that the British will acknowledge as Amir any sirdar or chief, with three or four exceptions, that an assembly of Afghan notables will elect; but Mohammed is said to insist on setting up Mussa Khan, Yakub's son, a child of six or seven years old, which would involve a long regency and probably much confusion. There has been no more fighting of any consequence, but the money is going fast all the same. There is also no news about the cession of Herat to Persia.

MR. SHERMAN'S STATESMANSHIP.

A CORRESPONDENT, "T. B.," makes some enquiries on another page about the history of Mr. Sherman's connection with the national finances. He assumes, apparently, forgetfulness on our part of the fact that Mr. Sherman introduced in the Senate in 1868 a bill for the consolidation of the public debt, by which he offered the holders of the earlier six per cent. bonds, which did not say specifically in what kind of money they were payable, a new five per cent. bond payable in coin, without the option of being paid off in coin. In fact, he maintained in discussing the bill that they might be paid off in greenbacks, although he admitted at the same time that the greenbacks were then payable in gold. But he had previously, in 1867, joined the late Senator Morton and Mr. B. F. Butler in maintaining not only that the bonds were legally payable in greenbacks, but that the bondholders would be perfidious and unreasonable to ask for payment in coin. In a letter written in that year, and in view of the agitation which Morton was getting up, Mr. Sherman, then chairman of the Finance Committee of the Senate, said: "I think the bondholder violates his promise when he refuses to take the same kind of money he paid for his bonds. . . . If, under the law as it stands, the bondholder can demand only the kind of money he paid, then he is a repudiator and extortioner to demand money more valuable than he gave." To appreciate all this thoroughly, it must be borne in mind that at that date the paper dollar was worth about 71 cents, and that the bondholders were not asking for payment. The bonds were not due. No question of any kind about the mode of paying them had been raised in the financial world. The whole discussion was got up by Western politicians for electioneering purposes. Mr. Sherman took a prominent part in it on the greenback side, and tried to use it to frighten the holders of the six per cent bonds into accepting a lower rate of interest, without the privilege of being paid off. It is true, he said he did not mean his consolidation bill as a threat; but his construction of the law and the surrounding circumstances made it a threat, and he did say that it would be prudent for them to accept the offer.

We commented on all this in very strong terms at the time (*Nation*, March 5, 1866), and we recurred to it January 17, 1878, and again in reviewing the volume of his selected speeches May 15, 1879. We recall it here to show that in characterizing Mr. Sherman's appearance as a Visiting Statesman we had his financial career fully in our mind. We confess, however, we are disposed to judge his financial vagaries much more leniently now than when they first appeared, because we think his subsequent career has revealed clearly enough what we may call the rationale of them. He probably became convinced at a very early period of his political career that, in order to be a statesman in the existing conditions of American society and politics, a man must stay in Congress by hook or by crook, and that he cannot stay in it by mere soundness of views, breadth of knowledge, or honesty of intention. He can only stay in it by either holding the views actually entertained by his constituents, or propounding views which they are likely to embrace with eagerness. A man who means to make politics his career, unless he comes from a small State, where the competition is small and personal weight is much felt, is therefore obliged to practise from the first the art of seeming to think the thought of the majority with more than ordinary profundity and to feel its passions with more than ordinary intensity, and of finding out beforehand what it is likely to think and feel. By far the larger proportion of those who practise this art become such adepts in it that their personality is wholly sacrificed. They sink into mere advocates. They cease to have opinions of their own on any public question. They carefully discard all passions or prejudices which the people are not likely to share, and keep far from them all knowledge which the people are not likely to appreciate or admire. The result is often in a few years a kind of atrophy of the perceptive faculty, a destruction of mental or moral initiative, and of all tastes or interests which do not bear on the question how are nominations to be got. Along with this comes a faith in compromise which sometimes assumes the proportions of a mania. After long practice in arranging compromises in party platforms and in the division of offices the whole universe assumes the appearance of a field for compromise, and all things, human and divine, of materials for compromise. Your trained politician would never have accepted the Copernican astronomy in its entirety, but would have proposed a reconciliation of that and the old system, by which the sun would have been held to go round the earth in some years and the earth round the sun in other years.

Now, Mr. Sherman differs from a large number, we were going to say the larger number, of politicians who have managed to stay in public life through a long series of years, in this, that he has managed to maintain his individuality intact while steadily pleasing his constituents. He has devoted a considerable amount of attention to finance during the last twenty years, and has become a financier, if not of the highest order, in which Hamilton and Peel and Huskisson stand, of a high order, while at the same time making a very successful show of sharing in the various financial crazes which from time to time lay hold of the public mind, and keeping his seat in the Senate. In making the public professions which he has occasionally thought necessary to help him in his elections, he has never lost his hold on the sound doctrine which he studied in private. For sound doctrine, too, he has always shown a distinct preference whenever he could do so safely. He has it constantly in his mind, and always produces and commends it when he thinks the people are not looking, or are prepared to look favorably. If he thinks the people are likely to clamor for the payment of the bonds in greenbacks, he clamors for it too, but secretly intends that it shall never take place, and at a fitting moment produces the plan of paying them in gold. If there is a demand for unlimited silver coinage and he thinks it popular, he joins in it and says it will be a great help in resuming specie payments, while privately believing that it will hinder resumption, and intending, if possible, to have the coinage of silver limited, and when the proper time comes, to try to stop it altogether.

We have no doubt whatever that in playing this double rôle, and playing it successfully, Mr. Sherman feels that he has evolved the nearest approach to the ideal statesman which the conditions of American society will permit. We do not ourselves admire it, and when Mr. Sherman first became prominent as a financier fifteen years ago we confess we did not understand it. But we are forced to admit that to play it as he has done shows no inconsiderable force of character and strength of mental fibre. Most public men who try it fail miserably and become in a few years intellectual wrecks, like Mr. Blaine, without opinions on any question, without much interest in any question, and ready to take up any theme which seems likely to tickle the voters' fancy, talk on it for half an hour, and let it go for ever. Mr. Sherman has not succumbed in this way. He remains a distinct individuality with ideas of his own, and generally sound ones, and with a history, which fills a volume, of many years' labor on real, vital, and pressing questions in the public service, and of solid and acute contributions to the discussion of financial policy and the shaping of financial legislation. Such men are rare in public life just now—so rare that even if Mr. Sherman were a less considerable man than he is, we should feel reluctant to condemn too absolutely his peculiar mode of keeping himself in office.

The Louisiana episode in Mr. Sherman's career belongs to an entirely different category from his financial aberrations. He has held or preached no doctrine about public finance which has not been honestly held at various periods by undoubtedly honest men. The history of finance shows that it has been full of delusions, which at various periods the strongest understandings have not been able to resist. Moreover, in all democratic countries the tendency of public opinion to make representatives the mere mouthpieces or advocates of their constituencies has acquired sufficient force to make it almost as easy for a conscientious politician to preach unsound doctrine, as for a conscientious lawyer to argue in

defence of causes which in private he would condemn. Politics, in short, has become a professional pursuit, in which many men allow themselves to hold a professional as well as private opinion on the same point. But the Louisiana count raised questions on which there never has been any difference of opinion among civilized men, and which lie so near the very foundations of society that every man, no matter what his calling, must stand squarely upon them. Mr. Sherman knew when he went down there that the members of the Board were men of tainted reputation, who had been already convicted of fraud in the business of counting votes, and yet he professed in his reply to the Democratic Visiting Statesmen that he knew of no reason for watching the proceedings of the Board with special jealousy or suspicion, and when he came away from New Orleans wrote a report eulogizing them in the highest terms. He knew that the law of the State and the rules of fair play required them to have at least one Democrat in their Board, and yet he made no objection to their doing their counting and revising privately, and without any Democrat being present. He knew they were exercising judicial functions in a case of vast importance, in which their own friends were one of the parties, and that both he and they would probably profit by their decision, and he encouraged them by his presence and countenance to decide in their own favor and for his benefit. Moreover, as soon as he came North he took an office of great dignity and power, which this decision had given him, and proceeded to reward the judges by other places in the public service. Nothing can palliate this proceeding. There is no redeeming feature in it, and no one who has occasion to estimate public men or political events, be he preacher, editor, or orator, can pass it over as of small account, without proving false to the generations who will have to carry on the Government after the actors in these troubles arising out of the war have passed away.

ANOTHER ILLUSTRATION OF MUNICIPAL GOVERNMENT.

THE recent proceedings by which Mr. McLean has suddenly disappeared from the Police Board, and Mr. Nichols, removed a short time since by the Mayor, with Governor Robinson's approval, has as suddenly reappeared in his place, have not aroused a widespread indignation among reformers. Indeed, it may be said that in New York they have not attracted much attention, except from Tammany and anti-Tammany politicians. There is a certain want of conclusiveness about all proceedings connected with Police Commissioners which deters thoughtful persons from giving way to their feelings on the subject of reform in the Police Board. Besides this, the enthusiasm displayed over "reform" when Mr. Cooper came into office has died out within the past few months, partly because the triumphs of reform under his leadership have been meagre, and partly because the reform offered to the public by him has been difficult to understand thoroughly. The public's knowledge of what it wants, and what it expects reformers to do for it, is generally definite enough. It wants to have the streets well cleaned and lighted and policed; it wants to have the money of the city well taken care of and economically spent, and it wants to have officials who do not do these things for it turned out of office, and others who will do them put in. But reform, as practised by Mr. Cooper, is a much less simple thing than this. It involves not merely the removal of "bad" commissioners and the appointment of "good" commissioners, but a series of very long and intricate lawsuits, with the usual accompaniments of mandamuses, injunctions, certioraris, and prohibitions, ending in a decision of the court of last resort which practically leaves the matter exactly as it was in the beginning.

Students of problems of municipal administration at a distance from New York will probably care very little whether "Sid." Nichols is or is not a Police Commissioner, but his case is in some respects a good illustration of the absurd state to which city government has by a variety of causes been brought in this city. The facts are briefly as follows: In 1873, after the Tweed exposures, a new charter was made for the city, one of the main objects of which was to secure an efficient and honest executive. For this purpose the mayor was given the power to remove heads of departments for "cause" and after a "hearing," subject to the approval of the Governor. When the mayor preferred charges against Mr. Nichols, the latter took the ground that this provision meant that he should have a regular trial; that there should be a complaint and answer; that the accused should have an opportunity to retain counsel and be assisted by them in his defence; that he should have the right to summon his own witnesses and to cross-examine those of the other side; in short, that the whole proceeding was a judicial one, and that judicial procedure must be followed in it. It is not necessary here to rehearse all the steps which Mr. Nichols took to enforce his claim. The mayor appointed Mr. McLean in his place, and Mr. Nichols took up his case to the Court of Appeals.

Now, the Court of Appeals had already had before it a case under a similar clause of the charter relating to the Fire Department. By this clause the Fire Commissioners were empowered to remove clerks and other subordinates, with the limitation that no regular clerk or head of a bureau could be removed until he had been "informed of the cause of the proposed removal" and had had "an opportunity of making an explanation." The question before the court was as to the meaning of this clause, and it was decided that the clause meant that the "cause" must be some dereliction or neglect of duty, or incapacity, or some delinquency affecting his general character and fitness; that an "explanation" might consist either of explaining unfavorable appearances or disproving the charges, and the removal could not be made because some other man was "a better man than the accused or more congenial to the appointing or removing power." Following this decision the Court of Appeals held in Nichols's case that the proceedings by which he had been removed were illegal. At the same time, remarkable as it may seem, the question of Mr. McLean's title to the office was not involved in the proceedings, and the decision of the court did not reinstate Mr. Nichols. His actual reinstatement was effected by his seizing his old seat in the absence of McLean and getting himself "recognized" by his Republican colleagues.

We certainly do not mean to find any fault whatever with the decision of the Court of Appeals, but, taking the law to be as they lay it down, it is obvious that the provisions of the charter with regard to the removal of heads of departments are of a most farcical character. It prevents, as the Nichols case makes perfectly plain, the removal of anybody except by means of a tedious and expensive lawsuit, which would often last longer than the mayor's term of office, and which would generally end in just the way the Nichols case has ended. Indeed, it is probably safe to say that no prudent mayor will again try to exercise it; in other words, the mayor's power of removal under the charter is for all practical purposes at an end. Considering that the efforts of municipal reformers in New York and other cities have largely been devoted of late years to enlarging the power of the executive, this result would of itself be somewhat startling. But it is by no means all. If the mayor cannot remove, the heads of departments become for all practical purposes permanent officials, irremovable except by an alteration of the charter, while the mayor cannot even appoint new officials at the expiration of the old ones' terms unless he gets the consent of the Board of Aldermen. Of this difficulty the case of Police Commissioner Wheeler is a ludicrous and sufficient illustration. Mr. Wheeler's term of office has long since expired and he is merely holding over till his successor is appointed. The mayor attempted to remove him, but Mr. Wheeler ingeniously took the ground that as he was not in office he could not be removed, and obtained a writ of prohibition from Judge Van Brunt. The Board of Aldermen will not allow the mayor to appoint a successor, so Mr. Wheeler, who neither has nor pretends to have any rights to this office, is likely to remain in the enjoyment of his salary long after Mr. Cooper's mayoralty has come to an end.

There are, it should be said, two parties who are thoroughly satisfied with this state of things—Tammany Hall and the Conkling Republicans. The alliance between these two factions—

which was during the Tweed period the actual means by which the city was governed—was broken up for a few years by the rising against Tweed; but it is now as firmly established again as ever, and, through the Board of Aldermen, renders the mayor almost powerless, unless he is in sympathy with it. As the mayor cannot remove except at the end of a lawsuit in which he is more likely to be beaten than to win, and as the Board of Aldermen will not confirm his appointees until they are satisfactory to the "boys" (we believe there is not a single instance since Mr. Cooper came into office of a confirmation of any nominee of his occupying a conspicuous position in the community to a position with a salary attached to it), and an officer who "holds over" seems to have a permanent tenure of office, it follows that all the Republican and Tammany heads of departments will continue to hold office as long as the alliance between the two factions lasts. How far this permanency of tenure extends, no one seems to know. Our readers may have observed in the *Herald*, within the past month, an advertisement calling upon "all police officers removed within six years" to send in their names and addresses, apparently on the theory that *all* removals under the charter have been invalid, and that all removed policemen can be reinstated. The humblest policeman is just as much entitled to his mandamus or his certiorari as the proudest commissioner; but the consequences to the discipline of the force and the order of the city which might be produced by a struggle in the courts, such as is suggested by the *Herald* advertisement, can better be imagined than described. The alliance between Tammany and the Conkling "machine," it should be observed, is not fictitious and accidental, but is based on the fact that these two "machines" are the great centres of power and fountains of patronage in the city. Reformers who desire to make the mayor something more than their mere puppet will sooner or later have to recognize the fact that these "machines" must be broken up or submitted to.

LESSONS FROM THE PRUSSIAN CIVIL SERVICE.

I.

THE publication of Mr. Dorman B. Eaton's elaborate work on the history and principles of the civil service in Great Britain has called renewed attention to a reform movement which, in spite of the politicians, continues to interest the better class of thinking Americans, but which still needs, unfortunately, the stimulus of frequent discussion. Mr. Eaton is a historian in the sense with which a pregnant epigram has made us familiar. He teaches by example the true philosophy of civil administration; and although the comparative method as employed by him is peculiarly obnoxious to a certain school of patriots, it cannot be too often or too warmly commended to all who are sincerely in favor of reform. We propose, therefore, to give some account of a system which differs hardly less from that of England than from our own. We refer to Germany, or, more strictly, to Prussia.

It is not so many years since that system was the fashionable horror of Liberals all over the world. The very mildest criticism pronounced it a servile instrument of despotism; an incubus on the people and their just aspirations; a caste of bureau clerks, an aristocracy of tax-collectors, whose vulgar plebeian origin made their sway only the more vexatious and hateful to freemen. It may even be said that in the pre-constitutional days this opinion was a matter of accepted faith with all but the extreme Conservatives of Prussia. And yet to-day it is viewed with pride and admiration by Liberals and Conservatives alike. How shall this change be explained? Not certainly by any great change in the organization, the discipline, the principles of action, of the institution itself, for those are substantially what they were a century ago. Not by the example and authority of Bismarck, who has no superstitious regard for the bureaucrats, and has done little to make them popular. The true reason is rather that the former hatred of those officials and their system was an inevitable incident of the struggle for a charter, to which they, having in their own hands the legislative as well as the executive power, were of course hostile; so that after they had been vanquished and the charter had been obtained, the country was only too willing to leave them that part of their duties which more properly belonged to them, and for which they had shown themselves so remarkably competent. About their competence, their practical efficiency, no dispute had, in fact, ever been possible. The earliest state to adopt rational principles of civil administration, Prussia had an educated, trained, honest, and zealous body of public officials while France was still groaning under the *fermiers-généraux*, and patronage was filling the English departments with idle and profligate barnacles. If those officials also formed, as they undoubtedly did, a species of bureaucratic despotism, it was not because they were trained, or honest, or faithful; it was chiefly because, being the authors as well as the servants of the laws, they had practically usurped powers which ought not to have belonged to them, and which elevated them above all responsibility to the authority or even the opinion of the people. But after this had been corrected by the introduction of a popular legislature, the system lost its most glaring fault, while retaining nearly all its virtues.

These virtues are not less those of organization than those of practice—not less the principles on which the system is constructed than the rules according to which it acts. But of the two classes the theoretical virtues are, of course, the more important to foreign enquirers. The practical details of an institution require in the stranger who would study them a great variety of preliminary and often special knowledge, which, owing to local differences, will fail in many cases to repay the cost of acquiring it; while the original principles of life in the same institution may deserve the most careful efforts of the enquirer, and prove to be capable of universal application. In obedience to this distinction we shall, therefore, speak not of the machinery of the Prussian system, but rather of the organic and essential conditions of its being. And these, we venture to say, are directly opposite to the notion which has been formed of them by nine-tenths of all intelligent Americans.

To make this clear let us take, by way of illustration, one or two typical branches of the public service in Prussia or Germany; for instance, the postal service. Mr. Nasby has made us familiar with the interest which the politician feels in this useful department. That gentleman, as well as many of his countrymen, will, therefore, be not a little surprised to learn that in Germany postmasters are not appointed as a reward for managing caucuses, nor on the recommendation of their townsmen, nor even by a popular vote. When we add that the postmaster is not even required to be a citizen of the town where he officiates, the credulity of many readers will be violently taxed. And yet the German postal system is the most democratic in the world, for this reason: that every youth in Germany, practically speaking, may become a postmaster by his own choice—that is to say, the service is open to all those to whom the certainty of permanent employment with promotion and, on retirement, a pension, is sufficient reward for the preliminary course of study that must be pursued, and the few years during which only an extremely low rate of pay is enjoyed. The effort of the Government is, therefore, only directed to keeping a proper balance between these two factors, so that the service may always be adequately supplied. The Postmaster-General himself is a product of this system. He entered at the very lowest rank and worked his way upward to the highest station. The accomplishments of this remarkable official are not unknown even in America. He has purged the official vocabulary of foreign words; he delivered last winter a lecture on the subject full of the most curious philological learning; and at a scientific congress in Leipzig he astonished the delegates by addressing them in fluent and correct Latin. Familiar with all the most minute details of the service, he has likewise the broad, comprehensive vision which make the administrator and reformer. Not every under-official can indeed become a Stephan, for the number who can actually reach the higher posts is necessarily limited. Neither can every youth who leaves West Point become a major-general. But the chance is open to them all, and this explains in part the fidelity with which they serve as lieutenants and captains through a long series of years.

The qualifications for entry into the postal service are determined by a general law, and are such as may ordinarily be acquired by the poorest youth if he have fair natural gifts. In the case of the lower class of employees—the carriers, postilions, messengers, porters, and so forth—this is a very simple matter. They are required to be taken as a rule from a particular class of retired soldiers—the non-commissioned officers—who, according to law, have a claim to civil employment after ten years' continuous service in the army. That they have satisfactorily filled such military offices as corporal and sergeant is held to be proof that they are adapted to service in the post; but they have nevertheless to furnish evidence of sobriety, honesty, and other civic virtues. When the supply from this source does not suffice, the deficiency may be made up in other ways, but discharged soldiers are always preferred. Among the officials

proper, original appointments are made only to the lowest grade; the higher ones are filled almost exclusively by promotion. Exception might, of course, be made in the case of the postmaster-general, who, in virtue of his responsibility to Parliament, is a semi-political officer, but, as already stated, the present incumbent is no exception. The lowest grade now is open to every youth who, besides the usual testimony as to character, has the certificate of a gymnasium that he has completed his studies as far as *prima*, or through all but the last year of the course. This gives him something more than the education of our high-schools and academies—more both in depth and in breadth. On application for admission into the postal service he is taken at first as a pupil—or *Élève*, as the Germans continue to say, in spite of Dr. Stephan's horror of the use or misuse of French words—next for a time on probation in some more responsible duties, and finally, if he prove efficient, is regularly installed. To secure the just application of tests, and to prevent a youth from being exposed to favoritism, the examinations are conducted by committees, to which in some branches of the service outsiders are also attached. With good conduct and efficiency come regular promotion, and, on retirement in old age, a pension. The very low salary which is paid in the lower grades is counterbalanced, we repeat, by security of tenure, certainty of promotion, and assurance of a pension. These conditions keep the general supply of applicants about equal to the demand When it falls short, as is the case oftener than the contrary, a deserving letter carrier may be promoted, or a clerk transferred from some other department.

Our second illustration shall be from a service which offers in many respects different conditions. The problem of municipal government is not the least of those which vex the minds of thinking and unthinking men in America; and it has not been wholly neglected in Prussia, as any one may see who chooses to look over the history of the many experiments that have been tried. We are willing to admit, too, that in Berlin, as in New York, these experiments have often been conceived in a sense favorable not to popular, but to personal or dynastic rule—in Berlin, to a personal king or the central government; in New York, to Tweed and Kelly, or an oligarchy like Tammany Hall. But, along with this, reform in Prussia, unlike that in New York, has aimed at and has obtained honesty, efficiency, and respectability in the administration of the cities.

A short time ago a new burgomaster was chosen in Berlin. If Mr. Nasby was amazed at the picture of a Prussian postmaster, Mr. John Kelly will rub his eyes in despair at the sight of a Prussian mayor. The burgomaster of Berlin is elected not by "the people," but by the Common Council. His term is not one year, but ten. He is not questioned about his politics; and it is a literal fact that when the late burgomaster retired to accept a cabinet seat, not a newspaper in the city could state to what party he belonged. He may be taken from any part of the kingdom, and while the successful candidate in the late election came from Breslau, his chief competitor was from Königsberg. But here freedom of choice ends and a despotic government begins to apply its fetters. The municipal council may disregard politics and geography, but it may not disregard fitness; for the law treats service in city administration as a profession, like any other, which a man can enter only after making the prescribed studies and passing a term of apprenticeship. He must know something of law, of history, of political economy; he is sure to know Latin, Greek, and philosophy; and he is likely to speak more or less fluently two or three modern languages. With all these accomplishments, however, he is not ready for appointment until he has qualified himself by general experience in the civil service, and by special discipline in municipal employment. A candidate does not spring at once from the school of probation to the mayorship of Cologne or Berlin. He becomes in the first place, perhaps, an unpaid member or attaché of the magistracy in some small city; then in a large city; next, assistant burgomaster in a small city again, and then assistant burgomaster in a larger one; and he completes his tour by the office of burgomaster in a lesser and then in a greater municipality. A slow career, indeed. It may take twenty or thirty years. But Prussian mayors are not "Bosses," do not steal, and are gentlemen.

In the early stages of the bureaucratic career, we repeat, the son of the duke and the son of the grocer may sit on the same bench. One law fixes for both the qualifications for entry and the conditions of promotion in the service, and they must be high up in the scale before their superiors presume to defy the traditions of equality and justice by discriminating in favor of one against the other. That so few grocers' sons undertake this career is owing to circumstances over which Government has no control. They may want the means to cover the long period of necessary study and the term of probation during which they draw no pay. They are likely, too, in this enterprising age to have a spirit of speculation, which soars above the patient labor and slow progress of the civil service. But, even if these two reasons are not present, there remains a force, which may be called hereditary inertia, inclining the son to the occupation of the father, and which keeps the administration, like other trades and professions, in a certain class of families.

This is, perhaps, an unavoidable result in practice. It is a great advantage in so far as it nourishes a feeling of professional pride and class honor, which elevate the tone and increase the efficiency of the service. It becomes an evil when it generates a depressing routine at the cost of natural impulse or elastic initiative. But it is an unavoidable result, or, at least, one which could hardly be prevented by positive legislation, and is not peculiar to Prussia among countries which have a permanent civil service. Indeed, the legislation of Prussia, which on this subject consists for the most part of royal decrees issued by a simpler process than a parliamentary act, long before there was any parliament, and which, therefore, might be expected to sanction the most arbitrary and unjust practices—this legislation is conceived in a spirit extremely and almost grotesquely democratic. If the effect of laws were not subject to the eternal conditions of human nature the Prussian system would in this respect be almost perfect. It is not willing to stop even at a competitive examination, which is the favorite method in England. It does not advertise a vacancy in some department, invite candidates to present themselves, and then take the one who most satisfactorily passes the test. This is evidently the only system which we can hope to introduce in America as an improvement on the present; and it offers, perhaps, as many elements of fairness as any other that is possible under our loose and vacillating public policy. But the Prussian plan differs from this as much as an educational qualification for the suffrage differs from a qualification based on some accidental test, like height or weight. It undertakes in theory to give employment to every youth who satisfies certain conditions. What those conditions are has just been shown in outline, though the details vary greatly, of course, in the different branches of the service. The postal clerk and the inspector of mines do not need the same sort of preliminary training. But any young man who chooses to pursue the required general and special studies for his favorite branch—be it mining or posts or customs or justice—has a right to be installed in the path of regular promotion; and no discrimination can be shown against him by social, pecuniary, religious, or political tests. In short, the civil service is a profession, which a man chooses for himself as he chooses medicine or law or the ministry. Like those professions it exacts from its members a previous course of special discipline, and when that has been completed imposes no further tests except efficiency and good conduct.

THE QUEEN AND PARLIAMENT.

LONDON, Tuesday, Feb. 10.

UP to the present time Parliament has been occupied with the prologue to the political drama. The business of the piece has not really begun. The progress of the Queen to the House of Lords, the reading of the royal speech in the Lord Chancellor's Irish and not in the Queen's pure and clear English, the moving of the address to the throne and the debate upon it, have occupied one or other of the two Houses until last evening. It is difficult to conceive any ceremony much less imposing than that which is usually presented on the first day of the session. To the modern eye and mind it has something of the incongruity of a lord mayor's show. It has a mediæval and barbarous appearance. And here, slight though the occasion may be, lies one of the chief dangers to the English monarchy. It has many political advantages which are set forth in those writers on the British Constitution whose works are by courtesy assumed to be in every gentleman's library. But there is some risk of the public opening their eyes one fine morning and finding it, in some of its ceremonial and yet indispensable accompaniments, absurd. The perception that they are or are becoming ridiculous is as fatal to institutions as the feeling that they are mischievous. The sense of the ludicrous is more of a solvent than the sense of a grievance. An institution which is tolerantly laughed at is in danger of crumbling away. The English monarchy has not reached this stage at present, and may be generations or centuries distant from it. It is impossible to see further in politics than in a London fog. We may be moving to republicanism, or to the democratic Cæsarism which Lord Beaconsfield has preached for half a century, and which the *Quarterly Review* has begun to advocate; or we

may remain much as we are. But the growth of simpler manners and the sense of equality make the Persian apparatus of monarchy increasingly ridiculous in the eyes of an increasing number of persons. One cannot see how or why it is that men should suddenly see that to be absurd to-day which they thought imposing or respectable yesterday. We can only say that so it is. The film drops from their eyes. The conversion to a sense of the ludicrous comes as quickly, as irresistibly, and as inexplicably as the conversion to a sense of religion. Woe to a good many respectable institutions which once were useful, and would be so still if men could only believe in them, when this mysterious illumination comes! In the House of Lords, where the Queen reads, or where the Lord Chancellor reads for her, the speech which she addresses to the Peers and to as many of the Commons as, led by the Speaker, can tumble and jostle their way to the bar, the scene, except for the brilliant dresses and often beautiful faces in the ladies' galleries, is rather foolish. Elderly gentlemen accustomed to lounge in shooting-coats, or to be spruce in evening dress, appear very ill at ease in the scarlet robes of peers, from which the modern boot and trouser incongruously creep out. They look at each other with a sniggering, half-ashamed expression. They require a stage manager. A well drilled Venetian senate of supers in "Othello" is certainly far more dignified in bearing than the assembled peers of England in their robes.

After the Queen's speech is read the two Houses adjourn till their usual hour of evening session, then to take the speech into consideration, and to adopt an address in reply. When it is practicable the address is moved, in both Houses, by new members, to whom it gives a safe opportunity for a maiden speech. In the House of Commons the mover is always a county member, or knight of the shire, as he is called, and the seconder a member for a borough. The habit of old times, when members appeared in full dress and decorations, when Lord North was "the noble lord in the blue ribbon," has disappeared; the only survival of the practice is in the usage which requires that the mover and seconder of the address shall appear either in court dress or in any military, naval, or civil uniform to which they may be entitled. The two figures, side by side, looking as if they were singled out for some marked fate, have a fantastic air among the careless costumes of modern life. Usually the debate on the address is a mere form. The mover and seconder echo the terms of the royal speech; the leader of the Opposition says a few complimentary or civil words to them, keeping clear of serious political controversy; the Ministerial leader makes such reply as may be convenient and necessary, and the Houses adjourn. This session matters have been taken more gravely, and there has been a reversion to the practice common a quarter of a century ago but exceptional now. Lord Hartington in the House of Commons, and Lord Granville and the Duke of Argyll in the Lords, sharply challenged the policy of the Government, and were as sharply replied to. The excited feeling which prevails out of doors made itself felt in both Houses on the first night. The main debate has, however, been, as you know, upon Irish distress and the Irish land system. Irish members clamor for an Irish Parliament; but they are making the British Parliament into an Irish one. Irish topics and Irish eloquence are certainly predominant in it. The debate on Mr Shaw's vote of censure, imputing to the Government negligence in dealing with Irish distress, has already occupied two nights, and will extend at least over a third.

The first day of the session has a certain interest as being the only occasion now on which the three branches of Parliament, the Crown, the Lords, and the Commons, actually meet in the same chamber. It may be considered, perhaps, a relic of the time when the Peers and Commons deliberated together, and when the king, if he chose, was present at their deliberations. In the Lords, when the separation between the two chambers took place, he sat as in his hereditary council, and he occasionally came down to the Commons to rate them. "Although, however," as Canon Stubbs remarks, "a good deal of the business of the Lords was no doubt transacted in the king's presence, mediæval history affords no instance of his visiting the House of Commons whilst they were debating." Queen Anne was the last sovereign who attended the debates of the Lords. So far has the jealousy of the Commons extended of anything like royal influence, that when the Prince Consort showed himself in the gallery of the House in 1846, the repeal of the Corn Laws being then under discussion, Lord George Bentinck and Mr. Disraeli protested in open debate against his presence as calculated to sway the deliberations of the House, by indicating the bias of the Crown. In a note which the Queen has appended to the passage of Mr. Theodore Martin's 'Life of the Prince Consort' which narrates this incident the following explanation is given: "The Prince merely went, as the Prince of Wales and the Queen's other sons do, for once to hear a fine debate, which is so useful to all princes. But this he naturally felt unable to do again." But though the Queen is not present at the debates of Parliament, she does not depend upon newspaper reports for her knowledge of what takes place there. It is the practice of the Prime Minister, or the leader of the House of Commons if the Prime Minister happens to be in the Lords, to write confidential letters to the sovereign, describing the course of discussion, indicating the views of the speakers, and signalizing any remarkable feature characterizing it, such as the effective speech of a new member. There is a trace of these communications in the 'Life of Lord Althorp.' A note of King William IV.'s, acknowledging from Windsor Castle one of these ministerial letters, is there printed. Its concluding sentence makes it worth citing:

"WINDSOR CASTLE, June 4, 1833.

"The King has received Viscount Althorp's letter of yesterday, from which his Majesty has learnt, with much satisfaction, that Mr. Stanley's first resolution on the West India question has been carried unanimously. He rejoices that a young member has come forward in so promising a manner as Viscount Althorp states Mr. W. E. Gladstone to have done."

The practice of the Ministerial leader of the House of Commons to write to the sovereign letters of narration and comment with respect to the evening's proceedings remained in full force until the close of Mr. Gladstone's Administration. The Minister, who was supposed by lookers-on to be taking elaborate notes of an opponent's speech, was really "presenting his humble duty to her Majesty," and engaged in descriptive reporting for her benefit. When Mr. Disraeli came into office, in 1874, this system, with the Queen's approval, was modified. Viscount Barrington, M.P. for Eye and Vice-Chamberlain in the present Government, was authorized to send to the Queen a summary of the proceedings of each evening, consisting of an analytical account of the debate and of the part borne in it by the successive speakers. There is direct telegraphic communication between the House of Commons and the Queen's residences out of London, and these summaries are sent by wire up till half-past ten every evening to Balmoral, Osborne, or Windsor, as the case may be. They are understood to be perfectly impartial and colorless; the rarer and more confidential communications necessary, being kept within the hands of the Ministerial leader, reach the Queen the same evening. The arrangement enables her when she is at a distance to anticipate the morning papers. The function is a delicate one, but there is probably no one more capable of discharging it discreetly than Lord Barrington, who might probably have earned political distinction if he had not preferred, like many able men fonder of conversation than of debate, to cultivate the inner and social side of politics rather than to seek public prominence. † † †

Correspondence.

MR. SHERMAN'S FITNESS FOR THE PRESIDENCY.

TO THE EDITOR OF THE NATION:

SIR: Does not this remark, in your yesterday's paper, indicate a departure from your usual judicial caution?

"The worst incident in Mr. Sherman's career is his officiating as a Visiting Statesman and whitewashing the Louisiana Returning Board."

I am not disposed to excuse or palliate this offence; and if the superlative which you used did not imply a comparison with other facts in that politician's history, I should not trouble you with this criticism. But I cannot forget, and, although the rest of the world seems to have forgotten, I should have thought the memory or pigeon-holes or scrap-book of the *Nation* would have kept at hand his extraordinary performances in the Senate at the time of the first serious attack on the public credit. The precise position which he then assumed could be stated accurately only by a reference to the *Congressional Record;* but it seems to me to be due to the cause of justice, and to the wide audience which you address, that you should recall the incident to which I refer, and reconsider your assignment of pre-eminence to the Louisiana exploit. For, really, there is something to be said by way of defence of the latter affair, however thin and feeble the defence may be; but I think the keenest sophist may be defied to invent one for the conduct of Senator Sherman on the earlier occasion. It was, in brief, an eager outrunning of what that too acute politician fancied to be a rising public sentiment in favor of a partial repudiation of the national obligations, by a forced exchange for obligations at a lower rate of interest, under the threat of payment by a flood

of depreciated greenbacks. What it was in terms and in detail will you not take an early day to set forth ?

For one, I should much prefer to regard Mr. Sherman as an endurable candidate for the Presidency, for I want to vote for a Republican, and the Republicans whom I can vote for are few enough at the best. But the intelligence and capacity which Secretary Sherman has shown in dealing with financial subjects preclude any excuse for him upon the ground which has served General Grant so often—that he meant well but did not know any better ; and I do not see but he must stand as an unscrupulous and not always sagacious politician, ready to anticipate the "civium ardor prava jubentium," by sacrificing his country's honor and welfare before the sacrifice is really demanded. T. B.

February 13, 1880.

To the Editor of The Nation :

Sir : Referring to the article in the *Nation* of February 12 in regard to Mr. Sherman's "busily working the official machine, especially at the South, to increase his strength at the Convention," I beg leave to enclose an article from the Cincinnati *Commercial* of this date. I do not know the writer, but he seems to confine himself to facts, and to know what he is writing about.

I am not an office-seeker or holder, never have been, and never want to be, and am as much opposed to the "machine" as you are ; and if I thought John Sherman was "working the machine" to secure his nomination I would oppose him as strongly as I now favor him. It seems to me if you had substituted the word "charges" for the word "evidence" you would have come nearer the truth, and it is hardly fair for you to assume, as you do in said article, that he is "active in his own behalf." Mr. Sherman has repeatedly denied, through newspaper correspondents, that he is using his official power in any way to secure his nomination, and, so far as I know, no proof and no evidence has been adduced to show that he is so using it.

Would it not be as well to assume, in this case as in others, that a man is innocent until he is proved guilty, and to require the opponents of Mr. Sherman to "prove" their charges as well as "make" them ? You are a sincere civil-service reformer. Can you name any Secretary of the Treasury whose administration has been more efficient, honest, and economical than Mr. Sherman's ; who has attended more strictly to business ; who has more completely ignored claims of party ; whose department has been so free from all scandals and frauds ; who has been more devoted to the duties of his office, and whose private and public life for twenty-five years has been so free from all scandal and taint ? And is all this to weigh for nothing against the charges of unknown correspondents of newspapers, either Republican or Democratic, which do not want to see Mr. Sherman President of the United States ? This Administration may not have done all that the friends of civil-service reform desire, but it certainly has done more in that direction than any other ; and, if we are to judge by results, it seems to me John Sherman is entitled to as much credit as any other member.—Yours,

Zeph. Brown.

Cincinnati, February 15, 1880.

METHODISM AND "THE STRONG MAN."

To the Editor of The Nation :

Sir : In your issue of February 12 you have an article on "The Grant Movement Thought Out," in which you do the "Strong Man idea" more exact justice than you seem to do some whom you name as supporting it. After describing the results of a seizure, more or less forcible, of the Administration by a Presidential candidate, you say :

"It would become apparent long before his term had expired that it would be madness to nominate anybody else to succeed him ; that the public peace and safety required that he should stay in power as the only defence against anarchy; and that, in fact, he should use all the means at his disposal to secure his re-election—under the forms of law if possible; if not under the forms of law, somehow. All the best people would insist on this—the ministers of the Methodist Church, the most widely-circulated newspapers, the great bankers, the railroad men, and so on."

Considering how remote such a contingency must be from a people who surrendered the administration of the Government into the hands of a minority whose claim to it was enforced not by the military, but by the decision of a political majority of one in a commission mutually appointed for that purpose, it would be difficult beforehand to tell exactly what justification for revolutionary measures the circumstances attending the contingency might supply. But your assertion that the "ministers of the Methodist Church" would favor the revolution you describe is evidently based upon the assumption that they are now, as a fact, in favor of the Strong Man idea. Nor is your suspicion wholly destitute of foundation. The "official" press of the Methodist Church is usually much more diligent in circulating "reports" of bulldozing in the South and in arraigning the "record" of the Brigadiers in Congress than in the enforcement of the duty of obedience to law or of the principles of correct morals in national finance. Occasionally a bishop or some other dignitary gives expression to his "national" patriotism. Yet such things are far from meeting the approval of the "ministers of the Methodist Church" as a whole. From personal knowledge I assure you there is a large and increasing number of young Methodist ministers who are opposed to executive disregard of Constitutional guarantees even in the case of a "reconstructed" State; who denounce larceny even where the plunder is the electoral vote of a Southern State; and who are destined to make themselves felt in the pulpits, press, and policy of the denomination of their choice. George M. Fortune.

Waverly, Ill.

MR. BLISS'S FAILING MEMORY.

To the Editor of The Nation :

Sir : In the *Nation* of February 12 occurs the following passage referring to some proceedings at Albany: "He issued his calls in the evening for primary meetings the next day at twelve, so that none but the forewarned faithful could get there in time—an old New York trick over which that disillusioned reformer, Mr. George Bliss, lately wept in General Arthur's bosom."

This is another instance of the *Nation's* conspicuous inexactness. The trick referred to may be a New York one. If it is, it is an old one, for since 1870, when the present Republican organization was formed, it has been impossible to call a primary except after four days' public notice, and none has been so called or attempted. This being so, Mr. Bliss has not wept in General Arthur's bosom or elsewhere over that trick. He has sought to change what exists, not what don't exist.—Yours, etc.,

George Bliss.

Union League Club, February 17, 1880.

[Mr. Bliss's recent political sorrows can hardly have impaired his memory to such a degree as to make him forget the following passage in his letter to General Arthur, dated November 12, and published in the New York *Times* of November 26, 1879. It is true the trick he here describes is practised with regard to the meetings of the district associations, and not the primaries, but what difference does that make? It was still a trick, and a trick practised by the very men who manage the primaries upon the men who compose the primaries, and the very same trick that was practised in Albany by Smyth and his friends, and that Mr. Bliss wept over in General Arthur's bosom. We fear some of Mr. Bliss's enemies will chuckle over his producing this point with triumph, as being "just like him."—Ed. Nation.]

"Elections in the [district] associations are in many cases—in most cases where there is any contest—conducted with conspicuous unfairness. It was in evidence before the Central Committee and not denied, that last December in one association no one was allowed to enter the place of meeting unless he had a postal card with a certain stamp on it, or something of that nature, and that the ingenious plan was adopted of mailing these cards to obnoxious members from a distant postal station an hour or two before the time of the election, so that it was impossible for them to reach the members till the next day. Yet the Central Committee affirmed the validity of an election held in that way, but as a salve to its conscience ordered the Executive Committee to investigate and report on that association within sixty days. This order was made last January or February, on, I think, your motion, certainly on your assurance that it must be done. Yet that Executive Committee has never reported, never investigated, never taken any steps to do so, and I may add that few who remembered how convenient a body the Executive Committee has proved itself for the burial of matters obnoxious to the controlling powers ever expected it to report. This is a specimen brick at once of the management of many of the associations, and of the care which the Central Committee takes to keep up the forms of fairness, and at the same time not to interfere with the acts of those who subserviently control these associations—'henchmen' I have heard them called."

STATISTICS OF THE HARVARD DIVINITY SCHOOL.

To the Editor of The Nation :

Sir : I send you some statistics collected from the last Harvard Triennial, which are interesting for the light they throw upon the class of

men who seek to be taught "unsectarian theology." In order to understand them we must remember that a learned ministry is better than a half-educated one, and that a college degree is the only criterion by which the education of a large class of men like the ministry can be judged.

During the first twenty-five years (1817–41) of the school's existence, when it was clearly sectarian, 189 men graduated, all of whom but six had received a college degree. These six belonged to the classes 1829, 1830, 1831, 1832, 1833, and 1839. In the second period of twenty-five years (1842–66) there were 191 graduates, of whom 147 had received a degree.

The Triennial closes with the class of 1874. During these eight years (1837–74) 59 men came out from the school, of whom 20 had received a degree.

In the first period, then, the school may be said to have consisted entirely of college men. In the second, three men out of four had received a degree. During the last eight years we find that only one in every three has been through college. And that the proportion has grown even less appears from the statement of the President in his last report, that "the faculty has carried into practice the policy of refusing pecuniary aid to unpromising students."

About 1843 a change seems to have overtaken the school. Dividing the last thirty years (1845–74) into periods of five years each, I get the following results:

Years.	Graduates	Had received a College Degree.	Percentage.
1845–49.....	48	40	four-fifths.
1850–54.....	29	20	two-thirds.
1855–59.....	39	30	three-fourths.
1860–64.....	31	25	five-sixths.
1865–69.....	32	29 (of these, 11 belonged to the two classes 65 and 66.)	five-eighths.
1870–74.....	42	14	one-third.

In order to make still more plain the meaning of these figures, suppose that in each period of five years ten men had graduated; then the number of college men for each period would have been as follows: 1845–49, 8; 1850–54, 6¾; 1855–59, 7½; 1860–64, 8½; 1870–74, 3⅓.

The Rev. F. G. Peabody, in his rather curious report on the Divinity School to the Board of Overseers, reminds us "that Harvard College was originally founded for no other purpose than the training of Christian ministers." I wished to learn what proportion of the graduates became *ministers*, and found this assistance: "Nomina Theologiæ Professorum et Ecclesiarum Pastorum literis *Italicis* imprimuntur." I did not understand for some time whether this referred to those who now are pastors of churches, or who during any period of their life had been such; but my doubts vanished when I found among the class of 1847 this name in italics, *Thomas-Wentworth Higginson*, Harv., 1841.

During the first twenty-five years, when all were college men, only 22 out of 189 did not become pastors, being ⅛.

During the second period of twenty-five years, when there were 191 graduates, 33 never became pastors, being ⅙. Of these 33, 28 had received a degree from some college; so that, out of 147, 28, or about ⅕, have not become pastors; while of 44, only 5, or ⅛, failed to become such.

During the last eight years, out of 59 graduates, 11 were never settled over a parish, being nearly ⅕. Of these, six had been through college, so that out of 20, 6, or almost ⅓, never became pastors. While from 39, 5, or ⅛, simply studied theology without becoming ministers. H.

GLOUCESTER, February 19, 1880.

Notes.

THE death last week of Mr. James Lenox, in the eightieth year of his age, removes one of the most liberal of modern benefactors. For his charities alone he would be eminent, but he followed the example of Astor in founding a great public library to perpetuate his memory. That library is still sealed to the public, and it is not generally known what will be the ultimate conditions of its use; its title to rank among the foremost libraries of the world is well understood.——In the current *Library Journal* (for January), Prof. W. G. Sumner, of Yale, gives a summary critical list of books on political economy and political science "recommended for general reading, and for an introduction to special study."——We have received a well-devised little brochure called 'Suggestions for a Course of Reading, prepared for the Denver High-School.' "The work was undertaken with the belief that high-schools are largely responsible for the character of their graduates as readers." All the books recommended are in the Public School library.——What we said the other day of the originality and intrinsic beauty of *Le Livre* will apply very well to Mr. Edward Walford's *Antiquary*, of which J. W. Bouton is the American agent. The January number is beautifully printed, and is embellished both typographically and pictorially. Amidst a variety of interesting matter we shall mention an article showing the abuses of the English franking privilege, an account of the finding of an East Indian money-cowrie in a British barrow near Land's End, a malevolent enquiry on the part of Mr. F. J. Furnivall whether any one can disprove his interpretation of *Swinburne* by *Swine's brook*, and the announcement of an Antiquary Exchange, to be conducted at the office of the journal, 62 Paternoster Row.——A kindred publication, the *Folk-Lore Journal*, edited by the Working Committee of the South African Folk-Lore Society, can now be obtained of David Nutt, 270 Strand, London, at the moderate price of six shillings for one year's subscription It is published bi-monthly at Cape Town. The first five parts, containing one hundred and twenty-three pages, are before us; they will be found valuable not only to folk-lore students but also to philologists, for the translations in all cases are accompanied by the original text. The contents are as varied as possible, embracing tales, fables, proverbs, customs, superstitions, etc. One number is devoted to some customs of the Ovahereró—a useful contribution to the history of primitive culture. We trust the society may be encouraged in the laudable effort to preserve traditions which are already rapidly fading away before European civilization——We have more than once alluded to the instructive series of papers on wood-engraving which have been appearing in the *Magazine of Art* (Cassell, Petter & Galpin). No. 7, printed in the February number, concludes them, and the writer, Mr. Henry Haliday, gives four very interesting examples of the result of a hearty co-operation between the designer (himself) and the engraver, in an attempt to realize such a unity of conception and execution as Bewick pre-eminently typifies.——The first number of a fantastically named paper, *Belatrasco*, edited by the Academic Department and School of Design of the University of Cincinnati, is noticeable for two "process" reproductions of pen-and-ink sketches by ladies, members of the sculpture class. They are very creditable productions.——The United States Coast Survey's latest publication is a fine quarto volume, the 'Pacific Coast Pilot: Coasts and Islands of Alaska,' second series. It is the laborious compilation of Mr. Wm. H. Dall, and contains a summary of all the meteorological data relative to Alaska up to the year 1877. Of this portion of the work we may speak hereafter. More striking to the literary eye is the second half of the volume—a partial list of charts and maps relating to Alaska and the adjacent regions, compiled by Mr. Dall and Mr. Marcus Baker (57 pages), and a partial list of books, pamphlets, papers in serial journals, etc., on the same territory, by the same compilers (151 pages). The references to Congressional Documents alone fill 16 pages. Only modesty could have called this admirable performance "partial." It would be singular if in so surprisingly large a catalogue, derived from works in so many languages, there should not be slips in the proof-reading, but such as we have observed are insignificant. The Russian titles are given in Russian characters.——A letter from Captain Gorringe in the first number of the *Egyptian Gazette* (Alexandria, January 26), describes in detail the masonic symbols which he is confident he has discovered in the foundation of Cleopatra's Needle, below the pedestal. They consist of a piece of syenite granite, 42 inches square, with dressed sides and all its angles right angles, found immediately below the east angle of the pedestal, and laid in a peculiar mortar; a piece of pure soft limestone beneath, in the next layer, resting on another piece of syenite granite, also carefully squared; a third piece of the same granite peculiarly cut; and a trowel, perhaps left in place by accident. Some notches also are regarded as emblematic. All these things have been carefully noted, and can be fully studied on the re-erection of the Needle in this city.——B. Westermann & Co. send us the first number of the *Revue Égyptologique*, published by E. Leroux under the editorial conduct of MM. Brugsch, Chabas, and Revillout, of whom the first and last fill all the space.——George Routledge & Sons publish immediately 'Insects Abroad,' by the Rev. J. G. Wood. Of the 860 insects described, 600 have been figured, and engraved in view of the actual specimens.——D. Appleton & Co. announce 'Rodman the Keeper,' Southern sketches, by Constance Fenimore Woolson; and 'Recollections and Opinions of an Old Pioneer,' by Peter A. Burnett——Mr. F. Gutekunst, Philadelphia, sends us some admirable specimens of his phototype (Albert-type) process, in the portraits of Miss Emma Thursby, Bayard Taylor, Emerson, and Henry Armitt Brown.——A second edition of Von Holtzendorff's 'Wesen und

Werth der öffentlichen Meinung' has been called for and is in the press (Munich: G. Himmer).

—Neither the *Atlantic* nor *Lippincott's* for March is remarkable, and the fiction of both is, perhaps, the best part of the contents. Mr. Howells's story gets well out of comedy and plunges into melodrama with a decision which leads one to suppose him more confident of the result than at this stage the reader can be. The success of "Adam and Eve" in *Lippincott's* is by this time pretty well assured, we should say; the present instalment serves noticeably to strengthen its picturesque quality. There are various short stories in both magazines, the best of those in the *Atlantic*, perhaps, being "Accidentally Overheard," by Mr. Horace E. Scudder, and of the other collection "A Mother's Vision," in spite of its very obvious moral; "Musk and Pennyroyal," by the author of 'Signor Monaldini's Niece,' being disappointing. Mr. Charles Dudley Warner contributes to the *Atlantic* a paper on "Washington Irving," which every one will perfectly agree with, we imagine, though it is difficult to account for its exciting cause; Mr. Grant White's "English in England" and an article by Mr. F. H. Underwood on "Egypt under the Pharaohs" are interesting and something more. The number is in great part given over to brief reviews of recent books. None of the illustrated articles in *Lippincott's* are important, but we should mention "Playing a Part: A Comedy for Amateur Acting," by Mr. J. Brander Matthews, which, though it rather goes to pieces at the end, is well conceived for its purpose, and, at the outset at any rate, is a far more finished piece of literary work than is ordinarily to be looked for between magazine covers.

—The Tile Club, to begin at the beginning of *Scribner's*, is more fortunate this year in its narrative than it was last. The artistic product, too, seems to us superior, and the original idea of a twenty days' trip in a canal-boat was well justified both on the score of comfort and recreation and of professional opportunities. On the whole, we give the palm to the subject nearest home—the tow, in its various aspects, some of which are caught in a masterly manner. Mr. Burroughs's "Notes of a Walker" treat of tree-toads, spring-birds, fox and hound, weeds, and air food. He makes also a short chapter of "typical facts," of which we quote the first half: "It is a fact in the natural history of the country that, in the South, birds run more to beak and claw, and in the West to tail, than they do in the North and East." Further extracts from the Journal of the late Henry J. Raymond throw still more light on the Fredericksburg campaign and its sequel, and the editor judiciously ekes them out as well as corrects them by introducing matter new and old, including Lincoln's letter to General Hooker, a most invigorating even if, from a military point of view, a most extraordinary document. The Journal has also much to say of an apprehended intervention by France, and of Mr. Greeley's mad threats and steps to bring it about. It closes with the report of a conversation with Mr. S. L. M. Barlow which clearly foreshadowed the July riots of that year (1863). An unnamed writer, using the Rémusat and Metternich memoirs, endeavors to discredit the one by means of the other; but it seems a little unreasonable to consider the Austrian's silence about the domestic scandals of the Bonaparte family a proof that Mme. de Rémusat (who was certainly better placed to hear of them) invented them out of the whole cloth. Nor can it be said, in a conflicting sense, that these writers give us "two views of Napoleon." The caricaturist Cham is worthily commemorated and illustrated by Mr. Richard Whiteing. Mrs Helen Jackson rehearses feelingly the wrongs of the Indians in her "Wards of the United States Government." They cannot be exaggerated; but, if they had never existed, there has not been a time from the foundation of the Republic when there was not an urgent necessity for an intelligent policy looking to the abolition of the tribal system and a fusion of the Indians, under proper safeguards, with the great body of citizens, black and white. This, more than lamenting the most recent infamy, seems to be the duty of the hour. The publishers of the magazine have prepared a surprise at the close—no less than a proposition to purchase pictures to order through their art-department, at a moderate commission.

—The greatest novelty in the March *Harper's* is the publication in the table of contents of the names of the several contributors. Much might be said in favor of the previous anonymous practice, but when once the publishers yielded to the fashion of revealing the names on the editorial extract-sheets the principle was sacrificed, and there seemed no longer any good reason for not taking the reader at once into confidence. The present number has no salient article in any other sense than comparative length. Mr. W. H. Gibson's "Winter Idyl" is the longest and artistically the most elaborate; a rhapsody in prose over the New England winter of the writer's boyhood, full of observation and sympathy, and illustrated by his own graceful designs, which dispute possession of the page with the text. Half a dozen artists furnish a theme for Mr. James Jackson Jarves, in his "New School of Italian Painting and Sculpture," and he has our thanks for the admirable illustrations of which he has been the cause. They are, speaking for ourselves, vastly more instructive than the flow of sentences like this, apropos of the color of Prof. Gaetano Chierici: "Ponderously realistic, in the most matter-of-fact sense, it has no subjective, æsthetic, subduing, or subtle choice to meet the finer senses of those whose acutest enjoyment of painting lies in the suggestive mysteries and diaphanous harmonies of warm-toned colors interblending into one beautiful whole." The Far West receives the homage of three articles—Mr. Hayes's "Vacation Aspects of Colorado"; Mr. C. C. Coffin's "Wheatfields of Dakota," which offers timely confirmation of our remarks last week about the obstacles to attendance on agricultural schools; and Lieutenant Lemly's "Among the Arrapahoes," a clever character sketch, with excellent portraits after photographs. "'Pinafore's' Predecessor" is the title of a paper by Mr. J. Brander Matthews, but it really treats of two English comic operas, Gay's "Beggar's Opera" and Sheridan's "Duenna," and distinguishes them at the outset as being ballad-operas, or musical plays, in which the music was secondary to the prose dialogue. Mr. Matthews thinks their reproduction with the original music might be a good venture, and he gives a sample score from the "Duenna," as well as an outline of the plot. We may mention also as pleasant reading Miss Cloud's "Irish Wake"; and, as instructive, Mr. E H. Derby's "Transportation by Railway and Canal." Dr. Samuel Sexton describes clearly the mechanism of the ear, and tells how to preserve the hearing. The poetical feature of the number is "a folk-song," "The Sifting of Peter," by Mr. Longfellow, which may be recommended to our composers. Mr. Paul Hayne's "Snow-Messengers" contains a remarkable tribute, coming from a Southern man, to Whittier.

—Three articles, comprising one-half of the *International Review* for March, deal with political subjects of present interest to Americans. The timeliest, in the sense that a short period may change the situation, is Mr. F. W. Whitridge's "A Brake on the Machine." Mr. Whitridge is a "young Scratcher," and speaks with authority, we presume; he not only admits the necessity of political organization in itself, but seeks through this means protection for those whose rights are ignored by existing machines, or, in his own words, "the mobilization of the independent vote within the ranks of the Republican party." The argument for preserving and increasing this "undeliverable" vote and using it at the polls to defeat bad nominations and so secure better ones next time, is familiar to our readers. Mr. Whitridge, however, goes further than this, and after saying that the Scratchers expect no direct representation in Conventions, seems to advise a *nominating* conference "*prior* to the National Conventions" in order to avert bad regular nominations; which appears to abandon the "reform within the party" notion. Mr. Jay's second paper on "The Roman Catholic Question" contains an excellent comparison of the public schools with the Roman Catholic, somewhat obscured by an unsympathetic, not to say prejudiced, view of the confessional and what it involves. Mr. Wm. Henry Trescott, in discussing "The Administration of Our Foreign Affairs," suggests that Congress should make a definite appropriation for the diplomatic service, and leave the details of its application to the Secretary of State, who should be held responsible for the efficiency of the service. Dr. Wm. A. Hammond's paper "On the Treatment of the Insane" maintains that we are "behind other civilized nations" in our methods of dealing with lunatics. The literary articles are a review of Dickens's Letters by Mr. John T. Morse, jr., and the first of two or more papers on Chateaubriand by M. Auguste Laugel, partly biographical and partly critical, and thoroughly charming in both style and substance.

—Mr. Joseffy, whom a sore finger had prevented from appearing in public for more than six weeks, met with a very enthusiastic welcome at the Philharmonic concert on Saturday. He had selected Chopin's Concerto in F minor, Op. 21, which he has only played here once before, and which afforded him an opportunity of displaying his best qualities to the fullest advantage. Grandeur of conception and power of execution are not Mr. Joseffy's strongest points; he is most at home in the lyric and romantic style of the modern school, and in the Chopin concerto there is lyric and romance to overflowing. It was particularly in the second and third movement that the warm and sympathetic touch, the thoroughly artistic phrasing, the absolutely faultless technique of the Hungarian virtuoso were most strikingly displayed. The immense difficulties of the

last movement were rendered with an ease and grace, with a comfortable confidence in the performer's own powers, that were truly admirable. Mr. Joseffy was recalled five or six times, and in response to the unceasing applause he played Liszt's Hungarian Fantaisie, a composition of such length and difficulties that many an ambitious artist has set it down as the *pièce de résistance* of his repertory. Mr. Joseffy played it on Saturday, after the exhaustive Chopin concerto, as if it were some pretty drawing-room composition. Altogether he obtained the most complete success he has had since his arrival in New York. The orchestral numbers were an adagio and fugue in C minor, by Mozart, originally written for string quartet, but most effectively adapted for a string orchestra and admirably rendered by Mr. Thomas; Beethoven's Fourth Symphony, in B flat; and lastly Wagner's mighty Introduction to "Tristan und Isolde," which was of wonderful effect, with its ponderous Teutonic phrases, after the graceful melodies and harmonies of Liszt and Chopin. All these orchestral numbers have been played again and again under Mr. Thomas's direction, and it is sufficient to say that they were given on Saturday with characteristic vigor and purity of taste.

—Within the past few months the German Government has obtained possession of a treasure so great that we can only see in it, as suggested by a German writer, a free gift of the Olympian gods in return for four years of disinterested excavation at Olympia. Some time since a number of massive reliefs, partly lying under ground, partly built into a wall for the defence of the city, were discovered at Pergamus. Through Herr Humann, a German engineer established at Smyrna, several specimens were sent to the German Government; Professor Conze visited the spot, and the Pasha was induced for less than the price of one modern statue to part with the right of excavation. The pieces of sculpture are at present in the east wing of the Berlin Museum, where twice a week they are open to inspection. Some of the Pergamus reliefs are still in the boxes in which they were packed, and from which the covers alone have been removed; most, however, are lying upon the floor. All are dirty and embrowned, and look more like coarse stone than like marble, except where the workmen with brush and delicate chisel have removed the mould of ages, and the pure marble shines through like the dawn. Everywhere are gods and goddesses, giants and winged dæmons. Of these giants, some stand armed with uprooted trees, others are hurling masses of rock; an eagle and a serpent are in mortal combat; assisted by a great hound, a goddess has overthrown a dæmon; in the midst a woman of grand proportions seems rising from the earth.

—Pergamus was one of the wealthiest cities of Asia Minor. Into the hands of its royal dynasty fell the treasure amassed by Lysimachus, one of Alexander's generals. To Horace, two hundred years later, the name of Attalus, King of Pergamus, was synonymous with wealth. This Attalus turned to art for the commemoration of his victories. Pliny ('Naturalis Historia,' 34, 84) says that several sculptors, among them Isigonus, Pyromachus, Stratonicus, and Antigonus executed his and Eumenes's battles against the Gauls. Further, Pausanias (1, 25) saw on the Acropolis of Athens a memorial dedicated by this same Attalus in gratitude for this great victory. It consisted of four groups of statues—the victory of the gods over the giants, Theseus's defeat of the Amazons, the battle at Marathon, and Attalus's slaughter of the Gauls. The base, or probably a portion of the base of this memorial, fifty feet long by sixteen broad, was discovered by Böttticher on the south side of the Acropolis, and a number of the separate figures, supposed to have belonged to these groups, have been found in different collections in Europe; among them a series of prostrate or dying Gauls, remarkable for the admirable, realistic manner in which the barbarian traits and features are rendered. The "Dying Gladiator," as well as the so-called "Arria and Pætus," in the Villa Ludovici, have both been proved to be the works of Pergamene artists. Up to the date of the recent German excavations this was all that was known of the school German research has failed to discover more than one *locum classicum* bearing upon these sculptures. Ampelius, an obscure writer of the third century after Christ, in his 'Liber Memorialis,' while enumerating the wonders of the world, mentions at Pergamus a marble altar forty feet high, on which was sculptured a battle of giants. The Pergamus frieze undoubtedly answers to this description, and was probably executed in the time of Attalus, between 240 and 197 B.C. The collective sculptures represent the giants storming Olympus. Each of the groups portrays a moment in the struggle. Of one of the best preserved groups Zeus forms the centre; his mantle thrown over one shoulder leaves bare the upper part of his body, which is treated with the utmost nobleness. An eagle is bringing him a thunderbolt to replace the one with which he has just overthrown a prostrate giant, while two more are struggling forward. In his left hand he holds the ægis. Upon a second block a goddess struggles with a giant, while directly behind her, facing in the opposite direction, another goddess armed with a torch carries on a similar contest. Athena with the ægis forms the centre of a third group. She has overthrown a winged dæmon, while another, whose face greatly resembles that of the Laocoön, sinks at her feet in the coils of her serpent. A third giant is attacking her, but Nice, the goddess of victory, is already reaching her the crown. The female form rising from the ground is Ge, Earth, mourning over the destruction of the giants, her children. Many of these giants are wild men with animal heads; some, except for superhuman force, are sculptured like men armed with weapons; yet others have trees and masses of rock; and a fourth kind are portrayed as winged beings. The heads of Zeus, Apollo, Athena, and Artemis are as yet most unfortunately missing. The German Government proposes to clean and reconstruct the entire frieze, which is now lying in single disconnected blocks. The cleaning proceeds under the eyes of the visitor; the tables and floors are piled with unsorted fragments—among them a beautiful woman's head of finer marble than the rest, with an ineffable smile on the finely-chiselled lips. It is hoped that the two best preserved groups—those of Zeus and Athena—will be ready for exhibition in February.

—The year 1879 was not rich in historical literature, although it produced some works of permanent value. In ancient history we have Froude's 'Cæsar,' the fifth volume of Ihne's 'Römische Geschichte,' reaching the close of Sulla's career, and the sixth volume of Duruy's 'Histoire de Rome,' coming down to the reign of Diocletian. Busolt's 'Die Lakedaimonier und ihre Bundesgenossen,' of which the first volume extends to the establishment of the naval hegemony of Athens, is pronounced a work of substantial value. Beesly's 'Gracchi, Marius, and Sulla' deserves notice as a work of original and independent power. Mommsen has also issued a second volume of his 'Römische Forschungen.' In mediæval history there have been several valuable publications. Perrens's 'History of Florence' has a fourth volume embracing the period from 1313 to 1358. Sigmund Riezler, author of the admirable 'Literarische Widersacher der Päpste,' has published the first volume of a history of Bavaria in the Heeren, Ukert, and Giesebrecht series, coming down to the year 1180. The Danish historian, Steenstrup, whose history of the Normans attracted a good deal of attention two years ago, has issued a second volume upon the expeditions of the vikings in the ninth century. The publication of the French mediæval historians has been resumed in Paris, and M. Paulin Paris has undertaken to edit William of Tyre and his continuators. We may mention also the 'Early Chroniclers of Europe,' published by the Society for Promoting Christian Knowledge, of which France, by Gustave Masson, and England, by James Gairdner, have already been published. Mr. Bigelow's 'Placita Anglo-Normannica,' dealing primarily with the history of law, contains much valuable material for constitutional history. The new volume of Freeman's 'Historical Essays' belongs to the early middle ages, as does 'Deutsche Urzeit,' by Arnold, the historian of the German municipal constitution.

—In modern history the veteran Ranke has published, as the forty-second volume of his collected works, 'Zur venezianischen Geschichte,' consisting largely of new matter. The third volume of Gindely's 'Geschichte des dreissigjährigen Kriegs' completes the so-called "Bohemian War"; this is a contribution of the first importance to the history of that period. Baird's 'Rise of the Huguenots' is almost the only American history of independent merit published during the year. The translation of Rambaud's 'History of Russia' is a welcome addition to our libraries; it is to be wished that a competent translator would undertake Vulliemin's 'Histoire de Suisse.' For the history of the present century Treitschke's 'Deutsche Geschichte im neunzehnten Jahrhundert' (vol. i., reaching to November, 1815), and Hillebrand's 'France' (vol. ii., covering the period of parliamentary monarchy from 1837 to 1848), both belonging to the series of 'Staatengeschichte der neuesten Zeit,' are the most important. Seeley's 'Life of Stein' also belongs here, as do the 'Memoirs of Madame de Rémusat.' In American history the translation of the second volume of Von Holst's 'Constitutional History' is perhaps the only work of high importance. Hearn's 'Aryan Family' is a significant contribution to the history of primitive institutions, and Tourmagne's 'Histoire du Servage' and Inama-Sternegg's 'Deutsche Wirthschaftsgeschichte' to industrial history.

—No one of the great modern writers is so little known personally as the author of 'The Betrothed.' This is partly due to his uneventful life

and partly to an almost morbid shrinking from publicity, which, among other things, has deprived his friends of any satisfactory portrait of him. Since Manzoni's death a host of biographies has appeared, most of them in the form of memorial addresses, and but few possessed of any lasting value. When Professor Angelo de Gubernatis was invited to deliver a course of lectures in the Taylorian Institution at Oxford, in May, 1878, in selecting as his subject Manzoni he chose a theme more novel than it seemed. These lectures have since been amplified and published under the title: 'Alessandro Manzoni: Studio biografico' (Florence. 1879). The work is a careful study of Manzoni's literary development, patiently traced through his works, edited and inedited, until his activity as an author practically ceased with the publication of the 'Promessi Sposi' in 1825. There is but little new material in the volume, and we catch only a slight glimpse of Manzoni in his social and family relations. That slight glimpse, however, is very attractive, and makes us regret the secluded life which his diffidence and the political condition of his country caused him to lead so long. It is to be hoped that Professor De Gubernatis's sketch will lead the way to a fuller biography, and revive in England and this country the interest in Manzoni, whose greatness as a poet, novelist, and man will grow the more thoroughly he is studied and known.

SEWALL'S DIARY.*

SEWALL'S 'Diary' increases in interest as it proceeds. Indeed, taking into consideration the writer's field of observation, its remoteness from the world's great theatres of action, its smallness and its intense provincialism—taking these things into consideration, if there is anything better in their peculiar line than these volumes we have yet to meet it. They do not, it is true, deal with great historical personages or events; Gov. Joseph Dudley does not fill the place of Charles II.; nor was "Boston's greatest Fire," whereby on November 27, 1676, "about fifty Landlords were despoyled of their Housing. N.B. The House of the Man of God, Mr. Mather, and Gods House were burnt with fire"—not even this conflagration was at all equal in interest to the London fire of September ten years previous; nor are the futile expeditions of Queen Anne's War like the naval engagements of Van Tromp and De Ruyter. This, however, is merely saying that Boston of 1710 was not London of 1666, and that Judge Sewall did not have the incidents to describe which fell in the way of Secretary Pepys. So far, however, as glimpses of life and manners are concerned—the revival of a buried past, with its lights and its shadows—Sewall is hardly inferior to Pepys. It is the touch of nature again; and, though the nature and social existence revealed may not be very inviting, it is none the less genuine. It is like an engraving of Hogarth or a chapter of Fielding.

The present volume covers the period from 1699 to 1714, and from the forty-seventh to the sixty second year of the diarist's life. In a public point of view it includes the whole of Queen Anne's War, marked as it was for New England by a succession of bloody Indian forays upon the unprotected settlements of the northern frontier, and the abortive retaliatory expeditions against Canada. During this time, and until his death in March, 1701, the Earl of Bellomont was governor of the province. He, in 1702, was succeeded by Sewall's connection by marriage, the able, versatile, and choleric Joseph Dudley.

Turning, however, at once from the historical to the social side of the diary, it must be conceded that the life of Puritan New England depicted in it is far from inviting. Indeed, it is not too much to say that it is repellent to the last degree. It is all shadow. Without literature, without art, without gaiety even, it seems to have been made up of toil and theology and funerals. It was the stern, hard existence of a peculiar people, intent on two things—religion and thrift. Struggling as they did unceasingly with a barren soil and a rugged climate, it was with them one long, hard fight, and it probably required exactly such a people as they were to face that fight and to achieve out of it the magnificent intellectual and material success they did. These volumes, however, open the workshop to us, and reveal the joyless existence of those days of little things. We have just said that the life seems to have been made up of toil, theology, and funerals. How shut off it was from the whole outer world may be realized from the fact that when Lord Bellomont was appointed governor he was some five months crossing the Atlantic, having ventured upon a winter passage. He died in New York on the 5th of March, 1701, and this entry of Sewall's shows how rapidly and by what means state news of the first importance passed between the two cities:

"Saturday, March 15 [170⁰⁄₁]. The town is fill'd with the News of my Ld. Bellomont's death, last Wednesday was sennight. The Thursday after, a Sloop set sail from N. York to Say-Brook; Mr. Clark, a magistrate, carries it to New-London; from thence Mr. Southmayd brought it by Land last night, Capt. Belchar acquainted Mr. Secretary with it about 9 aclock last night."

Such were the means of communication between Boston and New York. Those between Boston and the neighboring towns of Cambridge and Charlestown seem to have been hardly better, and by no means devoid of danger. The following incident, which happened to the wife and children of the vice-president of the college, should give to modern Cambridge professors a realizing sense of the combined comfort and safety of even street-railway travel:

"February 22 [170²⁄₃]. Mrs Willard and several of her children had like to have been cast away coming from Cambridge by Water, wind was so very high; put ashore at last on Muddy River Marsh: Got to the Govrs by that time twas dark."

Mrs. Willard was Governor Dudley's sister, and it was not long before his Excellency himself had an experience of the dangers of land (to offset his sister's of water) travel, between the two places:

"January 19, 170⁴⁄₅. The Govr coming to Town, the way being difficult by Banks of Snow, his Slay was turn'd upon one side against the Fence next Cambridge, and all in it thrown out, Governour's Wigg thrown off, his head had some hurt: and my Son's Elbow. The Horses went away with the foundation and left the Superstructure of the Slay and the Riders behind."

Meanwhile the following little episode of travel had, only a single week before, enlivened a trip of the Governor's from Charlestown across to Boston:

"Thorsday, Jany 11 [170⁴⁄₅]. The Govr and his Lady essaying to come from Charlestown to Boston in their Slay, 4 Horses, two Troopers riding before them, First the Troopers fell into the water, and then the Govr making a stand, his four Horses fell in, and the Two Horses behind were drown'd, the Slay pressing them down . . . Tis a wonderfull mercy that the Govr, his Lady, Driver, Postilion, Troopers escaped all safe."

Secluded from the great outer world and buried beneath the ice and snow of a New England winter, it was small wonder that a kindhearted man like Sewall hailed with delight and recorded every indication of the approach of even the bleak and fitful spring peculiar to that region. There is something quite touching in such records as these:

"March 16 170⁴⁄₅. Though all things look horribly winterly by reason of a great storm of Snow, hardly yet over, and much on the Ground: yet the Robbins cheerfully utter their Notes this morn. So should we patiently and cheerfully sing the Praises of God, and hope in his Mercys, though Storm'd by the last efforts of Antichrist."

"Feb. 24 [170⁴⁄₅]. Singing of Birds is come"

"Febr. 10 [170⁷⁄₇]. A pleasant, Serene, sun-shiny Day; sweet singing of Birds."

"Sixth-day, April 11 [1712] I saw Six Swallows together flying and chipering very rapturously."

The first of these records affords a very good illustration of those religious lessons, or morals, which the Puritan never failed to draw from every event, even the most ordinary. Everywhere and in all things he saw the immediate finger of the Lord, or a reminder of His written word. The following instance of this occurred in the first volume of the Diary, and is too delightfully characteristic not to be quoted. The child referred to in it as "seeking to shadow and hide himself" was his son Joseph, then aged four years and two months:

"Nov. 6 [1692]. Joseph threw a knop of Brass and hit his Sister Betty on the forhead so as to make it bleed and swell; upon which, and for his playing at Prayer-time, and eating when Return Thanks, I whipd him pretty smartly. When I first went in (call'd by his Grandmother) he sought to shadow and hide himself from me behind the head of the Cradle: which gave me the sorrowfull remembrance of Adam's carriage."

The most thoroughly characteristic incident of this sort, however—and, indeed, it may fairly be said the most characteristic incident of the whole publication—the editors have thought proper to omit, as being "unsuitable for publication" (p. 157). Considering what every reader meets as a matter of course not only in the sacred writings, but in the unexpurgated editions of nearly every classic writer, and Shakspere particularly, this would seem to be, in the case of a work published more especially for students of history, a somewhat unnecessary degree of delicacy.

We have remarked that the Puritan life was made up largely of theology and funerals. To the reader of the present day these volumes, as will presently appear, are made ghastly by the writer's frequent attend-

* 'Diary of Samuel Sewall. 1674–1729. Vol ii. 1699–1700–1714.' Collections of the Massachusetts Historical Society. Vol. vi. Fifth Series. [See *Nation*, Nos. 696 and 697.]

ance at the latter, while as to theology the glimpses we get at the Judge's library are such as would make a resort to a volume of Coke or Hailes a positive relaxation. The work he mentions with most affection as one which he had "enjoy'd one and Thirty years" is Pole's 'Synopsis Criticorum.' Then we have mention of Calvin's 'Exposition,' choice excerpts from which, and from Caryl's 'Exposition of Job,' he painfully copies out and sends to sick neighbors to comfort their dying moments; while he makes a present of Dr. Mather's 'Treatise on Tithes' to a lad who comes to notify him of a funeral, bringing the usual mourning gloves. Then we have Rivet's works, and Cotton Mather's 'Theopolis Americana,' while copies of Mr. Higginson's Election Sermon and of a work called 'Greek Churches' he kept on hand and distributed as presents among his female acquaintance. Of but one familiar name among the profane writers whom posterity has seen fit to remember, while for ever forgetting Pole and Rivet and Caryl, do we get even a glimpse; but then his note bursts in upon us with all the effect of a gleam of sunshine through December's gloom. It happened thus: The Judge was on his way to Narragansett and stopped to dine at a tavern; picking up a chance volume, and being himself in Puritanic way something of a poet, what he there saw seems to have pleased him so much that he copied it in his diary:

"Sept. 16 [1706]. . . . While Diñer was getting ready I read in Ben Johnson, a Folio:

'Wake, our Mirth begins to dye:
Quicken it with Tunes and Wine.
Raise your Notes; you'r out; fie, fie,
This drowsiness is an ill sign.
We banish him the Quire of Gods
That droops agen:
Then all are men,
For here's not one but nods.'"

Naturally church going, the Sabbath-day and private meeting are prominent features in the Diary and constant matters of record. We get, also, glimpses of all the eminent New England divines of that day; as a whole a devout and conscientious race, though long-winded in discourse and prayer to a degree which the present generation would find it hard to endure silently. For instance, frequent mention is made of the venerable Samuel Torrey, of Weymouth, and Eliot is our authority for saying that this divine "had such a gift in prayer that he was always chosen, as Mr. Prince tells us, 'to bring up the rear of their religious exercises.' Upon a publick fast in the year 1696, he prayed two hours after all the other exercises were over . . ." Nor was Judge Sewall himself behindhand in respect to this gift, and he himself has recorded that once in his younger days, while his calling was yet undecided, he held forth to the Newbury congregation, and "being afraid to look on the [hour] glass: ignorantly and unwillingly I stood two hours and a half" (vol. i. p. 1). As he grew older his power in prayer, at least, would seem to have in no way diminished, if we may judge by an entry in the present volume recording one of his self-imposed, private fast-days. It is somewhat long, but it is instructive and well worth reading, as showing the real living depth and strength of that Puritan faith which has made Massachusetts what she is. A more comprehensive petition, including, as it does, "Asia, Africa, Europe, and America," could hardly be offered up:

"The Apointment of a Judge for the Super. Court being to be made upon next Fifth day, Febr. 12, I pray'd God to Accept me in keeping a privat day of Prayer with Fasting for That and other Important Matters: I kept it upon the Third day Febr. 10. 170⅞ in the uper Chamber at the North-East end of the House, fastening the Shutters next the Street.——Perfect what is lacking in my Faith, and in the faith of my dear Yokefellow. Convert my children; especially Samuel and Hañah; Provide Rest and Settlement for Hañah: Recover Mary, Save Judith, Elizabeth and Joseph: Requite the Labour of Love of my Kinswoman Jane Tappin, Give her health, find out Rest for her. Make David a man after thy own heart, Let Susan live and be baptised with the Holy Ghost, and with fire. Relations. Steer the Government in this difficult time, when the Governour and many others are at so much Variance: Direct, incline, overrule on the Council-day fifth-day, Febr. 12. as to the special Work of it in filling the Super. Court with Justices; or any other thing of like nature; as Plim° infer Court. Bless the Company for propagation of the Gospel, especiall Gov^r Ashurst &c. Revive the Business of Religion at Natick, and accept and bless John Neesnumin who went thither last week for that end. Mr. Rawson at Nantucket. Bless the South Church in preserving and spiriting our Pastor; in directing unto suitable Supply, and making the Church unanimous: Save the Town, College; Province from Invasion of Enemies, open, Secret, and from false Brethren: Defend the Purity of Worship. Save Connecticut, bless their New Governour: Save the Reformation under N. York Governmt. Reform all the European Plantations in America; Spanish, Portuguese, English, French, Dutch; Save this New World, that where Sin hath abounded, Grace may Superabound; that CHRIST who is stronger, would bind the strong man and spoil his house; and order the Word to be given, Babylon is fallen.——Save our Queen, lengthen out her Life and Reign. Save France, make the Proud helper stoop [Job. IX. 13], Save all Europe; Save Asia, Africa, Europe and America. These were gen^l heads of my Meditation and prayer; and through the bounteous Grace of GOD, I had a very Comfortable day of it. The reading of Mr. Tho Horton's Sermon upon a Monethly Fast, before the House of Lords xr. 30 1646. was a great furtherance of me, which was hapily put into my hand by Major Walley the latter end of last Moneth"

DOWDEN'S SOUTHEY*

THERE have been few English men of letters the difference between whose contemporary and posthumous fame is so great as it is in the case of Southey. He was not, indeed, idolized by his time, and his works have not, to be sure, fallen into complete oblivion, though they avoid that fate by the narrowest of margins, we suspect. Macaulay said of them that he had great doubts whether they would be read "fifty years hence," but none at all that, if read, they would be admired; but the truth is that they are not read now because it has been discovered that they are not upon the whole admirable. "In the combat between Time and Thalaba I suspect the former destroyer has conquered; Kehama's curse frightens very few readers now," said Thackeray, twenty years ago. They are in truth hard reading, as any one may prove to his thorough satisfaction by turning to them; and they are hard reading not because the present generation has its own standards, very different from those of the Georgian era, but because they are in themselves quite lifeless, and, from an intellectual point of view, absolutely artificial. But to have told any of his contemporaries that Southey would so soon cease to be a classic, or, better, that he never would become one, would have been to invite certain ridicule. Wordsworth and Coleridge and Lamb sang his praises; Pitt sat up nights to read his blank verse; Landor thought him a literary giant; the *Quarterly* was almost as much identified with him as it was with Gifford; the best men of his time thought themselves honored by his approval. Even Byron, who devoted to him some of the most remembrable of the lines in his earliest satire—

"But if, in spite of all the world can say,
Thou still wilt verseward plod thy weary way,
. . . . . .
The babe unborn thy dread intent may rue:
'God help thee,' Southey, and thy readers too"—

and who remarked, "To have that poet's head and shoulders I would almost have written his Sapphics," called him "the only existing entire man of letters," pronounced his prose "perfect" and certain passages of his poetry "equal to anything." All of which sounds curiously now, but is worth calling to mind for its illustration of the condition of literary criticism in England in the epoch immediately preceding our own. The eighteenth century had performed its work of "the formation of English prose," as a distinguished critic has pointed out; periodical literature of a high order was beginning its career; the nation had a heritage of poetry unrivalled by that of any other country; Byron, Keats, Shelley, Wordsworth, and Coleridge were writing or about to write; and yet so strongly did the spirit of what Matthew Arnold calls "our provincial and second-rate literature of the eighteenth century" pervade the great literary outpouring at the beginning of our own era, that in criticism stock notions and traditionary habits of thought went wholly unrevised by either acute analysis or a broad culture. As late as when Macaulay wrote it was the audacity of his paradoxes that surprised his readers and created his audience, whereas now we presume it would be safe to say that what offends nine people out of ten in him is the arrogant elaborateness with which he argues what is elementary. To the first readers of the essay on Milton we suspect what sound criticism it contains came like a revelation; if it sounds like platitude now it is perhaps because we are farther away from Johnson's "Surely no man could have fancied that he read 'Lycidas' with pleasure had he not known the author" than were the subscribers to the *Edinburgh Review* in 1825.

Farther back than this, criticism was proportionately more superficial. An ardent disciple of Wordsworth, to whom Wordsworth was "a great critic," notes the vital fact concerning the poetry of both Wordsworth and Byron in saying that much of it had its source "in a great movement of feeling, not in a great movement of mind." *A fortiori*, this applies to the criticism in vogue at the time when Southey succeeded to the laureateship left vacant by the lamented Pye. It does not so much matter that much of it was mere polemics, that a

* 'English Men of Letters. Edited by John Morley. Southey. By Edward Dowden.' London: Macmillan & Co.; New York: Harper & Brothers. 1880.

Whig author was certain to be damned by the *Quarterly* and lauded by the *Edinburgh*, that the century of Pope had fixed canons by which Keats was to be judged, that Jeffrey's judgment of 'The Excursion' was overruled by better judges, who ended by convincing every one that it "*would* do," as that the whole literary movement, in so far as it was national, was more or less artificial, and in so far as it was purely literary was local and, as French critics are never tired of saying, insular. It certainly did not lack erudition. Southey's learning was prodigious, not to mention Coleridge. But it felt so much more than it reflected, its natural force was so far too great for its intelligence, that, like the society that surrounded it, it lay quite outside of the current of ideas as such; it is questionable if Wordsworth would not have belittled Goethe all the same even if he had read him.

Nothing, as we have said, could better illustrate a very interesting literary problem such as the one we have barely suggested, than a study of Southey, who, in many respects, exactly typifies the time of which he was "the only existing entire man of letters." Mr. Dowden has preferred to ignore any such examination. Of 197 pages he devotes barely ten to "Southey's Work in Literature." His estimate is, in the main, just enough, it seems to us; it could hardly go wrong, since at this date the most enthusiastic of biographers must feel that Southey's work in literature was neither brilliant nor enduring upon the whole; it reverses one detail of most former judgments, by the way, and places Southey's prose above his poetry, which is certainly right, considering how much of the latter was rhymed prose, and hence naturally less satisfactory than professed prose. But it stops here and has nothing to say upon the point which alone can be interesting in a criticism of Southey, and which must occur to every one who now takes up a book about him—namely, why his vogue was once so great and why it has now disappeared. Even if it were in and for itself that his work is interesting we should have looked for a more detailed consideration than is here given it, and for a fuller exposition, since the series in which the book appears is designed "with a view both to stirring and satisfying an interest in literature and its great topics in the minds of those who have to run as they read." How many of the readers thus specified know, for example, what 'Thalaba' or 'The Curse of Kehama' is all about? All others must be content with learning from Mr. Dowden that the former is an Arabian and the other an Indian epic.

Nevertheless it is of course Southey's life rather than his works which in itself has any lesson or interest for us. "We have left his old political landmarks miles and miles behind," to quote Thackeray again; "we protest against his dogmatism; nay, we begin to forget it and his politics; but I hope his life will not be forgotten, for it is sublime in its simplicity, its energy, its honor, its affection," and so on, as was Thackeray's wont when he had a man of letters of Southey's sort with whom to contrast a prince of the stripe of George IV. This is the view Mr. Dowden has taken; he would probably agree that "Southey's private letters are worth piles of epics," and he is not only never tired of singing the praises of Southey's sterling qualities, but is so full of appreciation for them that his utterance is at times awkward and embarrassed by an apparent distrust of his power of adequate expression. The difficulty with a literary biography of such a subject is that it is apt to be monotonous and somewhat tame. Fortunately there are good men in other walks of life, but their goodness does not lead to biographies of 200 pages; and where that is a man's sole title, or, since criticism has grown so frank, we may add even his main title, to a "life," it is soon told. "Had he been a worse or a weaker man," his present biographer acknowledges, "we might look to find mysteries, picturesque vices, or engaging follies; as it is, everything is plain, straightforward, substantial." But this circumstance does not prevent Mr. Dowden from trying to clothe this "plain, straightforward, substantial" life with the charms of poetry and sentiment, which is the chief vice of his book. Southey's pillow was "wet with tears before he fell asleep" on his first night at school, which, as is justly observed, "is usually not a time of mirth"; but he went to Westminster with "an imagination stored with the marvels and the beauty of old romance," and among other things he read Gibbon, and "viewed for the first time the sweep, the splendor, the coils, the mighty movement of the stream of human affairs," and even "caught some of Voltaire's manner of poignant irony." Though he was at Oxford an enthusiastic young republican and disciple of Rousseau, it is mentioned that "never was his life emptied of truth and meaning, and made in the deepest degree phantasmal by a secret shame lurking under a fair show." He fell in with Epictetus, and "now was heard the voice of a conscience speaking to a conscience; the manner of speech was grave, unfigured, calm," etc. In June, 1794, "the shuttles of the fates now began to fly faster, and the threads to twist and twine," which means that Coleridge and Southey met. "One or two friends he chose and grappled to his heart." Then we hear plenty about Pantisocracy, which soon comes, however, to "look faint and far," and in its stead "by love and by poetry, by Edith Fricker and by Joan of Arc, Southey's life was being shaped." He "was drawing a long breath before uttering himself in some thousands of blank verses." As to Joan of Arc, "in six weeks his epic had been written; its revision occupied six months." Southey's departure for Lisbon leads to the enquiry, "Who has not experienced, when first he has touched a foreign soil, how nature purges the visual nerve with lucky euphrasy?" Mr. Dowden continues in this vein until, as "Skiddaw gloomed solemnly overhead," he lays Southey to rest in the Crosthwaite churchyard His own style, the reader will have perceived, is anything but "simple and straightforward," and in a book about Robert Southey it seems curiously out of place. Southey was certainly, intellectually speaking, as commonplace a man of letters as ever lived; though he was a thorough sentimentalist, he never went beyond the bounds of wholesomeness; though he was at one time an ardent radical, a very few years sufficed to make a Tory Churchman of him; he never had any doubt that posterity would reward him for what he thought contemporary neglect, but his self-confidence was of a placid sort and wholly different from the conceit of genius; "Mr. Southey," says Hazlitt, "missed his way in Utopia; he has found it at old Sarum." To write about such a man in a heightened and heroic style is to intensify rather than diminish the obvious slightness of material which would in a measure handicap the best biographer of Southey. Mr. Dowden has evidently had 'The Life of Sterling' in mind; but there are not two such books as that written in a generation, and he not only lacks the genius to elevate a commonplace theme but he does not here prove himself skilful in the ordinary journeyman work of biography. Either he conceived his task as far more tremendous than in truth it was, or he was not content to adjust his pace to the slow and somewhat lumbering movement of his subject.

ADAMS'S 'RAILWAY ACCIDENTS.'*

BY this very attractive little volume Mr. Adams has increased the obligations the public owes him for the many aids he has furnished to the comprehension of railway problems. The stories of railway accidents are in themselves fascinating in a terrible way, and when they are not only graphically told, but grouped with reference to the causes and the cure, the reader feels that he is assisting at a scientific consultation on a subject which affects the safety of himself and his neighbors. The thrilling interest of the strange incidents of train disasters has added to it the zest of a worthy intellectual exercise of investigation, and what might be sensational reading if the narratives stood alone is dignified by the clear purpose of humanity and progress with which the book is written, so that we have the attractiveness of a novel with the value of a work of science. It ought to be universally read, for its general reading would fix public sentiment so firmly in regard to the more necessary and feasible additions to the safety of railway travel that these would be hastened, and not have to await the lesson of human destruction which has uniformly been the inseparable antecedent of such progress hitherto. The sad moral of this group of true stories is that nothing but a terrible train-wreck, with a long list of killed and maimed, has proved enough to overcome the inertia of mechanical habits of constructing and operating trains, the "practical man's" scorn of theoretic improvements, and the penny-wise dread of expensive changes.

Mr. Adams wisely illustrates the achieved successes before demonstrating the need of others which must follow. The old horrors of "telescoping," which led to the introduction of the Miller platform and coupler; the slaughters like the terrible one at Revere, Mass., which led to the abandonment of the old habit of "running by schedule"; and the long list of accidents by reason of the inefficiency of the means of stopping trains quickly, which forced the adoption of the automatic train-brakes, on the Westinghouse and similar plans, are skilfully arrayed to show that inventive talent is equal to the demand upon it, and that the way to still greater perfection of the wonderful machine of modern travel is perfectly open, if only the will to have it is created. The "battle of the brakes" is still going on in England; but in this country it has been decided, and

* 'Notes on Railway Accidents. By Charles Francis Adams, Jr.' New York: G. P. Putnam's Sons. 12mo, pp. 271.

the victory won for the simple yet admirable system which puts the control of the brakes on every truck of the longest train completely in the hand of the engineer upon the locomotive, and we have to reflect a little to recall the time before the days of the Miller coupler, when our passenger trains were jerked by the "taking up the slack" of the old coupling-links as only freight-trains now are.

The reduction in the number of deaths and injuries to travellers by these improvements is strongly brought out in the book before us, and is made the text for unanswerable arguments in favor of the steps in progress which lie next before us. These are the interlocking and the electric-signal systems. Interlocking means the bringing together the switch-levers and signals at one point in the railway station, so that all switching may be done by one will and one intelligent direction, whilst the mechanical connection of the apparatus is such that the signals of safety or danger shall be automatically connected with the proper or improper position of the switches. Everybody knows that one of the common causes of railway accidents is the misplaced switch, but everybody has not had the opportunity to study the confusing movement of trains, especially at night, in a busy railway "yard" near a great station. The switching or shunting of freight-cars from one track to another in the "making up" of trains or the "setting out" of particular cars, the dodging about of the "pony" engines, the swinging of the colored lamps at the arms of the semaphores, the glow-worm motion of the switchmen going from point to point, the flashing in and out of passenger trains, all combine to produce a complication utterly bewildering to the inexperienced observer.

Mr. Adams makes use of the interlocking system as operated at the great Cannon Street station in London as proof of the practicability and the safety of this plan. There the business amounts to the astonishing total of over six hundred and fifty trains received and despatched in twenty-four hours, and as most of these are despatched in a few hours in the morning and evening, they often number one per minute. All these are managed from a gallery like that of the bridge on a steamship, and with a success and freedom from accident which is certainly most convincing. But it is not only at great stations that interlocking is necessary and useful. One of the most common and simple instances of a railway junction is that of two double-track roads connecting in one main line. The fact is pointed out that in this case there must be two switch-levers and four signal-levers which would admit of sixty-four possible combinations. Of these sixty-four combinations only thirteen are safe, and the rest are such as might lure an engine-driver to destruction. It needs no argument that an automatic interlocking arrangement would even in this case add greatly to the safety of the public.

The electric-signal system is intended to notify approaching trains of the condition of switches and of connections in time to avoid danger, and to notify the public, at points where common highways cross the track, of the approach of trains. In regard to both of these improvements we have the old story of the "practical man" objecting to the delicacy and complication of the apparatus, to its trustworthiness, to all automatic action, exactly as in the cases of the train-brakes and the telegraphic handling of trains. Mr. Adams sums up the arguments in a very effective way, and shows, as we think, very satisfactorily that the time has come when this new step in advance should be taken. When this shall have been done, and the block system also adopted, by which but one train is allowed upon given sections of the track at one time, the dangers from the working of the machine as a whole will perhaps be reduced to the minimum. There will still remain those dangers which grow out of lack of discipline among employees and from criminal negligence or malice, which transcend the bounds of systematic prevention. But even as the system stands, it is a cheering and reassuring thing to read the chapter on the railway death-rate, in which it is proved, from the most trustworthy of the domestic and foreign statistics, that scarce any occupation in life shows so small a percentage of hazard to the individual, from causes beyond his control, as travelling on a first-class railway train. A comparison, no less forcible for being half comical, is made between the whole number of deaths in the community from various causes. The number of human beings killed on the rail is less than those killed from falling down-stairs, from falling out of windows, from being scalded to death, from being run over by teams in the streets, from coasting on sleds, from clothing catching fire, or from playing cricket!

One of the most interesting features of the book is the comparison between accidents occurring in this country and in Europe, and the management of railways on the respective sides of the ocean. Its examples are drawn liberally from English and French experience as well as American, and are full of valuable information not easily reached by the American reader in the original sources. It does not, however, profess to be an exhaustive treatise on the prevention of railway accidents, and is limited to those things of widest influence on the safety of passengers, which may be systematized and cared for in a few definite methods. We need a similar work upon accidents to the employees of railroads, especially those to which the conductors and brakemen of freight-trains are most liable. The possible application of the train-brake to freight-trains and the adoption of a reliable self-coupler for freight-cars are among the further improvements of railway appliances to which we hope Mr. Adams may at some future time contribute as powerfully as this excellent volume has done to the spread of sound views on the topics he has so well handled in it.

Tennyson's Songs with Music. Edited by W. G. Cusins. (New York: Harper & Brothers. 1880.)—The table of contents of this elegant volume offers an apparently choice collection of Tennyson's songs, and the names of composers like Hatton, Pinsuti, Macfarren, Leslie, Sir Julius Benedict, Blumenthal, Arthur Sullivan, Randegger, Cowen, Tours, and other well-known English writers, and of Raff, Liszt, Henschel, Joachim, Saint-Saëns, Gounod, Scharwenka, and Massenet justify the reader in expecting a rich treat. The book opens with "The Sea Fairies," a long two-part song by Barnett, well written and pleasing. This is followed by "Love that hath us in the net," to a rather mechanical and meaningless setting by Hatton. "The Death of the Old Year," a simple song and chorus, by Jackson, fails to hold the attention, and we pass on to an unnatural and uninspired four-part song by the editor Cusins, to the words "Of old sat Freedom" On the other hand, Pinsuti's setting of the "Miller's Daughter" is fresh and pretty, though reminding one of Schumann's "Nussbaum" and "Das Wiegenlied" of Richard Wagner. Walter Macfarren's "All along the valley" is musicianly, but somewhat mechanical and dry. Let the reader compare this song with Op. 86, No. 6 of Mendelssohn. Of "Merlin's Song," by Joachim, it is difficult to speak; there may be a few singers who could enjoy it. The four-part song, "The Golden Year," is a good and characteristic composition from the pen of Henry Leslie. The piece is well worked out and has a very effective ending. "The Sailor-Boy," which follows, is a doleful ditty by Cusins, relieved somewhat by the strange and effectively-written song by Sir Julius Benedict, entitled "A Farewell." Henschel next gives us a setting to the familiar "Break, break, break," and it is fine. One of the few good songs of the book, "The Poet's Song," by Parry, attracts by its tender sentiment and musical conception. Next comes the "Milkmaid's Song," by Stanford. This is a well-written production, which could be made effective if carefully sung, but it lacks the simplicity and naïveté which the poem bespeaks. There is something very disturbing in the second line of the first and second stanzas. The well-known poem of "The Brook," with the music by Cusins, is a disappointment. Compare this song with No. 2 of the "Schöne Müllerin" of Franz Schubert. Cusins also furnishes the music to the male part-song which follows next in order—"The Song of King Arthur's Knights." This composition has bright effects and a good ending, but is also harsh in places.

Many of the songs already noticed are either sad or suggestive of sadness, and the tendency becomes more and more prominent as we go on. In this vein is "Vivien's Song," by Emily Troup, followed by "The Lute Song" of Stanford in empty chords of D minor. The sadness grows apace. And now comes Blumenthal with every other stanza crying "Let me die, let me die!" in the characteristic and most conventional strains of this popular writer. One sighs for a bar or two of fresh melody. But no! Again the editor himself joins the dismal procession with a monotonous and doleful setting of the words "As through the land at eve we went," and a first-rate song by Barnby is well nigh robbed of its effect by its unfortunate juxtaposition. However, the "Sleep, Ellen Aubrey," which follows, is a sweet, simple song by Goldschmidt, and at the sight of the really charming rendering of "Sweet and low" by Harold Thomas the reader draws a long breath of relief. The song is natural and spontaneous, in refreshing contrast to most of the overwrought attempts thus far. After a simple, pretty, and unoriginal cradle song by Manns, we are plunged again into the waves of despair. "Tears, idle tears" has two settings from Raff. Though in their breadth of treatment often suggesting the orchestra, these two songs—especially the first—are dolorous to the last degree. We find no relief in the "Bugle Song" of Sir Herbert Oakley, because it says nothing; neither is the martial song of Berger, "Thy voice is heard through rolling drums," sufficient to rally us from the mood to which the dejected strains of "Ask me no more," by Florence Marshall, are appropriate. Cowen's

setting of "O swallow, swallow, flying south!" fortunately comes to the rescue with its bright, fresh, pretty melody and accompaniment, but why Franz Liszt should have thus treated "Go not, happy day" it is difficult to tell. And what a pity Cummings could not have hit upon some other selection than the sad "Edith's Song," and greater pity that his song should lead to such a vanishing point both of meaning and expression! Next comes John Hullah with a funereal "Come not when I am dead"; then Randegger with "Home they brought her warrior dead"—a finely-written song, which cannot, however, possibly be appreciated among so many other gloomy compositions. A bit of sunshine is let in by Gounod's characteristic "Ring out, wild bells." Then follows the "St. Agnes Eve" of Arthur Sullivan, a warm, spontaneous composition, but withal somewhat conventional in construction. It has very effective vocal points and a nice descriptive accompaniment. Such an exquisite poem as "Now sleeps the crimson petal" deserves something better than a prosy setting by Hueffner. The song by Massenet to the words "Come into the garden, Maud" is, if not the best song in the book, one of the best. The well-known ditty by Balfe should now be shelved. Massenet's setting is fresh and piquant, and there is a charming suggestiveness in his selecting the first, second, and fourth stanzas of this rather long poem. We should have been grateful to the editor if he had omitted just here his own heavy song, placed directly between Massenet and an interesting composition by Scharwenka. A capital song, indeed the best of the songs by English composers, is "O sun that wakenest!" by Fred. Corder. The manly ring and genuine sentiment of this song stand in refreshing contrast to the excessive sentimentality of the generality of English writers. The form of Corder's song, too, is excellent. Saint-Saëns contributes a most interesting song, "A Voice of the Cedar-tree," a thoroughly graceful composition with which it would have been well to end the book. At least the doleful, expressionless "Edward Gray" of Sullivan is wholly out of place. But "Enid's Song," by Silas, is bright and pretty; and the closing song of the book, "Our enemies have fallen," is ingeniously worked out by Berthold Tours, though we do not know what could induce anybody to sing it. In fact, most of the composers in this work are notably and unfortunately not at their best.

In conclusion, we cannot think the idea a happy one which suggested to Mr. Cusins a musical compilation of so many of Tennyson's poems. The poet does not gain anything, to say the least, by this grouping of them, while most of the composers seem to have written under some subtle constraint. In any event, the permanent impression left by a careful perusal of this work is the reverse of cheering—a result which seems to defeat the very object and mission of music.

Camp and Cabin: Sketches of Life and Travel in the West. By Rossiter W. Raymond. (New York: Fords, Howard & Hurlbert.)—Of these sketches all have been printed in various periodicals within the past eight or nine years; three are descriptions of the Yellowstone country and other Western "scenery," and the preface asks the reader to bear in mind the date at which they first appeared in order to allow for their "fresh enthusiasm"; and the remaining three are short stories, one being of New England and the other two of Western life. The volume altogether is a 16mo of 243 pages, of which the stories at least will be found a good deal more entertaining than most of their sort. They have the one necessary qualification of short stories, interest namely, in an eminent degree; but they are also cleverly done and are of some real value as portraiture of the types and life they attempt to depict. That entitled "Agamemnon" is very much the best, and it is admirable; the O'Ballyhan is in idea almost as good as Thackeray's Costigan, though, of course, his delineation is slight and shadowy in comparison; and the hero is charmingly unique, and not much the less real withal. "Thanksgiving Joe" is more distinctly sentimental, and "The Widow Baker" rather mechanical; so that both lose in force. The defect which the three share, and which we imagine would be inseparable from anything Mr. Raymond should write, and would thus weight any attempt of his to produce something ambitious and important, is a persistent optimism which operates fatally to verisimilitude. This is a great pity, but it is nothing new, and to blink it, as the evident merits of his work tempt one to do, is only to lose sight of the wide difference between serious fiction and agreeable romancing. Mr. Raymond is evidently one of those who believe in reforming Sunday-school literature, rendering it less "unwholesome"; substituting some fidelity of local color for its sickly imaginings, and introducing a blast of fresh air to dissipate its vapors. Nevertheless after all this tonic treatment it still remains Sunday-school literature in the hands of such writers as Mr. Raymond; it is just as false as if it had not lost its moral. Thanksgiving Joe is altogether too good to be believed in, as are most of his fellow-miners, and as are nearly all the personages of the other stories. The circumstance that the dialect is excellent and natural, the incidents probable, and the narrative simply told, is only an added aggravation to any one who believes it to be the province of fiction to deal with life as it is. Writers who so deal with it are by this time, we may hope, no longer called cynics; and writers who do not are justly suspected of a sentimentality which may be of a good or a bad sort but which is born of an *arrière-pensée* of some kind or other, or of an inability to observe deeply and clearly and free themselves of any responsibility in the matter. Bret Harte, for example, whom Mr. Raymond's stories recall, sins in this respect; his moral, that morality is independent of conventions, always lies near the surface; and we could not select a better instance to illustrate our meaning. Mr. Raymond's pictures are very agreeable, but they should not be mistaken for portraits.

History and Poetry of Finger Rings. By Chas. Edwards, Counsellor-at-Law. (New York: A. C. Armstrong & Son. 1880. 12mo, 234 pp.)—The title of this book would seem to indicate that it was the history of ornament, but it is something more than that. It commences with the announcement that the time when a ring was first fashioned and worn cannot be ascertained, and the reader is cautioned against mistaking "rings" for "ring money," which was used by the Egyptians and ancient Britons. The mythology of the subject is first treated, and then classical illustrations are given of a most interesting kind, which prove that the man with the gold ring was not always the one, even in classical times, who occupied the enviable position. There is scarcely any substance of which rings have not been made. Some of the oldest were of iron, and at first were worn by conquerors only. Gold was, however, one of the first metals used for this purpose, and was preferred to silver. Rings made wholly of stone without any metal, such as the carnelian rings that are found among Egyptian remains, were used by the higher classes, while the common people wore rings of blue porcelain and bone. The Romans were for a very long time content with iron. At length they became so common that bushels of them were taken in the spoils of Cannæ. Their first use was as signets; such an Egyptian ring is mentioned, the value of the gold contained in which was £20 sterling. Among the Romans they were used only as signets, and were not at first adorned with stones. They were worn by them on either hand, but when stones were employed it was considered foppery to wear them on the right. The Hebrews, however, wore their rings on the right hand only. The Greeks and Romans, according to Aulus Gellius, wore them on the fourth finger of the left hand, because this finger was supposed to have a nerve leading directly to the heart, but other authors who were less romantic say that they were so worn because the left hand was less used than the right, and the stones of the ring were on this account less likely to be broken. At first the Romans wore only one ring, then one on each finger, and then several, at least one on each joint of the finger. The practice of wearing a ring on the fourth finger is supposed to have originated from the fact of this finger being called the "medicus," because the old physicians used to stir their potions with it, supposing that no venom could stick to it. They were in the habit of wearing rings on this finger containing certain essential oils as charms. The Egyptian priests, on account of the belief of its having a nerve leading directly to the heart, used to anoint this finger with precious oils before the altar.

At the present day in Persia the authenticity of documents of all kinds depends upon the signet. This makes the occupation of a seal-cutter a very responsible one. He is obliged to keep a record of every ring he makes, and the alarm of an Oriental whenever he loses his signet-ring can be imagined, since the use of it is equivalent to the use of the signature with us. The language of rings must have been a very costly luxury, but little is left of it at the present time, and this consists mostly of the use of rings on certain fingers to indicate engaged or married ladies. The ring has always been an emblem of power. Pharaoh gave his to Joseph as a sign of authority. From very ancient times rings were buried on the hands of royal personages to indicate their rank. In ancient Rome even senators were not at first allowed to wear them. They have always been used, however, among Christian nations in the consecration of bishops as a symbol of the spiritual authority conferred on them at that time. They were very early used as amulets and charms, either with engravings of cabalistic power or set with gems, to which all kinds of virtues were

attached. Such rings were frequently worn by royal persons to counteract the effects of poison which might be administered to them. They were more frequently worn as charms against disease, and this superstition is still extant.

The fourth chapter of the book is full of historical incidents. Every one knows of the ring given by Elizabeth to Essex. Few rings have such a romantic place in history, but there are many other historical narratives related here about which just as much romance could easily be woven. The author closes his dactylotheca with the rings of love, affection, and friendship. The references with which the work abounds will enable those who wish to make a more careful study of the subject to do so at their leisure. A complete index makes a reference to any part of the treatise easy. It is pleasantly written, and cannot fail both to amuse and instruct any one who will spend upon it the few hours required to read it.

Glints from over the Water. By P. B. Cogswell. (Concord, New Hampshire: Published by the Author. 1880.)—The thing which most struck this traveller wherever he cast his eyes in Great Britain, France, Germany, Greece, the East, or in Egypt was the superiority of his own country: no lake is equal to Winnipiseogee, no business thrift or ability is equal to the Yankee's, and so on; he even says boldly he did "not covet Leo XIII. his pontifical chair, and would not exchange situations with him if he would give as boot all Satan offered Christ on the mountain." But, notwithstanding this somewhat obtrusive boasting, the volume is a good gauge of the observing powers of most Americans who go abroad, and a fair indication of what knowledge and experience they bring back with them. The author went to the Paris Exposition and wrote letters from there and from the other countries he visited during his year's tour to a Concord newspaper, and it is these letters which he has revised and gathered into this large volume. The revision might have been more thorough, for there are many things worth saying in a letter to a New Hampshire newspaper which are not worth repeating in a book; indeed, the larger part of this volume might have been omitted without loss. There are some errors, too, which have escaped his notice: the statement that in France "there are no farms apparently owned by the peasantry" is surprising even in a newspaper reader, if we remember the amount of attention peasant proprietorship in France has received in this country; so, too, the laying the destruction of the Parthenon to the account of Turkish shells is wrong, and the location of the Olympian games within less than a mile of the Acropolis of Athens is novel; in general the author is unsafe on archæological ground. In artistic matters, too, he occasionally stumbles, and although he tries hard to respect the old masters it seems to go against the grain. The sight of the pictures in the Doge's Palace at Venice, for example, leads him to point out a "peculiarity about the pictures painted by many Italian artists from the fourteenth century down, and that is the similarity of subjects selected, and those confined principally to a few Scriptural subjects, the best of them counted by the ten fingers. It shows how little of original genius most of those artists possessed, except in varying details." He has the characteristic American regard for admirable things, but the conviction that he ought to worship conflicts with the knowledge that he doesn't, and the result is often a remarkable attempt at humor, especially when he is at places made memorable by literary associations. Thus, at Avignon he remembers the romance of Petrarch and Laura, but the reflection which rises to his mind is that if all attachments were so lasting there would be fewer divorce cases.

But if Mr. Cogswell occasionally leaves something to be desired in archæology, history, art, and humor, he had more success in dealing with the practical concerns of the countries he visited, and he has written a few instructive pages about them; these are the most valuable portion of the book, and, although the information in them is to be found elsewhere perhaps more easily, they will be useful to whoever has patience to hunt for them through four hundred and fifty octavo pages. The one conclusion which may be safely drawn from the book is that Americans possessing Mr. Cogswell's intellectual equipment are distinctly injured by European travel. They are far more valuable and interesting men before they start than after they get back.

The Genealogist's Guide to Printed Pedigrees: Being a general search through genealogical, topographical, and biographical works relating to the United Kingdom, together with references to family histories, peerage claims, etc. By George W. Marshall, LL.D., of the Middle Temple, barrister-at-law. (London: George Bell & Sons. 1879. 8vo, pp. 514.)—The title fully describes this very useful index to such English genealogies as are in print. Moule's 'Bibliotheca Heraldica' was perhaps the earliest descriptive list of such works; but since the date of its issue, 1822, family histories have multiplied exceedingly. Of his other predecessors, such as Bridger, Coleman, Marshall, and Sims, the author writes: "Their collective contents will be found in these pages, together with more than double the number of references they contain. The late Mr. Bridger, indeed, whose work is the largest of them all, estimated, in his preface, his references at sixteen thousand; those in this volume are estimated at nearly three times that number." It would be useless to try to give examples of the thoroughness of the work. The names are arranged alphabetically, with the references under each. These references seem to comprise all the standard county histories, Burke's 'Commoners,' and similar books, leaving out, however, peerages and baronetages. Very few American genealogies are cited, those used, indeed, being selected on some occult system which we cannot understand. Thus, the elaborate work on the Brights of Suffolk is not cited, although it is almost entirely devoted to the English family; yet on the preceding page the Briggs genealogy is quoted, which is distinctively American. Probably the author's good-nature led him to insert such titles as his own notes or library supplied. Doubtless there will be found some errors or omissions, but a book of this kind is of the greatest possible assistance to the antiquary. Every item represents so many minutes or hours of useless search saved to the investigator. Mr. Marshall is favorably known as the editor of the *Genealogist*, the only magazine devoted to the subject in England; the publication of this 'Guide' will increase his reputation at home and in this country.

Studies on Fermentation: the Diseases of Beer, their causes and the means of preventing them. By L. Pasteur. Translated by Frank Faulkner and D. Constable Robb, B.A. (London and New York: Macmillan & Co. 1879.)—The original of this work ('Études sur la Bière') appeared some three years ago, containing the last results of many years of laborious research, and was at once a valuable contribution to our knowledge of fermentation and a hand-book for the intelligent brewer. For a quarter of a century this illustrious chemist has been one of the most brilliant experimenters in this department of science, and his numerous papers read before the French Academy have kept his name prominently before the scientific world, but his 'Études sur le Vin,' published in 1866, 'Études sur le Vinaigre,' a little later, his 'Études sur la Pébrine,' or silkworm disease, and other papers of immediate practical import, have given him perhaps even greater fame in the industrial world.

The causes and nature of fermentation have probably—save the dogma of evolution—been the subject of more sharp discussion and bitter controversy than any other question under modern scientific investigation. It has a biological and a chemical side, each involving a group of abstruse questions only to be solved by the most ingenious and exact experiment. Moreover, the practical and economical questions related to it are particularly numerous and varied, from the making of "our daily bread" to the foundation of great industries like brewing and the canning of foods; then, too, it has its relations to diseases, and to great chemical processes in nature, all of which give an especial importance to the study of its phenomena. The work before us is concerned primarily with a purely practical question in the arts, the solution of which involves principles of far wider application. Every one who makes bread, be it housewife or professional baker, knows that good bread is not and cannot be made at every trial, no amount of care or skill or empyrical knowledge being sufficient to secure uniformity of excellence. This is even more true of beer than of bread, and this uncertainty of result is of vastly greater pecuniary importance than is even dreamed of by any one not acquainted with the facts and figures. An English authority says: "Probably no industry—saving agriculture—employs so large an amount of capital as that of brewing and the various industries supported by it." The income of all this investment has heretofore had an element of uncertainty because of the "diseases" to which beer is subject in the brewing. In spite of the greatest care and skill, some brewings would become diseased and the quality impaired. This accident was liable to happen in the best regulated breweries, and with it came a loss, direct or indirect, to the manufacturer. No other great industry is subject to an uncertainty of this kind, and most of the changes which have lately been introduced into brewing at an expense of very many millions of dollars, and which have practically revolutionized the methods of manufacture within the last few years, have aimed at increasing the uniformity of result rather than im-

proving the quality or cheapening the production of good beer, as represented by the best brewings.

Before this special investigation there was no philosophical explanation of the causes of sick beer, and no way of entirely averting the loss to the manufacturer. The researches but prove the fact which the astute experimenter had before suspected and suggested—that the "diseases" are produced by the presence of special disease-ferments during the process of brewing. The substance of his conclusions is that "every unhealthy change in the quality of beer coincides with a development of microscopic germs which are alien to the pure ferment of beer," and the converse that "the absence of change in wort and beer coincides with the absence of foreign organisms." To the scientific man and the general reader the direct practical question, the solution of which M. Pasteur was seeking, is of far less interest than what is incidental to it in this volume—the ingenious methods by which the facts were proved, the different phases and conditions of fermentation studied, the light thrown on other related phenomena, and the suggestiveness of many of his experiments and conclusions. The question of the origin of ferment organisms is again discussed, and the hypothesis of the spontaneous generation (so called) of septic ferments again receives the hard blows of the author. He tells us in his preface that "our misfortunes inspired me with the idea of these researches," which were undertaken just after the disastrous Franco-German war of 1870, and he determined that French brewing should not only be put on an equality with that of Germany, but should surpass it in uniformity of excellence. But science is cosmopolitan, and already the microscope for the determination of disease-ferments has become as common in the German and English breweries as in those of France.

This English edition is more than a mere translation. It is revised and brought down to date, and a number of new original illustrations are added to those reproduced from the French. The publishers have left little to complain of in the matter of printing or illustrations.

The World's Paradises. Sketches of Life, Scenery, and Climate in Noted Sanitaria. By S. G. W. Benjamin. (New York: D. Appleton & Co. 1880. 18mo, pp. 228.)—Mr. Benjamin's style is nothing if not popular, and in this little "handy volume" one may find pleasant talk about a score of places more or less well known, from Damascus to Honolulu. Most of them Mr. Benjamin has himself visited; and from several of them he has brought away anecdotes and local touches which are new. The ground of his pleasant volume upon the Atlantic Islands is touched again, but not repetitiously—touched rather than trodden upon; and there are interesting chapters upon the Bosphorus and other Eastern localities with which Mr. Benjamin is familiar by residence. For the rest, one could wish that he had given ampler space to personal reminiscences. For the fastidious reader the fault of the book is that it leads one somewhat too persistently over the well-beaten tracks of description; but it was not written for the fastidious reader.

HISTORY OF

AMERICAN POLITICS.

By ALEXANDER JOHNSTON, A.M.

16mo, 60 cents.

"This little book is in reality the history of American political parties from the foundation of the Government down to the accession of Mr. Hayes. . . . It would not be possible to get at the facts which are here accumulated, arranged in the most orderly manner, in a very clear and absolutely colorless narrative, in a small duodecimo, without turning over at least a dozen larger works. . . . We cannot commend Mr. Johnston's little book too highly."—*The Nation.*

Cox's Popular Romances of

the Middle Ages. Large 12mo, $2 25.

Mrs. Brassey's Sunshine and

Storm in the East. With 114 illustrations and 2 maps. 8vo, $3 50.

A VALUABLE WORK.

The Reader's Handbook

OF ALLUSIONS, REFERENCES, PLOTS, FACTS, AND STORIES.

WITH TWO APPENDICES.

By the Rev. E. COBHAM BREWER, LL.D.,

Author of 'Dictionary of Phrase and Fable,' 'A Guide to Science,' etc.

Crown 8vo, 1,184 pages, half-morocco, gilt top, $3 50; sheep, $4; half-Russia, $5.

"This surpasses all that we have seen in a book of reference for readers and writers, as it combines the best qualities of the encyclopædias, biographical dictionaries, and quotation-books. Appended to it is a list of authors and dates of dramas and operas, numbering 2,517, and a second appendix gives the dates of the poems, novels, etc., referred to in the book, which is quite as thorough and complete. Altogether, 'The Reader's Handbook' would be cheap at any price, and it will take a place in every well-ordered library, small or large, that belongs to a person fond of reading or occupied in writing as a profession."—*Philadelphia Evening Bulletin.*

THE NEW FRENCH BIBLIOGRAPHICAL JOURNAL.

LE LIVRE:

REVUE MENSUELLE.

Bibliographie Ancienne;
Bibliographie Moderne;
Bibliographie Bibliographique.

We cannot too strongly commend this important review to the attention of book-collectors, and practical men generally. Its aim is to give a monthly account of the movements of the intellectual world; to present succinct criticisms of the principal recent publications, together with instructive and attractive bibliographical essays on old and modern books, and, in fine, to treat of everything which relates to literature. This breadth of scope will render it the completest journal of its kind, especially from the originality and variety of its articles, and the generality of its criticisms. Its size of page—large 8vo—permits the introduction of reproductions of all descriptions—the ornamentation of different epochs, with its various styles, as well as illustrations by the various processes used for the finer class of books. Each number will be divided into three parts, each distinct from the other, and separately paged.

Part I. will be devoted to the Technical branch and Book-collecting, and will comprise from 32 to 48 pages, printed on fine paper, with illustrations, full-page and otherwise.

Part II. will be confined to Critical Bibliography, and will contain essays on recent books, both French and of other countries. This part will be printed in double columns, on tinted paper, making about 50 pages monthly.

Part III. is devoted to Bibliography, and will form a sort of Catalogue Raisonné of the publications of the preceding month. In this part will also be included the priced catalogues of the old-book sellers of France and elsewhere, constituting a sort of résumé of rare and curious books for sale in different points of Europe.

The number of eminent writers and specialists attached to the editorial department of *Le Livre* will confer on its pages that spice of variety so important in a publication of this sort. The foreign correspondence will be confided to the most competent writers in each country.

The Nation.

NEW YORK, THURSDAY, MARCH 4, 1880.

The Week.

THE Republican Convention was held on the 25th ult. in due course at Utica. Mr. Conkling was present and took charge of the proceedings. Mr. Chas. E. Smith, the late editor of the Albany *Evening Journal* and a leading actor in the troubles arising out of the Smyth trick about holding the primary meetings at Albany, was made both temporary and permanent chairman. A more conspicuous and effective mode both of countenancing Smyth and expressing contempt for the malcontent Albany Republicans, could hardly have been devised. The protest of the malcontents was summarily laid on the table. The delegates to the Convention were not instructed to vote for Grant as a unit, but were "called upon and instructed to use their most earnest and united efforts to secure his nomination at Chicago." The preamble of the platform gave a dismal account of the state of the country, alleging that "the safety of the nation was again imperilled by the virulent and unlawful efforts of the Democratic party to overawe and subvert State governments, . . . thereby intending to secure control of the General Government by deeds of violence and fraud." The resolutions were entirely devoted to laudation of General Grant, but the reading of them was interrupted by loud cheering for Blaine, who appears to have been the favorite of the galleries. They were passed by a vote of 217 to 180.

Mr. Conkling made a speech in which he revealed the exact nature of the danger against which General Grant is to provide. If a flaw is discovered in the returns from a single State, and the Democratic House and Senate refuse to count it, this will throw the election into the House of Representatives, which will vote by States, and by States the Republicans have a majority. This majority will, however, be got rid of by depriving Mr. Washburn, of Minnesota, and Mr. Orth, of Indiana, of their seats, because they hold the casting vote of their delegations. This done, the Democrats will have the majority by States also, and will elect their man. The way to meet this crisis is to nominate "the man who is most certain to be elected, and most certain to be lawfully and peaceably seated after he is elected"—viz., General Grant. This idea was unfortunately not worked out in detail. Mr. Washburn and Mr. Orth, if unseated, will be unseated long before the election. The Democrats will then have a majority in the House by States. Are we to understand that if Grant should seem to be elected the House and Senate will be so afraid of him that they will not venture to reject any State certificate which gives him a majority, or that if they do reject such a certificate the House will be afraid, voting by States, to elect anybody but him? If so, what will they be afraid of? What is it that is to make him more terrible to the majority in Congress than any other American citizen in a similar position? Also, suppose that they are not afraid, and do carry out the above programme, what will happen if General Grant is not satisfied? How will he "lawfully and peaceably" seat himself? It seems to us that the public is entitled to full particulars on these points. General Grant does not expect to get into the Presidency by supernatural agency. Now, if, as is always possible, the majority in Congress should, always acting under the forms of law, do what Mr. Conkling considers their worst, how will General Grant get into the Presidency?

The effort to get Smyth confirmed in the Senate at Albany was continued after the Convention with greater vigor than ever. The nomination was doubtless made as a reward for his efforts in "fixing" the primaries, and the conspicuous approval of them given at the Convention by putting Mr. Charles E. Smith, one of his confederates, in the chairmanship of course made it more incumbent than ever on the Governor to get him the place if he could. But on Tuesday success was plainly impossible, and he withdrew his name. In the meantime Mr. Charles E. Smith, who moves to Pennsylvania, it is reported, to take charge of the Philadelphia *Press*, has begun a lawsuit with the proprietors of his old organ, the Albany *Evening Journal*, who expelled him from the editorship, and asks for a receiver of the property, so that the fight waxes warmer every day. Mr. Smith is one of the happily diminishing class of amphibious editors, one-third journalist, two-thirds "worker," who consult with the Bosses in hotels all over the State about "fixing things," draw fustian platforms for State conventions, embody the Boss view of the nation and the world in "editorials," and supply the pure milk of the word to local committees and henchmen, and "make it hot" for the Democrats during the canvass.

M. de Lesseps has "done" New York pretty thoroughly during the week, and has been received with a consideration which must be gratifying to him, but which some of the papers are a little anxious that he should not misinterpret. He made very much the same speech at the American Society of Engineers' and the Geographical Society's receptions, and at the Lotos Club's and the merchants' dinners. He had come here to enlighten the American public upon the Panama canal; should in a few days see the President and attempt to interest him in the scheme; assured his hearers that it was practicable and would pay, and was the only plan that would; poohpoohed rival routes, and expressed a confident conviction that after the canal should be opened it would only be a matter of time how soon America would be the mistress of the seas. So far as we can see, he has in the course of his enlightenment of the American people, descended into none of the details which the Paris Conference left everybody of any seriousness whatever anxious for. Perhaps in the eminently appropriate interchange of so much courtesy the amenities of the several occasions have prevented M. de Lesseps from answering, and indeed his hosts from enquiring, too curiously. The editor of the *Commercial Bulletin* has, therefore, offered him the use of his columns to answer certain questions about the contemplated cost of the canal—questions which may properly take precedence of the vitality and applicability of the Monroe doctrine.

The Rives mandamus decision of the Supreme Court is important, though not unexpected. The case, it will be remembered, was that of two negroes indicted in the State of Virginia for murder. Judge Rives removed all the proceedings into the United States District Court under the section of the Revised Statutes providing for such removals in case of the denial of civil rights (R. S. U. S. §641). He based his action on the ground that the jury which convicted the prisoners was composed of whites, and that it ought to have been a mixed jury. The Supreme Court decide, *first*, that the object of the Civil Rights Act (R. S. U. S. §§ 1977 and 1978) and the Fourteenth Amendment was to place the two races on precisely the same footing; *second*, that the Fourteenth Amendment is directed against *State* action; *third*, that, as a State may act either by its legislature, its executive, or its judiciary, the prohibitions of the amendment extend to all acts of the State denying equal protection of the laws, whether it be by one of these agencies or another. *Fourth*, Congress, however, has not carried its authority in this matter as far as it is authorized to do by the Fourteenth Amendment, for the removal act referred to above only contemplates a removal *before a trial or final hearing*. It is obvious from this that Congress in passing it never intended to provide against *judicial* infractions or denials of civil rights, although it might have done so had it pleased. *Fifth*, The sort of denial which the removal act was intended to provide against, therefore, must have been legislative. But, *sixth*, the constitution and laws of Virginia do not exclude negroes from service on juries, and consequently a case

for removal was not presented by the facts. *Seventh*, the demand for a mixed jury was without foundation. A negro is not entitled to anything more than a jury from which there shall be no exclusion on account of race or color. In another case (Strauder *vs.* the State of West Virginia), in which an act of the West Virginia legislature excluded negroes from juries, the Court decided, following the same line of reasoning, that the act was unconstitutional. Judges Clifford and Field dissented.

A kindred opinion disposes of the case of Judge Coles, indicted in the United States Court for the Western District of Virginia, on the charge of excluding negroes from juries on account of their race, color, and previous condition of servitude, and in violation of the act of March 4, 1875, providing for punishment of officers guilty of this offence. The Supreme Court holds the act constitutional; that the Fourteenth Amendment means that no agent of the State, through whom its powers are exercised, shall deny the equal protection of the laws; and that the act of any agent who does so is the act of the State itself. Otherwise the constitutional prohibition has no meaning. Legislation to carry it into execution must act not upon the abstract thing known as the State, but upon *persons*, and the statute of March 4, 1875, is legislation of this kind. The act of Judge Coles in selecting a jury was a ministerial, not a judicial act, and, although he derived his authority from the State, he was bound to obey the Federal Constitution. Judges Field and Clifford again dissented in this case, mainly on the ground that the act of 1875 was unconstitutional, and that the view of its meaning taken by the majority of the Court involved a complete subversion of the admitted rights of States as a co-ordinate part of the Government.

The case of the State of Tennessee *vs.* Davis sets at rest all doubts as to the jurisdiction of the United States Courts over indictments of revenue officers for acts done in discharge of their duty. Davis was a revenue officer, and on being indicted in a Tennessee Court for the murder of Haynes, a citizen of Tennessee, filed a petition for the removal of the case from the State to the Federal court. The Supreme Court holds that the defendant had a right to this removal, on the ground that the case involved United States law. Dissenting opinions were read in this case also by Judges Clifford and Field. The gravity of the conclusions reached by the Court with regard to the scope of the Fourteenth Amendment will be seen at a glance. We may recur to this matter on a future occasion.

Mr. Edmunds has furnished during the week a salutary example of a legislator who does not leave his post to manipulate his State Convention, and who steadily applies himself to the duty of his office. He did well to oppose a special act for removing disabilities growing out of the rebellion, whether he did well or ill afterwards to oppose the general repeal of these disabilities, so far at least as they related to the admission of Confederate soldiers into the Federal army. He performed a great public service when he exposed, with equal keenness, learning, and wit, the raid upon the Treasury contemplated by the Five Per Cent. Bill (as it was called for short), which provided for paying five per cent. of the value of military bounty lands located in some eighteen of the newer States, when by statute they were entitled only to so much of the net proceeds of the public lands *sold* in their respective limit. Mr. Edmunds showed that this movement was begun by Iowa as early as 1858, and he succeeded in having the bill postponed till the next session. On Monday Senator Hoar renewed the attempt to confuse the public mind on the subject of the Geneva Award, asserting that a payment made on an understanding which expressly excluded indirect damages was general and not specific in its application, and might be pocketed as England's penalty for acts which would have justified war with her "long before the *Shenandoah* left Melbourne." Senator Randolph began the debate on the bill to reinstate Gen. Fitz-John Porter, and had an audience remarkable for the number of high Confederate and Federal officers, who were partly there as judges and partly as curious spectators. Perhaps no one had a deeper interest in the result than General Garfield, a member of the original court-martial. Gen. Logan replied on Tuesday. On the same day the House adopted its new rules.

The passage of the Riddleberger bill by the Virginia Legislature on Monday need occasion no particular alarm to the creditors of the State, we are inclined to think. It is, of course, a most inexcusable and dishonorable measure, providing as it does for the reduction of the principal of the State debt from $33,000,000 to $20,000,000 by eliminating the capitalized war and reconstruction interest; fixing the rate of interest at 3 per cent.; making the coupons non-receivable for taxes, but the bonds taxable; and instructing county treasurers not to receive coupons of the present consols and ten-forties for taxes. It is difficult to understand why any man or party of men who could bring themselves to go so far as this should go no farther. The truth is, we suspect, that the "Readjusters" bark far beyond their biting capacity, and that no one knows this better than themselves. Under the lead of a popular but unscrupulous demagogue they made a dash for the control of the State government, one of the chief railway lines of the State, and the United States Senatorship; finding "readjustment" a popular means to those ends they used it with great success. Now that they have, by breaking the power of the Conservatives, gained what they wanted, it is hardly to be supposed that a party of non-taxpayers will concern itself very earnestly about fulfilling election promises made to the negroes. The Governor is sure to veto the Riddleberger bill, and it cannot be passed over his veto. Before a new Legislature can be elected the question will probably be settled by the Court of Appeals. The fact that most of the Republicans voted with the repudiators, however, is a really discouraging thing. It contradicts the inference drawn by every one at the time of the election, that the color-line was broken: and they appear to have got nothing of any account in exchange for their adherence to what is probably as disreputable an organization as now exists in this country.

The state of things in San Francisco during the past week has been tolerably humiliating for the more respectable portion of the population. A few thousands of the "unemployed" (there is plenty of work offered them a few miles away) have taken to holding meetings in "the Sand Lots," where they are addressed by Kearney, to walking in procession through the streets, and to making calls on persons employing Chinamen, and requesting them to discharge them, and threatening them with death. What has started the agitation afresh is a resolution of the Board of Health declaring the Chinese quarter, or Chinatown, as it is called, a nuisance, which we presume it is from a sanitary point of view. The Kearneyites interpret this as a legal direction, not only to purify the Chinese dwellings, but to drive out the inhabitants, and the demonstration is intended to force the authorities into action. Subscriptions have been collected for the erection of a permanent gallows in one of the Sand Lots; and Kearney, who pretends of late to fear assassination, has announced that he will leave a list of persons to be "guillotined" after his decease as a peace-offering to his manes. The situation is complicated by the fact that Kalloch, the mayor, and the sheriff sympathize with the Kearneyites, and in a measure encourage them by their speeches. The mob is still further irritated by the refusal of the corporations to obey the law recently passed, which forbids them to employ Chinese labor. They have carried the question of its constitutionality before the United States Circuit Court, and pending its decision keep the Chinamen; but Kearney says he will not recognize any decision but that of "the people." The police and the militia appear to be ready and even anxious to try conclusions with him and his followers, and the business people seem of late to wish matters to come to a crisis, but he is either very cunning or very timid, for he seems to be the most peaceable demagogue that ever mounted a stump; and his followers, while threatening slaughter on a vast scale, both in speeches and resolutions, refrain from hurting anybody.

In the meantime there appears to be little doubt that the new constitution is working disastrously for the business of the

State. Its provisions are of course evaded in all sorts of ways, but business carried on in evasion of the law is not apt to be flourishing or enterprising. There are many signs of the withdrawal of capital from the State, such as the decline in the bank deposits, the diminished value of real estate, a migration of capitalists to this city, and the establishment of a mining bank and exchange here. San Francisco cannot but become much less attractive as a place of abode under the operations of the mob, even if they do not commit overt acts of violence. The liability to be "waited on" by Kearneyite deputations and requested to change his servants, and afterwards to hear the propriety of putting him to death discussed by a large crowd outside his own door, does not make any man cheerful in his business or in his domestic life. There is, however, something very comic in the use of the bloodthirsty talk of the French Reds by the very timid and harmless Reds of our cities. At a Communist meeting in this city the other day one of the leaders was asked what should be done to a woman (Queen Victoria) who drew £470,000 for "her household expenses," while the people were dying of hunger. The answer was prompt: She should be tried in front of her palace by a jury of Irish paupers and decapitated on the spot. The retention of the jury trial in the proceeding when conviction was already determined on is characteristic and droll. A Frenchman would have insisted on execution by simple "decree."

General Boynton's application for a court-martial to try General Sherman for libel has been very properly refused by the War Department, but not before it had been referred to General Sherman, who put on it a somewhat scurrilous endorsement, repeating his charge of professional slander against General Boynton. General Sherman also announces that he is ready to meet General Boynton in the civil courts of the District, and has retained Senator Carpenter's services for the occasion. The trial would be an interesting one, though probably enormously expensive. But we do not see how the defendant could ever prove that the plaintiff would libel his mother for the sum of one thousand dollars, and feel sure that the General of the Army engaged in such an attempt would not be a very edifying spectacle.

The rate for discounts in London advanced during the week to about 3 per cent., and it was thought that the Bank of England would put its discount rate above that figure. Accordingly the rate for short-date bills on London advanced here, but as the Bank of England rate was unchanged the market here for sterling was not so strong at the close. The New York money market was more active, and the rate for demand loans advanced to full 6 per cent. Notwithstanding the purchase of $14,600,000 U. S. bonds for the sinking fund during February, and payments of several millions for pensions, the loan market was kept no more than steady, so large were the payments into the Treasury for duties on imports and for internal taxes, and so heavy were the shipments of currency to New England and the West on account of the enlarged volume of business. The Treasury took in during February for duties on imports and internal taxes about $28,000,000, against $19,500,000 in February, 1879; the principal gain—about $6,000,000—was in the form of duties on imports, the foreign goods imported in February having been valued at $33,800,000, against $25,400,000 in the same month last year. The public-debt statement shows a decrease during February of $5,672,000, which brings the reduction for the current fiscal year up to about $32,500,000. It is notable that of the coin-balance held by the Treasury the gold is steadily falling, while the silver is increasing. The Treasury now has about $42,000,000 of silver. The Stock Exchange markets were what the brokers call "feverish" during the week, and there is considerable apprehension respecting the course of the money market during this month, as so much depends upon it, while it in turn is very much in the hands of the Secretary of the Treasury. If he buys a large amount of bonds the rate for loans may not rise above 6 per cent.; if not, then a stringent loan-market may be expected. The price of silver in London fell to 51¼*d.* per ounce; and the bullion value here of the "buzzard dollar" fell to 87 cents—$0.87001.

No new light, at least none that has been made public, has been thrown on the origin of the explosion in the Winter Palace in St. Petersburg. The extradition of a man named Hartmann, supposed to have been connected with it and now in Paris, has been asked for from the French Government, but it is so violently opposed by the Radicals—on the ground that his offence, if ever committed, was political—that it will probably not be persisted in. The revelations about the population of the Palace are, however, interesting as showing how very Oriental the habits of the Russian monarchy still continue to be. It appears that about five thousand persons live in the Winter Palace, the occupation of a very large proportion of these being unknown. In fact, owing to its exemption from police visitation or surveillance, it seems to have become, to a certain extent, a sort of asylum for persons for whom the world outside had become too hot, and who had friends in the Imperial domestic service. General Melikoff has been appointed supreme governor of St. Petersburg, with military powers over everybody, and he has thoroughly purged the palace service. There has been some expectation that the Czar would make concessions to the discontented on the twenty-fifth anniversary of his accession, in the shape of some approach to representative government, but this has not been realized.

In France the condition of the political world is unusually dull. The Jules Ferry Educational Bill is before the Senate, and the famous Seventh Section, which forbids the religious orders to keep school without certificated teachers, is under debate, but it does not seem exciting. The question of legal divorce, of which it is now proposed to give France its first experience—all divorces under the Code being simply separations—is attracting more attention than anything else. This attention is stimulated by a very long pastoral from the Pope against civil marriages and in defence of the sacramental view, and by a new play of Sardou's which attempts to show up the freethinkers and bring civil marriage into disrepute by producing it on the stage with illustrations of its evil consequences. The clergy have begun to lecture on it, too. Father Hyacinthe, who has made a sort of specialty of marriage, has been discoursing on it from the Protestant standpoint before large audiences, but his offering himself as an illustration of the possibility of prolonged chastity seems to have called forth interruptions on the part of the irreverent and profane among his audience.

In England since the Liverpool and Southwark elections there have been many signs that the Tories, ascribing these victories to the effect of supposed Liberal dalliance with the Home-Rulers, were preparing to dissolve Parliament and go to the country with the cry that their opponents were ready to join the Irish in breaking up the Empire. This plan, if ever entertained, has, however, been frustrated by the prompt support given by the Liberals in the House of Commons to the new rules for putting down obstruction, and by the very damaging revelations made by Mr. A. M. Sullivan, the Home-Rule member from Dundalk, as to Tory participation or complicity in the Home-Rule movement by prominent men before they got into office in 1874. There appears to be no doubt at all that they did go much further in the way of dalliance than the Liberals have ever done in order to get into power. In fact, the Home-Rulers appear to be playing somewhat the same part in British politics that the Greenbackers have been playing in politics here. Each party would, owing to their numbers in English boroughs, like to catch their votes if they could do so without burning their fingers. The new rules, which have been adopted by overwhelming majorities, will reduce the Home-Rule element to nothingness in the House of Commons. Mr. Parnell, in particular, will find his occupation gone when he gets home, for if the Speaker censures him he will be reduced to silence for the rest of the day, or be dragged out by the sergeant-at-arms.

MR. BAYARD'S IMPEDIMENT.

IT would be idle to pretend that the publication of Senator Bayard's so-called "secession" speech in 1861 has not considerably affected his availability as a Presidential candidate. The only argument for the nomination of Mr. Bayard which has seemed to attract any attention from Democratic politicians has been the probability that he would draw off Republican votes enough to carry one or two doubtful Northern States. All the other reasons for nominating him—that he is a man of high character and strong sense, a thorough master of current political questions, and besides all this capable of just that independence of thought and action which is the most marked want of the politicians of the day—have attracted but little attention, possibly because in "political circles" these are regarded rather as objections than as recommendations—qualities which, however valuable they may be in other departments of human activity, make a man in politics dangerous and untrustworthy. It was only when the Democratic leaders discovered that there was a large body of Republican voters who desired to have an opportunity of voting for such a candidate, that they began to consider seriously whether this unexpected kind of availability did not offset the objections to such an idealist programme as the nomination of a man of pronounced convictions from a small State like Delaware seemed to be. Probably even now few Democrats understand why the Independent Republicans want such a man, and in their secret hearts suspect that the desire of "reform" among them is mainly the result of that hypocritical affectation of virtue which every true Democrat believes to be at the bottom of Republican reform movements. Of the fact, however, that large numbers of Republicans demand such qualities as Mr. Bayard possesses there is no room for doubt, and in the eyes of Democratic politicians this consequently constitutes pretty much his entire availability. But if he has a bad "war record" of course this availability is much weakened, and as an "opening gun" in his campaign his Dover speech is not the sort of oration that is likely to get him Republican votes. If it had been made before the outbreak of the war it would have been of less consequence. But it was actually made in June, 1861, and it is clear to the most careless reader of it that at that time Mr. Bayard's sympathies were enlisted on the side of the South, that he regarded the war as brought on by Lincoln and his Cabinet, and the Union forces as an invading army, and that, while disapproving of secession, he thought a peaceable separation preferable to all the evils which he clearly foresaw a war would entail. Now, although it would be extremely irrational to argue that these opinions held by a young Southerner nineteen years ago showed any moral obliquity, there is no denying that his words have a tendency to recall memories of the past which are very bitter, and to breed a feeling of distrust in the minds of people who on every other topic are perfectly in sympathy with him. It is quite true that in the next four years there is not the remotest possibility that any of the questions touched upon in Mr. Bayard's speech will come up in such a way as to require even an expression of opinion from a President; but votes are determined to a very large extent by sentimental considerations, and no doubt if the question were put to the average Republican voter—as it would be put during a campaign between say Grant and Bayard—"Will you vote for the hero of Appomattox or for a Southern sympathizer?" large numbers even of those who did not like him would find little difficulty in voting for Grant.

That the removal of Mr. Bayard from the list of candidates to whom Independents could turn as a refuge from Grantism would be a great misfortune we freely admit; but, on the other hand, the danger of it is perhaps more than counterbalanced by the rapid decline of the Grant movement. The means by which his friends have sought to push his nomination in Pennsylvania and New York have proved a distinct failure. In fact, the kind of candidate he was represented to be at the outset could not but be damaged by such operations as those at Harrisburg and Utica. The spontaneity of the movement and its thoroughly popular character were its earliest and best recommendation, but this has been ruined by the pains taken to pack the two State Conventions which were first to put him formally in the field. The refusal of the Illinois Republicans to play their part in the programme by calling their Convention now, and their postponement of it until May, have, in fact, disarranged the whole scheme, and it is not oversanguine to look for its abandonment before June.

In addition to this, the arguments of its promoters would ruin any scheme. In the first place, there was always an absurdity in proposing the re-election of General Grant as a remedy for the presence of a Democratic majority in Congress, that majority having been created during his Administration and as a consequence of his Administration. This has always made his candidacy, in the character of "a Strong Man" of whom the Democrats were afraid, something which could not be discussed in private conversation, or discussed in any place in which its advocates could be replied to on the spot. It was a good theme for set speeches and newspaper and review articles, but not for actual debate. No one has the face as yet to maintain in oral discussion that the homœopathic rule, *similia similibus*, applies to political problems, and that the man who has worked a given piece of mischief is just the man to remedy it and prevent its recurrence. Nonsense of this sort can only be produced by a speaker or writer who is secured against interruption and has unlimited command of rhetoric, and it may be affirmed safely that a candidate who cannot be readily turned over in private talk is a weak candidate, and is likely to grow weaker every day he remains in the field. Having begun with this absurdity, it was quite natural that his supporters should venture on others—such as the assertion that General Grant's two years' pleasure trip in Europe had been a means of valuable political education, and would enable him to avoid the errors of his past administration. He has himself disposed of this very effectually in the authorized report of his conversations which we noticed two weeks ago. Nevertheless, this did not prevent the New York *Times*, which has made the great mistake of taking him up at the eleventh hour, from declaring on Sunday last that "the fears entertained by some Republicans about the probable character of General Grant's administration were entirely misplaced." The reason, however, why some people fear that General Grant would not administer well is that they have seen him administer badly. The materials for inferring the kind of President he would be are, in fact, more abundant in his case than in the case of any previous candidate for the Presidency, and telling people that they must not mind them sounds like a quotation from the "Grande Duchesse."

A similar air of simplicity surrounds the argument that there is no use in opposing his nomination, because "if the people want him they will have him." It cannot be ascertained until the election whether the people want him or not. In fact, the election will be held to get an answer to this question. In the meantime the articles and speeches of the supporters of "the boom" have the weight due to the opinions of individual men of various degrees of honesty and perspicacity—no more and no less. They are at present trying to get the people to "want him," which is a perfectly legitimate enterprise; but the labors of those who are trying to persuade the people *not* to want him are also legitimate, and thus far seem much more fruitful than those of their opponents. Any one who recommends a democracy to choose a particular man for its chief officer in time of profound peace as a measure of safety, and because the machinery of the government will not work well without him, is fatally weighted in his argument. The more he talks and the more vehement he grows the worse off the orator is apt to be, because he cannot long conceal his belief that his audience are unfit to govern themselves. This is sure to leak out as he warms to his subject. The consequence is, in the present case, that the more the friends of a third term have declaimed about its harmlessness the more opposed to the idea people have grown; nay, they have now got to the point of saying that, even if a third term be harmless, they object to the bestowal of it on the particular person for whom it is proposed. In fact, the objections to a third term have already begun

to be lost sight of in the objections to a third term for General Grant. This contingency the gentlemen who have declaimed on the subject in the *North American Review* do not seem to have foreseen. All that they say in opposition to the notion that a third term is *per se* objectionable in a government like ours may be true, and yet that would never prevent the decision in any particular case turning eventually on the merits of the particular claimant of the honor. A third term, like various articles of food and drink, may be good for some people and not for others. A third term for a Lincoln may be a national blessing; a third term for a soldier in a time of profound peace as a "saviour of society," with a large band of scheming adventurers at his back, is not desirable; and yet the third term might be a good thing for a nation to have in store.

REFORM ORGANIZATIONS.

WE shall offer no excuse for reprinting the documents given below. The first is a circular emanating from the Independent Republican Committee of this city, which was sent to every member of the recent convention at Utica. The last is the announcement of a similar organization in Philadelphia, whose promoters are among the ablest and weightiest of her reflecting citizens. Both furnish rallying-points in their respective States for all those who are resolute in opposing the prostitution of the party machinery in the interest of Grantism, and who desire both before the nomination at Chicago and after it to save the country from the disgrace of political reaction. The enemies of reform palliate every triumph of the Machine by reproaching the helpless minority with failure to organize—meaning for the control of the primaries, etc., and "within the party." That this failure honorably precludes all other concerted action is a doctrine which no longer imposes on thinking men, as was shown at the last election in this State. We believe it to be of the highest importance that the independent voters of every section should make their numbers and intentions manifest before the party conventions meet in June.

"INDEPENDENT REPUBLICAN COMMITTEE,
"BOX 1827, NEW YORK CITY.

"You are herewith furnished with the Report of the work of this Committee during the last campaign. We call your attention to the fact that 19,686 Republicans voted who did not vote for Mr. Cornell, and to the fact also that these votes are essential to Republican success in the Presidential campaign. The immediate object of that campaign is to elect the Republican candidate. That candidate should, therefore, be chosen who may most certainly be elected. There are two prominent aspirants for the candidacy whom many Republicans deem unfit, and whose election would be doubtful. Their nomination is therefore inexpedient. Those candidates are Gen. Grant and James G. Blaine.

"Many Republicans recognize in Gen. Grant one of the foremost men of our time. They honor him, but they do not want him for President. His renomination would be a departure from wise precedents, and a confession of civil weakness, which ought not to be made. The cry for him as a Strong Man is unrepublican. It is the expression of an emasculated desire to be governed, unworthy of communities not yet wearied of self-government. His candidacy would be further weakened by his past administrations. Those administrations are indelibly associated with scandals which came home to thousands of Republicans with the sting of a personal disgrace. They have not forgotten those scandals. They remember that Gen. Grant seemed unable to distinguish between good men and bad men. They recall that under his administrations six Northern and eight Southern States were lost to the Republican party, and that its majority in the House of Representatives was extinguished. They believe that a popular demand for him does not exist, and that a step toward his nomination is a step toward defeat.

"Many Republicans recognize in Mr. Blaine the type of the 'statesmen' found upon the surface after the war, who have great reputations, but have established no claim to the respect of this generation. Their triumphs are registered in the caucus, not upon the statute-books. They have neither advocated nor been identified with any great measure. Their cleverness and great vehemence is devoted wholly to the acquisition and retention of office, and, after years of legislative employment, they can point to no permanent or conspicuous service which they have rendered to the public. Independent Republicans believe that no such man should be nominated. That feeling in Mr. Blaine's case, coupled with the suspicion that his official career is tainted with dishonesty, would cost the party thousands of votes should he be chosen as its candidate.

"Independent Republicans desire the election of a Republican President; they believe the party contains many fit men who can be elected; and that while this is the case, no man should be nominated who cannot poll the full Republican vote."

"NATIONAL REPUBLICAN LEAGUE,
"ROOMS OF EXECUTIVE COMMITTEE, 913 WALNUT STREET,
"PHILADELPHIA, February 25, 1880.

"The objects of this association may be briefly stated:

"We intend to use every effort in our power to defeat the third-term project.

"We propose to labor for the overthrow of the ignoble tyranny in this State whereby a few politicians constitute themselves dictators of our platforms and of our candidates, demand obedience to their edicts, and treat with undisguised contempt the will of the people and the declared principles of the party.

"We will seek to secure the nomination for the Presidency of some statesman of capacity, integrity, and courage, who will labor earnestly for the improvement of our public life, and who will secure the support not only of zealous Republicans, but also of thoughtful and independent voters.

"Our demands are moderate: no third term, a party without a master, and a candidate without a stain.

"In pursuing these aims we are wholly in the spirit of the honored founders of the party, and are endeavoring to rescue it from degradation and impending disaster. We intend, therefore, to maintain and enlarge our organization, and to co-operate cordially with associations or individuals desiring like objects.

"Wherever the party organization can be utilized to advance these ends it ought to be promptly and vigorously used. Wherever the organization is improperly or despotically controlled, self-respecting Republicans ought to join in frankly expressing their opinions. If at any place a sufficient number of such men cannot be found to act together, we will be glad to accept as non-resident members of our association any persons wishing to join us."

THE SOCIALISTIC LEGISLATION IN GERMANY.

THE proposal which Prussia has handed in to the Federal Council, that the law against the Socialist-Democrats be retained in force for five years more—that is, till March, 1886, has naturally again turned public attention in Germany to Socialism. The reasons assigned for this proposal are that the agitation has been suppressed only on the surface; to which it is very naturally replied that measures like the Socialist law never can do more than suppress the mere symptoms of discontent, and that eight years of police tyranny will not reach the root of Social-Democracy more than the three already past have done. In the present state of parties, however, the prolongation will certainly be granted, though perhaps not for the whole of the five years asked for. But with the meeting of the Reichstag much has also been heard of the other form of Socialism which has direct practical importance for our time, of that professorial Socialism which has made so much noise in the world in the last few years. Time and again we hear the assertion made that Germany is now tending toward the Socialist ideal, and the Liberal papers are fond of hinting—they do not quite dare to say it outright—that Bismarck himself is the greatest living Socialist. In the debates in the Austrian Parliament last December one of the arguments adduced against the military law then passed was the tendency of the military system to state Socialism, Germany being pointed at as a warning example. Probably the same argument will be used—we may add, used with as little effect as in Austria—in the German Reichstag, if, indeed, arguments directed against the military system in general will not seem altogether irrelevant in the present state of Germany. But it is not uninteresting to take a look at the relations between the political state of Germany and the theories of the school of Katheder-Socialists.

The essence of the doctrines of this school, like that of all

Socialism, lies in the endeavor to raise the social condition of the lower classes, to destroy or mitigate as much as possible such inequalities in wealth as are not due to differences of ability or exertion. The means proposed—and it is, perhaps, not unnecessary to insist that they are only means—are twofold. On the one hand, the state is directly to take charge of and conduct industrial undertakings wherever competition results in combination, in monopoly, and in the growth of huge corporations that form a state within the state; where direct assumption is not advisable for technical reasons, state regulation at least is to set in. The end appears more distinctly in the second class of means—in the use of taxation. Taxes are to be levied, not from the merely financial, but from the social-political point of view. The "unearned increase" is of course to be taxed, the progressive income-tax to be introduced, gains like those from stock-exchange speculation to be specially taxed, and so on. After all, this school, which pretends to represent the latest and most original development of political economy, is only Mill carried to the extreme, or the rabid Socialism of Marx very much softened down. Its importance lies in the fact that it attempts to define the extent to which Socialistic ideas can be carried into practice at the present day, and it is worth while to notice how far it is true that these ideas are being realized in the present condition and policy of Germany.

In regard to the kind of means exemplified by the progressive income-tax, recent legislation has been to a certain extent in a line with the proposals sketched above, but only to a certain extent. The *Klassen-steuer*, on which the representation in the Prussian Landtag is based, is an income-tax increasing from one-half to two and three-quarters per cent. as the incomes rise. Among the taxes proposed for the present session of the Reichstag is one on stock-exchange transactions. Indirect taxes on articles in general use, in the condemnation of which German Socialists and free-traders for once unite, are not so extensive in Prussia as in England, France, or Austria, though in this respect the tariff legislation of last year has deprived Germany of much of her advantage (if such it be) in this respect. We need only instance grain and petroleum. It is noteworthy, too, that the taxation of inheritances and legacies is by no means carried as far in Prussia as in any of the countries named above. In fact, whatever distinct current against the rich can be observed in the policy of Bismarck, is directed against the commercial rich, and proceeds, if we may be allowed the expression, not from Socialistic but from social motives. It has been called the struggle of immovable against movable capital, of land against money. Its character is clearly indicated by the tax on stock-exchange transactions which, as we have just mentioned, will be laid before the Reichstag at the coming session; another proposed tax of the same kind, also to be laid before the Reichstag, is that on all acknowledgments of payments received. The commercial rich, the manufacturers and traders and bankers, are a bugbear to the Conservatives. Apart from social considerations, whose importance in Germany is not to be lightly estimated, the weight of their influence is usually thrown in favor of the Liberals, and Bismarck and the Conservatives are only too glad to have professorial authority on their side in attacking them. The policy of the Government in this case, as in the Jew question (with which, indeed, it is in many cases closely connected), happens to chime in with the Socialist ideas, but only from political and, with many of the Conservatives, from social motives. It much resembles the policy by which the English Tories led by Bolingbroke sought in Anne's reign to maintain the ascendency of the "landed interest" and keep down the rising "moneyed interest." How little their policy is directed by any real regard for the poor man is shown by the detestable law concerning fields and woods recently proposed by the Conservatives in the Landtag and carried with inconsiderable changes. By this law the peasant who gathers wild berries must have a permit from the owner of the land; if he has none, or even fails to carry one with him, he is liable to imprisonment; the proceeding is criminal, not a civil action for trespass, but as a special grace the prosecution is undertaken only at the request of the landowner. The latter may refuse a permit except where the peasant can prove a right by prescription (thirty years' use in Prussian law); and when a peasant dies his prescriptive right shall in future die with him, and not go over to his children.

If we examine the other part of the programme of the Katheder-Socialists, the part which is summed up in the word "Verstaatlichung," the result is still more meagre. The Socialist programme would have the state take charge of all branches of transportation, including post, telegraph, railroads, even horse-cars; of all branches of insurance, life, property, income; the supply of municipal needs like water and gas, warehouses, markets; of banks in their regular routine business. It can hardly be said that this programme is being carried out in Germany to a much greater degree than in other countries. The recent purchase of railroads by Prussia, which will lead in a short time to the system of exclusive state-ownership in Prussia and even in all Germany, has often been pointed out as a movement towards state Socialism. Perhaps it is so, but such a movement is hardly peculiar to Germany. The railroad problem seems not only in Germany, but all over the world, to be veering toward the solution of state interference to a greater or less degree. Considering the bureaucratic tendency of the German mind, the policy of state-ownership seems there almost a matter of course, when in a country as essentially non-bureaucratic as the United States commissions for the supervision (to however limited an extent) of the railroads are organized, as is the case in Massachusetts and probably soon will be the case in New York. It seems a distortion of the facts to ascribe to the recent purchase of the railroads by Prussia any peculiar Socialist bearing; the motives for that purchase, as is well known, were mainly political and, to no small degree, of a military character. Still, it is impossible to deny the existence in professorial and official circles in Germany of a hostility to the results of what is called "Smithianism"—a use of the name of Adam Smith that would cause that worthy to turn in his grave could he hear it. One sign of this hostility is seen in the disfavor to the joint-stock-company principle. Among the many laws and proposals which are talked of for the present session of the Reichstag one of the most important and significant is that for a reform of the laws relating to stock companies. Another sign of this feeling is to be found in the favor to a return to usury laws shown by jurists and economists. In truth the position of Germany in modern industrial development is peculiar. Probably no country has in the last generation made such a comparatively prodigious advance in wealth and industry as Germany. This development occurred in the midst of a population in the main of a decidedly provincial character, accustomed to simple routine lives, not possessed of the independence of judgment, the versatility of resource, the energy tempered with caution, in fact, of the ability to look out for themselves, which are called for in the modern struggle for life. Consequently it is in Germany that the modern system of capitalistic industry has shown its worst side. In the hot-house atmosphere produced by the five milliards the extreme of gambling speculation was seen before, the extreme of relapse and ruin after, the crash of 1873. To these circumstances the more or less complete leaning to Socialist ideas now prevalent, especially in professorial circles, is probably to be in very great degree ascribed.

But not very much of all this is to be distinctly noticed in the policy of Prince Bismarck; for when we speak of the policy of the Prussian or German Government we mean, of course, that of the Chancellor. Prince Bismarck is and has always been an essentially political leader and thinker. He is in a way narrow-minded. He has never shown any great knowledge or comprehension of economic science, nor has his practical activity in economic fields brought him much glory. He probably neither understands nor cares for the logic by which the professorial Socialists try to prove the necessity of extending the sphere of action of the state. His utterances on economic and financial subjects have frequently been marked by ignorance or fallacy—as, for instance, in regard to the method of applying the income-tax to the incomes of state employees. The disorganization of trade and industry caused by

his management of the disbursement of the five milliards will not soon be forgotten in or out of Germany. The introduction of the protective tariff last year was to him far more a political and financial measure than an economic one. Still less can it be said that he has ever given evidence of any humanitarian sentiment for the lower classes, any great insight into the social problem, which is, after all, the great problem of the day. The present law against the Social-Democrats proves this abundantly. In fact, if it were not, on the one hand, for the peculiar internal condition of the German Empire, with the nationality question still far from being a thing of the past; and, on the other hand, for the external relations of Germany and the disturbed and threatening conditions of European politics, Prince Bismarck would probably by this time have outlived his greatness and usefulness. He is still indispensable to maintain the results of his own achievements. That he is so is an ominous sign for Germany and for Europe, for he is and remains the man of "blood and iron."

MASQUERADING IN NEW YORK.

THE annual *Arion* and *Liederkranz* masquerades constitute the chief and most conspicuous tribute paid by the inhabitants of the principal city of the United States to revelry pure and simple. There are numerous other public balls during the winter, but none of them approach in importance the two we have named, and these are now always so successful that each year adds to the means of provision for future entertainments, so that we may probably look forward to a long succession of them, steadily increasing in elaborateness. Of the two the *Liederkranz* has the reputation of being the more "select," and in the sense which that much-abused word has in New York this is probably true. The tickets for the *Liederkranz* cost two or three times as much as tickets for the *Arion*, and in a society in which there is absolutely no test of respectability but wealth, the presumption is that a ball to which it costs ten or fifteen dollars to gain admittance will be more marked by all those desirable qualities of breeding, taste, and manner included in the idea of respectability, than a ball where the paltry sum of five dollars opens the doors. But for those who, like ourselves, enjoy public spectacles for their distinct character, rather than for the opportunity they may afford of meeting persons whom we already meet only too often elsewhere, the *Arion* is the better ball of the two. It comes nearer to having a character of its own than any other entertainment of the kind in the United States. If there is an amusement in the world for which the Anglo-Saxon race has no sort of taste or aptitude it is masquerading; and if there is any branch of that great race which has less taste and aptitude for it than another, it is beyond doubt our own. Hence it is by no means accidental that the pastime in the United States should have fallen wholly into the hands of foreigners. In New Orleans, where the population is half French, they have annual French or Creole masquerading. In New York, where the population is one-third German, the duty falls upon the Germans. At the *Arion* ball you do undoubtedly see out of the twenty thousand persons who go a few hundred English-speaking pleasure-seekers. But they are a drop in the bucket. The ball is a German ball. As a German ball it is a great success. It brings together an enormous and heterogeneous crowd—very much such a crowd as may be seen on the piazzas of the Coney Island hotels on a summer afternoon, excepting the dominoes and costumes. It is, moreover, a thoroughly well-behaved crowd, and it has a curious effect to see during the early part of the evening a large number of children walking about outside the space reserved for the masquerade proper with their contented-looking fathers and mothers—very much as they may be seen at a matinée performance of a pantomime.

There is nothing more German about it than the conscientious thoroughness with which the work of preparation for it is carried out. The great feature of the night is the opening of the ball by a sort of carnival procession (it is not the less a mark of its German origin, by the way, that this New York substitute for a carnival should take place in Lent), made up of a series of *tableaux vivants* illustrating the history of the country, the progress of science and art, or anything else that occurs to the managers. A year or two since there was a praiseworthy attempt by somebody who thought that there was "money in it" to have an open-air carnival procession through the streets of New York, and any one who remembers the result will gain a very good idea of the *Arion* procession round the interior of the Madison Square Garden, bearing in mind the cramped character of the roadway in the Garden, and the fact that the horses, instead of caracoling through the streets, have to be carefully guided over a planked floor. Wherever there are two or three Germans gathered together there is sure to be some humor. No critic, we believe, has ever suspected German humor of being wit, and we must be permitted to say that to attempt to introduce humor into *tableaux vivants* is a risky business. With an ordinary joke the jester has the advantage of surprise; but it cannot be too constantly enforced upon the minds of those who undertake to provide jests for the public that novelty is an essential condition of their success. The managers of the Arion ball seem to labor under the erroneous impression that the true secret of humor is repetition, and that familiarity with even a poor joke will guarantee it against failure. To quarrel with the Germans for holding this view as an abstract proposition would, of course, be absurd; it is only when it is carried into practice that resentment becomes justifiable. It must be observed, however, that as the humor provided at the Arion ball is by Germans, so also it is for Germans, and that to the German appreciation of a German joke a certain continuity and permanence of impression may be necessary. These reflections were suggested to us by the humorous Wine-cooler, with the continuous popping of corks from titanic, unstable champagne bottles, and the street-sweeping machine directed by Captain Williams in the procession. The idea that a new broom sweeps clean expresses a truth which does not admit of dispute, and it is consequently one that hardly requires spectacular proof.

The procession goes twice round the Garden and disappears. It is almost pathetic to think that this laboriously-prepared exhibition, gazed at once a year for twenty minutes by an apathetic crowd, is all that has survived to us sombre and unpleasure-loving denizens of a new continent of the gaiety and revelry and reckless riot that our pagan progenitors once mingled with religion, and part of which, preserved in the festivities of the carnival, have in Europe, even after twenty centuries, remained as a connecting link between the joyous youth and the saddened age of the world. The carnival is said of late years to have fallen in a decadence; but a carnival within the limits of a circus-ring, for which the enterprising management has to "hire a hall," is a sort of social survival or transplantation which has something melancholy about its meagreness. Pleasure is such a neglected branch of human activity in America! This carnival, provided at so much a head by an enterprising foreign society in an old railroad-depot, reminds one so strongly how all the forces of society in the United States seem to contend against gayety or the successful pursuit of enjoyment. Masked balls will, we fancy, always remain an exotic in American life. Pleasure is an art like any other. There is no more reason to expect a people who have been monotonously devoted to money-getting for generations, and who have been strongly impregnated with religious notions which involve the idea that enjoyment cannot be innocent, suddenly to become gifted with the art of amusing themselves, than there is to expect a sudden outbreak of loquacity in a deaf and dumb asylum. Of all the forms of human enjoyment there is probably none that requires more natural gaiety and gives scope for more intellectual expertness than a masked ball. It is a challenge to a delicate encounter of wits, and it is nothing at all unless this challenge is taken up. Successful masquerading is only possible in a highly-cultivated society, in which women are trained to use their wits in conversation, and have a great fund of audacity and intellectual resource. None of these conditions exist in any modern Anglo-Saxon society, least of all in the United States. Conversational wit among English and American people is an extreme rarity—such a rarity that any one who has a trace of talent for it almost always is put down as "very foreign," and the art of talking is, as a branch of education, almost wholly neglected here, as we believe it is more and more getting to be in England. In American homes there is, as a rule, very little general conversation, and hosts of young girls make their début in society without ever having heard anything more like it than remarks about the weather or discussions between their brothers as to the price of stocks. General conversation even at dinners is almost never attempted, and, indeed, the modern custom of making a dinner-party as large as possible renders everything but *tête-à-têtes* out of the question. In fact, all that society generally exacts is a certain amount of commonplace talk, and no one who has been much about in it can fail to have observed that in certain quarters there has been of late years an effort to do away with much of this as a needless formality, interfering, particularly at dinner, with other duties. It is obvious that masquerading is no sort of amusement for such a society as this. The interest of carrying on a conversation with a

person whose face you cannot see consists, in the first place, of a pleasure derived from conversation for its own sake; and if this does not exist there is, of course, far less amusement to be got from talking to a person in a mask than from talking to a person without one.

LESSONS FROM THE PRUSSIAN CIVIL SERVICE.

II.

IF Prussia pays little respect to the uneducated and unsteady will of "the people" in the choice of executive officials, it is almost as free from the caprice of ministerial or royal favor. This is a most important distinction. In the United States the President, or, as in practice it commonly results, a Senator or a Representative, can select some friend of approved party or personal fidelity and make him collector of a great port, with the control of its revenues and thereby a vast influence on its trade and prosperity. But such a discretion would amaze a king of Prussia. The King of Prussia has his favorites and likes to reward them; yet it will be admitted that that is not a very serious partiality which cannot relieve even the president of a province from the obligation of eight years' study at a gymnasium, three or four years at a university, a year or two of unpaid service at the bottom of the official ladder, and a score of years climbing to reach the top.

At this point the objection will perhaps be made—in fact we have heard it from at least one ingenuous critic—that it is impossible in practice to throw the service open to a whole people. What is to prevent overcrowding? they will enquire. To all such objectors one may reply that they probably have in view the two thousand applications lately filed at Washington for the single, or eventually the first, vacant consulate, or the general system of office-seeking in the United States; but failed to extend the comparison to the qualifications for office respectively exacted in the two countries. How many of those two thousand applicants could satisfy the conditions required for the German consular service? If the appointee to a vacant consulate were required to show a diploma from Harvard or Yale, to know something of law in a technical sense, to pass a year or more as an attaché learning his duties but drawing no pay, and then to climb the intermediate steps of consular clerk, vice-consul, etc., would there not be a dearth rather than a glut in the market? Would not the Department of State have to invite reluctant candidates, instead of rejecting a mass of superfluous applications? It seems to us that this is perfectly clear. But one may reply that the last extreme is worse than the first; that from an abundance of material the Government can select what it needs, while an insufficient supply may gravely impair the interests of the state. This is no less clear, and in fact the Prussian conditions are only intended to secure quality and capacity. The just balance between demand and supply is obtained in the long run with great accuracy by means of a scale of compensation which takes account of all the conditions of the labor market, and thus equalizes the pecuniary and personal attractions of the civil service to those of the learned and other professions. No one will deny, however, that there are not many states in which this system could be successfully applied. It is possible only in a country where fluctuations of the labor market are slight and rare; where the facilities of higher education are abundant and the influence of the cultivated classes is very great; and where the traditions of the service are little disturbed by the vicissitudes of public opinion and political parties.

This reflection does not, however, lessen the importance of the chief point on which we wish to insist, namely: the democratic character of the Prussian system. For to show that a foreign institution, whether recommended for adoption or only for study, is not a vile instrument of kings and aristocrats but is highly popular and democratic, cuts the ground from under the clamorous demagogue who will have no reform at any cost, and reassures the honest but timid citizen who fears lest reform be at the cost of the people. Against both classes it is useful to insist that civil-service reform aims not at taking the offices away from the people, but the contrary. It takes from the few, but only that it may render to the many; from Mr. Butler and Mr. Blaine and Mr. John Kelly, in order to restore to the people of Essex, of Maine, of New York Any one who honestly studies and fairly masters it will see that the Prussian system is the really democratic, and that our own is by comparison aristocratic or oligarchic. In Prussia, Schmidt, who aspires to a career in the Government service, makes his studies according to a general law, and then has a right to adoption into the judiciary, diplomacy, or other department, as the case may be. In this country Smith must first acquire the favor of Jones, and Jones must have influence with Brown and White, and these with still higher dignitaries, till the appointing power is reached. But it is evident that under this system the number of citizens who have any chance of obtaining office, even as a privilege, is exceedingly small, while not one can claim office as a right. What constitutes the right to office? One of two things: either hereditary authority, which Mr. Conkling would indignantly reject; or character and capacity, which are rejected in practice. For although the appointing power always affects, and sometimes sincerely means, to make the best selections, it must fail in a great number of cases. Human nature is weak, and human judgment is fallible; and it is to support the feeble faculties of the individual that Prussia adopts the system of preliminary education, and England that of competitive examinations, for the civil service. In the vast majority of cases these systems procure the best men.

It is true there is a school of American critics, of a sincerity not to be questioned, who will say that this reasoning mistakes the object of the reform desired in our administration. A civil service organized and conducted like an army would be impossible with us, they say; and would not be advisable even if possible. We should not improve the service by keeping politics out of it, but we should improve our politics by keeping officials out of the conventions. This is the logic of the President's famous order. It seems to us to revolve in a vicious circle, as we shall undertake to show.

In Prussia, happily, the caucus and convention are unknown, and in the election of deputies some degree of spontaneity is still left to the popular choice. No occasion exists, therefore, for an order like that of the President. But even if the occasion were present no order would be necessary, and for two reasons: First, in a positive sense, the officials would be repelled from rather than drawn to such gatherings by their tastes, their feelings, and the spirit of the class to which they belong. In a negative sense, they would have no special interest above their private fellow-citizens in the candidates themselves. Beyond these we know of no prescription, much less a positive rule, which interdicts their participation like other men in political movements. The laws and the constitution rather encourage such participation. Almost any official may be elected to the Diet or to local office; and in any elective capacity which they may owe to their fellow-citizens we have not heard much complaint of their want of independence. Now, it must be clear that the contemptuous neglect of the low intrigues of politics which they practise on the one hand, and the intellectual freedom which they bring to higher political work on the other, are possible only to officials whose tenure is independent of partisan favor, and in a great measure of executive preference. Any other explanation would make human nature in Prussia different from what it is elsewhere. But if, on the contrary, the "collector" of Berlin were appointed on the recommendation, say, of Herr Lasker, and were likely to be dismissed as soon as his patron ceased to have a vote in the Diet, he would exhibit the liveliest interest in the regular re-election of that deputy. He would be a busy worker at ward meetings. He would faithfully attend the sessions of the "Vertrauens-Männer" of Herr Lasker's party in his district: and he would know how to secure the right degree of loyalty in the persons of the other members.

This result would not only be natural, it would be inevitable. No executive prohibition would affect it. How much more unreasonable it was, then, to expect any good result from the President's method, in a country where respect for the central authority, or for any authority, is so very slight; where the Congressional patron is likely to survive the remote President; and where, above all, the Senate divides the power, as it ought to divide the responsibility, of the executive? Mr. Conkling is a concrete person and a very permanent Senator. His friendship is a calculable quantity, like his support; but what assurance can be given that if an official forfeits that support in pursuance of the policy of to-day, the President of to-morrow may not reverse that policy, and dismiss its innocent supporters? All the measures taken, as yet, by the Administration fall far short of solving this problem. They begin the reform where it ought to end; or rather they propose as the leading object what ought to be only an incidental, however desirable, result.

The example of Prussia brings reformers back into the region of the practical—examination, competitive or not, but in either case by impartial, non-partisan boards, who are forbidden to apply other tests than those of character and capacity. This relieves both the appointing power and the candidates from serious temptations. Security of tenure, without the possibility of removal, except for cause, will make the service stable, and its members independent of improper influence from without or above. Promotion in the order of merit or of seniority, which, in nine

cases out of ten, will be the same thing, and retirement at the proper age with a fair pension, are the two remaining features of such a civil service as we have in view. If now any one supposes that men whose official position is guaranteed by such safeguards would be enthusiastic at primaries, or would be running off to "work" for this man or that, he has an extremely low opinion of human nature. Everybody knows that the party zeal of office-holders is largely factitious. They are active in the cause because that sort of activity got them their offices, and because at present it is the best way to keep them. Put their official tenure on a different basis, and they will need no executive order to keep them at home and at their legitimate duties.

This is, at least, the lesson from Prussia's experience, and we trust it will not be considered romantic or extravagant. If the President had succeeded in his way he would have deserved the thanks of every good citizen. His intentions were doubtless above reproach. But neither he nor any other man can succeed in what we call civil-service reform so long as appointments are made directly to the very highest offices; so long as the service does not offer young men a career, like the army or the navy or the learned professions; so long, in short, as human nature remains as it is, and good men even in the White House can be tempted by Satan. The efforts of true reformers ought not to rest on the good intentions of any man. Not the ability to resist temptation, which one President may have and another not, will save us, but freedom from exposure to temptation; and this can be secured only by reducing to a minimum the possibility of caprice and favoritism in appointments.

A FRENCH VIEW OF METTERNICH.—I.

PARIS, Feb. 5, 1880.

THE 'Memoirs of Prince Metternich' are almost an event. We find in them the shadow not of coming events, but of past events; and the world which reads with a feverish interest the 'Memoirs of Madame de Rémusat' cannot be insensible to these 'Memoirs,' which show us the great Cæsar of our age in contact not with an amiable and frivolous lady-in-waiting, but with a real statesman.

Our time had almost forgotten Metternich; he was not much more than a name for the new generation. His system had fallen with him in 1848, and we have little indulgence for the past, even when it has not been a failure. I have heard it said that M. Guizot met Metternich in London after 1848; they were both fleeing before the Revolution. Metternich had been anything but amiable to the Government of July and to M. Guizot while the latter was in power; he had always looked upon the Government of 1830 with distrust and fear. However, now they were both in exile. Metternich said proudly to Guizot during a conversation on the recent events: "I have no regrets; error never approached me." "I am happier than you," answered Guizot; "I have made some errors in my life, and I was always so fortunate as to perceive it." In the same conversation Metternich uttered a word worth remembering. Guizot said to him: "You, who have governed Austria so long—." Metternich interrupted him: "I beg your pardon, I have sometimes governed Europe; I have never governed Austria."

The Metternich of 1848 is the only Metternich who has left an impression on our time; but the true Metternich must be found in the 'Memoirs' now published by his son, Prince Richard Metternich. He was a type. He had a clearness of view and a strength of character which gave him the means of resisting, and of resisting successfully, the greatest military and political genius of our age—I mean Napoleon I. Metternich was born in Coblentz in 1773; he was sent in 1788 to Strasbourg, where he finished his studies in the French University, which had preserved a semi-German character and always received many German students. A year afterwards the French Revolution broke out. Young Metternich did not drink of its cup; he was not inebriated by the famous "principles." His father was ambassador of Austria to the Bund; he was born a conservative. He left Strasbourg for Mayence, where he studied law, but his studies were interrupted by the war. It is the opinion of Metternich that if the Duke of Brunswick had marched boldly on Paris after his first successes in Champagne he would have entered the French capital almost without meeting with any resistance. The time had not come; "the evil," says he, "had made too much progress to be stopped by mere military operations, and Europe nursed too many illusions about the Revolution to make it possible to use at the same time moral remedies and the force of arms." Metternich joined his father in Brussels, and spent the winter of 1793 in the Low Countries. His father represented the Austrian Government at that court, and he himself watched the military operations with the keenest interest. He accompanied to London the treasurer of the Low Countries, and made the acquaintance of William Pitt, of Fox, of Burke, of Sheridan. In his fervor against the crimes of the Revolution he composed a "project of an appeal to the imperial and royal army, written in the ardor of my youth in 1793." This manuscript is now published for the first time; it is pompous and sentimental, but it shows that Metternich was always the same man, and he could write in his 'Memoirs'—"From my earliest youth to the thirty-sixth year of a laborious ministry I have never lived an hour for myself."

On his return to Vienna he married, the 27th of September, 1795, at Austerlitz, the granddaughter of the famous Chancellor Kaunitz, and in 1801 he was named Minister to Dresden. In 1803 he was sent to Berlin; and the Courts of Vienna and St. Petersburg having entered, in the month of November, 1804, into an offensive and defensive alliance, it became the duty of Metternich to try to persuade Prussia to enter it also. The difficulties were great, the King was weak, Hardenberg was afraid and undecided. The Czar was very angry with Frederic William III., and warned him, through Prince Dolgoruki, that if he was not an ally, he would be treated as an enemy. Still, Metternich could obtain nothing, and the King of Prussia had just dismissed Dolgoruki when he heard that Napoleon, in order to turn the Austrian army at Ulm, had violated the Prussian territory near Anspach. The King of Prussia now became very angry with Napoleon, and on the 3d of November entered into the treaty of alliance. It was too late; the Prussian army was not ready; the battle of Austerlitz was fought, and Berlin was obliged to become very humble towards Napoleon. Metternich says in his memoirs that the treaty of November was communicated at once to France; and by whom? By the Prussian Minister Haugwitz. "Political crimes," he observes, "are like all crimes; time, which tears away every veil, discovers them sooner or later, and they never remain unpunished." . . . The French Minister in Vienna was M. de Laforest; as soon as Haugwitz had made his treaty with Austria and Russia, he went to Laforest and read it to him. Laforest reproached him, and Haugwitz told him, "We could not do otherwise, and you see that I have stipulated everything so vaguely, and kept so much latitude, that we are bound to nothing. You may assure the Emperor that it is all 'un jeu,' and that we are and will remain the best friends." The end of this "jeu" was Jena.

After the disastrous treaty of Presburg, which tore from Austria the fifth part of her possessions—Venice, Istria, Friuli, Dalmatia, Tyrol, the Vorarlberg, the Breisgau, the city of Constance—Metternich was sent as ambassador to Paris. He arrived there the 4th of August, 1806, and from that day began, it may be said, his great and long duel with Napoleon. The peace in reality could be only a truce; and it became the duty of Metternich to watch every movement of his enemy, and to take advantage of all his mistakes. He began to study him as a moralist, knowing well that man has no worse enemy than his own passions, especially when he is armed with supreme power. This was the state of Paris when Metternich arrived at the French capital:

"Paris was in a state of torpor, which resulted from the sense of oppression felt by every class of society. With the exception of the *agents provocateurs* [the police agents of the secret service] not a person would have dared openly to express an opinion unfavorable to the Government. . . . The impression which the news of a victory by Napoleon produced on the Parisian public was not so much joy as the satisfaction of having escaped the consequences of a defeat, and of seeing that the internal peace was not in danger of being altered by the consequences of such a defeat. The Emperor could well say then: 'La France c'est moi.' The revolutionary elements were only sleeping. In Europe France had not a single friend; there was always a feeling of inquietude mixed with the pleasure caused by a victory of the French army; for everybody knew that these victories made new victories necessary. . . . With very few exceptions the French nation would have willingly exchanged glory for security. Under the Restoration the appeal to glory became the arm of the Bonapartist and Revolutionary Opposition."

Metternich was well placed in order to see that all the plans which Napoleon made for Germany were purely selfish plans; the latter once told him: "All I want of the Bund is men and money." Napoleon's cynicism was such that a man of heart and of honor could not long tolerate him. Metternich always considered a new war with Napoleon as an absolute necessity; the 15th of April, 1809, he received his passports; in his opinion, Austria had not waited long enough and Germany was not quite ready. He was right; the campaign of 1809 ended disastrously for Austria, even more disastrously than the campaign of 1805. Metternich was named in July minister of foreign affairs; he became the executor of the ignominious peace of Vienna. The task was a painful one; he made this programme for himself:

"I gave the first place to the preservation of the nucleus which, after our unhappy campaign, still formed the Empire of Austria. Led away by the desire to assure to himself the definitive domination of the European continent, Napoleon had passed the limit of the *possible;* this was not doubtful to me. I foresaw that he and his enterprises could not escape a sudden ruin. The *how* and the *when* were enigmas for me. So my conscience traced for me the way; I had not to stop the natural march of events, and I was to preserve for Austria the chances of rising which the first of all forces, the force of things, kept in reserve sooner or later for her heroic sovereign."

To tie the remaining provinces of Austria round the dynasty; to save them from invasion and preserve them neutral during the commotions of the nation, and to be ready to enter a European coalition as soon as this coalition should be strong enough—such was the Metternichian policy. It explains at the same time his apparent complacence for a while, the facilities even which he gave at times to Napoleon, and the relentless ardor and obstinacy of the later days, when he was able to bring his arch-enemy to bay. An archduchess was the first sacrifice made to Napoleon by Austria, and the dynastic preoccupations of the French Emperor became a powerful weapon in the hands of Metternich. He bound Napoleon to Austria by means of the archduchess, but he did not feel bound himself, nor was the Emperor of Austria tied in any way. Human sacrifices are not abolished in politics; poor Maria-Louisa herself knew that she was sent to the Minotaur as a victim; she perfectly understood her part; she knew that her sacrifice would give a little breathing-space. When Metternich received the first overtures of Napoleon about the marriage with an archduchess he called on the Emperor and said to him: "Your majesty is a sovereign and a father; it behoves your majesty only to consult the duties of a father and of an emperor." The princess, when she was consulted, said: "I only wish what my duty commands me to wish; when the interests of the Empire are at stake, you must consult them and not me. Tell my father to obey only his duties as a sovereign, and not to subordinate these duties to my personal interests." When Metternich transmitted these words to the Emperor, "What you say," he rejoined, "does not surprise me; I know my daughter too well not to have expected such an answer. . . . My consent to this marriage will assure the monarchy a few years of peace, during which I will try to heal its wounds. I owe myself to my peoples. I cannot hesitate. Send a courier to Paris and say that I will accede to the demands of the Emperor of the French." And thus the young archduchess was sent to France. I have a small portrait of her at that period. She wears a white muslin gown; her head and dress are adorned with roses. She has a good, quiet German face, without any beauty, but with much simplicity—blue eyes, as blue as a forget-me-not; her blonde hair was put up in curls on the top of her head, after the fashion of the time. This blonde-and-white little princess was sent as a peace-offering to the dark, bilious, and restless Corsican. But she only postponed for a short time the inevitable struggle, which we have next to recall.

Correspondence.

MORE (AND FINAL) STATISTICS OF THE HARVARD DIVINITY SCHOOL.

To the Editor of The Nation:

Sir: In the issue of the *Nation* for February 26 your correspondent 'H.' points out the rapid decline in the proportion of college-educated men attending the Harvard Divinity School since 1845. By his showing the proportion has decreased from 8 out of every 10 holding a college degree to 3½ out of every 10, averaging periods of five years.

I presume his figures are correct, but they are limited by the source of his information, viz., the triennial catalogue, which reaches only down to the year 1874. By consulting the *annual* catalogues since that date I have discovered the following facts, which ought to be subjoined to his statements if the whole truth on this subject *down to the present moment* is to be given. I find in the

Year.	Students.	College Degree.	Out of Ten.
1875-6	12	8	6 and 2-3
1876-7	17	10	5 and 4-5
1877-8	17	11	6 and 2-5
1878-9	22	18	8 and 1-5
1879-80	19	14	7 and 2-5
	87	61	7

Seven college graduates in every 10 students; certainly an astonishing jump from the 3½ of the preceding semi-decade! What is the explanation?

I have given the figures in detail that you might see that the change is due to no accidental influx of college men for a year or two, but that it indicates a steady and persistent movement which, if I am not mistaken, will be continued in the future. Any one acquainted with the history of the Divinity School knows that for several years back, submitting to popular pressure, it has admitted and sheltered a grade of students not inferior, indeed, to those present in its sister schools—the Episcopal at Cambridge, for instance—but yet inferior in training and ability to what the community has a right to demand of its future religious instructors. Hereafter the school proposes to offer every inducement to those who wish to study theology in a free and catholic spirit, provided they come properly equipped for that task, but *not* otherwise. In short, the standard is being raised in this department of the University, as it has already been raised in the Medical and Law Schools; let us hope with the like happy result. S.

Newburyport, March 1.

CONCERNING A CHARGE OF PLAGIARISM.

To the Editor of The Nation:

Sir: In the *Nation* of February 12 a paragraph appeared charging the writer of an article in the *International Review* for February entitled "Universal Suffrage in New York" with stealing his article from the Report of the New York Municipal Commission of 1877. As we were warned in the paragraph against Mr. Mills, the writer of the article in question, we wish to say that we have compared the article and the Report with the greatest care, and can find no justification whatever for the charge made by the *Nation*.

We may add also that when Mr. Mills forwarded to us the Report for comparison with his article, he stated that, although, like everybody else who took any interest in such subjects, he was familiar with the scheme proposed by the Report, he had never read the Report itself. In this connection we should like to call your attention to the fact that the note to the article which drew out the attack of the *Nation* and which criticised the work of the Commission, referred only to the scheme proposed and said nothing of the Report.

Very truly yours,

John T. Morse, Jr.,
H. C. Lodge,
Editors International Review.

February 28, 1880.

[We did not accuse Mr. Mills of "stealing his article from the Report of the Municipal Commission." This conveys the idea of textual copying. What we said was that he "reproduced the description [too strong an expression, we admit] of a distinction and the reasons of it" contained in the Report, and that, "having adopted the arguments of the Commission, he adopted their plan," but added that this "convicted him of nothing disreputable"; that what made it disreputable in our eyes was a foot-note in which he treated the plan of the Commission with great contempt, as if he had examined the Report and found nothing in it. As it now appears that he had actually not read the Report when he wrote his article, of course we did him gross injustice, because a man cannot steal what he never saw, and we are thus saved the trouble of contending with his editors. But the inconveniences and dangers of writing an article for a Review without looking at the more conspicuous and recent contributions to the literature of the subject are very obvious. Not the least of them is the risk the writer runs of being suspected of borrowing what he has really himself laboriously conceived. The criticism in the note which the editors of the *International* recall did *not* "refer only to the scheme proposed and say nothing of the Report." The editors have overlooked the passage in which the omniscient author says: "The gentlemen who framed the scheme thought they had guarded against such a capture [that of the machinery by politicians] by restricting the constituency to tax and rent-payers; but any practical politician could have told them," etc. What "the gentlemen thought" about their scheme could only be found in the Report; and the gentleman who wrote this note without reading the Report we must still continue, therefore, to consider a writer against whom editors of Reviews may not improperly be warned.—Ed. Nation.]

Notes.

BY a new fac-simile process "which dispenses entirely with retouching," the 356 plates constituting the complete works of Rembrandt have been reproduced "in absolute perfection," according to M. Charles Blanc, who describes, annotates, and chronologically catalogues them in a work of which Mr. J. W. Bouton is the American agent. It will form 3 vols. royal folio, besides a portfolio for the larger pieces, and the minimum price will be $150.——D. Lothrop & Co., Boston, announce for early publication an illustrated 'Concord Guide-Book.' They have ready a 'Fireside Library' of 100 "carefully selected volumes in uniform bindings," intended for the use of parents in the training of their children. ——Dodd, Mead & Co. will shortly publish 'Adventures in Patagonia: a Missionary's Tour of Exploration [in 1833],' by the Rev. Titus Coan; a work on Alaska, by the Rev. Sheldon Jackson; and 'Success with Small Fruits,' from *Scribner's Monthly*, by the Rev. E. P. Roe.—— The current issue of the *Magazine of American History* (for February) is again a "Washington number." It is embellished with engravings on one sheet of the Peale (1772), Houdon (1785), Trumbull (1792), and Stuart (1796) portraits on canvass or in marble; a larger engraving from the authentic St.-Mémin crayon in profile (about 1798); and woodcuts and fac-similes. Some interesting particulars about Houdon's plaster cast and statue are given in an article on the "National Standard for a Likeness of Washington," by Mr. William F. Hubbard.——In December last began the publication of monthly Johns Hopkins University Circulars (4to, pp. 8, 12, 16), containing the calendar and other information necessary for students, but also recording briefly the doings of the several societies of which a list is given on p. 13. They are: the Scientific Association, of which Prof. Sylvester is President; the Philological, Prof. Gildersleeve, President; the History and Political Science Association, President Gilman; the Metaphysical Club, Mr. C. S. Peirce, President; and the Biological Association, which meets in the Laboratory. We do not know what other university or college can show similar and so useful organizations.——The original work done in the Physiological Laboratory of the Harvard Medical School during the past seven years is fairly represented in the volume of collected papers just made up for private circulation. Two of the eleven papers relate to the digestive process, two to the respirative, and the rest to the action of the heart, the function of the epiglottis, the physiology of the cortex cerebri, a new form of inductive apparatus, etc. These papers were originally printed in divers periodicals.——We have received Part I. of a Catalogue of the Library of the U. S. Naval Observatory, 'Astronomical Bibliography,' by Prof. E. S. Holden. It contains a list not to be found elsewhere "of all the indexes to scientific periodicals relating to Astronomy, Geodesy, Optics, and Mathematics" which are in the library just mentioned, "together with a list of such works on scientific bibliography as are of constant use in the conduct of researches in these subjects." As this is a preliminary list, merely, we may remark some typographical lapses in the printing of foreign titles, both as regards the use of capitals and correctness of spelling and accent.——Recent English announcements include 'Ilios; the City and Country of the Trojans,' by Dr. Schliemann; 'A Short History of India,' by J. Talboys Wheeler; 'Japan: its History, Traditions, and Religions,' by E. J. Reed, M.P.; 'Unbeaten Tracks in Japan,' by Isabella Bird (of which G. P. Putnam's Sons will be the American publishers); 'The Great Desert of the Sahara,' by Donald Mackenzie; 'Matabele Land and the Victoria Falls,' from the Journal of the late Frank Oates; 'Portugal, Old and New,' by Oswald Crawfurd; 'Bulgaria and the Bulgarians,' by the Marquis of Bath; 'Historical Geography of Europe,' by Edward A. Freeman; 'A Cavalier's Note-Book—William Blundell, of Crosby, Lancashire'; 'Introduction to English History,' by S. R. Gardiner and J. B. Mullinger; 'Life of Lord Beaconsfield,' by Georg Brandes; 'Life and Correspondence of Richard Cobden,' by John Morley; 'John Keats,' a study, by F. M. Owen; 'Victorian Generals,' by C. R. Low; 'Life of Lt. Gen. Sir James Outram,' by Maj. Gen. Goldsmid; 'Origin of the Zulu War,' by Miss Colenso and Lt. Col. Durnford; 'Our Future Highway,' by Commander Cameron; 'Life and Philosophy of Spinoza,' by Frederick Pollock; 'Six Lectures on the History and Prominent Features of German Thought from 1750 to 1850,' by Karl Hillebrand; 'Memoir of Francis Deák'; 'Memoirs of the Duke of Saldanha'; Locke's 'Thoughts on Education,' with introduction and notes by the Rev. R. H. Quick; 'Thalassius,' and other poems, by A. C. Swinburne; 'A Selection of English Poetry,' in four volumes, by T. H. Ward; 'Hodge and his Master,' by Richard Jefferies, author of 'The Gamekeeper at Home,' etc. ——To those who like to read about the inner life of the stage and its people no more entertaining book can be recommended than the 'Scènes de la vie de théâtre' of M. Abraham Dreyfus. The author is one of the most promising of the younger French dramatists, and this book is as bright and as clever as the best of French work. It gives at once a more amusing and a far juster view of the subject than M. Zola's 'Nana.'——A new monthly periodical, *L'Ordre Social*, comes to us from Zürich (Paris: Auguste Ghio). Its scope does not exclude the natural sciences, philosophy, statistics, criticism, or literature. Its aim is distinctly Socialistic. ——Dietrich Reimer, Berlin, has published, as vol. iii. of 'Contributions to the History of African Exploration,' the diary of Dr. Paul Pogge, who, in the service of the German Society for the Exploration of Equatorial Africa, survived the ill-starred expedition of 1874–75, and here reports his experiences, more especially from the easternmost Portuguese station, Kimbundo, to the domain of Muata Jamwo. His route lay somewhat north of Cameron's last journeys. Interesting lithographs and woodcuts, and a comparative map of travel in the southern part of the Congo valley, add to the value of this unpretentious volume.

—The Trustees of the Metropolitan Museum make the welcome announcement that they will open the new building in Central Park on Tuesday, March 30. One of the four picture-galleries will be filled with paintings already owned by the Museum; in the other three it is desired "to bring together not only choice specimens of foreign art, but a representative collection of the works of American artists." A loan collection of art objects, for which suitable cases have been provided, is also contemplated. Persons willing to loan either paintings or art objects are requested to communicate at once with the Secretary of the Special Committee on Loans, Mr. S. P. Avery, 86 Fifth Avenue, as delivery must take place not later than March 20.

—Congress is being showered with petitions to reduce the duties on printing-paper and types, and the newspapers of the West especially are joining in the cry with all the fervor of self-interest. We have no disposition to oppose the movement, but we should be glad to observe a unanimity among editors as to the necessity of a scientific revision of the tariff. It may be all very well to put quinine on the free-list one day, and types and paper six months later, and so on; but if these changes would have no serious effect upon the revenue, so would not a vast number of others, and there is no reason for a hand-to-mouth procedure when a methodical and rational enquiry is possible touching the whole round of absurdities and inconsistencies. But the duties on paper and type are a tax on intelligence. So is the duty on books, with its twenty-year limit, and the law is so obscure that no one can tell exactly what is meant by this limit. One of the best-known and most highly-respected of London dealers is at this moment a defendant in our courts on a charge of smuggling, the ground being that he put a new title-page as publisher to books published beyond the limit—"remainder" editions as they are known to the trade—without altering the original date. It remains to be seen whether this comes under the exemption allowed by the Secretary of the Treasury, March 5, 1872, for old books rebound and repaired. If it does not we shall expect our esteemed contemporaries to make their voices heard in favor of clarifying and civilizing the statute.

—Brazil has met with great difficulty in procuring European labor for its agriculture, which is its only industry. Besides other causes, the institution of slavery has driven away white laborers, so that the Government has been compelled to look elsewhere with a view to supplying the coffee and sugar-cane planters with hands. The present Premier, Sr. Sinimbú, who is himself a large planter, favors the importation of Chinese, and, in order to spread detailed information in regard to this people, commissioned the Brazilian Consul-General in this city, Sr. Salvador de Mendonça, to write a book on Chinese immigration to the United States. The report of Sr. Mendonça is now printed, under the title 'Trabalhadores Asiaticos,' in a 12mo of 280 pages (New York, 1879). After giving a well-compiled review of the history, geography, customs, government, etc., of China, the consul shows the past and present condition of the foreign relations of that country, principally with the United States, and then dwells on the experiment of Chinese labor in the Indian Archipelago, British Guiana, and California, and reaches the conclusion that, considering the actual needs of Brazil, the employment of Chinese in the Empire is essential as a stepping-stone between the present and undesirable African and the European labor. A current of Chinese immigration once directed to Brazil, he thinks, would have the immediate effect of lowering the price of the slaves, and would thus hasten complete emancipation. That it may have this effect we are willing to admit. The dan-

ger of such immigration is, however, in the virtual enslaving of the Chinese themselves, and it is doubtful whether public opinion in Brazil is enlightened enough to discourage any such attempts. At any rate, the elaborate report of Sr. Mendonça will no doubt prove a valuable contribution to the discussion of the question in Brazil.

—Byron's "Chawles, or A Fool and his Money," now having what promises to be a successful run at the Park Theatre, is neither a very good nor a very bad play, but it is decidedly entertaining throughout. The idea of a servant suddenly made a wealthy man is a legitimate comic subject, and if Mr. Byron does not make much of it, it is because contrast of character, and indeed character itself, are by no means his *forte*. He has a tolerable idea of dramatic construction and is very good at dialogue —though his fondness for plays upon words at times degenerates into a vice—but he labors under the defect of a fundamental inability to conceive a dramatic character. *Charles Liquorpound* is by far the nearest approach to it that he has made; a thoroughly good comic actor could easily create a character out of the part. Mr. Lewis, however, is not a comedian in the true sense of the word. He never will put into a part anything more than the author provided for it. His strength lies in a farcical appearance and manner. His deficiency of dramatic power is shown in a thousand little things, not much in themselves but quite sufficient to prove this. For instance, in the first act, in order to impress upon the audience his position in the *Ransome* household, he repeatedly touches an imaginary hat, a gesture of course impossible and absurd in a confidential valet. In the second and third acts, too, after he has come into the property, he is simply a vulgar *nouveau riche*, but there is none of that conflict of characters between the valet and the landed proprietor which Byron no doubt had in view, and which it is essential to bring out in order to make the part lifelike. *Mary Draper* (very well played by Miss Ada Gilman) is a conventional dramatic type, as are also *Percival Ransome* and *Mr. Pentland*. *Brabazon Vandaleur* is a peculiar creation of Mr. Byron's, which we can imagine made very entertaining by competent acting. Mr. W. J. Ferguson does it as well as he knows how, but, though he makes it absurd, does not make it real. It is almost a farce character as it is, so that it is hardly necessary to burlesque it. In addition to the puns which are scattered through the play, "Chawles," in virtue of his position, is gifted with a wonderful facility of confounding like-sounding but unfamiliar words with one another. His pathetic description of his feelings with regard to a "momentum" in the first act, and his joy over the "momentum" when it is at last discovered, are very amusing. His linguistic confusion, too, is not accidental. It is of just the kind to be expected from a person in his position. In other words, it is what a good deal of the play is not—in character.

—The month of March promises to be of unusual interest in musical matters. Besides the regular concerts of the season given by the Philharmonic, Oratorio, and Symphony Societies, we have a spring season of Italian opera, and Mr. Joseffy is advertised to play in seven orchestral and four chamber-music concerts. The first of these orchestral concerts took place on Monday night and was entirely devoted to Chopin. Chickering Hall was crowded, and the artist rendered the three numbers of his programme, the two Pianoforte Concertos in E minor and F minor and the Andante Spianato and Polonaise, with his usual mastery. Mr. Mapleson opened his short spring season of Italian Opera on Monday evening with every mark of public favor. "Lucia" was the opera selected for the opening night, and introduced Mlle. Marimon for the first time in the leading part. She failed, however, to make a strong impersonation. Her acting in the highly dramatic scenes of the first and second acts was lacking in warmth and spirit. She showed to greatest advantage in the third act, where her superb school and her beautiful voice came out with wonderful brilliancy. The remaining principal parts were in the hands of old favorites, Signori Campanini and Galassi, whose excellent acting and singing again excited general and hearty admiration.

—Mr. Carlberg's long-advertised symphony concert on Saturday evening was not a success. The performance itself was good enough, as it could hardly fail to be, for Mr. Carlberg, who is an experienced conductor, had selected his forces from among the best artists of the Philharmonic and Symphony Societies. But the programme was singularly devoid of interest, and had nothing to recommend it but the doubtful merit of novelty. Ulrich's "Symphonie Triomphale" is a shallow, uninteresting composition of commonplace themes, which lack even the merit of being cleverly put together. The instrumentation is at times brilliant and effective, but that is all. There is hardly an original idea in any of the four movements, and what the composer has not borrowed from Schubert, Schumann, and Mendelssohn is hardly worth listening to. Meyerbeer's music to "Struensee" is characteristic of the clever, experienced musician who wrote it. It is full of instrumental and sensational effects that strike the common ear, but make no impression on a cultivated mind. The twelve long numbers are particularly devoid of ideas, and, with their endless repetitions, wearisome in the extreme. The lady who played Mozart's Concerto in D is said to be an amateur; her performance gave abundant proof of this.

—The following criticisms, made by an aboriginal Hawaiian, of a recent article in the *Nation* ("The Decay of the Polynesian," in No. 734), are extracted from the private letter which contains them by permission of its recipient, a resident of this city. Their interest will not be lessened by the circumstance that their writer is the present King of the Hawaiian Islands, whose visit to the United States in 1875 will be freshly remembered. Kalakaua was born (Nov. 16, 1836) of pure Polynesian parents, and represents an older line of chiefs than the Kamehamehas, his predecessors. He was educated in Honolulu; in February, 1874, he was elected the sovereign of Hawaii—not the least interesting, though perhaps the smallest, of the many kingdoms enumerated in the *Almanach de Gotha*. His amiable personal qualities have made Kalakaua a very popular king. Of the quality of his thought the reader will judge by the following extracts; while they will appeal to his intellectual curiosity by affording the rare opportunity of a clear glimpse into a foreign and completely non-Aryan mind—rare, whether by reason of an insufficient knowledge, on either part, of the alien language, or, when that barrier does not exist, as in the case of some highly cultivated Chinaman or Hindoo, then by reason of a politic reserve in the comparison of opinions. We should say that in transcribing this interesting letter we have made but the slightest verbal changes, the Hawaiian "king's English" being, except for the few *nuances* of expression which the reader will notice, nearly the same as our own:

"Honolulu, November 17, 1879.

"The only comment I have to make upon the article in the *Nation*, which the writer was kind enough to send me, regarding the decrease of the Hawaiian race, is the continual flinging of writers at the oppression of the chiefs upon the people as being one of the chief causes of the depopulation. I allude to Dibble, Ellis, Bingham; and it has been taken up by the *Nation*. The writer is silent as to how the oppression was done. Our people were more healthy and prolific under their chiefs than under the present condition of things. If you examine into the system of labor that the people had to undergo under their chiefs you will find that their labor was comparatively light. Four days in the month at the change of every moon is only what the chief was entitled to impose upon the people, leaving twenty-six out of thirty days in each month. That was again divided—twelve days for the people and fourteen days for the gods, or prayer-days. The oppression of the people, then, really came from the side of religion. It was out of these fourteen days of work at day and prayer at night that the priests succeeded to build their *heiaus* and temples. In every land and clime where religion has a deep hold on the masses you will find the preponderance of oppression has come from the side of priestcraft. All our human sacrifices and taboos and oppressions can be traced to no other source. The chiefs were kind to the people; they instituted a *puuhonua*, or place of refuge, where victims fleeing from the wrath of the priest could find an asylum, a haven of life. If one chief had a cause of complaint against a man he would fly to another chief's house for safety, but not to the priest's; there would be instant death.

"With all due charity and acknowledgment of the missionaries' great work, I must lay a charge against them. They taught their pupils from English books translated into the vernacular, and among the most important of the studies was anatomy. But chemistry and medicine, none. Why were these studies omitted? The Seminary turned out physicians for the soul, but, alas! none for the body. With every missionary church there ought to have been connected, besides the dispensaries at their disposal, a small convenient hospital or nursery. But none! The one great object of the work of the instructors of our pupils was to save their souls from perdition; they left the human clay to rot. The error, if you may call it so, seems to put a blot upon the whole good that has been done by the missionaries. They have done good in certain things, no one can deny, but 'they have left undone those things which they ought to have done.' The real cause of the decrease of our race, when coming in contact and assimilating with a foreign element, is *neglect*. We have learned now, at the cost of dear experience, if not too late, our folly. The great drama of nations will soon repeat its history in our case if we allow the chance of recuperation to pass by. I do not despair. I feel confident that with the general prosperity of the islands since the treaty of reciprocity came into effect; by the establishment of hospitals, nurseries, schools in medicine, arts, and science; and by the amalgamation of races, Hawaii will emerge from its decadence to a brighter future.

"You wrote that it seemed to you that we should 'soon be overrun with the Chinese,' and that 'the [reciprocity] treaty is a money-making business, but a sledge-hammer driving down the nails into the coffin of the Hawaiian race.' To this, my dear friend, I demur. The Chinese will come into the country so long as it is a place where he finds contented-

ness and happiness, and as long as there are high wages, like all races who fly from the persecution of one country to a more congenial one. I look at the matter in its broad sense, and not at one particular class and race of men. I would there were twenty millions more of them. I am not afraid of the Chinese. They are a peaceable race and easily governed. They are more controllable than the Irish element in your country, which has no other political ambition than to 'go against the Government.'

"At present the influx of the Chinese has about sunk to its level. Prices of labor are now lower than when the treaty came into operation. The richness of China under the worst of administrations is enough to convince the most sceptical that the Chinese, under our free and liberal institutions, will be a prosperous people, a good element to introduce in a country where no other labor can be procured. If treated well, they will be good citizens. In time, with this industrious element in our country, we shall be producers in various ways where now (excepting sugar and rice) we are consumers. With Chinese ingenuity, industry, and cheap labor, we shall be able to compete in trade with the rest of nations in the struggle of national existence.

"Whether we exist or sink in oblivion, our lot is one with all that have lived and died. Every race has its goal, and every species of man has its course to run, whether by amalgamation or actual extinction.

"Me ke aloha nui, KALAKAUA."

—An original and amusing contribution to the copyright discussion has been made by Mr. Eduard Quaas in a book-trade-journal article, which we find reprinted in the *Literarische Correspondenz*, the organ of the German authors' union. Much has been said, of late years, about the unfortunate state of the German literary man, as compared with his brothers of France and England, and three causes have been assigned for it: namely, the enormous number of translations of novels, travels, histories, etc.; the extensive reading of English books; and the popularity of works which are beneath criticism, and hence unknown. These evils are not ignored by Mr. Quaas, but they seem to him of little importance compared with the harm done by circulating libraries. The circulation of a book in one of these institutions is, he says, in principle, the same thing as its dramatization upon the stage; that is, a large number of persons have the benefit of the author's conception, without any profit accruing therefrom to him. By statute, however, the theatre-manager is obliged to make a bargain with his author, while the latter has no protection against the owner of a library. Every library copy of a book by a popular author represents, say, fifty readers, and of these it is presumable that at least ten would buy the book if it were otherwise inaccessible. This assumption is substantiated by the statistics of the book-trade in France, where there are very few circulating libraries, and these used only by the poor. Mr. Quaas therefore proposes an addition to the copyright law, by which the announcement of All Rights Reserved would make a library liable to an action for damages. Under "circulating" libraries should be understood only those in which compensation is received for the loan of books. Under the new system these libraries would still exist, and would still do the literary class an important service, for until an author had acquired a reputation he would wish to further it by means of them.

—Two new books just published abroad, for the purpose of throwing light on Hamlet, will be found interesting by Shakspere students. One, by Dr. Zinzow, of Halle, entitled 'Die Hamlethsage aus und mit verwandten Sagen erläutert,' is an exhaustive work, in which the Danish Hamlet tradition is compared with similar Norse, Greek, and Roman myths. The struggle between Hamlet's father, Horvendill, and Holler, Dr. Zinzow compares with the myth about Thor's conflict with the giant Hrungnir in the Teutonic mythology, and this is again interpreted as the symbolic expression of the struggle going on in nature between summer and winter. In other words, he makes Hamlet one of the numerous family of spring myths The other work on the same subject is published in French, in Paris, with the title 'Hamlet le Danois.' The author, Alexander Buchner, tries to show that Shakspere's "Hamlet" was based on an earlier English work, written by a learned scholar named Kyd, but now lost. He asserts that Shakspere cannot have known the original myth, but only this English version of it, and tries to prove his point by the Danish chronicle of Saxo Grammaticus and other works. It is owing to this fact that the hero has got the Janus head by which we know him. The one face bears the impress of its first author Kyd, the second of the creative genius of Shakspere. Buchner describes the one as the face of the viking, the other as that of the *cunctator*. Herein, he says, must be sought the interpretation of Hamlet's ambiguous character.

—It is well known that the primitive liberties of the early Germans maintained themselves longest in the two extremes of the country—in the mountains of the South (Switzerland), and the levels along the North Sea (Friesland). Much study has been given to the history of the Swiss institutions; but the Frisians, having never grown into an independent nation, have received little attention. Dr. Okko Leding has recently published at Emden a thin pamphlet: 'Die Freiheit der Friesen im Mittelalter und ihr Bund mit den Versammlungen beim Upstallsbom.' Very exaggerated notions, he says, have existed in regard to the Frisian liberties, and the extent and power of the confederacy; so obscure has its memory become that even the situation of the capital, Upstallsbom, is a matter of controversy. Dr. Leding has carefully examined and sifted the evidence, and laid before us the results of his enquiry. It was not an elaborate or powerful organization, and as a federal union presents few instructive points. What interests one especially is that the Frisians completely escaped, by their distance and the troubles of the time, the feudal institutions. They started like the rest of Germany with the condition of things which became feudalism; but when their lords divested themselves of their earlier character as magistrates they were too far off to convert these subjects into vassals, as they did in the rest of their territories. The Frisians were, therefore, left to themselves, and formed a loose confederacy for protection against the Normans and the maintenance of internal order. Their society was now an almost complete democracy until the inequalities of property developed in the fourteenth century an hereditary magistracy, which was very near forming a basis for a new feudalism. The institutions of local self-government of these free peasants are not touched upon by Dr. Leding.

SEWALL'S DIARY.—II.*

THOUGH, as a rule, the divines who pass before us through the pages of these volumes, constituting, as they did, the theocracy of colonial Massachusetts, leave in their peculiar style little to be desired, this is not always the case. It would, indeed, appear that even scandals about the relations between eminent clergymen and their female parishioners are not peculiar to our own days. For instance, in one of the rare pamphlets printed during the time covered by that portion of the diary included in the present volume, and the republication of which as part of it adds greatly to its historical value, we find (p. 81*) the following amusing anecdote of the famous Cotton Mather, illustrating his pastoral and filial methods:

"A Gentlewooman of *Gayety*, near *Boston*, was frequently visited by the Reverend Mr C. M. [Cotton Mather] which giving offence to some of his Audience, he promised to avoid her Conversation. But *Good* intentions being frustrated by *Vicious* Inclinations, he becomes again her humble Servant; this *Reciprocal* promise being first made, that NEITHER OF THEM SHOULD CONFESS THEIR SEEING EACH OTHER: However it becoming again publick, his Father accused him of it, who after two or three HEMS to recover himself, (like Col. *Partridge* at the Council-Board) gave this *Aequivocal* Answer, INDEED, FATHER, IF I SHOULD SAY I DID SEE HER, I SHOULD TELL A GREAT LYE."

As an offset to the foregoing the following genuine little scrap of nature, in the record of a private meeting, shows that the Judge himself was not insensible to the delights of congenial female society. There is in it the germ of much Shandean philosophy:

"Midweek, March, 10, 170¾. The privat Meeting was at Mr Cole's, where Mrs Noyes was. I read a sermon of Mr Willard's. I went away a little before her but she overtook me near the New Meeting house; I saw the Glimpse of her Light and call'd to her; spake a few words and parted; feeling in myself a peculiar displeasure that our way lay no further together."

By far the most entertaining anecdote of the clergy, however, contained in this volume relates to Judge Sewall's own pastor, the Rev. Mr. Pemberton. For some reason he seems, in the year 1710, to have taken serious offence at a public action of the Judge's, and he evinced his feelings in a way not to be mistaken. At first he confined himself to private disputation, in which he addressed him "sharply and upbraidingly" but "with extraordinary Vehemency (capering with his feet)," saying among other things that a certain Captain Martin, an officer of the Royal Navy then in Boston, had "call'd him Rascal in the Street, and said had it not been for his coat, he would have can'd him," and that the Judge took no notice of it. He seems in his passion even to have intimated grave doubts of Sewall's judicial integrity. This was bad enough, but the very next Sunday he passed all bounds, for he gave forth the following hymn from the pulpit, the Judge being in the congregation:

"Speak, O ye Judges of the Earth
if just your sentence be:
Or must not innocence appeal
to Heav'n from your decree?

* 'Diary of Samuel Sewall. 1674–1729. Vol. ii. 1699–1700–1714.' Collections of the Massachusetts Historical Society. Vol. vi. Fifth Series. [See *Nation*, Nos. 696, 697, 765.]

"Your wicked Hearts and Judgments are
alike by Malice sway'd;
Your griping Hands, by weighty Bribes,
to Violence betrayed."

Whereupon Judge Sewall contents himself with the following meek and truly Christian entry in his diary, highly creditable to him as showing at once how deeply wounded and yet how self-contained he was:

"I think if I had been in his place and had been kindly and tenderly affectioned, I should not have done it at this time. Another Psalm might have suited his Subject as well as the 5th verse of this. Tis certain, one may make Libels of David's Psalms; and if a person be abused, there is no Remedy: I desire to leave it to God who can and will Judge Righteously."

Turning now to the subject of funerals, it is astonishing to see what a fascination there was to the early Puritanic mind in the close contemplation of death. Judge Sewall seemed to gloat over his family tomb. In this volume he notes down how he enlarged the number of steps leading into it, and at the same time "dug a hole in the North East Corner and there buried the scattering bones." This is the tomb of which in the first volume of the diary (p. 443) he gives the following loving description on the occasion of his placing his little two-year-old daughter Sarah in it:

"[6th day, Decr 25, 1696.] Note. Twas [the tomb] wholly dry, and I went at noon to see in what order things were set; and there I was entertain'd with a view of, and converse with, the Coffins of my dear Father Hull, Mother Hull, Cousin Quinsey, and my Six Children: for the little posthumous was now took up and set in upon that that stands on John's: so are three, one upon another twice, on the bench at the end. My Mother ly's on a lower bench, at the end, with head to her Husband's head: and I order'd little Sarah to be set on her Grandmother's feet. 'Twas an awful yet pleasing Treat; Having said, The Lord knows who shall be brought hither next, I came away."

One of the six of the Judge's children to whom he refers as being deposited in this dreary vault was an infant son, Stephen, buried July 27, 1687. It was on the occasion of the funeral of this child that he says: "Sam [his son, nine years old] and his sister cryed much coming home and at home, so that could hardly quiet them. It seems they look'd into Tomb, and Sam said he saw a great Coffin there, his Grandfather's."

Indeed, the youthful Samuel seems to have had a great deal too much of this sort of thing, and about a year later we get this glimpse of him under a cheerful Puritanic exhortation:

"Sabbath, Jan. 12. Richard Denner, a flourishing youth of 9 years old, dies of the Small Pocks. I tell Sam. of it and what need he had to prepare for Death, and therefore to endeavour really to pray when he said over the Lord's Prayer: He seem'd not much to mind, eating an Aple; but when he came to say, Our father, he burst out into a bitter Cry, and when I askt what was the matter and he could speak, he burst out into a bitter Cry and said he was afraid he should die. I pray'd with him, and read Scriptures comforting against death, as, O death where is thy sting, &c."

The incidents which occurred at some of the frequent entombments here recorded are to the modern mind simply shocking. For instance, a Major Richards was buried in April, 1694, and Sewall was, as usual, one of the bearers. In describing what took place he says:

"In the Tomb were fain to nail a Board across the Coffins and then a Board standing right up from that, bearing against the top of the Tomb, to prevent their floating up and down; sawing and fitting this board made some inconvenient Tarriance."

As to the number of funerals Judge Sewall attended, they defy computation. Rarely a week passed without one, and sometimes he went to two in the same day. It was the commonly-received token of respect, whether to the deceased or to surviving relatives. Rings, scarfs, and mourning gloves were distributed to the guests of honor on these occasions, and the diary is filled with long lists of the bearers. Here is a description of a winter funeral of a member of the Quincy family:

"Thorsday, Xr. 5th. 1700. Sam. and I ride to the Funeral of Aunt Eli. Quinsey. Because of the Porrige of snow, Bearers rid to the Grave, alighting a little before they came there. Mourners, Cous. Edward and his Sister rid first, then Mrs Aña Quinsey, widow, behind Mr Allen; and cous. Ruth Hunt behind her Husband; then Sam. and I. Bearers had Rings and Wash-Lether Gloves. I had Gloves and a Ring."

The Judge further records another incident in the history of the Quincy family which is dramatic enough. It is in the style of Hawthorne, who ought to have woven it into one of his tales. It happened, too, at the wedding of the parents of that John Quincy who died in 1767, just after the birth of a great-grandson, who was called after him, John Quincy Adams:

"Thorsday, Novemb. 9, 1682. Cous. Danl Quinsey Marries Mrs Anna Shepard Before John Hull, Esq. Saml Nowell, Esq. and many Persons present, almost Capt. Brattle's great Hall full. . . . A good space after, when had eaten Cake and drunk Wine and Beer plentifully, we were called into the Hall again to Sing. In Singing Time Mrs Brattle goes out being ill; Most of the compa goe away, thinking it a qualm or some Fit; But she grows worse, speaks not a word, and so dyes away in her chair, I holding her feet (for she had slipt down). At length out of the Kitching we carry the chair and Her in it, into the Wedding Hall; and after a while lay the Corps of the dead Aunt in the Bride-Bed: So that now the strangeness and horror of the thing filled the (just now) joyous House with Ejulation: The Bridegroom and Bride lye at Mr Airs, son in law to the deceased, going away like Persons put to flight in Battle."

Rapidly turning from deaths at bridals to other topics, the following entry would seem to indicate that the Judge, gentle-hearted as he was, had not been touched by that sentimentality as to punishments which is so marked a characteristic of more modern times. It was an eye for an eye then, and a tooth for a tooth; and the whipping-post for both sexes:

"Jr 10th [1707]. Midweek, sentenced a woman that whip'd a Man, to be whip'd; said a woman that had lost her Modesty, was like Salt that had lost its savor; good for nothing but to be cast to the Dunghill: 7 or 8 joined together, call'd the Man out of his Bed, guilefully praying him to shew them the way; then by help of a Negro youth, tore off his Cloathes and whip'd him with Rods; to chastise him for carrying it harshly to his wife."

Here, also, is a description of the wholesale execution of pirates, which took place not far from where the jail on Cambridge Street now stands in Boston, where was then the shore of Charles River:

"Juny, 30, 1704. . . . Many were the people that saw upon Broughton's Hill. But when I came to see how the River was cover'd with People, I was amazed: Some say there were 100 Boats. 150 Boats and Canoes, saith Cousin Moody of York. He told them. Mr. Cotton Mather came with Capt. Quelch and six others for Execution from the Prison to Scarlet's Wharf, and from thence in the Boat to the place of Execution about the midway between Hanson's point and Broughton's Warehouse. Mr Bridge was there also. When the scaffold was hoisted to a due height, the seven Malefactors went up; Mr Mather pray'd for them standing upon the Boat. Ropes were all fasten'd to the Gallows (save King, who was Repriev'd). When the Scaffold was let to sink, there was such a Screech of the Women that my wife heard it sitting in our Entry next the Orchard, and was much surprised at it; yet the wind was sou-west. Our house is a full mile from the place."

There are, however, altogether too many curious and interesting passages in these volumes to attempt to quote them. We have given but a few of the many we had marked, but these, perhaps, are as curious and illustrative of the times and the manners as any. To one class only of these have we still room to refer. Death many times entered the Judge's family circle, and the entries in which, in few and touching words, he notes the taking away of children and grandchildren are deeply touching. In December, 1685, he described how the "faint and moaning noise of my child forces me up to pray for it"; and two days later he adds that again he "went to Prayer: By that time had done, could hear little Breathing, and so about Sunrise, or little after, he fell asleep, I hope in Jesus, and that a Mansion was ready for him in the Father's House. Died in Nurse Hill's Lap." And then again, in 1706, he records how his grandson "poor little Sam. Hirst went through the Valley of the Shadow of Death through the opression of Flegm." Two years later, in December, 1708, he loses another grandson, and this cry of grief goes up through his diary: "And Alas! Alas! seventh-day Decr 18. News is brought that the poor child is Dead about an hour by sun *mane*. Alas! that I should fail seeing him alive! Now I went too late, save to weep with my children, and kiss, and mourn over my dear Grandson."

In closing we cannot refrain from quoting at length the entries relating to the courtship, marriage, and sad subsequent death of the Judge's daughter Mary. They contain a whole modern novel ready to the writer's hand, and are full of touches of genuine human nature. It is merely necessary to premise that young Mr. Gerrish, the lover, husband, and widower of the little episode, was the son of a country clergyman, and himself engaged in business in Boston as a bookseller and publisher. Apparently the idea that their daughter looked upon him with favorable eyes did not at first meet the approval of Judge and Madam Sewall:

"Jany 24th [170$\frac{3}{4}$] I propound to Joseph to pray with his Mother and me for his Sister Mary; he declines it and I pray, and was assisted with considerable Agony and Importunity with many Tears. The Lord hear and help.

"Jany 31. Mr Spensar calls here, and I enquire of him about Mr Gerrish of Wenham, what he should say; He answer'd not directly; but said his Cousin would come if he might have admittance. I told him I heard he went to Mr Coney's daughter. He said he knew nothing of

that: I desired him to enquire, and tell me. I understood he undertook it; but he came no more.

"Febr 4th. Nurse Smith buried. Coming from the Grave I ask'd Mr Pemberton whether S. Gerrish courted Mr Coney's daughter; he said No; not now. Mr Coney thought his daughter young.

"Febr 6. is a Comfortable day. Febr 7th I deliver a Letter to S. Gerrish to inclose and send to his father, which he promises to doe.

"Febr. 17. I receive Mr Gerrishes Letter just at night.

"Febr 18th. I leave word at Mr Gerrishes shop that I would speak with him after Mr Bromfield's Meeting was over. He came and I bid him welcom to my house as to what his father writt about. So late hardly fit then to see my daughter, apointed him to come on Tuesday, invited him to Supper; I observed he drunk to Mary in the third place.

"Febr. 23. When I came from the Meeting at Mr Stephens's I found him in the Chamber, Mr Hirst and wife here. It seems he ask'd to speak with Mary below; her Mother was afraid because the fire was newly made: and Mr Hirst brought him up. This I knew not of: He ask'd me below, whether it were best to frequent my House before his father came to Town: I said that were the best introduction: but he was welcome to come before, and bid him come on Friday night.

"Febr. 24. Mr Hirst tells me Mr Gerrish courted Mr Coney's daughter: I told him I knew it, and was uneasy. In the evening daughter Hirst came hether, I supose to tell that Mr Gerrish had courted Mr Coney's daughter: and if she [Mary] should have Mr Stoddard, she would mend her market.

"Friday, Febr. 25. Madam Winthrop, Oliver, and Mico visit my wife. In the evening S. Gerrish comes not; we expected him, Mary dress'd herself: it was a painfull disgracefull disapointment.

"Febr. 26. Satterday, Sam Gerrish goes to Wenham unknown to me, till Lords-day night Capt. Greenleaf told me of it. He was not seen by us till Wednesday March 2, David saw him.

"March 11th. S. Gerrish calls here.

"March 14th. The Revd Mr Joseph Gerrish comes to our house in the evening. Dines with us March 15th Tuesday. At night his Son comes, and Mary goes to him. Mr. Gerrish goes home on Wednesday. His son comes and is entertain'd then also.

"Friday-night. [March 18.] S. Gerrish comes. Tells Mary except Satterday and Lord's-day nights intends to wait on her every night: unless some extraordinary thing hapen.

"Midweek, Augt 24 [1709] In the evening Mr Pemberton marrys Mr Samuel Gerrish, and my daughter Mary: He begun with Prayer, and Mr Gerrish the Bridegroom's father concluded: Mr Mayhew was present.

"Novr. 10. 1710. Daughter Gerrish is brought to bed of a daughter about 6 m. My wife being with her, I sat up late and lay alone.

"Novr. 15. Came home, fair Wether, and not very Cold. Enquired of Mr. Gerrish as I came along concerning his wife: He said she was something disorder'd; but I aprehended no danger, and being just come off my journey, went not to see her that night.

"Novr. 16. Thanksgiving. My wife sent my daughter Gerrish part of our Diner, which as I understood she eat of pleasantly. But twas a Cold Day and she was remov'd off her Bed on to the Palat Bed in the morning. After the Evening Exercise my wife and I rode up in the Coach: My daughter ask'd me to pray with her, which I did; pray'd that God would give her the Spirit of Adoption to call Him Father. Then I went away with Mr. Hirst to his House, leaving my wife with my daughter Gerrish, till she call'd to go home. After our coming home, the northern Chimney of the New house fell a-fire and blazed out extreamly; which made a great Uproar, as is usual. An hour or two after midnight Mr. Gerrish call'd me up acquainting us of the extream illness of his wife; All the family were alarm'd, and gather'd into our Bed-Chamber. When I came there, to my great Surprise my Daughter could not speak to me. They had try'd to call up Mr. Wadsworth; but could not make the family hear. I sent for Mr. Mayhew, who came and pray'd very well with her. I put him [manuscript imperfect] again; Mr. Cutler the Physician said he [imperfect]. (Joseph pray'd at home with the family). [Near] four a clock after Midnight my dear child expired, being but Nineteen years, and twenty days old. When this was over, I advis'd them to take Mrs. Hubbard's Assistance; left Mr. Mayhew there and went home. When I entered my wife's Bed-Chamber, a dolefull Cry was lifted up."

Then four months later the entries proceed:

"April, 21 [1711] Plenty of Swallows. Note. Hannah Gerrish was taken very sick last night.

"April, 22. Lords Day, B. Gray calls me up at 1. at night: I find poor little Hannah Gerrish in an Agony, I went to Prayer; afterwards B. Gray read the 5th Rom. I found the chapter so full of Comfort that awhile after I read it over again. About 6. m. Mr Wadsworth came and pray'd with little Hañah. Mr Gerrish her father came home at ½ past Nine: put up a Note in the Afternoon, which Mr Pemberton read coming out in his Gown.

"April 23. I was call'd up between 2 and 3 at night, but my little Hañah Expired before I got thither. However, She had the Respect of one visit after death. She Expired about ½ hour after 2 at night. The Lord prepare me for my great Change.

"Third-day, April, 24. Hañah Gerrish is buried. Bearers, Gillam Phillips, and Benj. Gray: white Scarvs. Was put into the Tomb just before Sun-set, several of the Council, Dr Cotton Mather, Mr. Wadsworth, Colman there."

Then one year more passes:

"May 8th [1712] At night, Dr Increase Mather married Mr Saml Gerrish, and Mrs Sarah Coney; Dr Cotton Mather pray'd last. P S. 90. 13—— 2½ staves, I set Windsor Time. Had Gloves, Sack-Posset, and Cake. . . . The whole family was Invited.

"May, 13. 1712. My Wife visits the Bride and Bride-groom at Mr. Coney's; . . ."

BEESLY'S 'THE GRACCHI.'*

So many historians have undertaken to tell the story of the downfall of the Roman Republic that it would seem impossible now to give the subject either freshness or interest. This Mr. Beesly has, however, succeeded in doing, partly by the freshness of his treatment, partly by what we may call the novelty of his point of view. We do not know whether Mr. Beesly is related in any way to Prof. E. S. Beesly, whose 'Catiline, Clodius, and Tiberius' we reviewed some months ago (see the *Nation*, No. 687); but his point of view is very much the same. And if it appeared to be the exaggeration of a theorist to push democracy to the point of defending Catiline and Clodius, we cannot take exception to this tone in the earlier period. Here we can agree with the author in nearly all his positions. We detest Sulla—perhaps the most odious great man in ancient history—as heartily as he does; he does not think it necessary, like Mr. Froude, to extenuate the crimes of Marius and call him a great man; we will not quarrel with him in regard to his estimate of the Gracchi; it is only in upholding Saturninus that he startles one—"those who condemn him must condemn Cromwell too," he says (p. 108).

The political history of the fifty years here comprised is the best and most graphic with which we are acquainted. The characterization of the leading men of the period is remarkably keen and appreciative; for example, Scipio Æmilianus (p. 40):

"He was a reactionist, who, when the inevitable results of those liberal ideas which had been broached in his own circle stared him in the face, seized the first available means of stifling them. . . . Brave as a man, he was a pusillanimous statesman; and when confronted by the revolutionary spirit which he and his friends had helped to evoke, he determined at all costs to prop up the senatorial power. . . . It was well for his reputation that he died just then. Without Sulla's personal vices he might have played Sulla's part as a politician, and his atrocities in Spain as well as his remark on the death of Tiberius Gracchus—words breathing the very essence of a narrow swordsman's nature—show that from bloodshed, at all events, he would not have shrunk. It is hard to respect such a man in spite of all his good qualities. Fortune gave him the opportunity of playing a great part, and he shrank from it. When the crop sprang up which he had himself helped to sow, he blighted it. But because he was personally respectable, and because he held a middle course between contemporary parties, he has found favor with historians, who are too apt to forget that there is in politics, as in other things, a right course and a wrong, and that an attempt to walk along both at once proves a man to be a weak statesman, and does not prove him to be a great or good man."

When we call Mr. Beesly's point of view a novel one, we do not mean that his estimate of the men and their actions is new, so much as that it is founded upon a more uncompromising democratic sentiment—social rather than political—a more thorough sympathy with the humble classes, than that of any other author who has treated of this period. Whether we agree with him in this or not, it is at any rate an instructive point of view. For our own part, we do agree with him in the main, and yet what we said of Prof. Beesly's remarks upon the proletariat needs to be repeated here—that the Roman populace, being a pure proletariat, and not representing *industry* in any sense, are not entitled on their own account to any very hearty sympathy. Of course this was the fault of the system under which they had grown into what they were; but this does not alter the historical question—there they were, a very good-for-nothing lot, a hopeless problem for even the wisest statesmanship. The system of slavery, which was the cause of this ruin, is described by Mr. Beesly in terms of condemnation as strong as need be; but we do not think that even he has fully appreciated its deadly nature. When he compares it with American slavery, which he does often with great felicity, he cannot help considering it exclusively as a rural institution, as American slavery to all intents and purposes was. But for two reasons Roman slavery was far more fatal than American slavery ever could have been. In the first place, the American slaveholder was a country gentleman, residing upon his plantation, and identified, if in a crude and unskilful way, with the industrial interests of his country; Roman slavery was purely speculative—its aim was to extort wealth, at whatever cost of life and suffering, for the purposes of luxury and ostentation, and for the benefit of a non-resident owner. In the next place, American

* 'Epochs of Ancient History. The Gracchi Marius, and Sulla. By A. H. Beesly.' With maps. (New York: Charles Scribner's Sons. 12mo, pp. 217.)

slavery was associated with vigorous and persistent free labor in the North, so that it was always on the defensive ; in ancient Italy slavery had unrestricted sway, and it is as true that slave labor will inevitably drive out free labor as that bad money will drive good money out of circulation. Hence the irretrievable degradation of the Roman proletariat; it was not, as in modern society, the outgrowth of evil civic conditions merely, but was in good truth the product of rural society. The description, therefore, of the state of society which introduces the story of the Gracchi, good as it is, cannot be pronounced altogether satisfactory. It is not so much that it has anything positively incorrect as that it seems inadequate. It does not bring the society and the government vividly before the reader ; it rather talks about them than depicts them. Perhaps the thing itself is impossible ; perhaps this long-vanished society, so different from our own, and yet with so much in common, cannot be reproduced. At any rate this has not yet been done. But that Mr. Beesly's failure—so far as it is a failure—comes in part from a want of clear definition, rather than of natural powers, is shown by his classing together slave and serf labor (p. 22) as equally signs of decay. The two things are fundamentally different. The slave works at the command and for the profit of his owner ; the serf works in part for himself on land owned by another, but in which he has an inalienable interest. Slave labor is always destructive of social progress, except in the very beginnings of society ; serfdom is not inconsistent with a tolerably advanced state of society. The two things, in fact, are less alike than slavery is to the poorly-paid labor of factory operatives.

Mr. Beesly is best in the strictly historical parts of his work ; in questions of antiquities he is sometimes inaccurate. At the end of the book he gives, on a couple of pages, a list of terms and phrases, with their definitions, which he says are "only approximately precise," and which, indeed, are in some cases quite inaccurate. Thus, in the *imperium* the judicial power was quite as essential as the military. It does not convey a correct notion of the powers of the *legati* to say that they corresponded "to our generals of division." The *comitia centuriata* were not the "subdivisions" of the classes (these were the *centuriæ*) but the assembly of the people according to these subdivisions ; there were not six classes, but only five (as is assumed on page 136) ; and the centuries were not at this period 193 or 194, but—as may be gathered from the strangely-confused account on page 204—probably 373. On this page we read : "The first class consisted of one of each of these [centuries] from each tribe, so that, as there were thirty-five tribes, each class would consist of seventy centuries." How does that follow ? Moreover, we are never told what the classes were, nor, in this paragraph, how many there were. Several other matters of antiquities in this same chapter, "Sulla's Reactionary Measures"—Sulla's measures, by the way, were not all of them reactionary, but some of them very salutary—are at least open to doubt. Mr. Beesly generally follows Mr. Long, in preference to Mommsen or Lange, admiring extremely "his dogged determination never to swerve from facts to inference." If only this were possible, where facts are so very few and fragmentary as in this period ; or if only Mr Long himself had been consistent in this ! To take an illustration from the legislation of Sulla, B.C. 88 : Mr. Long says, vol. ii. p. 227 (and Mr. Beesly follows him), that Sulla's proposition was that "the votes should not be taken in the Comitia Tributa, but in the Centuriata." But Appian, the authority for this ('Civil Wars,' i. 59), says nothing about *Comitia*, but only that votes should be taken "not by tribes but by centuries"—an expression which may as easily mean (as Mommsen and Lange think) that he abolished the reformed method of voting in the centuriate comitia as that he abolished the tribal comitia.

RECENT WORKS ON CARDS.*

THE triple title of the interesting volume first named below corresponds to the three distinct divisions of which the book is made up. In the first Mr. Jones has gathered together seven essays on card-subjects, which he has contributed at different times to different publications ; in the second he has set down certain decisions on disputed points of whist-play —with the reasons therefor—made by the late Mr. Clay, the famous "J. C."; and in a final hundred pages he drops into anecdote and gives us incidents, always authentic and always neatly told, of his score or more of years' experience as a player of whist. To the card-expert who turns to this book for counsel and advice, perhaps Mr. Clay's decisions on nice points of law will be most interesting ; but to the general reader the final anecdotes and certain of the earlier essays afford greater entertainment. Some of the anecdotes are gems, and deserve to get at once into general circulation. "Cavendish" tells us that the sly old players who take advantage of every opportunity of peering into a neighbor's hand are sometimes humorously called "triple-dummy" players ; and he goes on to say that two triple-dummy players being once set against an unsuspecting youth and an "old soldier," had in a short time taken a full inspection of the youth's hand, when the old soldier rather astonished them by saying : "Partner, you had better show me your hand, as both the adversaries have seen it." And still better is the following : Mr. Clay told "Cavendish" that

"when he first played whist at a London club he was horrified to see an old gentleman deliberately looking over one of his adversaries' hands. Mr. Pacey, the player whose hand was overlooked, was, as it happened, an old friend of Clay's, and, the rubber being over, Clay took an immediate opportunity of advising him to hold up his hand when playing against P——, adding :

"'The last hand he saw every card you held.'

"'Oh ! no, he didn't,' replied Mr. Pacey, who was well aware of P——'s peculiarities, 'he only saw a few I put in the corner to puzzle him !'"

Mr. Jones informs us that Mr. Clay was the original of *Castlemaine* in Mr. George Lawrence's 'Sans Merci,' in which is made the well-known speech : "It has been computed that eleven thousand young Englishmen, once heirs to fair fortunes, are wandering about the Continent in a state of utter destitution because they would not lead trump with five and an honor in their hands." On another occasion a gentleman having made an absurdly bad play, asked Mr. Clay if it were not justifiable. To him the following crushing rejoinder, spoken very deliberately at the wall opposite, instead of to the querist : "At the game of whist, as played in England [pause], you are not called upon to win a trick [pause] unless you please."

The card essays which form the first third of the volume are of varying degrees of interest. The chapter about "The Origin and Development of Cards and Card-Games" contains much agreeable information about the growth in one country of games now universally popular, but the account of the origin of playing-cards is little more than a compilation from Dr. Wiltshire and other authorities. Mr. Jones points out that whist—to the etymology of which word he devotes an essay—is a purely English game, and he defends its claim for precedence over the oriental chess with a skill and a success which would satisfy even Mr. Abraham Heyward, to whose admirable essay on 'Whist and Whist-players' Cavendish more than once refers. We Americans have vainly, it seems, prided ourselves on the invention of poker and euchre. "The French settlers in America," says Mr. Jones (p. 68), "took *Triomphe* with them and transformed it into euchre." And from the account given (on p. 57) of *Primero*, of Roman or Florentine origin, it is obvious that poker can claim a noble Italian descent—perhaps the next best thing to being a native American. Other essays are on the "Morality of Card-Playing," on the "Duties on Playing-Cards," and on Molière's description of a game of piquet in the "Fâcheux," the last being an amplification of the note Mr. Jones contributed to Mr. Charles Heron Wall's translation of Molière's plays. In his final paragraph he tells us that since he began to write about games under the pen-name of "Cavendish" he has been bombarded with questions of all kinds about all sorts of games, and has answered in writing nearly ten thousand questions in the past sixteen years ; but it may be doubted if any query sent him could well be odder than the question propounded about Christmas, 1877, by a lady living in the country, a total stranger to him, who asked, "May tee-totallers join in a game of snap-dragon ?"

Col. Drayson's book is not a rival to Cavendish's 'Laws and Principles of Whist,' which of course still remains the standard authority, while this only aspires to be an elementary hand-book. It is frankly a volume for the inexperienced, giving first the laws of the game and then simply and directly showing what the elements of good play are. It is meant rather for the poor player conscious of his deficiency and desirous of improving than for the actual beginner. It has the merit, rare in all books about games, of telling the reader which of the many maxims it lays down are to be first learnt and applied—of showing the novice, in short, not only the varied things which the good player does, but also the way in which the beginner can best gradually acquire the same accomplishments.

* 'Card Essays, Clay's Decisions, and Card-table Talk. By "Cavendish," author of 'The Laws and Principles of Whist,' etc., etc.' London : Thos. de la Rue & Co. ; New York : Scribner & Welford. 1879.

'The Art of Practical Whist ; being a series of letters descriptive of every part of the game and the best method of becoming a skilful player. By Col. A. W. Drayson, R.A., F.R.A.S.' New York : George Routledge & Sons. 1879.

The epistolary form, which is nowhere overworked, has been adopted, apparently for the sake of using a simple and familiar style; and it is only here and there that the author's literary inexperience is evident. It would have been better if the notes upon the laws of short whist which Col. Drayson himself contributes were typographically uniform; those on pp. 4, 7, 8, 9, for example, are in italics, while others on pp. 5, 12, 20 are in the same type as the laws themselves, from which they should in some way be sharply distinguished. All of the author's annotations might perhaps have been in square brackets [thus]. This is the only blemish which we have remarked in the construction of the book; in general it is as clear as any novice could desire. It may be recommended with confidence to any one who wishes to avoid the *triste vieillesse* which Metternich—or was it Talleyrand?—predicted for all who did not learn whist in youth.

WHITNEY'S SANSKRIT GRAMMAR.*

VERY many persons who are not Sanskrit scholars will doubtless welcome the publication of a new Sanskrit grammar by an American. We may certainly take a patriotic pride in it as a fruit of American scholarship, and, moreover, the subject itself is one to which we owe so much that we should welcome any contribution to it. The study of Sanskrit by Europeans hardly antedates the present century, and yet from it has come an entirely new philosophy of human speech, and so in some degree a new psychology; for the relation of speech to thought is so close that our views of one cannot greatly change without changing our views of the other. From it has come also the beginning of a new philosophy of religion, besides many contributions to history and ethnology. Our satisfaction may well be increased upon finding that the new grammar is also the most complete and the best that has yet appeared. Few even of those who appreciate the advantages of having a good Sanskrit grammar know how difficult it must be to make one. Though the language has been studied by native grammarians much longer than Latin or Greek has been studied by anybody, yet the native view of grammar is entirely different from that with which we have become familiar by the long study of two dead languages. A Sanskrit grammar is not intended as a means of learning the language at all, but as a system of rigid and authoritative rules to guide those who already know it in the use of it. Hence the history of European Sanskrit grammar has been a gradual emancipation of the student from the fearful pedantry of rules upon rules and exceptions within exceptions, as also a working over of the endless material into compendious systems suited to our western ways of attacking a dead language. To write a new Sanskrit grammar one has not had as in most languages a frame or form ready to his hand, but the whole had to be recast on a model more and more nearly approaching our methods in Latin and Greek. Much of the native grammar is also artificial or conventional, and not supported by usage as it appears in any extant works. Even yet our grammars do not represent the usage of writers, as they do in Latin and Greek, and often it cannot be determined what rules are founded on usage and what are drawn from the fancies of pedants.

To recast the grammar in a form suitable for the western mind, and to substitute usage for traditional rule as the norm of speech, has been avowedly the aim of the author; and certainly these two ends have been attained in a far higher degree than in any other grammar which we know. No one of the earlier grammars has pretended to support its statements to any extent by citations, whereas by our author everything not known to be supported by extant literature is specially designated as "not quotable," so that we can see at once (so far as the investigation has yet gone) what is and what is not the usage of the language either in the earlier or later stages. This fact at once gives a different character to the work from that of any of its predecessors. Connected with this, but also proceeding from the author's habit of mind, is the entire freedom from pedantry noticeable in all his works, but especially in the case of this the most pedantic of subjects. Less striking but still in general a marked improvement on others, is the recasting of the matter into a scientific form according to western ideas. This has already been done in a considerable degree by both Max Müller and Monier Williams in English, and by several of the lesser German grammarians; but by no one of them is the structure of the verb put into such a learnable shape. The same is true of the subjects of derivation and composition, which are more important in a Sanskrit grammar than even those of inflexion, and far more than the same subjects in any other language of our stock. On the other hand, we cannot help thinking that in the treatment of inflexions the grouping and arrangement of Max Müller are more easily comprehended than those of our author. This is no doubt more than compensated for by a greater fulness and exactness of statement—as, for instance, in monosyllabic root-stems; nevertheless, it seems a pity to deprive the learner of any help in so difficult a subject.

On the subject of accent this grammar is immeasurably superior to any other. Very few contain anything at all about it, and the great grammar of Benfey, which is somewhat full on the subject, is of so difficult topography that it is impossible to find anything in it. A distinct advantage of Prof. Whitney's work is that it is written throughout in the spirit and from the point of view of historical grammar. The author has purposely excluded comparative matter because it could not be given with fulness; and, much as we may regret it, if space had to be considered this could be dispensed with more easily than any other part, because it can be found elsewhere, and the historical aspect of the whole treatment constantly leads one to make comparisons. The very great advances made in phonology within the last few years, as well as the author's own genius in that direction, have enabled him to put a soul into the terrible laws of Sandhi, or list of euphonic rules. This, the most discouraging feature of Sanskrit grammar, has been made by skilful and intelligent treatment hardly more troublesome than the same subject is in Greek. Another great improvement upon former grammars is in the syntax, which, as is well known, is not a title in Sanskrit grammar proper, and for the foreign learner is full of snags and quicksands, and all sorts of impediments to progress. Prof. Whitney devotes more attention to it than does any of his predecessors, and furnishes a pretty safe conduct through the difficulties, while at the same time much valuable material is here collected for comparative syntax as soon as anybody gets wise enough to handle that subject in a more thorough manner. We should, indeed, have preferred a separate chapter on syntax, instead of having it thrown in under each etymological head as is done here; still, one is constantly surprised to find how much is stowed away in the small spaces allotted to it under each head.

We miss the catalogue of verbs usually found. To be sure, this is a cork-and-bladder appliance; yet the language is so very difficult that the student needs all the help he can get. Greek without the list of anomalous verbs would be formidable enough; but in Sanskrit nearly all verbs are, in the usual sense, anomalous. It is a pity, too, that the book had to be printed, and apparently written, in Germany. Somehow the style seems to differ from the usually clear and simple style of the author, as if the clumsy German tongue had reacted upon his mental processes and made his utterance in many places involved and almost obscure.

*'A Sanskrit Grammar, including both the classical language and the older dialects of Veda and Brahmana. By William Dwight Whitney, Professor, etc.' Leipzig: Breitkopf & Härtel; New York: B. Westermann & Co. 1879.

Brazil. The Amazons and the Coast. By Herbert H. Smith. Illustrated. (New York: Charles Scribner's Sons. 1879. 8vo, pp. 644.)—This book is composed of a series of loosely-connected articles on Brazil, in the course of which a majority of the topics of general interest are touched upon. Readers of *Scribner's Monthly* are already somewhat familiar with several chapters, but, according to the preface, they have been reproduced "with so many changes and additions as to give them an entirely new character." After an elaborate study of the country, its institutions, and its people, the author attempts to give a fair idea of the empire as it is and of its possibilities in the future, personal adventures being regarded as of secondary importance. In the descriptive portions Mr. Smith appears to the best advantage. Whether treating of the government, society, industrial pursuits, natural history, the myths of the Indians, or whatever else, evidences of great caution in regard to the facts are everywhere apparent. The conclusions, however, are not always those of a man who has gone to the bottom of his subject. The work contains a great deal of well-digested information, yet there is comparatively little that has not been anticipated by Agassiz, Kidder and Fletcher, Bates, and others who have gone over the same ground. The historical references are carefully made. As a result of investigating the story of the Amazons, from whom the river derived its name, we have the safe conclusion that it is a myth. A chapter devoted to the "[North] American Farmers on the Amazons" does not give so cheerful a view of their present situation as might be justified by a comparison with pioneer life in the United States.

The zoölogical gleanings may in the main be characterized as superficial. Among them, p. 206, there is a picture of spider monkeys, representing a pair hanging from a limb to rob birds' nests which were out of their reach below. One holds to the limb with tail and left hand, and

with his right hand clasps the left of his comrade, who is in this manner let down to the nests. Did any one ever see such a performance? The theory advanced on p. 93 to account for the treeless condition of the meadow-lands northward from the mouth of the Xingú and on the island of Marajó, in the immediate neighborhood of heavy timber, will not admit of extended application. These meadows are flooded for a portion of the year, but become very dry during the season of low water. The author says "they are alternately soaked and baked; hence the forest trees will not grow on them, but they flourish well on the banks, where their roots are only covered during three or four weeks of each year." Flooded forests are not uncommon, and in California, with its seasons of wet and dry, there are magnificent forest-growths. There is a striking similarity between the conditions in the meadows of the Amazons and in the prairie regions of the Mississippi Valley. Level, grass-covered tracts, with soil so fine as to be almost impalpable, exist by the side of groves and forests on soil more coarse and broken. When the river overflows, the coarse detritus is deposited near the bed, and a bank is built up which is covered with trees; further out, in the still waters covering the meadow, the fine sediment settles to the bottom and on this the grasses flourish. The case is a good one in support of Professor Whitney's theory of the origin of the prairies—namely, that the character of the soil prevents the growth of timber; it is too fine. We are told on p. 629 that "a river valley can only be scooped out when the land is above the surface of the sea; but as this valley sinks the sea finds an entrance, and a long bay is the result," etc.; and that the Amazons has no true delta because "it has hardly had time yet to fill in the estuary bay. Moreover, the sea-bottom beyond the mouth must have sunk with the river valley, and the river will require a vast period to build it up to the level of the surface." According to Agassiz the reason why there is no delta is that "the sea is eating away the land much faster than the river can build it up." He also proved the island of Marajó a portion of the mainland, and suggested that if the eating process should continue for countless ages there is a possibility of the valley being cut away as far as the Madeira.

Mr. Smith is enthusiastic in his descriptions of the beautiful and picturesque. His book is much above the average of popular works on similar subjects; few are so carefully written.

The Refutation of Darwinism, and the Converse Theory of Development, based exclusively on Darwin's Facts, etc. By T. Warren O'Neill, member of the Philadelphia Bar. (Philadelphia: J. B. Lippincott & Co. 12mo, pp. 454. 1880.)—This is a thoroughgoing book. "The design is to show that the very same facts which Darwin confesses his inability to explain, yet upon which he relies to sustain his theory, may be explained in a way which signally disproves the theory that man and other species of animal, and species of plant, were evolved from lower types." "All of Darwin's facts are taken for granted, as are all of his scientific factors. The same facts, however, are differently apportioned, with but a slight variation from Darwin's mode of distribution of them." This new reading of the facts which Mr. Darwin has laboriously accumulated has resulted in two discoveries: one of these reverses the common estimate of Mr. Darwin's character, the other reverses his theory.

The first discovery is that Mr. Darwin cannot be the ingenuous and candid person he has had the credit of being. He "confesses, how frankly we do not know" (p. 43). A few pages farther on we are told of something which "might suggest to the reader that Darwin, in being so complacently content with his ignorance of any cause for variation, was governed by the fear that, if he evinced any great solicitude to find a cause, the cause might be only too ready in forthcoming, to the signal discomfiture both of himself and his theory." On p. 66 the author "cannot refrain from delicately intimating that either a dim or a well-defined consciousness" that something which Darwin well knew "would sound the knell of Darwinism, alone prevented him from disclosing" the fatal fact. Darwin "has settled in his own mind that all the improvements which arise are due to reversion," though he says the contrary, having, "to all seeming, thought it discreet" to say, in short, the opposite of what he believed; and when Mr. Darwin refuses "to explain the variations by means of reversion" Mr. O'Neill says he does it with a coolness "most unique," which is certainly true if he all the while believed the opposite. In similar taste Mr. O'Neill gets up an imaginary argumentation (pp. 75–78), at the end of which "Mr. Darwin . . . departs to assure his friend Tyndall that his theory about 'giving the religious sentiments of mankind reasonable satisfaction' is altogether utopian."

The author is a member of the Philadelphia bar—we judge one of the younger, from these and other specimens, and from the exceeding cocksureness of the whole treatise. We can understand the old counsel's advice: "A bad case; abuse the plaintiff's attorney"; but we do not understand why a lawyer bringing a civil (?) action, with perfect assurance of a verdict, should think it needful to abuse the defendant personally. Moreover, the whole *raison d'être* of the book is in the other discovery, namely, that what is called variation is reversion, that in all variation there is no acquisition of something new but a recovery of characters which the species once possessed and had lost by degradation. Now, a less modest man than our author would have taken credit to himself for this discovery, the illustrations of which fill the volume; but instead he ingenuously awards to Mr. Darwin the credit of having found it out, and the blame of having tried to conceal it for a sinister purpose.

We like to think fairly well of our fellow-creatures, both for sense and honesty; so, as it is evident that Mr. Darwin had pondered this matter of reversion, and explained a good many things by it, we would suggest a possible reason (over and above the assigned one that it would have spoiled his theory) why he did not adopt the doctrine that "the variations or improvements in each species are limited in number and kind to the number and kind of the characters previously lost by such species under nature"; and that, "although the type is susceptible of modification, in countless ways," this is "only at the cost of evil results which soon lead to the sterility, lessened constitutional vigor, and consequent extinction of the line of individuals which have so departed from the true moulds of their respective species." For Mr. O'Neill's hypothesis contemplates throughout organic nature either a degradation which exceeds the reversion, and so will end in the evils aforesaid, or else a reversion which will in time mainly repair all the degradation, and so make the future a complete reproduction of the past. Mr. Darwin, not being a pessimistic philosopher, but quite the contrary, would reject the first alternative—namely, that the organic world is tending from good to bad; also the second, on the ground that, even if made out, all the questions he is considering now would be merely transferred to an anterior state of things. For Mr. Darwin to ascribe all change to reversion would be laying himself open to the same criticism which a Kentucky hunter passed upon a preacher who had argued round in a circle—viz., that he came out of the same hole he went into.

Reversing the ordinary view, our author insists that the prototype of each species was an organism of a higher state of development than the type of such species as now found under nature. Adverse conditions entailed the suppression of the characters, and the mere restoration of the favorable conditions secures their redevelopment. With him all reduction from the typical number of parts and suppression of function counts as a degradation of the animal or plant, and their recovery as an improvement, which favorable conditions may secure. In the past—however it may be in the future—circumstances have largely wrought degeneration, and every abortive organ is a specimen of it. Still Nature endeavors to recuperate and restore. Under this view the reproduction occasionally met with of one of the suppressed toes of a horse into an accessory hoof would be an advantage rather than a blemish, and, of course, in the good time coming when all abortive organs are to be restored, horses should have at least their three toes again, and—as has more than once happened—lactation may again come home to men's business and bosoms.

Cincinnati's Beginnings. By Francis W. Miller. (Cincinnati: Peter G. Thomson. 1880. Pp. 235.)—This book is rather a history of the "Miami Purchase" than of Cincinnati. Of the nine chapters of the body of the work only the two last may be said to be devoted to "Cincinnati's Beginnings." The first seven chapters give a pretty full and connected account of the origin and progress of the first attempt to plant settlements of white people in what was then known as the "Miami country." The originators of the scheme (a vast land speculation) were John Cleves Symmes, of New Jersey, and Benjamin Stites, of Redstone, in western Pennsylvania. In 1787 Symmes (having associated with himself Jonathan Dayton, also of New Jersey, and perhaps others) made application to the Government, in his own name, for the purchase of the entire territory lying between the Little Miami and the Great Miami Rivers, supposed by him to contain about two million acres of land. A contract was finally closed, October 15, 1788, for one million acres. The quantity of land between the two Miami Rivers proved to be much less than was at first supposed, and Symmes never paid and received patents for more than about six hundred thousand acres. Symmes removed at once (1788) with a number of followers to his purchase, settling at the point to which he gave the name of North Bend, near the

mouth of the Great Miami, where he undertook the management of the speculation for himself and his associates. Here he laid out the streets and squares of a great city, in which he foresaw the coming metropolis of the West. The book gives a history of his struggles and embarrassments in the management of the large interests which he had charge of. But the object of his great hope failed entirely.

The tract of land on which Cincinnati was originally laid out had been previously sold by Symmes to three other speculators—Matthias Denman, of New Jersey, and Robert Patterson and John Filson, of Lexington, Ky. In consequence of the death of Filson, Israel Ludlow, a surveyor, became a partner with the other two before any settlement on the tract had been effected. Ludlow and Patterson, with a company of some fifteen others, who had been got together at Limestone (now Maysville), reached the ground (opposite the mouth of Licking River) about Christmas, 1788, and the settlement was commenced. Log-cabins were built on lots given to actual settlers, and the streets and squares of a town were surveyed and marked under the direction of Ludlow, who was the only one of the proprietors who determined to stay and cast his lot with the new adventure. In the next year the Government built a fort here (Fort Washington) and garrisoned it with troops for the protection of the new settlements. With this advantage, added to the natural superiority of the location over that of any other on the entire river-front of the purchase, Cincinnati rapidly outstripped North Bend in growth and importance. Its only other competitor was Columbia, at the mouth of the Little Miami, a town begun about two months before the settlement at Cincinnati. The proprietor of Columbia was Benjamin Stites, who had contracted with the Symmes associates for about a thousand acres and had planted at that point a colony considerably larger than that led by Patterson and Ludlow. A high flood in the Ohio River in December of the same year demonstrated that the site chosen was too low for a town.

This book furnishes little that is new in the way of history in relation to the "beginnings of Cincinnati." The leading facts given by Mr. Miller have long ago appeared in print in one form or another, but it is well to have them gathered up. The work of the author, embodying his materials in a connected narrative, is not, however, without its blemishes. His sentences are remarkable for their great length and involved construction, and his style is frequently disfigured by the faults of an ambitious diction. The larger part of the book, and perhaps the most valuable as *material* for history, is an appendix, filling 121 pages of the 235 which constitute the entire work. This is made up of twenty-eight letters and extracts of letters, most of them from Symmes to his associate, Dayton, in New Jersey. A few are from Dayton to Symmes. They all relate to the complicated affairs of the new purchase and its management, and now for the first time appear in print. The printing, paper, and binding are of the very best, and are a credit to Cincinnati book-making.

Les Peuplades de la Sénégambie. Histoire, Ethnographie, Mœurs et Coutumes, Légendes, etc. Par L.-J.-B. Bérenger-Féraud, Médecin-en-chef de la Marine, etc. (Paris : Ernest Leroux.)—The tradition that the Senegambian coast was first discovered by the Normans of Dieppe in 1364, has sufficient probability to justify the French in regarding their portion as the oldest of their foreign possessions. The occupation has been far from continuous, and, in fact, the colonies on the Senegal were contemporaneous with Plymouth Colony in Massachusetts Bay. Much has been written about the littoral settlements, which have been involved in all the European wars of the past three centuries, and about the natives of the territory lying between the Senegal and the Rio Nuñez ; but the interior of this vast country is still very imperfectly known, and Dr. Bérenger-Féraud found nothing systematic or tolerably complete concerning the aborigines in more or less constant and immediate contact with the *Gouvernement*, and no study of them with a view to the future expansion of the French dominion. This last is the aim of his book, which, with characteristic orderliness, takes up the several tribes and treats them after one plan, such as is indicated in the sub-title. For the most part he describes them from personal observation, but to some extent relies upon the descriptions of other travellers. His narrative confirms the reputation which the negroes of the west coast enjoy of being among the most interesting and promising of the multitudinous peoples of Africa. He is even at pains to compare them with our European ancestors before the invasion of Cæsar, and indeed long after, and recommends the study of them as an aid to the historical imagination.

There pass in review before us first the Ouolofs or Yolofs, who inhabit the alluvial plains of lower Senegambia, from St. Louis of Senegal to Goree, and are most closely identified with the French colonists, having proved brave and docile soldiers, loyal, stoical under privations, good pupils, skilful artisans, exact accountants, shrewd traders—the counterpart of the Western European of the ninth century. These are the Yolofs of the town, who, whether Catholic or Mussulman (marabouts), wear the gris-gris or amulets, consisting generally of a written verse of the Koran—often the only costume of children. The rustic Yolofs are, in spite of their religion, great drunkards, improvident as to food and clothing, polygamists with easy divorce. They have one excellent custom, that over a dead body before burial any one can speak his mind aloud about the deceased, whether for praise or blame. Their *damel* or chief is chosen by four headmen of villages, who must be paid roundly for the service—a simple mode of election to which, it will be seen, Messrs. Cameron and Conkling have no patent right of invention.

When we leave the level regions of the coast the most interesting people encountered is the Peuls or Foulahs, of seemingly Indo-European descent or affiliation, Mahometans, shepherds and cultivators of the soil, among whom the condition of women is much ameliorated, the slave who bears a child to her master is thereby freed, and the house-born slaves form part of the family. Superior to the Yolofs also are the Saracolais or Bambouks, agriculturists and travellers who occasionally reach St. Louis or Goree, of more than ordinary gentleness and chastity, observant, bright, and highly capable of civilization. Their legends, of all those related in this book, exhibit the greatest refinement. The Mandingos have an instinct for commerce, and are more enterprising in the pursuit of it than the tribe just named. They act as intermediaries between the traders of Senegal and Central Africa, and move in caravans. They sometimes till the soil and weave the cotton that they raise, and they are also gold-miners. They have the hospitality of their religion (Islam), their women are not mere beasts of burden, the descent of their rulers is even through the female line, and their music and musical instruments surpass all others. The Bambaras have the military spirit and discipline, and slash their cheeks and temples as a sort of tribal distinction ; they have mercenaries to let, and are the Swiss of this part of the Soudan. They maintain a highly organized system of slavery (which means that the institution has its mild sides), and though the wife is the captive of the husband she is said to have no little voice in the affairs of the tribe. They have gold in plenty. Under French rule they make good citizens, and have a distinct rôle in our author's scheme of a progressive military frontier. The Twocolors he likens, in their adaptability, to the Auvergnat or the Savoyard, but their temper is far less amiable. To better themselves they essay willingly long adventures from home. They are proud, conceited, bellicose ; do not submit to discipline ; are strict Mussulmans, but prefer monogamy ; are a growing community and may give trouble to the French. Of the tribes south of the Gambia we need not speak in detail. They have not yet been rescued from fetishism by the movements of population caused by the conquering spirit of Mahometanism, yet wear promiscuously the gris-gris and the Portuguese crosses and medals, with a freedom from prejudice which almost does credit to their intellect.

To the chapter on the Moors of the right bank of the Senegal, a kidnapping and marauding community, only redeemed by their one industry, the gathering of acacia gum, we must refer the reader directly, as well as to the concluding retrospect, in which the opportunities for the growth of the colony and the extension of trade are discussed with much ability. The work is greatly enlivened by the introduction, in connection with every tribe, of one or more legends, historic, mythological, or moral, some of which suggest a European origin, while others have the genuine stamp of first-hand. They would, if collected by themselves, make a very amusing contribution to folk-lore.

A Year in a Lancashire Garden. By Henry A. Bright. Second edition. (London : Macmillan & Co. 1879.)—There is no pleasanter writing than that of a man of taste about his familiar occupations and amusements, and there is no out-of-doors occupation or amusement to which men of taste have in all ages and countries devoted more of their leisure than that of the cultivation of flowers. It would not be at all too fanciful to say that the progress of civilization is marked by the development of the art of gardening, and that a period in which the cultivation of flowers is brought to its highest perfection will also be one in which the liberal arts and the sciences bring forth their fairest fruits. Indeed, Bacon has refined on this idea by the suggestion that gardening is an art later in development and greater in perfection than even architecture. Mr. Bright's little book is modestly styled by the author a "collection of notes," the result of "a year's work in a garden and of those associations

which a garden is so certain to call up." It was originally privately printed, but the demand for it soon outran the supply, and Mr. Bright was fairly forced into authorship against his inclination. We are glad that his reluctance was overcome, for it would have been a shame that so pleasant a volume should have been lost to the world. The "something private and personal about the whole affair" which caused him to shrink from making his notes into a book, is just what gives them a peculiar charm and naturalness. The only fault we have to find with him is that he has not written more, though, no doubt, it is partly because he has devoted more time and thought to his subject than to the idea of writing about it that everything he says is so well said. His English is pure and simple, but very graceful. It is impossible to quote it, because the book has an atmosphere of its own which gives a peculiar quality to the language that is lost if isolated fragments are read separately. Beginning with December, Mr. Bright carries his readers through the round of the year, month by month and season by season, each season bringing some new plant or flower to perfection, and furnishing an opportunity for literary observations and quotations by the way. Of the horticultural value of the notes it is unnecessary to speak, for though the advancement of horticulture was Mr. Bright's main object, it is not by any means the *cognoscenti* in flowers alone who are concerned in the result. Pleasure in reading the book is compatible with a profound degree of original ignorance on the subject of flowers.

Taxation of Railroads and Railroad Securities. By C. F. Adams, jr., W. B. Williams, and J. H. Oberly, a Committee appointed at a Convention of State Railroad Commissioners, etc. (Published by the *Railroad Gazette*, New York.)—Of the forty-nine pages which compose this interesting pamphlet only eight are assigned to the discussion of the principles of railway taxation, the remainder embracing a digest or summary of the laws relating to this subject now in force in the several States of the Union, and also in Canada, England, France, Belgium, Holland, Germany, Russia, Switzerland, and Austria-Hungary. No such comparative exhibit has, we believe, ever been made before. Consequently, from the point of view of a mere compilation, it is of the greatest value to those legislators who care to understand a subject before voting upon it. Direct taxation is perhaps the particular topic of human concern in respect of which this country is most deficient in knowledge. This is proved by the immense contrariety of practice which prevails in the different States. "There is no method of taxation," says the report, "possible to be devised which is not at this time applied to railroad property in some part of this country." As usually happens where guess-work is substituted for scientific knowledge and tests, the worst possible method is the one oftenest adopted, with local variations according to the original bias of the legislature. To enumerate these local variations would require more space than we can allow even to so tempting a mass of folly. As a general rule the attempt is made to apply the principle of "equal taxation of every species of property," and the divergence begins with the definition of "property," and widens with that of "equal taxation." The question, How shall the State *collect* from the persons and things moved by railroad (*i. e.*, from the receipts; there being no other fund from which taxes can possibly be paid) a fair share, or some share, of the amount needed for the expenses of State and municipal government? has seldom engaged the attention of American legislative bodies. Instead of it, they have been enquiring, How can we *assess* railroad property—*i.e.*, how can we arrive at a gross sum, an annual percentage of which shall be exacted for the expenses of government? After due examination of all the methods in vogue, including those of the principal countries of Europe, the Committee considers the system of the State of Michigan the best, the most readily understood, and hence the easiest to substitute in place of other systems. This provides that the real estate of railroads lying outside of their right of way, not exceeding a certain width, shall be taxed as other real estate; that they shall pay, in addition thereto, a certain percentage of their gross mileage receipts according to the number of miles operated by them within the boundaries of the State, and that these taxes shall be in lieu of all other taxes upon the property, capital stock, or evidences of indebtedness of railroads. This is, perhaps, too simple to become immediately popular, but since it is a system actually in force with good results in one of the States of the Union, it is not exposed to the practical man's objection that it is too theoretical to be of any use.

With General Grant in the East. By John M. Keating. With illustrations. (Philadelphia: J. B. Lippincott & Co. 1879.)—Mr. Keating accompanied Gen. Grant's party through the East, and this book is made up of the letters written by him to the Philadelphia *Evening Telegraph* during the trip. In the preface he disclaims all pretence to having written a book of travels, but says it is simply intended to be "corroborative of the beautifully-written reports of Mr. Young" which appeared in the New York *Herald*. In spite of this disclaimer, the greater part of the book consists of an account of what he saw superficially and had superficially explained to him, with occasional mention of Gen. Grant and the receptions given him. Only in the account of their visit to China do Gen. Grant and his receptions become prominent. The purpose of the book, we are informed, is to show the good-feeling towards this country in the different places visited, as evinced by the receptions given to Gen. Grant; but all this plays so small a part that the reader would never suspect it. It is very much what Mr. Keating would have written to the *Telegraph* if he had taken the trip without Gen. Grant, though, of course, he had unusual opportunities for observation in many ways. As the letters appeared originally, they were probably interesting enough; but we protest against the idea that because letters in a newspaper are readable they are consequently worth printing in book-form. Such an expression as "quite a go-ahead man" ought certainly not to have got further than the newspaper. We should suppose that the book would be bought mainly by those enthusiastic admirers who wish to complete their collection of Grant literature.

HISTORY OF AMERICAN POLITICS.

By ALEXANDER JOHNSTON, A.M.

16mo, 60 cents.

"This little book is in reality the history of Ameri[can] political parties from the foundation of the Government down [to the] accession of Mr. Hayes. . . . It would not be possible [to look] at the facts which are here accumulated, arranged in the [most] orderly manner, in a very clear and absolutely colorless [style], in a small duodecimo, without turning over at least a [dozen] larger works. . . . We cannot commend Mr. Johnston's [little] book too highly."—*The Nation.*

Cox's Popular Romances of the Middle Ages. Large 12mo, $2 25.

Mrs. Brassey's Sunshine and Storm in the East. With 114 illustrations and maps. 8vo, $3 50.

Escott's England: Her People, Polity, and Pursuits. 8vo, $4.

The Nation.

NEW YORK, THURSDAY, MARCH 11, 1880.

The Week.

THE President has sent in a message to the Senate, laying down the rule that the Canal must, when made, be under American control. If treaties with foreign powers, or rights of property or sovereignty, interfere with this control, they must be got rid of by "just and liberal negotiation." The needful protection to the capital invested in it must be given by the United States alone. The Canal will be "a great ocean thoroughfare" between the Atlantic and Pacific States, and virtually a part of the coast-line of the United States, and any other great Power would, under similar circumstances, "not fail to assert a rightful control over it." He therefore alleges that it is the right and duty of the United States to assert and maintain the necessary supervision and authority over the enterprise. This would seem, in plain English, to be an intimation that the corporation which undertakes its construction must be organized in the United States and come to terms of some sort with the United States Government, and he is not far wrong in alleging that this arrangement would be compatible with and "promotive of the widest and most permanent advantage to commerce and civilization."

M. de Lesseps has been before a committee of Congress, to which he explained at considerable length the comparative merits of the Nicaragua and Panama routes. The Panama Canal, he said, would cost $168,000,000, would take eight years at the outside to construct, would be fifty yards wide at the surface and twenty at the bottom, would be forty five miles long, and one hundred vessels a day could pass through it. The Nicaragua line, on the other hand, would call for the construction of a harbor at Brito, and would require either seventeen or twenty locks. Each lock would detain a vessel two hours, it would not be possible to send her through the line under five or six days, and not more than ten or twelve steamers could pass in a day; besides which the locks would probably be injured by earthquakes. The Panama route, too, had a good harbor to start with, and would use the bed of the Chagres River as part of the canal, and the extraordinary floods of the river would be held in check by an immense dam. He denied that any official control of the Canal by any Government was contemplated, and said the administrative headquarters would be wherever the majority of the stock was held—if in America, in New York; if in Europe, Paris.

The Supreme Court on Monday announced another very important decision affirming the constitutionality of the United States election laws, over which there has been so much bitter controversy. The decisions cover two cases, both petitions for writs of *habeas corpus* from State judges of election in Maryland and Ohio, who were indicted and convicted in the United States Court, in one case for resisting United States marshals and inspectors of election, and in the other for violating the State law in allowing the ballot box at a State election to be broken open after it had been sealed up. The Court holds that the Federal election law under which the marshals and supervisors acted is constitutional, and that the Circuit Court has jurisdiction of offences against it; and that the observance of State laws regulating the election of representatives is a duty owed by State officers to the United States, and their violation by such officers may be punished by the United States. Judges Field and Clifford dissented. We propose to speak more fully next week of the changes which these decisions and those of last week have wrought in the relations of the States to the general Government, or, at all events, in what has been popularly supposed to be such relations. These changes are important and far-reaching. The Democrats in Congress now, it is said, propose to surrender and vote the expenses of the marshals and supervisors, both for this year and the last.

The Smyth affair in Albany has taken a curious turn. Governor Cornell withdrew his name, last week, on finding that there was no chance of his confirmation, and it was supposed that he would, of course, speedily send in another name. Two or three days afterwards, however, the Albany *Express*, an assistant-organ, announced, apparently with authority, that he would not send in another name, but allow Smyth to hold over, as the law allows, until his successor was appointed, and thus secure him a prolongation of his tenure to the end of the Governor's term—that is, for three years. The announcement of this little scheme seems to have exasperated the Senate, and it is now made known that if the Governor does not nominate some one else within a reasonable interval Smyth will be removed, as the law also allows, by joint resolution, and in that case the filling of his place falls to the Legislature. The Governor's obstinacy is a very strange phenomenon, particularly as the Machine newspapers all over the State condemn it. It is probably an expression of what is strongest in him—his devotion to his chief in Washington, and his sense of the importance of keeping the Machine in good working order for the Presidential election. The general belief is that Smyth, besides being a good "worker," is able to extract money from the insurance companies for the campaign fund in a way which a new and inexperienced man would not find so easy.

The Governor's culpability is, however, in our view, not so very great after all. It was well known when he was nominated and elected that he was and had always been a "politician" in the lowest and narrowest sense of the term; that he had never given any thought in politics to anything but the "fixing" of primaries and conventions, and the use of offices to fill the party treasury and carry elections, and all this under the superintendence of a master or "boss." There was not the smallest reason for supposing that he would, if made Governor, in any way change his pursuits or interests or aims. He made no speeches or promises indicating anything of the kind. Nevertheless, he was nominated and elected on a platform which ridiculously subordinated State affairs to those of Mississippi and Louisiana. To secure his election under these conditions, and with full knowledge of his antecedents, two cabinet ministers came on from Washington to stump; the civil-service order was ostentatiously violated and his custom-house henchmen let loose on the country, and the bulk of the party supported him with heartrending appeals, on the ground that the American Union would be endangered next November unless he was made Governor of the great State of New York. He therefore very naturally feels that he is free to work his will with the State offices, and he is working so well that we venture to assert that there is now a corruption showing itself throughout the State administration which has not been witnessed since General Dix purified it after the expulsion of the Tweed Ring.

The Massachusetts "Young Republicans," as they call themselves, though many of them are as old, or nearly as old, as the Organ himself, held a convention in Boston on Saturday, the delegates numbering sixty in all, and after some debate, in the course of which the late circulars of the Independent Republicans of New York and of the Philadelphia National Republican League, published in our columns last week, were read with applause, they adopted resolutions which we print elsewhere. Ineffectual efforts were made by one or two delegates to have Mr. Blaine's name struck out from the enumeration of objectionable candidates. The Springfield *Republican* has published a biography of him which, if only half correct, makes him a curiously

inadequate person to set up either as a reformer or a Strong Man. He is simply thus far a Favorite Son and First Choice. Attempts to insert Mr. Edmunds's name as a desirable candidate were also happily defeated. It would be very injudicious for the Independents at this stage in their history to start "a boom" of any kind. Their aim ought to be to get a good candidate from the Republican Convention, and the best way to do it is to mention outright now the candidates whom they will not support. In 1872 and 1876 this threat would have been treated with ridicule and contempt; this year it will not be.

Apropos of the great danger of the coming Presidential election as described by Mr. Conkling, viz., that it will be so close that the Democrats will be able to throw it into the House, and there manage it to suit themselves, the following questions naturally suggest themselves to every enquiring mind: If you are afraid of a close election, why do you so eagerly press a candidate who will not, in all probability, command the full Republican vote? Why not select some one to whom there will be no moral objection within the party, and who will, therefore, without doubt carry *all* Republican States? Is it not treating the voters with disrespect to press on them a candidate who is likely to make the election close, and then use its probable closeness and the fact that he is a fighting man as reasons why they should choose him? Is there any reason in the world for supposing that any considerable body of Republicans want to see a fight over the Presidency, for the purpose of proving that General Grant is a "strong man"? Finally, how does a Strong Man frighten a Democratic Congressman? What does he do to him if he catches him?

The *World* has collected the "straw" votes for President taken on various occasions recently in the following colleges of the country: Harvard, Yale, Williams, Princeton, Trinity, Madison, Lafayette, Washington and Jefferson, Pennsylvania, Lewisburg, and Bates, and Phillips Academy at Exeter. The showing is in favor of Blaine upon the Republican side and of Bayard on the Democratic, 3,048 votes being thus distributed: Blaine, 871; Grant, 618; Bayard, 581; Sherman, 481; Tilden, 73; Garfield, 63; Washburne, 61; Edmunds, 52; Hayes, 50; Evarts, 26, and scattering. At Harvard, Bayard led over all, having 233 to Grant's 146, Sherman's 139, and Blaine's 76, and getting about one-fifth Republican votes as the candidate, according to the *Echo*, "not of the Bourbon Democracy, but of the Independents." At Yale the party seemed more harmonious, the figures standing: Grant, 213; Sherman, 205; Blaine, 163; Bayard, 82. The *World* extracts from the statistics the comfortable assurance that Tilden runs over five hundred behind Bayard, and calls upon "politicians with heads on their shoulders and brains in their heads" to "ponder the significance" of this circumstance. We fear, however, that whatever conclusion the Cincinnati Convention comes to, its decision will not be influenced greatly by the preferences of young men in colleges who are not yet voters.

Whatever opinion one may have of the merits of the Fitz-John Porter case, or of the legal powers of Congress in the matter of his rehabilitation, it must be admitted that the Advisory Board which has pronounced him both innocent and praiseworthy was composed of officers of the highest standing in the Army and in society. No judgment on a military question can be more trustworthy than that of Generals Schofield and Terry and Colonel Getty. It must be admitted, too, that they had before them a great deal of most important evidence which was not accessible when the court-martial sat seventeen years ago in the midst of the fierce excitement of the war. This evidence consists of new testimony both of Confederate officers and others, of Confederate reports, of accurate surveys of the battle-fields recently made, and of despatches from General Porter which have been hitherto suppressed, or, at all events, not produced by General McDowell. In fact, in any civilized society governed by the ordinary rules of morality, by the ordinary tests of credibility, and by the ordinary principles of enlightened jurisprudence, the finding of the Advisory Board would be and must be accepted as of the highest degree of moral authority. An appeal has, however, had to be taken to Congress, in order to give effect to the decision of the Board.

Congress, it may be said without disrespect, cannot, under the most favorable circumstances, be considered a judicial body. Acting on a question which has ever excited party feeling it is anything but a judicial body. Nevertheless, if both parties put forward their best men, even a case like that of Fitz-John Porter might be discussed, if not judicially, instructively, fairly, and in a manner to enlighten the public. The Democrats have done this. Mr. Randolph and Mr. Bayard are men who would be a credit to any party, and to whom men of any party must listen with respect. But what are we to say to the appearance on the Republican side, on a question of justice, of Messrs. Carpenter and Logan, both members of "the old set"? It is not possible to treat seriously General Logan's utterances on any subject, and yet his blatherskite harangue in the Senate has been prominently printed by leading Republican papers as a conclusive statement of the Porter case, and as a complete refutation of the report of the Advisory Board. Mr. Carpenter is an able lawyer, and his arguments against the power of Congress to undo the sentence of a court-martial and in favor of remitting Porter to the pardoning power of the President must be considered effective and weighty. But it was followed by a piece of political invective against Porter, and he wound up consistently, but amid the laughter of the Senate, with nominating General Grant for the Presidency as the sole way of "ensuring a proper discrimination between vice and virtue," besides "fixing a proper punishment on disloyalty and holding rebellion in check."

Besides listening to the Fitz-John Porter debate, the Senate has done little beyond passing General Burnside's amusing bill to provide instruction in moral and social science in the schools of the District of Columbia, under the direction of the Commissioner of Education, and a bill of Mr. Conkling's to protect from forfeiture vessels used as common carriers, when the breach of the revenue laws attempted by means of them proves to have been not within the cognizance of the master or owner. In the House Mr. Wood has been permitted to explain the new Funding Bill, and has received a sharp intimation that the inaction of his committee in regard to the tariff is not acceptable to a possible majority of the House. By far the most important action, however, has been the passage of a bill amendatory of the Act of March 3, 1875, regulating the removal of cases from State to Federal courts. Its effect is not only to restrict the facilities afforded by that act, but, as one of its general supporters admitted, to alter the Judiciary Act of 1789, by limiting the original cognizance of the Circuit Courts in civil suits, whether at common law or in equity, so as to exclude those in which a State *corporation* is a party, except when arising under the patent or copyright laws. The vote to strike out this provision was yeas 35, nays 95. The tendency of the bill is still further illustrated by the fact that it was advocated at length by Mr. Townshend, of Illinois, who has a bill of his own pending to repeal utterly the law authorizing removals, and whose grievance is the encroachment of the Federal upon the State judiciary. The bill is partly a Southern and partly a Western measure, and, as we showed in regard to Mr. Townshend's bill a year ago, is passed in the interest of repudiation, private and municipal. It does not go so far as he would have it, but it is for him a "step in the right direction."

The excitement in San Francisco has increased during the week. General McDowell has had the arms of the Second Regiment of militia removed from the various company armories and deposited in the central police station, with a guard over them; the First Regiment armory closely guarded; and, under instructions from Washington, is collecting at San Francisco all the available

troops in his division. The militia object to being treated with the suspicion which they think the removal of their arms indicates, but have been assured that the movement is purely precautionary—as indeed there is no reason to doubt that it is—and implies no reflection on their loyalty. The vigilance of the Government will not be in any degree relaxed, it is reported, until the constitutionality of the anti-Chinese employment law shall have been decided and the question of condemning Chinatown settled. Kearney's people confine themselves to the posting of blood-curdling but apparently innocuous placards. As one of the papers puts it, however, "if the time ever comes when it must be settled whether the city must belong to the men who built it or to Kearney and his tramps, God help Denis—that's all." A beginning of organized defence of order has been made in the shape of an address to the public by a "Citizens' Protective Union," without signatures, but said to emanate from a strong body of property-holders.

The imports at New York alone last week amounted to the unprecedented total of $13,878,046, which calls to mind the change that is going on in our foreign trade. During the first seven months of the fiscal year the imports for the whole United States exceeded those of the corresponding time last year by $162,507,893, while the exports in the same time gained only $62,228,830. This means that the foreign trade of the country is steadily, if not rapidly, drifting into a condition when gold exports will again be forced. During the week the foreign-exchange market has advanced another point towards the rate at which gold must be shipped, but it does not necessarily follow that much gold will be exported before summer. Before specie payments were resumed gold exports were of less consequence to the currency than they would be now, for then gold was, in fact, only a bankable commodity, while now it is part of the circulating medium. Moreover, there were so few silver dollars then in existence that there was no danger of the establishment of the silver par, which is the changing bullion value of 412½ grains of silver—worth to-day about 87½ cents. Not only does the enlarged volume of mercantile and manufacturing business all over the country—and the volume of business is nearly double what it was a year ago—keep currency from returning to New York, but there is still a drain upon this city for bank and Treasury notes. The result is falling bank reserves at a time when they should be rising, and a loan market dependent almost entirely upon the Treasury. Last week the Secretary bought only $2,516,000 bonds for the Sinking Fund, and the currency paid out therefor, together with the payment of March interest, was not enough to prevent the bank reserve from falling $1,500,000. The Stock Exchange apparently closes its eyes to the money market, and continues to "boom" one stock after another, and not infrequently stocks of companies which have hardly emerged from bankruptcy. It is true that railroad earnings were never so large as now, and that there is some foundation for a substantial improvement in railroad securities; but prices are "boomed" unreasonably, and it may be said dangerously. The price of silver in London, after falling to 51⅛*d.* per oz., advanced to 52⅛*d.* and closed at 52⅛*d.* The "buzzard dollar" at one time had a bullion value of as little as $0.8623 and at another of as much as $0.8817.

From Russia the only news is of arrests, trials, searches, and investigations. The Emperor is closely guarded in all his movements, and the palace converted into a huge prison. The investigations have apparently lighted on a good deal of strong proof of what the late attempts on the Emperor's life have only too plainly indicated—that the Nihilists have had disciples or sympathizers near his person, through whom minute information about his habits and movements was always attainable. That the conspirators are not cowed is shown by another attempt at assassination—this time on the new military governor of St. Petersburg, General Melikoff. He was shot at at close quarters in alighting from his carriage in a crowded street, the ball going through the folds of his cloak. The assassin, a converted Jew, was instantly seized and hanged the next day, but met his fate with calm, and even contempt. The Nihilists still continue to warn the authorities of their approaching doom. Hartmann, whose extradition was asked for from the French authorities, on the ground of complicity with the Moscow attempt, has been refused for insufficiency of evidence.

The announcement of the dissolution of Parliament, made in the English House of Commons on Monday by the Chancellor of the Exchequer, appears to have taken all parties by surprise, long as it had been looked for. The belief had lately gained ground that the Ministry would wait for more good luck before making an appeal to the country. But the dissolution is to take place at Easter and the new Parliament will assemble early in May. The ostensible and probably the real reason is that the certainty that dissolution would come within a year and might result in a change of ministry is weakening the hands of the Government in their foreign relations, and it is therefore desirable to hear from the country as soon as possible. The estimates will now be presented, the necessary legislation for the relief of Irish distress having been passed.

The Liberals profess to receive the news with joy, but it must be admitted that their chances do not seem to be as good as they did three months ago. The defeats in Liverpool and Southwark, particularly the latter, go to show that the foreign policy of the Government has a stronger hold on the country than it was supposed to have. It even begins to be doubted whether Mr. Gladstone can carry Mid-Lothian, owing to the great manufacture of "faggot votes" carried on by the Tories. The Premier has issued a sort of manifesto, in the shape of a letter to the Duke of Marlborough, the Lord-Lieutenant of Ireland, in which he gives what would here be called "the key-note of the campaign"—a strong and meddlesome foreign policy and resistance to Home-Rulers. In the canvass it will probably be maintained that the Liberals are encouraging the designs of the latter. The opinion of the best observers in England is, we believe, that the Liberals will gain some seats in the election, but not enough to deprive the Ministry of a working majority, and there are some fears that the two parties may be so evenly matched that the Home-Rulers will hold the balance of power. Out of this there would come much trouble and no little political demoralization.

The famous Section 7 of the Educational Bill has been defeated in the French Senate after one of the longest and, in some ways, ablest debates that have taken place in that body, Jules Ferry in particular, the author of the bill, having distinguished himself by a speech which extorted admiration even from his enemies, and in which he made a most effective assault on the Jesuit teaching. It is at this order that the section is more particularly aimed in forbidding teaching by members of religious orders unrecognized or unauthorized by the law. The Jesuit order is forbidden in France, but the law has long been allowed to remain a dead-letter. The Minister, in spite of the powerful defence he has made, both in the Senate and the Assembly, has, however, been weighted heavily by the opposition of many moderate Republicans of high standing, such as Dufaure and Jules Simon. It is now announced that in consequence of his defeat he has resigned, thus furnishing another striking illustration of the novelty of the kind of responsible ministry which the French are evolving, and on which we commented some weeks ago. They seem, in fact, to be entirely giving up the principle of united responsibility, which is an essential feature of the English system. Each minister, apparently, carries his own burdens, and, if he breaks down, goes out of the Cabinet alone, as he might do here. How it will work in the long run remains to be seen. It may operate to prevent frequent Cabinet changes; but, on the other hand, it may enable a factious opposition to attack a ministry in detail with an effectiveness which would not be attainable if the Cabinet stood or fell together.

THE INDEPENDENTS AND THE PRESIDENTIAL NOMINATIONS.

THE malcontent Republicans—"Scratchers," "Independents," or whatever one pleases to call them—in this city and in Boston have named certain Republican candidates for the Presidency whom they will not support, and in Philadelphia they have described such candidates in terms which leave no room for mistake about their meaning. As the Independents will, under the most favorable circumstances, cast but a small proportion of the total Republican vote, their undertaking to reject in advance the possible choice of the convention naturally strikes some of those who still retain the older traditions of party organization, as a very gross impertinence. There was a time when the nominating convention was, in fact as well as in theory, a deliberative body, to which members came, not without bias or preconceived opinions, but without any settled plan of action, and in that condition of persuadableness by discussion which alone makes deliberation possible. We do not say this lasted very long, but an intermediate state, in which things were partly "fixed" *before* the convention met and partly left to be fixed *in* the convention by comparison of opinions, did last down to the war. The convention which nominated Abraham Lincoln was probably as deliberative as any large political assembly of the kind can be in the existing state of human nature—that is to say, every delegate who went there was sure of finding that the work of the convention had not been wholly or in the greater part irrevocably cut out for it, and that his speech or vote might still exert some influence on the final result. On this state of facts grew up the party usage which makes it improper for members of the party who mean to send delegates to it, or to go to it as delegates, to attempt by public action to limit its field of choice in advance, by announcing that they are opposed to the nomination of this or that person, or by threatening to bolt the ticket if any such nomination is made.

What has brought about the present crisis in the Republican party is, however, the fact that the nominating convention has been since the war rapidly losing all the characteristics of a deliberative body. The deliberative function has been transferred from it to the State conventions, which send the delegates and instruct them, and from these conventions lately to the primaries, and finally from the primaries to the "pre-primaries" or secret caucuses of the "workers," by whom the business of the primaries is arranged beforehand. So that when a convention meets now the chances are that a delegate who goes there to deliberate may find that there is nothing left to deliberate upon, that the result has been determined out-of-doors, and that he is, owing to his apparent want of astuteness and perspicacity, a somewhat ridiculous object to his brother-members. In fact, it may be said roughly that the work of discussing the candidates for the Presidency is now done in the newspapers, and in the course of the preparations made for the State conventions half a year before the Presidential Convention meets. This year the work has begun earlier than ever before, and the State conventions have been held in New York and Pennsylvania earlier than ever before. The friends of the more prominent candidates have, in fact, been busy in direct preparation for the National Convention for nearly a year, and these preparations aim not, as one might suppose from some of the talk one hears, at making the deliberations of the convention full and free and judicial, but at leaving it nothing to deliberate about, and at confining it to the mere registration of a decision reached months before it met, so that any dissenter or malcontent who goes there with the expectation of accomplishing anything by his vote or speech may find himself powerless.

What is the best course of action for those who feel themselves defrauded of their legitimate influence in the party action by this situation is, as every one knows, one of the most difficult questions of the day. It seems at present as if the nominating machinery which was invented and put in operation in 1830, had grown much too ponderous and complicated for the use of a community so vast and busy as this of ours now is, and that something simpler, more direct, and less troublesome to work and keep clean must be substituted for it before long. It is not in cotton-mills and iron-works only that machinery becomes antiquated and has to be cast aside. But, pending the production of improved apparatus, it is clear that it would be childish for those who are dissatisfied with the present state of things to sit down under traditions which their opponents have utterly cast aside in practice. If the Independents were to sit silently waiting for the action of the convention, and ready to acquiesce piously in its decision, while their opponents were working night and day, and without the least concealment, to settle everything months before it met, as Mr. Cameron and Mr. Conkling have been doing, they would richly merit the ridicule which would assuredly be heaped upon them after the nominations had been formally made. The work in which the party managers are now engaged is that of anticipating the action of the convention for the benefit of certain candidates; that is, they are trying beforehand to make the choice of any candidate but that of A. or B. impossible, which of course means that they have thrown overboard completely the old party theory that the convention is a place to which men come open to conviction and prepared to modify their opinions by and through discussion.

The only feasible and the perfectly proper way of counteracting this is to work to make the choice of A. or of B. difficult. One kind of work is exactly as legitimate as another. If it be a violation of party traditions to announce beforehand that you will not, under any circumstances, support a certain candidate even if nominated, it is also a gross violation of it to pack the delegations so that no other candidate will have any chance of being nominated. In fact, in disregard of the party theory of nominations, all work intended to take from the convention its deliberative or judicial function stands on the same level—putting aside, of course, all questions of the comparative purity of motives and aims. It is just as lawful to seek to influence the convention by saying beforehand that Blaine or Grant ought not to be nominated as to seek to influence it by "fixing the primaries," and "instructing" delegations, so that there will be no chance of having anybody but Grant or Blaine to vote for.

Moreover, it is a mistake to suppose that any such outspoken declaration of hostility to particular candidates is at all likely, by irritating the convention, to defeat its object. Conventions are not irritable bodies, and that of Chicago will certainly not be *provoked* into nominating anybody. The first object of those who manage conventions is victory at the polls, and to this they sacrifice passion of every description. That Independent "impertinence" will betray them into reckless courses is a comic idea. They will weigh the "impertinence," like every other element in the problem, in the coolest way, and give just the amount of heed to it that its probable influence on votes in important States seems to call for. If they think it threatens them with the loss of no votes, they will not heed it at all. If they think it threatens serious defection in case certain persons are nominated, they will not nominate them. The last thing they will think of is getting angry over it. They will probably heed it more this year than they would ever have done before, partly owing to the demonstration afforded by the late State election in New York of the amount of damage even hastily-organized "scratching" can do, and partly owing to the fact that the election may this year be decided by the vote of a single State. The voice of the Independents is therefore more likely to be effective in the regular organization this year than it has ever been before, especially if it is not muffled or timid. What has hitherto made "the better element" in the Republican party so contemptible in the eyes of the regular managers has been their unshaken belief that its opposition was sure to collapse before election day. They do anything to gain their ends, while the Independents will only do some things, and nothing excites more hilarity or indifference in the "pre-primaries" than the halting or timid attitude of a reformer or "high-toned" man.

If the Independents, therefore, mean to accomplish anything

they must imitate their adversaries, first in finding out what they want, and next in pursuing it unflinchingly, without being evasive or mealy-mouthed. It is in this way that results are accomplished in business and politics and war. The notion that the Machine is to be overthrown and American politics purified by preaching sound doctrine to Satan and then helping him on with his pack, has the merit of simplicity, but hardly any other.

The following resolutions were adopted by the Massachusetts Young Republicans:

"First. We declare our adhesion to the principles of the Republican party. Especially do we urge the establishment of the public service on the basis of intelligence and good conduct; the maintenance of specie payments; the passage of laws depriving greenbacks of their legal-tender quality; the management by the States of their own affairs; the enforcement of all national laws, and the maintenance of equal rights throughout the country.

"Second. Earnestly desiring the success of the Republican party at the approaching Presidential election, we protest against the nomination of any candidate who is certain to lose the support of any important portion of the party. The decline of the Republican power from 1873 to 1875 showed plainly that the Republicans cannot hope for success while supporting candidates who, in office, do not uphold the principles the party has affirmed. It is our belief that to submit to such leadership is to invite disaster as well as to deserve it, nor can we be induced to support such leaders by the plea of the necessity of party success, for there are many Republicans whose record is free from any taint of personal or political corruption, whose fidelity to the principles above declared is proved, and whose fitness for the highest public office cannot be qualified. We therefore strenuously oppose the nomination of Ulysses S. Grant or of J. G. Blaine, since many considerations will lead large portions of the Republican party to vote against either.

"Third. We will gladly support any man who, like President Hayes, has shown in words and acts that he is in sympathy with the principles declared by us, and whose personal character is pure and above suspicion.

"Fourth. We heartily approve of the purposes and principles of the Independent Republican Committee of New York and the National League of Philadelphia, as explained in their recent circulars; and the executive committee are requested to correspond with those organizations, with a view to joint action in the future, if it should be desirable."

THE SECRET OF NIHILISM.

M. LEROY-BEAULIEU, who has, during the last two or three years, been contributing a series of very interesting studies on Russian politics and society to the *Revue des Deux Mondes*, makes in the number of February 15 an apparently valuable attempt to throw light on the most obscure question of contemporary politics, the composition and aims of the Nihilist sect—for sect, rather than party or faction, it seems to be. There have been before now many secret societies in various countries and at various times, seeking to accomplish political changes by acts of violence directed against the constituted authorities. In other words, political conspirators using assassination or arson or brigandage as means are nothing new. But we believe in all previous cases the conspirators have had behind them some well-known condition of public opinion, and have been the champions of some definite and easily-described form of popular discontent; and if not connected with a regular political organization have at least had in view the same ends as some large or small body of visible enemies of the Government. Those, therefore, who condemned the instrumentalities to which the conspirators resorted, as in the case of the Italian Carbonari, for example, or the Irish Fenians, had no difficulty in finding out what they sought, and in pointing to large numbers of peaceable and well-disposed citizens who shared their opinions to a greater or less degree. Who the Nihilists are, however; to what extent the Russian people of any class sympathize with them; what is the exact nature of the changes they desire to bring about; what they would substitute for the régime of which they apparently desire the overthrow; what principle or idea or motive it is which sustains them in the dreadful conflict which they are carrying on with the Government, and enables them, apparently without difficulty, to obtain the needed supply of agents of the most extraordinary fortitude and audacity, and to maintain their courage in the teeth of terrible punishment and frequent failures—are questions to which, up to the present moment, no satisfactory answer has come from any quarter.

Turgeneff's novels have made every one familiar with the prevalence of Nihilism among the young Russians of the educated class as a form of strong Pessimism, which, however, is no novelty. A sense of the vanity of all that exists, of all efforts, of all hopes, of all knowledge, of all fruition, of all human institutions and relations, is a mental condition by which the educated youth of many generations past has been more or less ravaged, and with which the world is now so familiar that it is frequently treated as one of the phenomena of physical immaturity and growth. But no western reader of Turgeneff's books a few years ago ever dreamed that we should witness in our time the conversion of this disgust with human society into a motive of action hardly less powerful, apparently, than that which sent the early Christians unflinchingly to martyrdom. The Nihilists, too, do not seem to have any founder or prophet; that character has been ascribed to Tchernytcherski, who has recently died in Siberia after eighteen years of exile; but his works contain little which is not found in those of Lassalle, and Marx and the English economists. In other words, he preached great social changes, but his new society was to be built on old foundations. He was, in short, little else than a somewhat mystical political economist of the advanced Socialist school. He, as well as the western reformers of the same type, would have used most of the existing social and political machinery in regenerating society. The Nihilists, on the contrary, as far as can be ascertained, insist on absolute destruction of everything that can be called a social institution—government, society, family, and religion—before they will even talk of the order which is to succeed. One of them was asked six or seven years ago what his doctrines were, and he replied, "Take the earth and heaven, church and state, take kings and Deity, and spit on them—that's our doctrine." Turgeneff relates that at Heidelberg, in 1865, a Nihilist paper was issued by Russian students there who had been expelled from their own colleges, which had for its motto: "I spit on all comers." This is not in Russian as strong an expression of contempt as in English, but it is sufficiently strong.

The rapid growth of this state of mind M. Leroy-Beaulieu ascribes to the vague expectation and unrest excited by the emancipation of the serfs and other reforms of the present Emperor, and to the great increase within twenty-five years of collegiate education in which literature largely predominates. That the reforms, thoroughly material though they were, should have led to wild hopes and stimulated social speculation among the classes which have leisure for it, is easy enough to understand. The same phenomenon has been witnessed elsewhere. The overthrow of the French monarchy produced a widespread and peculiarly vivid sense of the near approach of some sort of great social transformation, in which most of the more prominent existing miseries of human life would either disappear or be greatly mitigated. Great changes either in the distribution of property, or in the relations of men before the law, in fact, have always and everywhere had a strong influence on the nerves, either exciting or depressing, and have opened up large vistas either of possible increased misery, or of possible increased opportunity of enjoyment.

But there appears to be no evidence whatever that this influence of the reforms has reached the Russian peasantry. The possession and regulation of the common land in the village community called the *Mir* had made them familiar enough with changes in the ownership of land to prevent the emancipation from having in their eyes the character of a revolution, and they appear to be thus far completely untouched by the passion for social equality, so much so that the Nihilists have been unable even to make them comprehend it. M. Leroy-Beaulieu gives some amusing illustrations of the failure of their attempts at propagandism in this field. The peasantry are

not only unfamiliar with the nomenclature of European Radicalism, but they seem unable to lay hold of its fundamental ideas. Nevertheless, it seems possible that their familiarity with the process of redistributing landed property, which they witness in the *Mir* every year, might yet be made the means of initiating them into the mysteries of social revolution. Thus far, however, no impression whatever has been made on them by the Nihilists or any other body of malcontents. The Nihilists apparently get no recruits and no assistance from them. None of those arrested during the past two or three years have come from the peasant class. They have generally been students, or Government employees, or small shop-keepers, or traders, or old soldiers. The core of the movement seems to be composed of students, both male and female, in whose pessimism the recent reforms have sown the seeds of an immense and fanatical faith in the possibility of a sort of materialistic heaven on earth as soon as the ground has been cleared of existing institutions. And this faith has many of the characteristics of a religious enthusiasm of the old sort. Many of the young men and women on whom it has seized are known to have given up wealth and social position and luxury to become part of the people whose misery they expect to put an end to. They have made themselves laborers and artisans, and entered workshops on small daily wages, so as to have a full sense of the sorrows and privations of the people; and most of the propagandists of this sort are, as might be expected, women. In fact, it is among the women that the new faith shows itself in the strangest ways. They have furnished Nihilism with its most courageous missionaries and martyrs, and with the most audacious expression of its contempt for social conventions. Many of them have married while solemnly devoted to a life of celibacy for the mere convenience of being able to live and travel with a married woman's freedom, but without any intention of filling a wife's position. Solovieff, who made the first attempt on the Emperor's life, seems to have had a wife of this sort. On the other hand these marriages seem frequently to be made for the sole purpose of enabling the couple thus legally united to display their contempt for the institution of matrimony by the subsequent practice of free love. This use of the marriage contract has played a prominent part as an incident in a Nihilist novel by Tchernytcherski. Their readiness to put their own lives in peril of course makes the sacrifice of such other lives as seems necessary to carry out their objects a regrettable but not very serious feature in their work. They blow up the soldiers in the guard-house in order to get at the Emperor with as little hesitation as they would kill them in battle. They give their martyrs, too, a sort of poetic canonization, and preserve their memory in hymns of greater or less literary merit. The opinion of the western world—that is, of foreign nations—counts for nothing with them, owing to the deep-seated belief which has long pervaded the Russian educated class, and the counterpart of which may be found in our own Western States, that Russia is a peculiar country, which has nothing to learn from old Europe, and is destined to evolve a new social and political system of its own to which old Europe will make no contribution either in theory or practice.

This complete emancipation even of a small class from the dominion not only of religion but of all the received social morality, and of what is called the common sense of existing civilization, would a few years ago have been considered impossible. It is not surprising, therefore, that some observers should now pronounce it an epidemic disease, in the nature of hysteria, growing out of the unhealthy physical condition of the student or literary class in Russia, and the absence of any career for them calculated to maintain the proper balance of their faculties. But this will not account for the ease with which they make converts among persons without any tincture of letters at all, and command at pleasure, for the most desperate enterprises, agents drawn from various callings. The more probable explanation, if explanation it can be called, of the phenomenon is, that we are witnessing the display in a very striking form of some of the peculiarities of temperament of the Slav race, of which, in spite of the large space of European soil it has covered ever since the fall of the Roman Empire, but very little has as yet been known. But it is certain that there is no other great division of the population of the western world in which race characteristics have been preserved in such purity, which has been so little modified by crossing with other breeds, and in which the earlier founts of feeling and motive have been so little affected by modern civilization. The growth of the Russian Empire, which now furnishes the great mystery and marvel of recent history, has brought this race for the first time prominently into view, and it may be that Nihilism is but the first of the surprises which its full contact with the ideas of the older world has in store for us.

THE FUNCTION OF THE LYCEUM.

THE assertion that "the lecture business is played out" has been made so often during the past eight or ten years that the decline of the lyceum has been accepted as a fact by general consent. Yet we suspect there was never in this country so successful a season, from the lyceum point of view, as the present one; it is probable that never before were there so many lecturers "in the field" and so many lectures delivered. The lyceum has simply ceased to be the sensation it was, and is taking its place among other institutions of entertainment and instruction, so that we hear less about it than we used to do when it had burning questions to discuss and the papers reported it religiously and at length. It certainly has a place, in Anglo-Saxon communities at all events, and it would be idle to assume that it had forfeited it through its pretensions and what we may call its over-production.

The history of the origin and rise of the lyceum in America must be familiar to every one who remembers Mr. Wendell Phillips's lecture on "The Lost Arts," the introduction to which sketches with a very charming vivacity the beginnings of what Mr. Phillips regards as a great engine of civilization. During the war epoch, and for some time before and after, it enjoyed the vogue which the possession of a mission of necessity secured for it. The high pressure of that period was not only favorable to the production and popularity of such lectures as the vigorous military criticisms of Miss Dickinson upon General McClellan, but it gave rise to and kept alive an interest in all sorts of platform discussions, political, social, and literary. For a time, it must be acknowledged, "the business was overdone," and accordingly it fell into discredit. The ambition rather than the ability to "lecture" was the only stimulus of scores of estimable persons of both sexes who invaded the platform. What may almost be called a new industry, similar to that of the manufacture of sermons for country clergymen by London hack-writers, grew up; through the instrumentality of some clever writer or other the "Pearl of the Platform" or what-not was enabled to instruct "associations" throughout the country upon the true sphere of her sex or whatever subject she inclined to discuss. Public men in the intervals of Congressional sessions were glad to comply with the demands of the public for lyceum delectation. The late Mr. Sumner, we remember, talked for two hours on "Political Morality"; the dashing Kilpatrick told the story of the March to the Sea; the genial Mr. Cox explained "Why We Laugh." We are not sure that General Logan passed through the ordeal without paying the penalty of at least one lecture. Humorists sprang up as if from dragons' teeth sown broadcast. Every successful "local" or "paragrapher" followed in the illustrious footsteps of the lecturer on "The Babes in the Wood." Elocutionists and dramatic readers multiplied. Towns far beyond the confines of rural New England had their "courses," with prominent stars billed long in advance. There was in particular an extraordinary influx of foreign celebrities. Succeeding the experiments of Thackeray and Dickens came Edmund Yates, Justin McCarthy, George Macdonald, the late Charles Kingsley, Gerald Massey, Edward Jenkins, Froude, Tyndall, Huxley, Proctor, Wilkie Collins, Bradlaugh, and others, of whom, excepting the scientists, it is safe to affirm that either they had nothing to say or had no faculty for saying anything well. These disqualifications they shared with the great mass of our own platform orators. Indeed, the sole test applied in the solution of the great question "to lecture or not to lecture" concerned not at all the worth of the proposed lecture or the oratorical ability of the intending lecturer, but merely his personal celebrity of one sort and another. There came to be very little worth hearing in most lyceum deliverances, and that very ill presented; as Thackeray said of his own venture, the lecturer simply "went around the country exhibiting himself for so much a night."

This condition of the lyceum has, we suspect, been undergoing a very wholesome change within the past few years. Even lecture-com-

mittees, it is probable, have ceased to rely so much upon the eminence *per se* of a lecturer, and to trust more to his capacity to deal with a subject in the first place, and in the second to his capacity for dealing with it before an audience, in estimating the measure of his attractiveness. Public dinners, receptions, and so on, are, it may be said, recovering the ground upon which the lyceum encroached. But that the popularity of the lecture-course has lost seriously by the change there is no reason for believing. Its province is very clear, and it is manifestly well that its limitations should be understood and acknowledged. It may not be a great engine of civilization, or anything else to be heroically described; but in both popular instruction and entertainment it has a place which neither the pulpit, the press, nor the drama precisely fills. The *à priori* objections to it are obvious. It demands, or should demand, a high order of oratorical excellence in the lecturer, whereas it is plain not only that the majority of lecturers have no knowledge nor care for even the rudiments of elocution, but that it is generally useless to expect a high order of oratory in the absence of any "burning question." The slavery discussion, for example, may be said to have of itself bred orators; but upon many subjects wholly appropriate to lyceum treatment it is idle to expect eloquence, and the cultivated delivery which alone can replace it is rare and of slow growth. Moreover, if oratory be thus out of the question, it may be asked with some pertinence, Why should one depend upon a lecture for what he can get just as well in print? Why, for instance, should Mr. John Fiske ask us to listen to his admirable course upon American history, instead of saving our time and his by printing his lectures for us—save for the economic reasons, which he has, of course, an entire right to consider? The invention of printing logically extirpates all popular oral instruction that has not some oral merit which types cannot supply. Logically, one would say most lecturers should go the way of the rhapsodists and their successors. Nevertheless, in practice these objections fail, because the true reason for the existence of the lyceum is to be found in the necessities of audiences rather than in the perfectibility of the platform. People will go to hear lectures who will not read books. The class of men and women in New York to whom reading is a virtual impossibility is larger than most people have any idea of, we suspect. It is the class whose emblem is the gig, as Carlyle says—thoroughly respectable heads of families, whose children are fond of books, but who find the ordinary daily routine of business, however slight in itself, sufficiently wearying to conduce powerfully to repose very soon after dinner. It is much if such get through the evening paper. After that, at all events, there are only two resources open—the ordinary restorer of tired nature and social amusement. More or less social the character of the lyceum certainly is; and a great many men to whom clubs are a bore and reading a nuisance—it would, by the way, be a curious sociological enquiry to ascertain how much middle-aged reading is neglected on account of the mere awkwardness of eye-glasses—will more or less languidly enjoy absorbing from an evening lecture the information they would of themselves never have had the heroism to conquer. To such as these, and to the many others who go to a lecture as they would to a concert, the lyceum is a really important educator. Moreover, there are many topics which lend themselves to oral treatment far better than to print. There are many lecturers who, without any especial gift of oratory, manage to add a personal charm to what they have to say that is not the less important because it is as if inappreciable. Any one, for example, who has heard Mr. Emerson, who is no orator at all, will quite understand that; and there are, it should not be forgotten, a few lecturers who are cultivated orators, and who, in addition to the interest and value of what they have to say, are interesting and valuable for the art with which they say it—an art that Anglo-Saxon communities especially are in some danger of forgetting all about. But of celebrities, as such, the lyceum will do well to steer clear.

A FRENCH VIEW OF METTERNICH.—II.

PARIS, Feb. 20, 1880.

WE left the 'Memoirs of Metternich' after the marriage of Napoleon with the Archduchess Maria-Louisa. I have heard it said by some people that Metternich attributes to himself too much importance and too much foresight, but his official papers show that he was really a true prophet in politics. In the first week of October, 1810, he wrote that—

"In 1811 the material peace of the European continent will not be troubled by a new war. In the course of that same year Napoleon, after having augmented his own forces, will unite his allies with the view of attacking Russia and striking a great blow. Napoleon will open the campaign in the spring of the year 1812. . . . Armed neutrality will be the proper attitude of Austria in 1812. The issue of the eccentric enterprise of Napoleon will indicate the direction which we shall have to choose afterwards. In a war between France and Russia Austria will have a flank position, which will make her heard during and after the struggle."

This programme was executed to the letter. Metternich had studied Napoleon as a naturalist studies a new species; he understood the necessities of this strange character, which could not limit its action: if Napoleon was not the master of the world he could not remain the master of France. Let us come at once to the great dramatic scene, which is, so to speak, the culmination of the Metternichian policy. Napoleon has made his great Russian campaign, he has dragged half a million of men of all nations as far as Moscow; he has lost them in the snow-deserts of the north. He has not been discouraged; he has made new levies in 1813, and he has fought the allied armies of Russia and Prussia at Lützen and at Bautzen. His military prestige is still intact. What will Austria do? She has been biding her time; she has watched the momentous issue. Now the time is come when she must throw her sword in the balance of events. Russia, England, Prussia entreat her to join in the great alliance against the arch-enemy of peace, the modern Attila, the new scourge of God. Metternich is ready; he is determined to force Napoleon to peace or to side with the allies against him. Napoleon receives him near Dresden, at the Villa Marcolini. The history of this interview is perhaps the most extraordinary page of history which has been written in our time. M. Thiers had had the good fortune to be allowed to read this chapter of the 'Memoirs of Metternich' before he published his 'History of the Empire'; he tells faithfully some of the incidents of the interview at Dresden: but his is only a second-hand account, and nothing can equal the effectiveness of Metternich's own story.

The Emperor received him with dignity; his hat was under his arm, and he carried his sword. After a few formal enquiries after the health of the Emperor Francis he said abruptly:

"So you want war; well, you shall have it. I have destroyed the Prussian army at Lützen, I have beaten the Russians at Bautzen; you will have your turn. I give you rendezvous at Vienna. Men are incorrigible; the lessons of experience are lost upon them. Three times have I re-established the Emperor Francis on his throne; I have promised to remain at peace with him as long as he lives; I married his daughter. I said to myself then, 'You are committing a folly.' I regret it now."

At that time Metternich was conscious of all his advantages. Napoleon was beside himself; he was pushed on by his evil genius; he was, so to speak, not free. Metternich had seen, on his way, the look of uneasiness and inquietude of all the French generals. The Prince of Neuchâtel (Berthier) had whispered in his ear in Napoleon's ante-chamber: "Don't forget that Europe wants peace, especially France." Napoleon's outburst made him feel how strong he was himself. "At this decisive moment," says he, "I looked upon myself as the representative of the whole European society. May I say it?—Napoleon seemed to me small." Metternich gave Napoleon to understand that the time had come for him to make sacrifices if he really wanted peace. "What," says Napoleon, "do you want of me? that I should dishonor myself? Never! I shall know how to die, but I shall never give away an inch of territory. Your kings, born on the throne, can be beaten twenty times and always go back to their capitals; I cannot, for I am a *soldat parvenu*." He then explained that he had never been beaten by men; in Russia he had only been beaten by the elements. He still had a fine army; he did not fear even a coalition. He explained to Metternich that the Austrian army was not strong enough; he knew to a man how the Austrian regiments and corps d'armée were composed. Metternich in his turn said that the French army was only so numerous because the Emperor had been obliged to anticipate his levies; he had seen the French soldiers on his way; they were children, and what would happen if this army—the last army of France—suffered a reverse?

"At these words Napoleon was carried away by his rage; he became pale, and his features were contracted. 'You are not a soldier,' said he rudely, 'and you don't know what passes in the soul of a soldier. I have grown up on battle-fields, and a man like myself cares little for the life of a million of men.' Thus saying, or rather screaming, he threw in a corner of the drawing-room the hat which he had hitherto kept in his hand. I remained calm, leaning against a *console* between the two windows, and, profoundly moved by what I had heard, said: 'Why do you speak thus to me? Why make to me, between four walls, such a declaration? Let us open the doors, and make your words heard from one end of France to the other. The cause which I represent will not suffer by it.' Napoleon, containing himself, then uttered in a calmer tone these words, which are not less remarkable than the preceding ones: 'The French cannot complain of me; to spare them I sacrificed the

Germans and the Poles. I lost three hundred thousand men in the Russian campaign, but in the number there were not more than thirty thousand Frenchmen—' 'You forget, sire,' I exclaimed, 'that you are speaking to a German.'"

Napoleon began to walk with Metternich in the drawing-room ; at the second turn he picked up his hat himself. I have heard it said that Metternich always showed himself particularly proud of having forced the great Napoleon to pick up his hat. The interview lasted a long time yet ; Napoleon had become calm, almost gentle ; he saw that he could gain nothing. He spoke of the Archduchess, and said, "In marrying an archduchess I wanted to unite the present and the past, the Gothic prejudices and the institutions of my age ; I made an error, and I feel now the extent of it. It may cost me my throne, but I will bury the world under its ruins." When Metternich left him he said to Napoleon : "You are lost, sire. I had the presentiment of it when I arrived ; now that I go I have the certainty of it."

Such scenes cannot be invented, and I do not doubt that the account given by Metternich is, upon the whole, very exact. I know few scenes in history more dramatic, more human ; and it is not a little to say in praise of Metternich that he stood his ground remarkably well against Napoleon.

Metternich's diplomatic and political foresight was particularly well shown in the stipulations which were made between the three Powers when the coalition began in earnest. Metternich had a very clear mind, and he knew how to sacrifice the details to the general and important objects. His view was the re-establishment of *peace*, based upon *order*. To obtain this he proposed, 1st, on the part of the Allies, all exclusion of conquest, and, therefore, the return of France, of Austria, of Prussia to their ancient limits ; 2d, a difference to be established, according to the law of nations, between the *consummated conquests* and the *de-facto incorporations of territory*, made without any formal renunciations by treaty. These last incorporations were to be considered as null, the consummated conquests of Napoleon or his allies were to be considered as a common property of the Allies, and a disposition should be made of them after the peace by special arrangements in a European congress. Metternich by these means threw in the background all questions which could divide the Allies. The *de-facto* incorporations were Hanover, the possessions of the King of Sardinia, the German possessions of the House of Orange, Electoral Hesse. Metternich entered also into the discussion of the campaign which was to be opened against Napoleon. Schwarzenberg presided at the great council of war. He was nominally the chief of the three allied armies. Successive campaigns were to be made. The object of the first campaign was to bring the three allied armies to the Rhine ; it was accomplished by the battle of Leipzig. The plan of the second campaign was made at Frankfort-on-the-Main on this general basis : 1st, to carry the war to the other side of the Rhine, into the heart of France ; 2d, to strike thus a decisive blow against Napoleon ; 3d, to see what effect the invasion would produce on the French nation ; and, 4th, the heights of the Vosges and of the Ardennes once occupied, to form the plan of the military operations of the third campaign.

In January, 1814, Metternich was at Langres, and there the resolutions were taken. The principal questions were discussed between Metternich and the Emperor Alexander, who was surrounded with uneasy and half-revolutionary spirits, and who was himself constantly led away by his imagination. The time had come when it seemed necessary to Metternich to choose a new government for France. Metternich and his Emperor saw but one solution, the old French dynasty. They were carrying on war for historical rights ; the whole programme of the coalition was founded on these rights ; they saw no reason to make an exception for France, and to them the son of Napoleon and Maria-Louisa appeared like a representative of the Revolution. Alexander was afraid that France was too hostile to the Bourbons ; he proposed that general elections should take place in France, and that the new Chamber should choose a sovereign. Metternich rejected this plan with energy ; he would rather resign than accept it.

"The execution of this plan would prepare for France and for Europe a long future of confusion and tears. . . . The power of Napoleon is broken ; it will never rise again. Such is the fate of a factitious power when the crisis passes. On the day when the Empire falls nothing is possible but the return of the Bourbons, coming in virtue of their imprescriptible right. They will come back by the force of things, and in conformity with the desire of the nation, which, in my opinion, cannot be doubtful. Never will the Emperor Francis support another government than theirs."

This was the language of a statesman ; Alexander's solution was abandoned. After all that France had gone through, after years of despotism, in the midst of three invading armies, it would have been impossible to go through the farce of elections, and a Constituent Assembly, and declarations of rights. France was under the foot of the conqueror, and as the life of a country cannot suffer interruption, the easiest and simplest thing was to allow the Bourbons to come and retake their places in the country. Nations are really no more free than individuals; when you have lost the game you are not free to pay or not to pay. In 1814 the Bourbons were a necessity, and Metternich saw it at once. A foreign occupation is not a proper time for political experiments. Metternich also understood that in politics he who sets the table will eat the dinner. The Bourbons were half-forgotten in France, but France wanted peace, and if the Bourbons could become the instruments of peace they gained at once a powerful hold on the nation. The British Government was entirely of the same views as the Austrian Government; the restoration of the Bourbons and the return to France within its ancient limits became their common programme; the Congress of Châtillon took place on this basis. Even at that moment Napoleon refused the frontier of the Rhine; perhaps he knew that the Allies were hostile to him personally, but if he had taken them at their word he might have kept his throne. "Marche, marche," says Bossuet to the sinner. No more could Napoleon stop.

The Memoirs give the most interesting details as to what followed, about the Congress of Vienna, the return from the Isle of Elba, and the new campaign which ended at Waterloo, about the final negotiations at Vienna. The part I have gone over shows Metternich at the best moment; he was a man of strong will, determined, with firm and fixed principles, deeply imbued with the notion of historical right and its legitimacy, profoundly hostile to whatever was not founded on law or established by law and treaties; and, therefore, averse not only to popular revolutions and seditions, but also to conquests and usurpations.

OPENING OF THE REICHSTAG.

BERLIN, February 22, 1880.

IT was a rainy and chilly day on which the present session of the Reichstag was opened, but the feeling was still more dull and dispirited with which about eighty out of one hundred deputies went to the royal castle to hear the speech from the throne delivered by the Vice-Chancellor, Count Stolberg. The Emperor, instead of welcoming the representatives of the people, had gone to Potsdam to inspect the sergeants' school. If the statement of those who ought to know can be relied on, he refused to read the paper himself for the reason that Bismarck would not consent to a friendly allusion to Russia. The Chancellor did not feel disposed to act in the Emperor's place because the latter objected to a passage in relation to Austria, while his organs declared that bad health prevented him from ascending the high stairs in the castle. Thus a patchwork was brought about which in its present shape reveals several corrections and omissions, and which was read by Count Stolberg without the least show of applause.

The three positive measures which the imperial message proposes are: 1, A biennial instead of an annual budget, in consequence of which measure the Reichstag would only meet every two years instead of every year ; 2, the increase of the army by some 25,000 men ; 3, the prolongation of the law against the Social-Democrats till 1886 (instead of 1881), to which the Emperor finally adds his wishes and endeavors for the preservation of the European peace. On more than a mere superficial glance, you will at once perceive that he speaks only of the co-operation with those Powers which are animated by the same desire (*gleichgesinnt*). Which, then, are the Powers that do not wish for and guarantee peace ? If all the Powers were animated by the same love of it, it would be superfluous to lay stress on those which agree with the Emperor. Does this imply a kind of reproach against Russia or France ?

After the formal opening of the Reichstag the election of its president and other officers occupied more than a week. It was only on the 20th inst. that by the election of the second vice-president the House succeeded in organizing itself. It is the bane of German parliamentary life that it is not ruled by two powerful parties, but only by cliques and factions. If you wish to understand fully German parliamentary manners and practice you must try to become acquainted with the customs and traditions of German university life, and especially with those of the "Corps" and "Corpsburschen." Instead of subordinating petty differences to the leading questions of the political strife, the most trivial side-issues are often considered paramount to the solution of the most important state interests. Although more than thirty years have passed since the first be-

ginning of parliamentary life in Germany, the majority of her politicians have made little progress in party management. They always remind me of that simple-minded burgher of the city of Darmstadt who, when in 1848 the republican form of government was demanded by his friends, valiantly stepped forth and said: "I also vote for the republic, but with our grand-duke as its hereditary head." Thus, whatever platform you may make, a German always insists upon having his pet idea brought in.

Bismarck, instead of encouraging the formation of large and powerful parties, does his best to disintegrate them. He is impatient of restraint, hates parliamentary debates, and believes that he can best rule with weak parties, which he tries to subjugate entirely to his will. For that reason in the summer of 1878 he dissolved the old Reichstag, as he wanted a more reliable support than that offered him by the National-Liberals. Although the latter were never more than one-third of the whole number of deputies, and although they never asked any political benefits for themselves, such as appointments as ministers, ambassadors, etc., Bismarck found the small amount of independence left to them in his way. He complained that he had to treat with his political friends in every particular case, that he lost too much time in negotiations, in compromising measures, and that he was tired of sacrificing his better judgment to the mere weight of numbers. In the present Reichstag he has obtained a large Conservative party, which, however, is divided against itself, jealous of the Chancellor's daily growing influence, and even hostile to some of his most favorite plans. The Conservatives are therefore of less use to him than the National-Liberals, and can only form a majority through a coalition with Bismarck's most bitter opponents, the Ultramontanes. Prussian Puseyism and Roman Catholicism meet each other half way. This alliance saps the foundations of the Empire, and means a suicidal policy. Thus far Conservatives and Ultramontanes have made their bargains and formed majorities, but it cannot last much longer, as one of the happy family will and must be cheated out of his dues.

It is, however, difficult to say on which side in the present confusion and dissolution of parties the balance of power will fall. Of the 397 members of the House there are at present about 120 Conservatives of all shades, 100 National-Liberals, 100 Ultramontanes, 20 Progressists, 15 Poles, 8 Social-Democrats, and the rest "Wilde" (savages)—*i.e.*, members who do not belong to any party. The following is the result of the Conservative-Ultramontane combination: President, Count Arnim Boytzenburg (a brother-in-law of Harry Arnim), a gentleman of the highest personal character, one of the richest and most independent landowners in the country, Conservative and High-Church; First Vice President, an insignificant Bavarian nobleman, Arbogast Baron Frankenstein, whom the Ultramontanes imposed upon their Conservative brethren; and, Second Vice-President, a more insignificant man even than Frankenstein, a small Saxon lawyer by the name of Ackermann. In order to give their bargain at least a little Liberal shade, Conservatives and Ultramontanes, at the suggestion of the great protectionist intriguer, Varnbüler, had offered the second vice-presidency to a half-and-half Liberal, a Mr. Holder, who, however, did not swallow the bait, and refused to accept the position. Nothing, therefore, was left to the majority but to choose a Saxon state-rights man (Particularist), who was elected by only 102 votes. Thus nine years after the unification of Germany her Parliament is headed by gentlemen who by birth, interest, tradition, and prejudice are the natural enemies of the Empire. To give you a practical idea of the present political situation, imagine that nine years after the defeat of the Southern rebels the speakership and chairmanship of the most important committees of your House of Representatives in Washington had by a formal vote been bestowed on a Bell-and-Everett man, a South-Carolinian *à la* Toombs, and a Missouri border-ruffian. Bismarck angrily declares that he will never have intercourse with the Reichstag in its present organization; but he has only reaped what he has sown, and must therefore see how he can manage without a compact majority.

Thus far there has been only one incident in the proceedings of the Reichstag worth being noticed in an American paper. On the enquiry of Mr. Bamberger, one of the most prominent members of the House, and an authority on all financial and monetary matters, the Secretary of Finance declared on the 20th inst. that the Government had no idea of returning to the bi-metallic system, that no proposition from any quarter had been made to them for the reintroduction of silver as a legal tender, and that Germany would hereafter, as heretofore, strictly adhere to the gold basis. I remark here that, according to the official statement of the Minister of Finance in the Prussian Diet, the sale of silver by the Government had only been stopped on account of its low price in the London market. You will see from these facts that you were perfectly right when last summer you laughed at the nonsense published by Mr. Kelley, of Philadelphia, and that your silver-men will derive little comfort from Germany.

The question which will create the greatest excitement, but which will ultimately be decided in favor of the Government, is the increase of the army. I reserve a fuller treatment of this subject for a later letter. ? ?

Correspondence.

COST OF PRESIDENTIAL ELECTIONS.

To the Editor of The Nation:

Sir: An article in the last number of the *Fortnightly Review* prompts me to fulfil an intention which I formed after the last Presidential election, but which it seemed necessary to defer until the excitement of the election should be past—viz., to raise the question what a Presidential election costs. From the meagre data which I was able to collect I made a rough guess that the election of 1876 cost, down to the day of voting, $100,000 in each State, on the average—or, say, four millions. I mean to include all sums spent by national, State, and local committees, and also all sums spent by politicians and candidates on account of the election, but which were disbursed directly and not through the party committees. The estimate is intended to include both parties.

Can you or any of your readers criticise or correct this guess, or contribute to an approximate estimate? The only person to whom I have submitted it, who is in a position to judge, says I put the expenditure far too low.—Yours respectfully, W. G. S.

New Haven, March 2, 1880.

WHY WE HAVE NO MAUDSLEYS AMONG US.

To the Editor of The Nation:

Sir: In one of your late issues you ask very pertinently the question why we do not have in this country men of the capacity of Dr. Maudsley to discuss the subject of insanity. As the same question precisely had occurred to me on reading the two volumes of his last edition I venture, with your permission, to state briefly the answer so far as it is possible to frame it.

1. It is impossible for works of an American origin to obtain any audience if they are very far in advance of the average thought. If Maudsley's book had been first published in this country it would have secured no recognition until it had been stamped with European approval; and it would have cost the author most of his friends, if he had any, and would certainly have blocked and impeded, if not entirely cut off, his pathway to professional success. Even in England, as I have reason to know, he has not entirely escaped.

2. Philosophical works of an original character cannot obtain in this country any considerable amount of intelligent criticism, either favorable or adverse. An original thinker may attain great influence and fame even though his works have no audience, or almost none, as is shown in the lives of Hume and Young; but criticism of some kind, public or private, is indispensable to power or fame. If it do not come before the death of the author it must come after, as with Montaigne. When Maudsley's book was first published (in 1867) the oldest and the leading medical journal of this country devoted page after page to show how absurd and worthless a treatise it was, and what a terrible influence it would have on society. The consequence is that all our philosophical ideas are either direct importations or reimportations—that is, originated here and approved abroad. Our ideas, like our silks, must have the stamp of Europe upon them even if manufactured here.

The above remarks need two qualifications: First. Philosophical works of a scientific character of foreign birth are more widely read here than in any other country. They are read, however, with the emotions more than with the intellect, as fables and tales, and, without any certain conception of the philosophy that so much interests them, the readers do not know what side the author is on. It is this fact that saves the few thinkers we have from social ostracism and actual failure in life. Copernicus, as we all know, was saved in the same way. Secondly. There is constant and rapid improvement in all these respects; criticisms are becoming more valuable, and the audience for works that contain new ideas is widening; but even now very few individuals and few journals are able to decide whether any new contribution to thought is a great truth or a great folly until England and Germany have been heard from.

At the present time it would appear that, in spite of all the popularization of German thought and modes of thinking among the English-speaking peoples, Germany is the only country where one can think without paying a tax so heavy as not to be almost prohibitory; and German criticism and endorsement are what a man who is organized for thinking chiefly cares for.

GEO. M. BEARD.

NEW YORK, March 8, 1880.

Notes.

THE second part of the late Mr. George Brinley's American Library is to be sold by the Messrs. Leavitt, at Clinton Hall, on Monday, March 22, and the following days. The catalogue comprises 1,714 lots and more than 3,000 titles, all of which, except a few New England addenda to the first part, relate to the Atlantic States from New York to Georgia. In "first works" printed in these colonies the collection is very rich, and among the addenda is the first work printed in Boston, as well as such rarities as Thomas Morton's 'New English Canaan,' and the 'Cambridge Platform,' London ed. 1653. The Dutch books concerning the New Netherlands are also of the rarest. As appertaining to Pennsylvania we have a precious assortment of Frankliniana, including numerous productions of Franklin's press and his own copy of a London work, 'Experiments on Electricity' (1751–4). Here also belong numerous works involving the Quakers—George Fox's 'Great Mystery,' with his autograph; the first edition, uncut, of Woolman's 'Considerations on the Keeping of Negroes' (1754), etc. Virginia introduces Washingtoniana in great variety—Washington's 'Journal,' ed. of 1754, American and English, the former almost unique; a vast store of funeral orations and eulogies on the Father of his Country, etc., etc. The catalogue is an admirable piece of bibliography, and Mr. Trumbull enjoys tossing Mr. J. R. Bartlett for his 'Dictionary of Americanisms' a Boston use of the party nickname "Silver Greys" as early as 1813.——A proof "portrait en pied" of Washington, by N. le Mire after L. le Paon, marked "rarissime," is offered in the collection of engravings made by M. Élie Angély, who died in 1797, to be sold on the 5th of April at the Hague. A companion portrait of Lafayette follows it in the catalogue, which has been received by L. W. Schmidt.——The new edition, already announced as in the press of J. B. Lippincott & Co., of their 'Gazetteer of the World,' will be ready towards the close of the present month.——On the 1st of March the publishing business heretofore carried on by Henry C. Lea, Philadelphia, was assumed by a new firm, Henry C. Lea's Son & Co., of which Mr. H. C. Lea becomes the special partner.——Lee & Shepard have in press 'The True Story of the Exodus of Israel,' compiled from Brugsch-Bey, and edited with introduction and notes by Francis H. Underwood.——T. Whittaker announces 'Lectures on Social Questions,' by the Rev. J. H. Rylance, D.D.——The Board of Directors of the Nashville Centennial Commission offer a prize of one hundred dollars for the best Centennial Ode to be read or sung at the celebration, on April 24 prox., of the city's hundredth birthday, which the poet must take for his subject, contenting himself with one hundred lines. The President of the Commission, Dr. T. A. Atchinson, will receive the poems, with the authors' names in sealed envelopes, up to April 1.——The Bureau of Ethnology of the Smithsonian Institution has just issued the second of its preliminary papers, 'Introduction to the Study of Sign-Language among the North American Indians as Illustrating the Gesture-Speech of Mankind,' by Col. Garrick Mallery. The author shows by numerous examples how erroneous is Mr. Tylor's statement that one system of sign-language prevails from Hudson's Bay to the Gulf of Mexico; gives a corresponding set of instances of resemblance; enumerates the sources from which these are derived, and closes with a vocabulary on which observations in sign-language are requested, and diagrams illustrating the mode in which the gestures should be represented. These last will be mailed on request by Col. Mallery.——Cassell, Petter & Galpin's 'Science for All,' an anomalous serial, well printed and well illustrated, continues to furnish much popular information on all sorts of phenomena (Parts 11–13).——Part 9 of Dr. Grove's 'Dictionary of Music and Musicians' (Macmillan) has been with good reason delayed, as it is nearly half occupied by the two titles of *Mendelssohn* and *Mozart*, the latter begun, the former concluded. Altogether, Mendelssohn has 59 pages allotted him, of which two and a half are filled by an inedited first movement of a posthumous symphony. Moscheles naturally finds a place beside his friend. The only other great composer included is Meyerbeer. Thomas Moore is not overlooked. Other noticeable titles are Metre, Metronome, Modes (the ecclesiastical), Modulation, Motet.——A fac-simile of Louis Joliet's oldest map of North America is published in the *Revue de Géographie*.——Few books promise more than the 'Souvenirs de Frédéric Lemaître,' published by his son, and few are more disappointing. These recollections of the actor who bore a foremost part in the dramatic battles of the Romantic revolution are too incomplete, fragmentary, and empty to be of any value or even of any interest. They abound also in errors, the obvious result of carelessness.——No. 84 of the *Zeitschrift* of the Berlin Geographical Society contains the usual classified summary by Dr. Koner of the geographical publications of 1879. A map of Upper Egypt from Thebes to Kosseir, on the Red Sea, accompanies Dr. Klunzinger's account of his travels in this region.

—The children of the late Mr. George Brinley, of Hartford, in carrying out the intentions of their father, invited certain institutions (Yale College, American Antiquarian Society, Watkinson Library of Hartford, New York Historical Society, and Pennsylvania Historical Society), to bid off free of cost, at the auction of their father's library, books to the amount of $25,000; one-half or a less proportion to be received at the sale of the first part, which took place in March, 1879. The American Antiquarian Society, by availing itself of the privilege conveyed through this invitation, has added 686 books and pamphlets to its library in Worcester, as many as 60 being works of the Mathers. Mr. Nathaniel Paine, the treasurer of the society, has lately published a pamphlet of 54 pages, giving a list of the books obtained at the Brinley sale, and also a catalogue of the Mather publications heretofore possessed by the society. Mr. Paine's pamphlet is a valuable contribution to Mather bibliography. It furnishes a list of 307 printed and 33 manuscript works of the Mather family, the title, collation, and imprint of each printed work, besides a number of interesting notes. The first three books on page 50, credited to "Samuel Mather of Boston," are manifestly by another hand. Samuel Mather (of Boston), born in 1706, is not likely to have prepared for the press a Latin oration in 1713 nor to have published "discourses" in 1719. We may say, to be exact, that Samuel Mather of Witney, England, an uncle of the Boston Samuel, was the real author of the three works mentioned.

—At the International Congress of Geographical Sciences assembled in Paris in 1875 the commissioners of sixteen countries, the United States included, signed a resolution pledging themselves to solicit their respective governments to organize central offices for the collection and international exchange of chartographical, geographical, and other state publications. We do not know what has been done in this country, where the Smithsonian Institution has long fulfilled all the objects of the proposed office so far as lay in its power. A circular letter from Sr. Mendonça, Consul-General of Brazil in this city, informs us that a Brazilian Central Commission of International Permutation has been created by the Emperor at Rio, under the Presidency of Dr. J. J. de C. da C. de Medeiros e Alburquerque, and that any scientific, literary, or artistic society desiring to enter into communication with it can do so directly or through the medium of the Consulate-General, 71 Broadway. We improve the opportunity to suggest that Congress could not do better than to employ the Smithsonian Institution to catalogue and dispose of, at fixed prices, the public documents which are now so recklessly and lavishly rather than generously distributed. The service, of course, would have to be paid for, but the economy would be immense, and the example of order and economy most beneficial to the States, whose practices are no less negligent even if less prodigal.

—A year and a half ago (*Nation*, No. 692) we spoke here of a little tract, printed by Collins Brothers, describing the cocoa-rooms of the British Workman Public Company of Liverpool. We will recall so much of it as to say that these places of resort were intended to compete with the grog-shops, that there were at the time indicated twenty-nine of them in successful operation, and that success meant ten per cent. dividends on a capital of $100,000. This tract seems to have borne fruit, for we have before us the prospectus of the New York Coffee House Company, Limited, which begins with a capital stock of $50,000, in two thousand shares of $25 each. The Liverpool example, and similar experiments in London, Glasgow, and Edinburgh, are referred to as models. When we have given the names of the directors, viz., Messrs. Morris K. Jesup, Henry E. Pellew, Cornelius R. Agnew, Charles Collins, Wm. E. Dodge, jr., Jos. W. Drexel, John A. Stewart, and Wm. H. Appleton, and of the bankers, the United States Trust Company, 49 Wall Street, we have done all that is necessary to show that this philanthropic enterprise is in the

best of hands, morally and financially. We strongly urge all who wish their benevolence to take a practical shape, and who realize the evils of intemperance in our overcrowded metropolis, to invest in the shares of this company, with or without regard to dividends. Not more than a quarter of the subscription will be called for during one year. Mr. Drexel is chairman of the company, Mr. Jesup Treasurer, and Mr. Pellew Secretary; the temporary office is at No. 103 Madison Avenue.

—The awards of the *Sanitary Engineer* prizes for school-plans have been published. The Committee consider that the conditions imposed "were of such a character that it is probably impossible to produce a plan which should be recommended as one which should be constructed." This was chiefly owing to the insurmountable difficulty of obtaining light in the narrow limits imposed. Many of the plans would make excellent school-buildings if surrounded by a sufficient open space. The first recommendation made by the Committee is, in effect, a demand for a corner lot and a free space in front of the two faces of at least sixty feet. Other suggestions are: No more than three floors to be used for class-rooms; maximum height of class-rooms, fourteen feet; fifteen square feet of floor-area per scholar, and thirty cubic feet of air continuously supplied per minute and head; fresh air introduced near windows, and removed by flues in opposite wall; window-space not less than one-fourth of floor-space; distance of desk furthest from window not to exceed once and one-half the height of window-head from floor; maximum temperature, seventy degrees; heating by water or low-pressure steam; water-closet accommodation for pupils on each floor; the building to occupy not more than one-half of the lot. The committee wish it distinctly understood "that they do not recommend the plans to which they have given awards as being the best designs for a school-building, but only as the best plans for a school-building to be built in a huge box lacking one side and without a top, the sides of which box are about sixty feet high—which seem to be the conditions under which school-buildings have been erected in New York, and in which from 1,500 to 2,500 children have been crowded."

—A subscriber in Iowa writes us as follows under date of Feb. 20:

"At a meeting held to learn the sentiments of the Republicans of this town on the third-term question the enclosed resolutions [adverse] were unanimously passed. The sentiment here is that voting for Grant in any case is a choice of evils, and that as between him and some good Democrat, like Bayard, voting for the latter would be considered the lesser. One thing was discovered that was a surprise to us all—that each one was personally strongly opposed to Grant and the third term, but did not know that his neighbor was.'"

—Mr. Theodore Thomas has resigned his position as Musical Director of the Cincinnati College of Music in consequence of the inability of the Board of Managers to comply with his demand for complete control of the musical department. The long correspondence preceding this step throws little light upon the causes of it; for though there was clearly a personal issue between the President of the Board, Mr. George Ward Nichols, and Mr. Thomas, the latter exhibits a not unnatural reticence in regard to the details of Mr. Nichols's interference. Apparently he thought the Board ought to understand this without his going into particulars; and the fact that they did not or would not, may have convinced him that it was not worth while to be explicit concerning matters which he regarded as beside the main issue. The result has been that each party to this unfortunate controversy has charged upon the other a want of frankness, which is certainly not a failing of at least one member of the Board Committee, General J. D. Cox, who fully shared the views of his colleagues, Messrs. Goshorn and Springer, and perhaps was the author of their joint letter. In an educational institution whose endowment is not sufficient to make it independent of the public patronage, the difficulty of separating the business interests from the professional is obvious. There is some trace of this in the present case, but, as we have said above, the fundamental difference is as to the headship of Mr. Nichols in Mr. Thomas's domain.

—The last week of Italian opera was, from an artistic point of view, in every respect the most successful of the season. Three of the operas given, "Linda," "Favorita," and "Aïda," were rendered in so admirable a manner that they must rank among the best performances of Italian opera that have ever been witnessed in this country. In "Aïda" the honors of the evening fell to the lot of Mlle. Valleria, who gave a most charming impersonation of the heroine. Since Mlle. Marimon's arrival Mlle. Valleria's powers have not been taxed to such an extent as before, and she seems to have profited by the rest she has enjoyed; her voice sounded remarkably fresh and full, and her acting was very graceful and interesting. The remaining parts were filled by the same artists as in the early part of the season, and the whole performance was noticeably smooth and pleasing. "La Favorita," however, which was performed on Friday, was the greatest triumph. Sig. Campanini assumed for the first time in this country the part of *Fernando*, and made this interesting rôle perhaps the strongest character in his extensive répertoire. He was never in better voice, and rang out repeatedly the upper C with full chest-voice and with delightful facility and perfect purity of intonation. His acting reached a climax of fire and passion in the closing scene of the third act, where he throws his broken sword at the prince's feet. Miss Cary sang the part of *Leonora* with exquisite taste and beautiful voice. Her acting is at times a little cold and conventional, but, taking everything into consideration, her *Leonora* is a decided artistic success. Sig. del Puente was evidently indisposed and did not show to fullest advantage. Herr Behrens was a very good *Baldassaro*, and the chorus showed excellent training. "Aïda" was Col. Mapleson's trump card during the fall season, and was again given on Monday with a brilliant *mise-en-scène* and a considerably enlarged chorus and orchestra. Mlle. Ambre is a not very powerful but a very charming and interesting *Aïda*, and the *Amneris* of Miss Cary and the *Rhadames* of Sig. Campanini have so often been heard and admired that they need no further comment.

—Mr. Joseffy's orchestral concerts have so far introduced only one novelty—a fantaisie with orchestra, by Liszt, on Beethoven's "Ruins of Athens," which he played with his usual brilliancy on Monday night. The first concert of chamber-music introduced an interesting programme, including Schubert's trio in E flat, a gavotte by Bach, arranged for the left hand alone by Brahms, the Kreutzer Sonata, and a charming duo for two pianos by Reinecke, on one of the most striking subjects from Schumann's music to "Manfred."

—Considering that Booth's Theatre was constructed for the production of Shaksperian drama the state into which it has fallen within the last few years is somewhat remarkable. Irish melodrama and French opera have in turn made it their home, and finally a house designed for nothing below the level of *Shylock* and *Lear* is occupied by a pantomime company. Pantomime has been given a certain importance in the eyes of the present generation by the fact that Thackeray was so fond of it and wrote so much about it. For some reason the adventures of *Harlequin* and *Columbine* possessed an inexhaustible interest for the author of 'Vanity Fair,' and his books are full of allusions to it. We doubt whether the great novelist would altogether approve the latest improvements in the art of pantomime as produced at Booth's. These consist of having a double set of Harlequins, Columbines, Pantaloons, and Clowns. The only real advantage gained is that the pantomime can be kept going for a considerably longer time, one set of performers being allowed to rest from their arduous physical exertions while the other is on the stage. But we suspect the main motive of the innovation is a mistaken idea that doubling the number doubles the amusement. Instead of having this effect it really spoils the unity of the performance, and makes it dramatically almost as absurd as having two *Ghosts* in "Hamlet" or two *Hunchbacks* in the play of that name would be. Apart from this the pantomime at Booth's is in many respects the best we have ever seen, and for children there is now no better entertainment in the city. Of the "Spanish Students" (brought in as an interlude) we cannot say as much. This entertainment consists of a musical performance by some twenty persons on stringed instruments. Of these some are guitars and some are played in very much the same way. We do not desire for a moment to throw any doubt upon the Spanish origin of the performers, but that being taken for granted, it is remarkable how very American their cast of countenance is, while it is still more remarkable that, among their favorite melodies should be the "Turkish Patrol," "My Mary Ann," and other airs which can hardly yet be much known in Spanish institutions of learning. The music is very good for any one who likes to hear a number of strings played in unison without the relief of other instruments. They may like this in Spain better than we do.

—The sixth volume of the 'Théâtre Complet' of M. Alexandre Dumas has recently appeared in Paris. It contains his two latest dramas, "M. Alphonse" and "L'Étrangère," each accompanied by an introduction. Those who remember the subject of "M. Alphonse" will have no difficulty in guessing what the author talks about in the preface to this play. Most of it is given up to the injustice of society to illegitimate children, and he concludes his argument with a satirical suggestion

(p. 52) that since so large a percentage of natural children die every year their bodies should be used as fertilizers; adding that if the public recoils from this logical suggestion then it ought to see to it that the percentage be diminished. The preface to "L'Étrangère" is of more general interest, treating of naturalism on the stage. It is, in fact, a direct answer to M. Zola's essay on the same subject prefixed to the 'Annales du Théâtre et de la Musique.' Here M. Dumas speaks with authority. He points out that an absolute reproduction of nature is neither possible nor desirable. He shows that there are everyday situations which cannot be put on the stage, and that no matter how naturalistic one may desire to be there is always a point at which imitation of nature must stop and convention take its place. "An artist," he says (p 168), "a true artist, has a higher and more difficult mission than the mere reproduction of what is; he has to discover and to reveal to us that which we do not see in things we look at every day, that which he alone has the faculty of perceiving in what is apparently patent to all of us."

—*Nature*, which has all along been very civil to Mr. Edison, as it invariably is to American science and genius, cannot put up with the "first correct and authoritative account" of his electric-light invention given in the February *Scribner's* by the Mathematician of Menlo Park, and endorsed by Edison's autograph. "We fear," it says in its issue for February 12, "Mr. Edison is thirty-five years behind the time in his new invention," and proceeds to describe the electric lamp patented by King in England in 1845, "in which a thin rod of carbon was placed in an exhausted globe," and "a similar lamp designed by Lodyguine in 1873." The only difference between these and Mr. Edison's, it says, is that he "prefers a different, and apparently less durable, kind of prepared carbon," and even "in the employment of carbonized paper he has been more than once anticipated." It then traces the various mistaken and wasteful steps in his progress as confessed by the Mathematician; notes the so-called "discovery" that "mercurial air-pumps could be constructed to exhaust to one-millionth of an atmosphere," which had been known in Europe for some time, it being also known that with all this exhaustion "there may yet remain many millions of millions of molecules of air, enough to make the disintegration of the incandescent carbon fibre only a question of time"; finds no new principle or any important improvement in his generator (Edison's "Faradic machine"); and ridicules the Mathematician's calculations in the *Scientific American* to prove that ninety per cent. of the energy of the driving-engine is given out by the machine. The article concludes with some wholesome remarks on Mr. Edison's duty to "devote some time to learning what has already been done in this field," and not less wholesome censure of "reckless newspaper announcements . . . by which the public mind is periodically fluttered."

—In view of the efforts sometimes made to hold up to admiration Mohammedanism, in contrast with Christianity, as the patron of science, it may be interesting to notice what is said about the matter in a recent report to the Asiatic Society of Paris, by M. Renan, whose authority on such subjects is unsurpassed, and whom no one will accuse of excessively Christian predilections:

"During several centuries the Mohammedan races were of real service to civilization, not by seriously contributing to its progress, but by preserving its traditions, which German barbarism had suffered to perish. But how avoid detesting that gloomy fanaticism, that senseless pride, that hatred for Europe, and especially for European science, which have been almost everywhere the result of Islam! With reference to this subject the difference of dates is of importance. Down to the thirteenth century elements of excellence in Islam keep up the struggle against the rising flood of theological intolerance; then the victory of theology becomes complete; science and philosophy die out; and with them all force and all life quit this doomed society. Yes, science and philosophy flourished on Mussulman soil during the first half of the middle ages; but it was not by reason of Islam, it was in spite of Islam. Not a Mussulman philosopher or scholar escaped persecution. During the period just specified persecution is less powerful than the instinct of free enquiry, and the rationalistic tradition is kept alive; then intolerance and fanaticism win the day. It is true that the Christian Church also cast great difficulties in the way of science in the middle ages; but she did not strangle it outright, as did the Mussulman theology. To give Islam the credit of Averroës and of so many other illustrious thinkers, who passed half their life in prison, in forced hiding, in disgrace, whose books were burned and whose writings almost suppressed by theological authority, is as if one were to ascribe to the Inquisition the discoveries of Galileo, and a whole scientific development which it was not able to prevent."

—A recent number of the London *Times* gives an interesting account of a Japanese "find" of singular curiosity and perhaps some practical importance. The existence of a great number of Chinese-Sanskrit sacred texts, which resulted from the introduction of Buddhism into China in the first century of our era, is of course no news; they have already, in the hands of Western scholars, served important purposes in throwing light on the great religion of the East. What has long been desired and has hitherto escaped discovery in the Flowery Kingdom is the original Sanskrit from which the Chinese versions were made. Some years ago Dr. Edkins submitted to Prof. Max Müller a vocabulary printed in Japan, containing Sanskrit words explained in Chinese and transliterated into Japanese—proof that the language of Buddhism had once been studied in Japan. Shortly afterward, one of the greatest Buddhist communities in Japan sent a young Buddhist priest, Bunyin Nanjio, to Prof. Müller at Oxford, in order that by learning Sanskrit and Pali he might be able to read the sacred writings in the original. Through this pupil the professor prompted a search for Sanskrit MSS. at home, and last December was rewarded with a book sent out by a learned Buddhist priest which proved to be "the hitherto unknown Sanskrit original of a Sûtra translated into Chinese 400 A.D., possibly 200 A.D., and contained a description of the Buddhist Paradise, which with the Northern Buddhists took the place of Buddha's Nirvâna." The Sanskrit was written in the old and difficult Nepalese alphabet, and was full of mistakes; each word was transliterated with Japanese letters, and translated into Chinese. Prof. Müller succeeded in making a corrected copy with translation and notes, which he will return as requested. He finds that the Chinese versions are "full of misunderstandings, sometimes affecting the very essence of Buddha's teachings"; and that the Buddhism of Japan is on many points in direct opposition to those teachings, being chiefly founded on the Mahâyâna school. Her thirty million Buddhists could, he thinks, have no greater boon conferred on them than "to have the simple words of Buddha translated for them into Japanese direct from Sanskrit and Pali."

THE EMOTIONS.*

IN this volume we miss something of the incisiveness of Dr. McCosh's other works. He has usually written under the spur of some distinct idea, strongly held, and enforced with a thoroughgoing ardor that could not fail to be impressive even if it could not be reconciled with the latest conclusions of science. He was always armed for attack and quite clear as to his opponent's blunders in every field of battle. This work, however, seems to have been written more as a college text-book, and confines itself more closely to description, though one would suppose that Princeton students were already sufficiently familiar with that aspect of the subject. It is full of clear, cool good sense, and it is not duller than such books usually are. It is not as subtle in its analysis of character as a New-Englander would probably have made it, but it is simpler. A complete resolution of so complicated a thing as human character is not to be expected. "Unmixed the stream of motive rarely flows," and the foaming champagne of passion loses its life in the laboratory before we can test it with our psychological reagents.

The interest in the study of the emotions lies in their laws of growth, in the complexity of the forms which the combinations take in real life, in the close relation which certain emotions seem to have had to certain forms of civilization, and in their relative value to our own. Dr. McCosh, however, merely attempts to present their elements, and says little or nothing of their history or laws. Some parts of his exposition seem incomplete, even when judged by his own meagre plan, such as the passage touching the interesting question of the localization of faculties in the brain. On the other hand, the brief résumé of the æsthetic characteristics of some of the leading authors whom Dr. McCosh is familiar with (and one would almost suspect of some with whom he is not, from the odd allusion to Hawthorne's poetry—but the suspicion would, we are convinced, be unjust), and further on again of the principal points of interest in the scenery of Europe and America which he has visited, seems scarcely necessary in a work so narrowly limited. Sometimes he does not seem to have fully thought out the points he raises, as, for instance, in his treatment of the theories of the beautiful of Plato and Ruskin, which he cannot accept and yet dislikes to reject. It is disappointing to find that Dr. McCosh had not made up his mind about them when he printed his book.

He begins by analyzing emotions into appetences, phantasms, excitements, and organic affections, considering that there must always be present these four elements: the desire, the idea, the mental excitement,

* 'The Emotions. By James McCosh, D.D., LL.D.' New York: Charles Scribner's Sons. 1880. 8vo, pp. 255.

and the accompanying nervous action ; but he naturally finds some difficulty in distinguishing the parts both of the first and second pair in his treatment. He then goes on to examine the emotions separately, classifying them according as they are called forth by animate or inanimate objects, or are compound in character or are generally shared by others. The introductory analysis might very well be carried farther, and the mental processes reduced in number. Appetence, in any definite sense, does not seem to be necessarily involved in emotion. If we follow the process by which a thought changes into an emotion, when, for instance, an abstract disapproval of a man's course becomes intensified into hate, as it is realized that that conduct seriously injures some dear friend, we see that the thought becomes passionate through the change effected in it by the agitation which aggrieved friendship causes. There are not three distinct mental processes here combined in one, as might be supposed from Dr. McCosh. There is but one process—that is, an idea colored by the disturbance of the medium in which it arises. As the agitation increases, the mental action is more and more impeded by the intensity of the idea presented, until only the single hated image remains. While it is almost universally admitted that the thought is a distinct thing from the nervous action (even by Spencer, Dr. McCosh to the contrary notwithstanding), it is not so clear that the excitement is anything more than a disturbance of the physical basis without whose action thought cannot proceed. A mere physical change in the nerves may convert a thought into an emotion, as is often seen in the diseased ; and there is some gain in simplicity in supposing that the physical cause is the only one.

To take another illustration : we notice a smoke in the theatre, and conclude that there is a fire from which it would be wise to retreat. So far there may be no emotion. But the smell and glare and roar of the flames excite our nerves and we start up ; the audience rushes wildly towards the doors, and sympathy increases our agitation. The emotion of fear has arisen, and it is only by a great effort that we can stop to think what we had better do. The nervous excitement increases overpoweringly in the mad rush that follows, until at last we have only the one intensely vivid idea of escape. Here there is simply one thing—a mental process, first intensified, and then impeded in its movement by growing excitation of the brain. And we may look upon emotions in general simply as ideas altered by the unusual increase of the nervous action which in some degree always accompanies thought. They may differ, as Dr. McCosh says, in their intellectual element, as one or another idea has the same embodying passion ; or they may differ on the other side according as the physical element varies. A complete analysis on this line would, of course, require a separation between the different kinds of excitement in a way that Dr. McCosh does not attempt. The aggressive excitement which makes jealousy or revenge so absorbing has a very different character from the passive abandonment to dreamy music or ecstatic devotion. Moreover, there is an important difference between the disturbance effected by pleasurable or painful excitements, and we should also distinguish the perturbations connected with special bodily organs, and perhaps some other nervous conditions. These things are real, and a classification founded on them brings together things like each other in other respects, while Dr. McCosh's arrangement seems artificial, and brings together in one class feelings as different as self-esteem, hatred, benignancy, remorse, gratitude, and anger. There is an accidental connection between them in their origin, but they are not at all alike. And here we may remark that a good many of the feelings classed as emotions in Dr. McCosh's list are not properly emotions, not having usually the essential characteristic of agitation or excitement.

The great fault that will be found with the volume will probably be that the author's old dislike to anything like evolution prevents him from giving any attention to the origin of emotions and their relative value to civilization, so that his work is little more than a collection of simple data for a scientific exposition, and not arranged in such a way as particularly to further research. The preliminary labor upon their origin has been performed by others with some fulness in connection with other investigations, and Dr. McCosh might easily have availed himself of it if his prejudices had not intervened. A work showing the use of the various emotions and their relative development and importance in the various stages of civilization, with their present bearing upon our growth and their probable weight in the future, would be very interesting. Our own time has its special emotional problem. The dying out of all strong passion is one of the most marked features of our modern money-making civilization. Each year leaves us nearer a dead level of passionless industry. Certain superficial social sympathies are almost the only emotions that are not felt to be in our way. We are ashamed of anything vehement, good or bad, and look on enthusiasm as a pleasant but childish amusement, to be laid aside before we attack the stern realities of life. The mere growth of civilization does not account for this ; for the great civilizations of old went through no such change in their growth, apparently, except as to their love of fighting. Will this peculiarity of ours save us from their decay ? However this may be, the world seems to have changed, and a scientific account of the change would be very instructive. We do not, of course, complain of Dr. McCosh for not executing in this book a plan that has never entered his head. His work is good enough in its way ; but it is, after all, only an imperfectly arranged summary of well-known data, and the psychology of the future is still to be written.

A WOMAN'S ACCOUNT OF CANTON.*

THIS unpretending volume by Mrs. Gray is one of the few books upon China whose perusal carries its own evidence of the author's truthfulness, candor, and kindness. The reader soon begins to feel the same interest in the Cantonese that she has ; and before he lays down the book comes to regard them as men and women with like feelings as ourselves, and not, as has often been the case, as curiosities, if not monstrosities, with whom it is needless to cultivate sympathy. Almost everything touched upon in these letters is indeed described or alluded to in her husband's book ; but she has thrown into her sketches that animation and unaffected good-will, which make them worthy of standing on the same shelf with Lady Mary Wortley Montagu's 'Letters' about the Turks. Mrs. Gray is the wife of Archdeacon John Henry Gray, who was British chaplain at Canton from 1851 to 1877, and during that period made himself more conversant, probably, with the people and places in and around Canton than any other foreigner. His recent work presents the results of his observations at Canton and elsewhere in China during those twenty-five years; but his wife's letters contain the true evidences of the personal regard felt for him by its citizens.

Fifty years ago Canton was all there was of China that could be seen by the foreigner, and this sight was confined to the suburbs, where he was hooted at, if not stoned, whenever he ventured far into their intricate streets and lanes. His ignorance as to the social life and real feelings of the mass of human beings whom he gazed at as they hurried on through the streets, was only exceeded by their utter disregard, if not contempt, of him and the outer world he came from. To buy and sell tea, silk, opium, long-cloths, etc., was the only common ground on which the two parties met, and this ground did not bring forth even a promise of anything better; although the antipathy, the fear, the suspicion, and the ignorance which existed in the minds of both were restrained and alleviated by many kindly influences growing out of the conviction that quietness, honesty, and courtesy were as essential to the conduct of a profitable trade between them as goods and money. As one looks back to the state of things existing in Canton at the cessation of the East India Company's monopoly in 1834, it seems more remarkable that there was, on the whole, so much peace and good feeling between foreigners and natives during the one hundred and fifty years previous, than that broils and disputes were constantly arising at Canton and Whampoa.

This book of Mrs. Gray's describes the real change and improvement that has taken place in Canton since that date, better than anything we have seen. She has, of course, no knowledge of the annoyances which a pedestrian experienced then—of the insulting language used by the people as he passed by ; the hooting of children, crying *fan-kwei lo !* (foreign devil), or the stones thrown and pockets rifled, if he ventured beyond the north side of the city walls. No foreign women were allowed to come up to the Thirteen Hongs, as the foreign residences were called, much less live there. We remember the expression of disgust on the face of the great hong-merchant, Howqua, when the question of their coming to live there was brought up in 1840, as he said : "No can ! No want-chee that outside woman come Canton side !" This was the general sentiment, and those foreigners who knew it best looked forward to a slow and disagreeable reception of their wives and daughters by the educated families in native society. We do not here refer to those days of restraint to find fault with these families, for all the people were shut out from every meliorating influence by the restrictive regulations which kept them separated from foreigners. Mrs. Gray shows how the same families now regard and treat outside women, for whom their grandfathers had no more polite name than *fan-kwei po*, or foreign devils' old crones. One ex-

* 'Fourteen Months in Canton. By Mrs. Gray.' With Illustrations. London and New York : Macmillan & Co. 1880. Post 8vo, pp. 444.

tract will be enough, containing her description of a visit on the 30th of May to the grandson of this same Howqua :

"I am glad to say that I have had my great wish granted, and have been admitted into the inner family life of a Chinese home. About eleven o'clock last Friday seven Chinese gentlemen belonging to, or friends of, the Howqua family, called upon us ; amongst them was a son of our particular friend, the widower, about whom I wrote the other day. He said that his mother would much like to see *Nai-nai*, and asked us if we would call upon her that afternoon. We went about three o'clock, and were received by young Mr. Howqua. . . .

"When we had sat some time with the ladies (my little friend and I ; the gentlemen were in a separate room), I thought it time to take leave ; but on rising I was told that a European dinner had been prepared for us and would soon be ready. We were then conducted by Mrs. Howqua, she leading me by the hand, into the room where my husband and the gentlemen of the family were assembled, and a long table arranged in true English style. Dinner was soon ready and Mr. Howqua placed me on his right hand and Henry on his left. . . .

"When dinner was over, Mrs. Howqua stepped into the room, and spoke to me, saying she hoped I had had a good dinner. She ordered a young slave to fan me, and from that moment this poor little girl, eight years old, fanned me vigorously with a large palm fan ; and if she desisted for a minute, Mr. Howqua turned and frowned at her. It was a luxury much to be appreciated, for the room had become stiflingly hot. . . . The ladies claimed me when dinner was over, and Minnie and I returned to their apartments. I was then taken by Mrs. Howqua (her position is somewhat difficult to explain to you, as she is the third of the widows still living of the late Mr. Howqua) to pay my respects to the small-footed widow of old Mr. Howqua. The old lady gave me tea and sweetmeats, and questioned me in the same manner as the other ladies had done, as to my age, how long I had been in the country, etc.

"Every ornament I had was taken off and handled by the old lady, who asked me how much each had cost ; whether my watch-chain was true gold, the price of my dress and hat, and a string of similar questions. . . . You would have been amused to see me as I walked from room to room, my hand held by my hostess, and a slave-girl holding up my dress behind; they looked upon it as a train" (pp. 121–129).

In Letter XIV. Mrs. Gray gives the details of the return visit of Mrs. Howqua and her party of daughters and children, with eight native gentlemen connected with the family, making seventeen in all, besides the men and maid-servants—a truly formidable company in appearance. The account is just long enough to give one a good idea of the interview, for its author is very happy in detecting and touching on the most noticeable points without wearying the reader. The improvement in foreign intercourse at Canton which these visits indicate to one who knew the entire separation of the two races forty years ago, has been brought about by just such kindly acts as Archdeacon Gray practised daily towards all whom he met during his whole residence. It was reciprocated on their part as they came to know him better, and to learn from him and other foreigners, who could talk the local dialect, that they were neither savages nor devils.

Among the meliorating influences in removing this idea, the missionary hospital opened by our countryman, Dr. Peter Parker, in October, 1835, may be mentioned. It was one of the chief agencies in bringing the favorable traits of Western civilization to the knowledge of the people at large, and its beneficial influence during the forty-five years it has existed at Canton, during which time 750,000 patients have been relieved, has helped to bring about the good feeling described in these letters. The same Howqua who expressed so much disgust in 1840 at the idea of foreign women coming to Canton to live, was so pleased with the free hospital opened by Dr. Parker for the relief of poor Chinese that for twenty years he gave him the building rent free, a total contribution of nearly twenty thousand dollars. The schools, the chapels, the visits, and the varied efforts of the missionaries, both men and women, who live in and around the city, have also done much to increase mutual confidence.

The following letter describes an entirely new state of intercourse and regard among the highest officials in the province. Mrs. Gray, Aug. 9, 1877, writes :

"Since I wrote my letter about the military examinations, Henry and I have again made an early excursion into the city to see the imposing ceremony of the autumnal state worship paid to Confucius. We left the chaplaincy at the trying hour of 2.45 A.M., and went by boat to the official landing-place, and thence to the chief Confucian temple. Henry had written the day before to M. Sales, French vice-consul, to be so kind as to request the mandarin to have the great east gate near his consulate opened for us. We obtained the permission, but had no idea at the time that we were really asking a favor difficult to be granted. We had chairs in readiness at the gate, and reached the temple at four o'clock.

"The precincts were already crowded by Chinese gentlemen and their attendants, who, like ourselves, had come to see the state worship. Long before we reached the temple we saw numerous lanterns arranged on tripods, and groups of the city guard on the ground around them. . . .

"The large shrine, brilliantly illuminated, contained the offerings presented this day to Confucius. We went to see them, and a strange sight it was. . . .

"The viceroy and Manchu general of the city were, in the meantime, robing and chin-chinning each other. One of the officials had seen us pass up to the shrine, and had ordered an attendant to accompany us, who was most attentive, and gave us the best position possible to see the ceremony. And now the mandarins walked towards the front of the shrine in procession, the viceroy and general first, the others following in order, to the accompaniment of a band of music, the civilians arranging themselves on one side of the great quadrangle, the military on the other. As before, a master of ceremonies gave the word of command throughout the proceedings. The *ko-tau* was first performed simultaneously by all the civil and military mandarins present; then the viceroy and general left the quadrangle, the former going up the steps on the left, and the latter on the right, to the shrine. No man, save the Emperor, may go up the central stairs leading direct to the shrine of the great Confucius. The two magnates moved with much deliberation and dignity, each taking a step at the same moment as the other, for fear one might get a little in advance. Each was accompanied by a bachelor of arts and by a conductor of ceremonies. . . .

"Nine times the great men walked up with solemn step to the shrine, the viceroy sometimes knocking his head, and making his offerings at the chief altar, and sometimes at a lesser altar. The last three times he went before the three small altars on the left of the shrine, while the general finished his three final acts before the three on the right side. Here I was standing, and I had to move one side to enable him to kneel before the last altar. The offerings consisted of spirits, presented in old classic-shaped brass vessels, and cakes. The viceroy came up the steps alone once, and presented a folded letter at the shrine, written on yellow paper, to Confucius. An attendant mandarin kneeled at his side, opened the letter, and read it aloud, solemn stillness being observed by the crowd. The viceroy then made the *ko-tau*, and the attendant holding the letter advanced to the chief altar, presented it to Confucius, and laid it down. There it remained until the ceremony was over. It was then removed by the same mandarin, who carried it in both hands high above his head, and threw it into the sacred fire in the outer quadrangle. After the viceroy had completed his ninth visit to the shrine, he and the general, with all the mandarins, returned to the robing-room."

We counsel all who wish to get a lively and trustworthy account of the Cantonese and their interesting city to read Mrs. Gray's book. It will give them a higher idea of the courteous and peaceable manners of the gentry, the comfort and industry of the laboring class, and general well-being of the rulers and ruled as constituting an orderly government and people, than any volume which has lately appeared. Archdeacon Gray's long residence gave his wife every facility for seeing things as they really were, and we have seen no mistakes in the letters that are worth mentioning. They not only prove the great advance for good on the spot in the social and political intercourse between the natives and their visitors, which has been our object in this notice, but they indicate how largely it has been owing to Christian charity and zeal on the part of those who have, like Dr. and Mrs. Gray, taken pains to teach and live it.

MARY CARPENTER AND DR. WINES.*

"MANY things are called *Christianity*," wrote Theodore Parker from Switzerland, in 1859, to Mary Carpenter in England, "a name dear or hateful as you define it one way or another. The Christianity which your admirable father loved and taught and lived was Piety and Morality, Love to God, Love to Man. It is this which I honor and love in you, especially as it takes the form of Humanity and loves the Unlovely. The greatest heroism of our day spends itself in lanes and alleys, in the haunts of poverty and crime, seeking to bless such as the institutions of the age can only curse. If Jesus of Nazareth were to come back and be the Jesus of London, I think I know what work he would set about. He would be a new Revolution of Institutions, applying his universal justice to the causes of Ill; but also an Angel of Mercy, palliating the effects of those causes which could not be at once removed or made null. You are doing this work—the work of humanity. It seems to me that you have a genius for it." This passage, copied from page 260 of her memoirs, is the best key to the character which this unpretending volume describes. Miss Carpenter was not a distinguished person in talent or attainments; she did not write remarkably well; she had not the graces of person or manner which give their chief influence to her sex; but she had a genius for practical Christianity which made her powerful and will preserve her memory. She was the daughter of Dr. Carpenter, an English Unitarian, contemporary with Dr. Channing, and her early interest in life seems to have been bestowed on education, doctrinal religion, and that form of

* 'The Life and Work of Mary Carpenter. By J. Estlin Carpenter.' London and New York: Macmillan & Co. 1879.
'The State of Prisons and of Child-Saving Institutions in the Civilized World. By E. C. Wines, D.D., LL.D.' Cambridge: University Press, John Wilson & Son. 1880.

liberalism with which her family and the Martineaus were identified. But in 1833, when she was twenty-six years old, a new turn was given to her thoughts by her acquaintance with two foreigners, in different ways remarkable—the Hindoo reformer, Rammohun Roy, and the New England philanthropist, Dr. Tuckerman. The former died in her friend's house at Stapleton, near Bristol, in September, 1833, and two months later Dr. Tuckerman came, with letters from Dr. Channing, to spend a few weeks at her father's house in Bristol. As Miss Carpenter was walking out one day with the Boston "minister-at-large" in the narrow streets near her father's chapel, "a miserable, ragged boy darted out of a dark entry and rushed wildly across their path." The good Bostonian said: "That child should be followed to his home and looked after," and the remark went to his companion's heart. "His words sank into my mind," said Miss Carpenter in 1870, "with a painful feeling that a duty was being neglected." This feeling to a true English heart is the most painful and the most compulsive. She resolved from that time forward that she would do something in the matter. At first she proposed to visit Boston for a year or two, "observing the excellent plans there adopted"; but circumstances did not favor her, and it was not till nearly forty years after her walk with Dr. Tuckerman that she landed in Boston. In the meantime she had found her work and accomplished it; had taken up another great task in India, and had done much there to promote the education and elevation of women. In June, 1877, she died, having become in the last thirty years of her life the acknowledged head of the systematic movement for the reformation of vicious girls, which has effected so much in the British Empire and in the United States.

The course of her activity in this philanthropic work and in that kindred task of prison reform, which she also undertook late in life, made her intimate, by acquaintance or correspondence, with most of the leading philanthropists in all countries. To none does she seem to have been more indebted for inspiration than the two Americans, Tuckerman and Parker. In the memoir of Matthew Davenport Hill, by his daughters, they speak of the phrase "perishing and dangerous classes" as "a designation which the pen of their devoted friend and benefactor, Mary Carpenter, affixed to neglected and criminal children." But, in fact, she borrowed it from the sermons of Parker, as her biographer says, in speaking of her first important book, 'Reformatory Schools for the Children of the Perishing and Dangerous Classes and for Juvenile Offenders.' This was published in 1851, not long before the Birmingham Conference of December, 1851, which she organized but took no public part in. This Conference laid the foundation for the present excellent system of Government aid to small reformatories—so much better than our American method of maintaining great establishments from the public treasury. The Life of Miss Carpenter gives a sufficient account of this system, its origin and results, and is, in other respects, a most useful book. It is hardly so picturesque and interesting as it might be, and has fewer anecdotes and good sayings than the Memoirs of Hill, just mentioned.

The wide scope of the late Dr. Wines's large volume on prisons and reformatories has prevented him from doing full justice to Miss Carpenter and her work. She deserved mention far better than the rhetorical Spanish lady, Doña Arenal, whom Dr. Wines translates at some length; but then she was better known, and the American prison-reformer might assume that his readers knew who Mary Carpenter was and what she did. As a concise history and geographical summary of prison systems, with more or less discussion of their principles and methods of administration, Dr. Wines's book is meritorious, and even indispensable, since it contains between two covers what we should else have to search for in a hundred books and pamphlets. It is the serious, long-meditated, but not very methodical work of an enthusiast, who had observed much and reflected earnestly, sometimes profoundly, on one of the most perplexed questions of our civilization. Although printed by Wilson, it is not exactly published by him, but will be sold by subscription until the small edition now issued is exhausted. Besides its chief topic—prisons and penal law—it treats of preventive and reformatory agencies for children, and this also historically and geographically.

The Financial History of the United States from 1774 *to* 1789. Embracing the Period of the American Revolution. By Albert S. Bolles, Lecturer in Political Economy in the Boston University. (New York: D. Appleton & Co. 1879.)—The student of American history scarcely knows, from time to time, whether to make up his mind that that history is thin, crude, and mean, or that it presents the grandest forces of civilization in their most remarkable unfolding. Especially in the history of the Revolutionary period does this uncertainty exist. At one moment we discern in it the opening of a great drama, the birth of a great empire, and at another moment we see the miserable squabble of a few hucksters, aping in the backwoods the methods of legislation and war-making which civilized nations practised at the time. Great social forces are mixed with sordid personal struggles in a juxtaposition which certainly is not so glaring anywhere else in history. The financial side of our Revolutionary history reveals the less admirable features in the nature of the struggle and in the character of the people. It reveals this far more by what it does *not* tell than by what it does tell. The most significant fact about the Revolutionary finance is that there are no records of it. But when we say of any financial transactions that the records of them are missing, a very heavy suspicion is thrown upon the transactions themselves. The Continental Congress contained a great deal of ignorance, inexperience, and prejudice, and a very large measure of vanity. It deteriorated steadily during its whole existence, and all its faults and vices combined to color its financial measures. Its prejudices about "one-man power," etc., etc., also forced it into very unwise administrative arrangements. Hence there were no records or guarantees of any transactions, and John Adams said truly that the financial history of the war was lost beyond the chance of recovery.

Our historians and specialists have tried to reconstruct the history from later or outside sources. They have all been obliged to make use for this purpose of the same material. It is sadly meagre, and the total product of it is very small. Mr. Bolles has now gathered most of it, and it makes a large volume, but the additional facts are few, and there is very little new light shed upon the old facts. The author has collected his material with very great zeal and care, and his comments are just. The material is no doubt very stubborn. The material of financial history always is especially so. To go into full detail is to weaken the interest and weary the patience of the reader; to omit is to lessen the full justice of the statement; to condense is, in the nature of the case, very difficult. The material in the case of this history is also of such a kind that from it the writer cannot form for himself a simple, distinct, and full conception of the subject. Hence it is impossible that he should give such a conception to anybody else. It is a very natural step in such circumstances to quote the authorities and leave the reader to form his own conception. Mr. Bolles seems to have arranged and digested his material with due effort, but he has been forced to this latter course, and it has swelled his book to a size which seems disproportioned to the subject.

The story is one of financial inefficiency and of the consequences which financial inefficiency entails upon a nation. It is hard to tell which feature of it is more humiliating than another—whether it be the paper-money mania, with the tender-laws, price-laws, committees of safety, and all the other apparatus by which the effort was made to realize paper-money notions; or the childish opposition to taxation which prevailed; or the loan offices, with the confusion and negligence which reigned in them, and which constituted fraud in effect if not in fact; or the begging attitude of the country towards France, which justly offended and disgusted that nation. It was nothing less than the absolute compulsion of circumstances which forced Congress to put Morris at the head of the finances, and it crippled and thwarted him, refused to comply with his wishes, neglected its own plain duty to his department, and finally forced his resignation. Mr. Morris was a great speculator, who had made a fortune in privateering and in gambling on insurance policies. He spent his whole life in this kind of business, and was afterwards engaged in a great speculation on the tobacco export to France, and finally on land. What he brought to the service of the country was merely some knowledge of the first principles of business and finance. This knowledge was at the moment a very scarce thing indeed, and Morris was appreciated accordingly, but he could not make something out of nothing. It seems that this was what was expected of "a great financier." His "first principles of finance" were, after all, only these: to take prompt and energetic measures to fulfil obligations, and to fulfil them when they became due; to nurse credit, to use it as little as possible, and then only in proper ways and where it could be made most efficient. His failure, as well as such measure of success as he obtained in his public position, proved the truth and soundness of these principles.

Le Donne nell'antica Società genovese, di Marcello Staglieno [Women in the Olden Genovese Society]. (Genova. 1879. 8vo, 64 pp.)—Curious pictures of mediæval life, founded on researches in the Genovese archives, are here exhibited. The author divides his work into three parts—the girl's life, from the cradle to the door of the husband's house; the mar-

ried life and second marriages; and, lastly, women and religion, women in the church, in processions, and in nunneries. A female child was an unwelcome burden in Genoa. She could earn nothing, she could not fight, her dowry diminished the wealth of the family. If there were several sisters, one might hope for a husband, the rest could expect nothing but the cloister. From infancy the predestined nun was often taken to visit the monastery, where she was sure to find an aunt, a sister, or a cousin, who, for the good of the family, or, as the author says, "for the pleasure of the damned, to have the more company in wretchedness," tried to accustom the child to the monastic life, and to entice her to take the veil. In the city, girls were confined to the house, or at least could never go out unaccompanied, for the young bloods of that day were "less educated than now," and once in their hands no woman's honor was safe. Even if a young lady who ventured out without an escort escaped the worst, there was danger that some man of low estate would kiss her, or lay hands upon her to compromise her and compel her family to grant her to him in marriage, with a dowry. The constraints of life in the city made the freedom of the *villeggiatura* all the more welcome. Acquaintances were formed and affections grew up there which must often have been only a source of misery in after life, for the parents had absolute power over their children and arranged the espousals, sometimes of children in the cradle, at their own pleasure, for purely family reasons, and carried them out without the slightest regard to their children's feelings. The priests had a large part in arranging these bargains—especially, in the later times, the Jesuits. But it is very noteworthy that before the Council of Trent the Church had no necessary part in the solemnization of nuptials. There was no religious ceremony whatever. Matrimony was contracted simply by the couple expressing their consent, after which they embraced and kissed, and the husband put a ring on his wife's hand. That act completed the ceremony *secundum ritum sanctæ Ecclesiæ Romanæ et consuetudinem civitatis Januæ*. But, for the sake of having an indisputable record of the act, it was customary either that a notary should be present, or that the event should be fixed in the minds of a large number of persons by the old Roman *traductio*—the passage of the bride from her parents' house, where the ceremony took place, to her husband's, in company with the marriage guests. The witnesses in this case were all the dwellers on the way, and the crowds of idle folk and children attracted by the show and the showers of nuts, freely distributed, just as in pagan times.

The custom of *serraglio*—resistance to the *traductio* by the friends of the bride, and a mock fight for her person, or a payment by the bridegroom for a free passage—does not appear to have existed at Genoa, unless it can be inferred from the tenor of the sumptuary laws passed in 1440. Another record of the marriage was the receipt for the dowry, which was given by the husband in presence of his wife and her relations, and attested by a notary. At the same time he announced the amount of the *antefatto*—pin-money or settlements—which he was willing to give his wife. The legal rights of wives, so far as property was concerned, appear to have been reasonably well protected. Her dowry was a first lien on her husband's property, and, if he was evidently going to ruin, she could, by application to a magistrate, have her portion set aside. Wives uniformly made their wills before childbirth, especially the first, usually leaving their property to one of their own family. More wills of women than of men are to be found in the Genovese archives. They inherited one-third of the husband's estate. Second marriages were looked upon with great disfavor, and were often greeted with a serenade of pots and pans, or the bridegroom was treated to a ride through the city on an ass, with a similar discordant accompaniment. The custom is brought within the cognizance of our author by the number of lawsuits that arose from these charivaris.

The passion of the Italians for games of chance led in the sixteenth century to betting on births, as to whether they would take place within a given time, and whether the offspring would turn out male or female. The sport was not in itself worse than risking money on a fly's lighting on this or that lump of sugar; but when those who had large sums at stake attempted to influence the result, and the *redoglio* (as it was called) led, or was believed to lead, to seductions and miscarriages, the religious authorities thought it time to forbid such wagers under penalty of committing mortal sin.

At Genoa, as elsewhere, the women were more religious than the men. Their secluded manner of life made the comparative freedom of the religious festivals, the excitement of processions, the opportunity of displaying a toilet in church which sumptuary laws would have prohibited on any other occasion, particularly grateful. Genoese streets were lighted at night only by the lamps burning before the numerous images of saints. These lamps were in charge of the families near whose houses they were placed, and the ladies found another excuse for excursions and gossip in the necessity of collecting among the neighbors oil to feed them with. Another similar excuse for publicity was the custom of ladies sitting on benches in the churches to receive the offerings of the faithful, as, in our own time and in English-speaking countries, ladies keep booths at charity fairs. But instead of selling kisses, or drinking out of the same cup, they appear, at one time at least, to have carried small rods to beat, not very severely we may suppose, those who came within their reach. In early times the women sat apart from the men in the churches, usually on the left; after a while this fell into disuse, and loud were the lamentations at the innovation and the consequent excesses. Finally the Government was obliged to maintain spies in all the churches, and their curious reports, implicating persons of every class, priests and friars among the rest, are still to be seen in the Genoese archives. Nevertheless the assignations continued, and the misfortunes of the republic at the hands of Louis XIV. were set down by grave minds to the divine anger at this desecration. The earliest nunneries were not closed; the nuns came and went and received visits at will; hence great scandals, so that in 1596 the famous Prierio, no doubt with something of a preacher's exaggeration, calls them *monasteria diaboli, turpissima lupanaria, digna millies igni*. Gradually the restrictions were increased (though not without resistance both from the nuns and from the orders of monks with which many of the nunneries were connected) till they reached the seclusion of the past and present century. Yet the records of the courts show that scandals still continued—a natural result of the habits of the time, by which so many were forced to take the veil for family reasons, without any vocation.

A Treatise on the Liability of Stockholders in Corporations. By Seymour D. Thompson. (St. Louis: F. H. Thomas & Co. 1879.)—This treatise, as Mr. Thompson modestly says in his preface, is the "result of an attempt" to write an article on the subject discussed for the *Southern Law Review*. It throws a curious light upon the chaotic state of the law governing corporations that Mr. Thompson should have originally supposed that the intricate subject of the liability of stockholders was one that could be dismissed in a magazine article. On examination he discovered to his surprise that it was one of the "most litigated topics" in this branch of the law; that there were no good American books relating to it; and that any proper treatment of it would require the citation of some thirteen hundred decided cases. There is probably no relation in life into which the average modern man enters more recklessly, and with a less intelligent conception of the legal consequences of the step, than into that of stockholder in a corporation. He generally understands that he makes himself liable to the company for the amount of his subscription to the stock, and has in addition a vague notion that he cannot be made liable to anybody beyond the amount of his stock. That he may be liable for the debts to an amount twice or three times as great as his subscription; that he is, at all events, liable to the creditors for any unpaid subscriptions on stock, in case of the insolvency of the corporation; that if the organization is not in accordance with law he may be involved to a still further extent; that these various liabilities may last until he transfers his stock to a purchaser, or, possibly, even afterwards—of all these things the ordinary stockholder is as innocent as the babe unborn. The result of his ignorance is generally that in the case of insolvent corporations the greatest confusion arises, as a very slight reading of the cases cited by Mr. Thompson will convince the reader.

It is the policy of England and of American States to make the stockholder in a corporation to a certain extent responsible as a partner, and the chief fault to be found with the law as it stands in either country is, that it is extremely difficult to say in advance to what extent this liability goes. As an illustration of this doubt and obscurity, we may mention that Mr. Thompson states that in examining the English decisions he has been "impressed" with the fact that the decisions of the English courts of law, in many cases, exhibit "a higher appreciation of the principles of honesty" than the courts of equity of the same country. He admits, however, that he "could not very definitely point out the sources" of these impressions.

It would be impossible to criticise Mr. Thompson's book in detail, without going into technical points altogether *caviare* to the general reader. The book will, of course, prove of use to lawyers, for it has a very full collection of cases, and though the principles to be deduced

from them are not always clearly stated, this is as often the fault of the courts as of the author. The general result of an examination of the law must be to convince any impartial reader that it is in an unsatisfactory condition. Admitting that it is advisable to make stockholders liable beyond their stock, there can be no question that the liability ought to be simple and its enforcement easy. In many cases its complexity and difficulty of enforcement suggest that litigation rather than the security of creditors has been the main object of the legislature. Particularly is this the case where the stockholders reside outside the State in which the corporation does business. It is difficult to avoid feeling a very grave doubt whether the personal liability of stockholders in excess of paid-in debt is any very valuable security to creditors, and whether it is not better on the whole in legislating on the subject to create a liability which is restricted but easily enforced, rather than a liability which is broad but vague. One consideration never seems to be adverted to in discussions of this subject. Nobody ever really gave credit to a corporation on the strength of the possible result of a lawsuit. Yet nobody, it may be safely said, has ever succeeded in making a stockholder pay a debt of the corporation without at least beginning legal proceedings. It is impossible, therefore, to consider the liability of any very great value as a means of credit. In other words, what the creditors rely upon really are the visible resources of the company, and the remote personal liability can hardly be considered one of these. In addition to all this it must be remembered that it is always advisable to have the law conformed, as far as possible, to the general principles which govern the ordinary conduct of business; and there can be no doubt that nine business men out of ten regard the stock of a corporation as limiting the liability of the stockholders. But the policy of enlarging this by statute is now so fixed in this country that a reversal of it seems at present out of the question.

Rhine Roamings. By Lucy A. Hill. (Boston: Lee & Shepard; New York: Charles T. Dillingham. 1880.)—The life of American girls abroad has become so much an object of attention of late that even this slight sketch of school-girl life in Germany has a certain interest beyond what it would otherwise possess. It describes life in a private school made up of six girls of all nations who have gathered there for study and excursions; and it contains, in a very crude state, raw material like that out of which Mr. James has wrought his stories. Its interest does not lie so much in the roamings among the fine Rhine scenery and in the neighboring cities, during which little was seen that is not noted in guide-books, as in the naïve revelation of character made in the amusements, adventures, and conversation of the pupils. There was nothing more exciting in their lives than one proposal of marriage and running for a train occasionally, but the openness with which the public is admitted to the events of their daily life, to the Christmas and birthday festivities, and to their sympathy with a friendless young American who died near them, and on whose dead lips the American girl imprinted a kiss when she thought she was alone, is charming; and especially striking is the naturalness of the letters of a friend in another school to the American girl (read as a matter of course to her companions and here reprinted) that descend into a realism from which Mr. James has fortunately spared us. The author has written a diary of days which may be remembered with pleasure certainly, but with quite as much pleasure perhaps if it had never been printed.

Bye-Words. A Collection of Tales New and Old. By Charlotte M. Yonge. (London and New York: Macmillan & Co. 1880.)—These tales are intended for young readers, and the first half of the volume is as good reading as could be put in their hands, for it deals with those legends of history which exercise the imagination at the same time that they lead on curiosity. One of them is a very interesting tale of adventure in the Anabaptist rising of the peasantry, which brings home sharply the conditions of life during the German religious wars, and contains an excellent sketch of Luther's Elector; there is also a picture of Dutch life in the days of Charles V. which is both instructive and entertaining. The finest story is that of the Boy Bishop, the legend of the children's bishop on Childermas day at Salisbury Cathedral, and how he died apparently in attempting to resist the scandalous rout of the common people who made the festival an excuse for buffoonery and sacrilege, but really in passively resisting the threats of a man who tried to frighten him into appointing a relative to a vacant canonship which lay in his gift. The story will touch any boy's heart, although the affected archaism of the language will exasperate his patience. So much cannot be said for the latter half of the volume as for the first half. A tale of the engagement of one governess and the flirtation of another seems out of place, and all the later ones are of very inferior merit. The volume concludes with a short comedy which could be easily acted by amateurs, and would make a simple and amusing play for parlor theatricals. Of course, being written by Miss Yonge, every tale has a moral or "bye-word" attached, but it is not thrust on the attention of the reader, and is an afterthought rather than a motive of the story.

Comedies for Amateur Acting. Edited, with a Prefatory Note on Private Theatricals, by J. Brander Matthews. New Handy-Volume Series, 46. (New York: D Appleton & Co. 1880.)—Mr. Matthews in his preface indulges in some gloomy views of amateur acting, and evidently feels that he is fulfilling a duty to the public in presenting amateurs with a collection of one-act plays, on the principle that the least said the soonest mended. It seems to us, however, that it is precisely these one-act plays, "not transiations—only taken from the French," which are the most difficult to act well, and depend for their success almost entirely on the acting. The selections in the little volume before us do not strike us as very happy. One of the best is "A Bad Case," which might more correctly be termed a farce. "A Teacher Taught" is as tiresome as private lessons are apt to be, while "Heredity" could only be made tolerable by extending to the prose portions of the play the editor's suggestion that other songs may be inserted instead of those given. We think that amateurs will still find it more profitable to select plays of two or three acts, even if among the latter should be some by Mr. Robertson, which the editor cruelly says "are just about worthy of amateur acting."

Our Own Country. Descriptive, Historical, Pictorial. Illustrated. (London and New York: Cassell, Petter & Galpin. 1879.)—Great Britain is the subject of this pretty and agreeable book, one of a thousand that might be made concerning the same territory without exhausting the material, and even without much repetition. If we call it an informal guide-book we shall about describe it. Scotland is disposed of in two chapters, one on the Clyde, the other on Dunfermline; Ireland also in two, wholly relating to Dublin, but rather oddly separated by four other chapters. A deliberate attempt, indeed, seems to have been made to avoid geographical sequence, where it would have been so easy and so useful to have followed a determinate course from shire to shire or from coast to coast. Beginning on Salisbury Plain, the scene of the narrative is abruptly shifted to the north, to Leeds; then there is a rebound to the Cinque Ports, next to the Frith of Forth, then to Plymouth, to Lincolnshire, Salop, etc. Bristol, Edgehill, Naseby, Woburn, Burghley House, Cornwall, and Land's End, the Weald of Kent, Scarborough and Whitby, Derwentwater, and the course of the Dee, are most of the remaining topics. The text is very readable, and is interspersed not only with views and portraits in great number, but also with excellent neighborhood, district, and river maps, which form a convenient adjunct to any general chart of the British Isles

HISTORY OF AMERICAN POLITICS.

By ALEXANDER JOHNSTON, A.M.

16mo, 75 cents.

"This little book is in reality the history of American political parties from the foundation of the Government down to the accession of Mr. Hayes. . . . It would not be possible to get at the facts which are here accumulated, arranged in the most orderly manner, in a very clear and absolutely colorless narrative, in a small duodecimo, without turning over at least a dozen larger works. . . . We cannot commend Mr. Johnston's little book too highly."—*The Nation.*

Cox's Popular Romances of the Middle Ages. Large 12mo, $2 25.

Mrs. Brassey's Sunshine and Storm in the East. With 114 illustrations and 2 maps. 8vo, $3 50.

Escott's England: Her People, Polity, and Pursuits. 8vo, $4.

HENRY HOLT & CO., NEW YORK.

Appletons' Journal

FOR APRIL

Contains a remarkable paper on

The Suez Canal,

Giving the inside history of that enterprise, showing how it was the means of deposing the Khedive and ruining the finances and trade of Egypt.

Other papers in this number are: "HEALTH AT HOME," by Dr. B. W. Richardson; "HENRY THOMAS BUCKLE," by G. A. Simcox; "THE NEW FICTION," by H. Holbeach; "MIDDLE-CLASS DOMESTIC LIFE IN SPAIN," by H. J. Rose; "STAGE ANOMALIES," by H. S. Edwards; Second Part of "THE RETURN OF THE PRINCESS"; "FORGOTTEN ASPECTS OF THE IRISH QUESTION"; "BUDDHISM AND JAINISM"; "A NATIONAL THEATRE"; "A MODEL ART-CRITICISM"; and in the "Editor's Table," GOVERNMENT AS A FORCE IN CIVILIZATION, ARTISTS AND INARTISTIC DRESS, THE GROWTH OF ART, INTERIOR PARADISES, concluding with BOOK REVIEWS.

25 cents per Number; $3 per Annum.

D. APPLETON & CO., Publishers,
1, 3, and 5 Bond Street, New York.

THE ONLY WEEKLY JOURNAL OF ITS CLASS PUBLISHED IN THIS COUNTRY IS

The American Architect and Building News.

It discusses topics of general as well as of professional interest in architecture and related arts, while the four full-page illustrations and the illustrative cuts of each number are valuable to all intelligent persons no less than to architects.

"This excellent periodical leaves nothing to be desired on the part of its conductors."—*The Nation.*

TERMS: Per year, $7 50, or, if paid in advance, $6; or six months, $3 50. Single copies, 15 cents each.

HOUGHTON, OSGOOD & CO.,
Winthrop Square, Boston.

PERSONS ABOUT TO MOVE ARE reminded that the editor of the *Sanitary Engineer* solicits questions regarding the sanitary construction of buildings. When of general interest they will be answered without charge in its columns. Issued on the 1st and 15th of each month. Subscription price, $2 per year; $1 for six months. Published at 140 William Street, New York. P. O. Box 3037.

*TAXATION OF RAILROADS and RAIL-*road Securities. A report by C. F. Adams, Jr., W. B. Williams, and J. H. Oberly, of a plan for an equitable and uniform system for such taxation; with an appendix giving a summary of the systems in use by the principal foreign nations and by the various States of the Union. Price 25 cents. Published and for sale by THE RAILROAD GAZETTE, 73 Broadway, New York. Send for catalogue of railroad books.

TREES.

The largest and most Complete Stock of Fruit and Ornamental Trees in the U. S. Priced Catalogues sent as follows:

RECENT

Important Publications.

THE FORBIDDEN LAND: Voyages to the Corea. By G. Oppert. With Illustrations and Map. Large octavo, cloth extra, about $3 50.

"Here, then, is the phenomenon of a population of 16,000,000 without a history, and inhabiting a land which has been for centuries a sealed book to European research. It will be easily guessed, therefore, that Mr. Oppert's book has an interest distinctly unique among later books of travel. . . . It is offered as a picture of an unknown country, and very admirably and faithfully fulfils its end."—*Mayfair.*

"A book of rare interest."—*N. Y. Evening Post.*

"Of novel and intrinsic interest."—*N. Y. Sun.*

LAMARTINE and HIS FRIENDS. By Henri de Lacretelle. Translated from the French by M. E. Odell. 12mo, cloth extra, $1 25.

This little volume gives a bright, picturesque inside view of the characters and opinions of the social, literary, and political circles which surrounded Lamartine, and incidentally of French society during the period 1820-1850.

"Full of sparkle. . . . Delightful fancy is everywhere work."—*Phila. Times.*

THE LIFE of W. E. GLADSTONE. By George Barnet Smith. Large octavo, with two portraits, cloth extra, $4.

"A sober, solid, and interesting contribution to the political history of the Victorian epoch."—*London Telegraph.*

"A history of British home and foreign politics during the past three-quarters of a century. . . . Written with ability and fairness."—*N. Y. Post.*

A LADY'S LIFE IN THE ROCKY Mountains. By Isabella Bird, author of 'Six Months in the Sandwich Islands,' 'A Ride of 700 Miles Through Japan.' Third edition, octavo, illustrated, $1 75.

"Miss Bird is an ideal writer. . . . She has regard to the essentials of a scene or episode, and describes these with a simplicity that is as effective as it is artless."—*London Spectator.*

*NOTES ON RAILROAD ACCI-*dents. By Charles Francis Adams, Jr., author of 'Railroads: Their Origin and Problems.' Second edition. 12mo, cloth extra, $1 25.

"By this very attractive little volume Mr. Adams has increased the obligations the public owes him for the many aids he has furnished to the comprehension of railway problems. . . . Ought to be universally read. . . . Full of valuable information."—*Nation.*

NEARLY READY.

THE ESSENTIALS of ANATOMY. Prepared as a Text-Book for Students, and a work of reference for the General Practitioner. By William Darling, M.D., and A. L. Ranney, M.D. Octavo, cloth extra, $4.

The work will be especially valuable to many members of the profession and for use as a text-book; it is based on the lectures of Prof. Darling, whose method of instruction is characterized by great originality and by an attractive system which has been well recognized.

Bowling Green, New York.

The Nation.

NEW YORK, THURSDAY, MARCH 18, 1880.

The Week.

A VERY weighty and imposing anti-Grant demonstration took place on Thursday last in St. Louis, on the initiative of ex-Senator Henderson, who made the principal speech of the evening. He argued elaborately against the third-term principle under our present system of nominating Presidential electors—"political slaves, accredited only to register a foregone conclusion"; showed how "each party is taught to believe that if the other succeeds the country will be ruined," and that "every election is declared to be the most momentous since the origin of the Government"; confessed himself "tired of military methods," and was applauded for asserting that if the methods and policies of General Grant's last administration deserve party approval, "the party itself is unworthy of public confidence." He quoted the Pennsylvania, Ohio, and New York Republican resolutions of 1875, and the almost unanimous protest of the House of Representatives in the same year, against the third term, as opposed to the unwritten law of the land, and predicted that if Grant should be nominated, "with the corruption of his administration and the jealousies and dangers of a third term, he cannot be elected." In support of this he cited some very instructive election statistics of the year 1874, and reviewed the irreparable losses of the Republican party during Grant's two terms. Considering the cry for a strong government, he contrasted the turbulent state of the South under Grant with its peaceful condition since Hayes came into office; said that in the present temper of political parties he feared an effort to inaugurate Grant whether elected or not, and added, amid cheers, that in his judgment "the danger of Mexicanizing this Republic is greater than the temporary success of the Democratic party." The single resolution declaring a third-term nomination "unwise, inexpedient, and subversive of the traditions of the Government, and likely to endanger the success of the party," was enthusiastically adopted.

Mr. Henderson gave no hint of his favorite candidate, but the spirit of his remarks was opposed to the only manifestation of the meeting, made when Blaine's name was mentioned. The Grant faction in St. Louis had planned to capture the meeting, or at least vote down the resolutions, but they were outnumbered and overawed. The *Globe-Democrat* performed the singular service for its candidate of quoting not only Mr. Henderson's apology for Grant in the Greeley canvass, but also an article rightly or wrongly attributed to him in 1870, when President Grant undertook to interfere on behalf of the Machine in Missouri, and secured so signal a victory for the bolters under Gratz Brown—an article denouncing this procedure with great and justifiable severity. It is a wonder the *Globe-Democrat* did not refer to Senator Henderson's dismissal from the whiskey prosecution in December, 1875, because of the affront he gave to the President by intimating a desire on the latter's part to let the guilty men escape. We ought to remark in Mr. Henderson's speech the prominence he gave to some recent foolish talk of the boomsters about the Germans being an injury to the country. One of the speakers was Dr. Emil Prætorius, editor of the *Westliche Post*, who read to the meeting two letters from such representative men as Fred. Muench, of Missouri, and Fred. Hecker, of Illinois. Mr. Hecker made the following neat point, apropos of the Strong Man:

"And again. Would, then, the arm of a tried soldier become lame if he was not elected President? Is the military talent of Gen. Grant not at the disposition of any elected President against whom violence should be resorted to by reckless demagogues? Indeed, there is no viler insinuation against a highly-praised man than to hint that he, who has served the nation under two presidents, would not do so again!"

There is still no account published of what Grant will do if nominated and the Democratic majority in Congress should throw out the vote of one of his States, and yet nothing can be more important. Mr. Conkling says that Congress will be afraid to throw out such a vote, but refrains from saying what they will have to fear, and nobody else comes forward with any explanation. The Chicago *Inter-Ocean* said that in that case the candidate would summon "500,000 veteran soldiers"; but the Philadelphia *Bulletin*, another Grant paper, says that this is "libellous," and that the *Inter-Ocean* does not know what it is talking about. It also, however, declines to say in what manner Grant would frighten the Democrats. This secrecy apparently points to some patent contrivance—a strange noise or sudden darkness, accompanied by blows on the person, such as Spiritualists use.

The non-production of any fresh Southern murders or outrages is one of the most interesting features of the present crisis. We have heard of none since the Yazoo murder, and we are now within two months of the convention. The explanation of this cannot be that murders and outrages have ceased at the South, for we have the highest Republican authority for saying that they still occur in vast numbers, and will not cease until there is one more "rousing Republican victory." Why, then, does news of them not come in? The answer to this, we think, must be that Grant's "boom" is not based on murders, but on "counting-out schemes" of the Democrats in Congress, it having become a little too absurd to maintain that he would put down outrages at the South in view of the accounts given by his friends of the condition of the South during his two terms. On the other hand, the inner chamber of the Blaine and Sherman boom is stuffed full of outrages, but it has been discovered in practice that when produced they only help the Strong Man, and do nothing for the Magnetic Man and the Financier. Accordingly they are, as it were, by tacit common consent dropped, and the poor negro is left to his fate or to the secretary of the British Anti-Slavery Society, who seems to be taking up the old 1876 outrages and using them as new, with some additional particulars fresh from Louisiana.

The Smyth case in Albany has presented another phase; in fact it grows more interesting every day. As soon as Smyth found that the *Evening Journal* was turning against him, he wrote to the Mutual Insurance Company of this city, in his official capacity as superintendent, informing the president that a loan of the company's to Weed, Parsons & Co., the proprietors of the *Journal*, on mortgage on their building was much too large for the security, which was greatly overvalued, and urging his calling it in or reducing it, and giving a very low estimate of the premises which he said had been recently made by "an experienced, skilled person." The property was carefully appraised eighteen months ago, during the depression, at $115,000. The sum lent on it is $50,000. Smyth's valuation by his "experienced, skilled person" was $45,000, and he maintained that at a forced sale it would only bring $35,000; even if his statement of the facts were correct, this use of his official position to harass a political enemy would have been bad enough. But it appears his "skilled and experienced person" was another "henchman," or "pet henchman" as he is called, named Oliver, who "works" for Smyth in politics, and whose estimate of anything is worthless. This makes the transaction exceedingly useful as a fresh illustration of the kind of thing the Machine is, and the kind of men Messrs. Cornell and Conkling, whom Smyth serves, are. He has been a "pet henchman" of Mr. Conkling's for twenty years.

Last June we witnessed an attempt on the part of the majority in Congress to use the select Committee on Civil Service Reform to

worry the Republicans by introducing a bill "to prohibit Federal officers, claimants, and contractors from making contributions for political purposes." The measure has just come to the surface for debate, and occupied the House during the past week more than any other business. It was too clumsily drawn to vindicate either the sincerity or the reasonableness of its projectors, and the consequence was that the discussion had no great value for determining the real sentiments of either party. The inherently corrupt nature of the Republicans was assumed to justify the preposterous provisions of the bill; and the retort courteous, that the Democratic party was not and never had been pure or reformatory, could not be ruled out of order. Mr. Butterworth, of Ohio, who offered a substitute from the Republican side, made an interesting historical allusion to similar measures which failed in both Houses forty years ago, under Democratic censure. Nobody, however, cared to show that the bill (so far as it affected Federal officeholders only) would be rendered superfluous by the simple establishment of tenure of office during good behavior.

After a rejoinder to Messrs. Logan and Carpenter by Senator McDonald, the bill for the relief of General Fitz-John Porter was tabled, both parties being convinced of the inability of the Senate to regard it as any other than a political question. On Tuesday Mr. Edmunds on his own motion introduced a bill to regulate the electoral count. It is a modification of the one passed by the Senate of the Forty-fifth Congress; but though the rules laid down in it are absolutely impartial, its author is probably not sanguine of its adoption. At least the Democratic arithmetic men will doubtless take a long time to study its working in every possible contingency.

Kearney's arrest and conviction for using "vulgar and threatening language" have been promptly followed by his sentence to six months' imprisonment in the House of Correction and a fine of $1,000. He was, however, so persuaded of the reality of the harmonious settlement, "honorable to all parties," lately announced that he was thunderstruck by the result of his trial. He has managed to get bail for an appeal. The incident confirms the reflections which we offer upon another page in regard to the situation in San Francisco.

The Stock Exchange markets were variable during the week, but the tendency of speculative stocks was to lower prices. One bubble recently blown collapsed, namely, the stock of the Nashville & Chattanooga R.R., which was lately advanced to 128 and fell to 84. Pacific Mail stock, which was recently run up to 62, fell to 44¼. The general depression was due to disappointment at the small purchases by the Treasury of U. S. bonds for the Sinking Fund, and to a reversal of the efforts of the leading speculators. The small purchases of bonds for the Sinking Fund deprived the money market of a resource upon which it had counted, and left the rates for loans subject to the easy manipulation of speculators, who on several days made borrowers pay commissions of $\frac{1}{16}$ to $\frac{1}{8}$ of one per cent. per day. The reserve of the banks was reduced so that the associated banks of the city together held last week less than two millions of dollars more reserve than the law requires. Although money in London is active at 2¾ to 3 per cent., bills on London were borrowed and turned into cash here as a means for getting time loans. Notwithstanding that the sterling-bill market was supplied with these borrowed bills, as well as with a considerable amount drawn against the sale during the week in Germany of about $7,000,000 Southern Pacific 6 per cent. gold bonds, the market was firm at the close at less than two points below the rates which would cause gold exports. The imports of foreign goods continue largely in excess of the exports of domestic products; the imports during February having been valued at $40,160,000, and the exports at $26,968,000. During the first two months of the calendar year the total imports were $81,062,000, while the total exports were $50,730,000. Silver bullion in London closed at 52*d.* per oz.; and the bullion value here of the 412½-grain silver dollar at $0.8759.

The Virginia repudiators have met with a serious repulse in the veto of the "Riddleberger" bill by Governor Holliday, which the Senate by a close vote has just sustained. Governor Holliday's message on the subject is indignant in tone. He very justly points out to the Legislature that what they call an "elimination" of debt is known to the world at large as repudiation, and that "a State cannot give its own definition of terms and expect them to be adopted by the world." The Riddleberger bill is the most impudent scheme yet put forward in the South for the purpose of cheating creditors. It begins with a solemn preamble that the people of Virginia "will never acquiesce in any settlement which will obligate them and their posterity to pay any part of the interest upon the public debt which accrued during the war and the period of reconstruction," and where it does recognize any right in the creditors at all, proposes that they shall get their interest "out of any money in the Treasury not otherwise appropriated." He calls attention anew to the fact that the Virginia debt is not a war debt, but represents internal improvements for which the money was advanced to the State forty years ago. According to the *Herald's* Richmond correspondence, the debt question has created an almost hopeless division in the Democratic ranks. The debt-payers have control of the State organization, while the "readjusters" have a strong following among the negroes. The "colored readjuster's" view of repudiation seems to be a simple one. The negro politician feels that emancipation without some tangible material results is a hollow mockery. He has seen white debt-paying carpet-baggers carry off all the available plunder, in the shape of Federal offices, while the white debt-paying "brigadiers" have all the State offices. To the "colored readjuster" this looks very like a conspiracy between Democratic and Republican debt-payers to "perpetuate the color line," and he accordingly favors repudiation as a means of splitting up the dominant parties and giving his race a chance.

The abuses of the referee system in this city have from time to time attracted the attention of reformers, but efforts to reduce the evil have never had much success. A new movement has lately been set on foot which we trust will result in some intelligent consideration of the subject. There is very little dispute as to the facts. There are in New York a large number of what may be called "habitual" referees, who get their positions through politics or judicial favoritism. They are frequently men of no character, property, or responsibility, barely competent to discharge their duties, who are made referees solely to give them some means of support. As to the results of such a system there cannot be room for doubt; but in the discussion of the matter in the newspapers the mistake is frequently made of supposing that the root of the abuse is the constant employment of the same person as referee. It is not this, but the constant employment of an unfit person that constitutes the abuse. If a law were to be passed forbidding judges absolutely from appointing the same person twice as referee, the character of the appointments would not necessarily be affected by the change. Indeed, it may be doubted whether it would not produce better results to recognize the "habitual" system, compelling judges to appoint formally their referees, and compelling the referees to give bonds for the proper discharge of their duties, and making the referee removable for cause like any other judge. The referee really acts as a judge, but under the present system as a judge superior to all human responsibility.

Mrs. Belva Lockwood, a lawyer recently admitted to the bar in Washington under an act of Congress passed last session, and who sent bouquets to the supporters of the bill, appears to have got into what is, in more senses than one, an "active practice." She recently began to "stir up Ben Hill" by a bastardy suit, her client being

a woman from Georgia about whom little seems to be known. No sooner had the papers been served, however, than the plaintiff was induced, she says by a small payment in money, to disown the suit and repudiate her counsel and sister-woman, Mrs. Lockwood. Whereupon Mrs. Lockwood, instead of dropping the matter, as a cold-hearted male lawyer would have done, resolved to pursue the defendant in the newspapers, and wrote for publication a "scathing" letter to Mr. Hill, accusing him of carrying "ruin" into divers households, and using the civil service of his country to "cover up his tracks." As Mr. Hill cannot refute this new charge, even if untrue, without bringing shame and confusion on some family, naturally Mrs. Lockwood has thus far the better of him. In fact, by this mode of attack she has all men at her mercy, including the judges before whom she practises, the lawyers whom she opposes, the litigants against whom she fails to get verdicts, and clients who do not pay her bills. By keeping charges of "a delicate nature" hanging over their heads she can make the proudest and ablest men in the community dread her displeasure more than loss of either health or money. The pity of it is that this is exactly the kind of element which the foes of woman predicted she would introduce into legal practice if she was ever admitted to the bar, and which they predict she will introduce into politics if she ever takes heartily to voting and legislating.

The facts with regard to the compulsory pilotage question now being investigated by Congress are, we believe, so far as they relate to the port of New York, as follows: The whole system of pilotage is governed at present by State law. Pilots are licensed by the Pilot Commissioners, and every vessel entering the harbor is compelled to employ one. The number being restricted, the business is a valuable monopoly. It appears that the gross annual earnings of a Sandy Hook pilot-boat are now over $25,000. This sum is, of course, reduced by expenses, and has to be divided among a number of men. The service, too, from the intelligence and capacity required by it, ought to be well paid. Still, there is a general belief among the employers of pilots in New York that the remuneration since the war has been too high. At the time of the war the fees were increased fifty per cent. on account of the inflation of the currency, and they have never been reduced. The present agitation is the result of an attempt to lower them. The contest began at Albany and has been transferred to Washington by the merchants, who, finding that the result of domestic legislation was not likely to be satisfactory, set on foot a Congressional investigation of a minatory character. Practically the investigation is intended as a warning to the pilots that if they persist in their unconscionable course with regard to fees the whole system will be done away with by Congress, a Federal law passed on the subject, and pilotage thrown open to competition. As an abstract question a good deal is to be said both for and against compulsory pilotage. The arguments against it are very obvious. The argument for it is that the self-interest of owners is not a sufficient motive to ensure the proper precautions being taken on entering a harbor, and that the public must therefore regulate the matter by law.

The London *Anti-Slavery Reporter*, the organ of the British and Foreign Anti-Slavery Society, refers in its issue of March 1 to our suggestion that the official superiors of their Secretary, Mr. C. H. Allen, should "restrain his activity," in view of his publication of stories of mutilation committed on negroes in Mississippi, of which he was obliged to confess in the London *Times* that he had no proof whatever. The Committee of the Association now make on this subject the following singular declaration: "So far from Mr. Allen's action in this matter being disclaimed by the Committee of the Anti-Slavery Society, the *Nation* may rest assured that the Committee are taking every means in their power to spread abroad both in England and America the sad story of this great negro exodus, as made known to them by their friends and correspondents in the United States." But the *Nation* said nothing about "the sad story of the negro exodus." It called attention to the fact that Mr. Allen sent to the English papers a story of two negroes having had their arms cut off, by Southerners, for attempting to emigrate to Kansas, and when challenged he was unable to substantiate these stories by a particle of proof. He had no evidence whatever of any such mutilations having ever taken place. No one had seen the mutilated men. No American newspaper, at a time when such stories had great political value, had printed one word about them. What we asked the Committee to do was to restrain Mr. Allen from circulating such stories again. But his anecdotes cannot have been part of "the sad story of the exodus," because, of course, the story of the exodus is true and rests on testimony. Does the Committee intend to allow him to embellish it at his discretion?

The Marquis of Hartington and Mr. Gladstone have both opened the canvass in England by addresses controverting Lord Beaconsfield's key-note about Liberal sympathy with Home-Rulers and foreign enemies. But there is no news calculated to throw fresh light on the prospects of the two parties. Both are apparently equally confident of victory, and it may be interesting to Professor Sumner to know that the election expenses are estimated at $10,000,000, and that the announcement of the dissolution depressed consols, as likely to cause a temporary drain of money to the country districts. Considering the extraordinary severity with which the English judges now construe the statute against bribery and intimidation, it is hard to see what can be done with so much money.

The course to be taken by the French Ministry in consequence of the defeat of Article 7 of the Educational Bill in the Senate has been settled by a positive announcement from M. Ferry that he would accept the excision of Article 7, but would enforce existing laws in regard to the Jesuits. Upon this he demanded a vote of confidence, which was readily given. This appears to be at present the only topic which greatly occupies the public mind. The Emperor William has taken great pains to prevent the growth of anxiety about the pending additions to the German army by dining ostentatiously with the French Minister, and uttering loud protestations at the dinner of his desire to be on good terms with France, and of his esteem for President Grévy and M. de Freycinet. General von Moltke, too, has in the Reichstag made a speech declaring that the additions to the army indicated no fear or expectation of war with anybody. They were simply ordinary precautions, and he showed that the German army still fell below the Russian and French, both in numbers and length of service, though it had to defend a territory exposed on every side, while the French had the ocean and the Russians the desert at their back.

In Russia things seem quieter. General Melikoff, the Armenian, who now really holds a dictatorship, his powers far exceeding those of a military commander even in a state of siege, is said to be a man of much cultivation and enlightened views, and his administration is winning good opinions and restoring confidence. The press is enjoying greater freedom, and is venturing to preach the necessity of reforms, and the public are treated with a consideration to which they have never been accustomed from the official class. Nothing has done more to restore confidence than his calling on the Municipal Council of St. Petersburg to send delegates to the council or board which assists him, and the discovery that their presence will not be an empty form, but that they will be consulted and heeded. It is already begun to be said that there may be in this the germs of representative government. He has adopted also a more conciliatory policy towards the students, and its effect on them is already seen. That the Russian Empire should be reorganized by an Armenian is one of the striking illustrations of the way in which long-forgotten or obscured races are beginning to appear once more in our day on the stage of events. The resuscitation of the Armenians Russia may fairly claim as her work, and that England should be virtually engaged in keeping them under the Turks is one of the oddest phenomena of the day.

THE SAN FRANCISCO TROUBLES.

IF the last news from San Francisco be true—that Kearney has succumbed, and that in two or three days "arrangements will be consummated ensuring a harmonious and mutually honorable settlement of the questions which have so long vexed the community, and a restoration of good will, business confidence and activity, and general prosperity"—if this is really a correct description of the state of affairs, it would seem as if the respectable people of the city owe an apology of some sort to the rest of the country. For some months back we have been assured that business in San Francisco was declining; that the bank deposits had greatly diminished; that real estate had fallen heavily and building had ceased; that capital was emigrating, and that every branch of business was in a state of stagnation. The cause of this deplorable state of affairs was the presence in the city of a large armed mob, which drilled by night and marched the streets by day, and held meetings in "the sand-lots" at which the speakers threatened many citizens by name with death, and the community at large with fire and sword. Private persons were called on by the mob and directed to discharge some of their servants and make changes in the mode of conducting their business. An adventurer of the worst type, who had been travelling for years in the attempt to escape from his reputation, had been elected mayor, and in office made himself publicly the champion and sympathizer of the mob. The chief agitator, Kearney, a foul-mouthed vagabond, daily threatened publicly to kill his enemies, and collected subscriptions to build a gallows to hang them on. Ministers were interrupted with insult in the midst of their sermons by emissaries of the mob. Merchants and manufacturers were compelled to sit still and listen to public discussions on the side-walk as to whether they ought not to be executed. Rich men bought cases of rifles to arm their retainers for the defence of their houses, as in Rome and Florence in the Middle Ages.

This state of things, though not in its most acute form, has now lasted for nearly a year. Lately, owing to a decision of the Board of Health that the Chinese quarter was a nuisance which must be abated within thirty days, the disorder and alarm became greater, and the language of the mob more threatening. We have, in fact, in this part of the world, been led to expect any day during the last fortnight or three weeks an outburst of bloody violence in San Francisco, not through an attempt on the part of the constituted authorities or of the orderly citizens to put down the mob, but through an attempt of the mob to visit the city with pillage and massacre. This expectation was strengthened by the formation, a week ago, of an organization outside the law called the "Citizens' Protective Union," which published a manifesto indicating that they were about to undertake the duties which in civilized communities are usually performed by the police and by the courts, viz., the protection of life and property. This, instead of allaying our anxiety, increased it, for we assumed that such a step would only be taken in the last extremity, and it seemed to increase the probability of a desperate armed conflict. The United States troops, we were told, had been concentrated so as to take a hand in it, and the arms of the militia regiments were, as a measure of precaution, removed from the armories to a place of greater safety.

On Tuesday, however, the Chief of the Police arrested Kearney for using "vulgar and threatening language," and took him before a police magistrate as quietly as if he were an ordinary pickpocket. He was found guilty and is awaiting sentence, and immediately afterwards there occurred that restoration of harmony, on "mutually honorable terms," which we have already referred to, and the "arrangements" for the return of peace and prosperity are at this moment being perfected. At this distance it seems, if all this be true, either that the dangers of the situation were grossly exaggerated or that the present settlement is ridiculously inadequate. Neither view is very flattering to the courage and good sense of the real people of San Francisco. If Kearney's arrest was all that was needed to restore "peace and prosperity," we cannot help asking how it came to pass that the business of a great commercial city was allowed to be put in peril before it was attempted. If it was not sufficient, and the present settlement is only a truce, does not the importance attached to it indicate either great timidity or great simplicity? What "mutually honorable" settlement, too, can the peaceable, industrious inhabitants conclude with a brutal mob of loafers who have been threatening to murder them and destroy their property? What negotiation is it possible to carry on with Kearney and his followers which will not contain the seeds of future trouble? Is there any "honorable" settlement with them possible which does not involve their pleading guilty and going to jail?

These are questions which we have no means of answering. They can probably be only answered on the spot, but until they are answered we must consider the history of the past six months in San Francisco very mysterious, and, on the surface, not very creditable. If the law is for any reason, in any community, insufficient for the protection of life and property, organizations outside the law for that purpose are undoubtedly justifiable, for the law is made for man, and not man for the law; and security, being the foundation of civilization, is the first consideration of every good citizen. But certainly when such an organization is found necessary, all compromise with law-breakers ought to be at an end, and nothing short of their unconditional submission be accepted.

It is very difficult, also, to form any rational conjecture as to the future of California from anything one hears or reads from Californians about the present condition of the State. The pictures drawn of the way in which the Chinese live in San Francisco are very horrible, but the fault plainly lies with the city authorities. The crowding in the cellars, the open drains, and all the other foulness and nastiness of "Chinatown" are phenomena that would rapidly show themselves in any large city in the Union or in the world where there is a poor population, if the police and the health officers permitted them. Horrors almost as great have been witnessed in tenement-houses here. In all the great modern cities of the western world precautions more or less effective are taken against such nuisances by municipal regulation. But in San Francisco the public apparently has not thought seriously of this remedy, and when we first hear of the loathsomeness of the Chinese quarter it is in connection with the proposal of a mob to destroy it with fire and murder the inmates. In an article on the Chinese question in the last number of the *California*, a San Francisco magazine, by General Miller, a prominent Californian writer, we find the extraordinary statement that the Chinese in San Francisco live as they live "in spite of American laws and in defiant contempt of American police." Elsewhere we have read accounts of their living in some of their cellar abodes over open drains, the drains being municipal works, and the prevention of disease through public nuisance a municipal function.

Surely, all this, if true, points to deplorable apathy about city government on the part of the well-to-do classes, and prepares one for the spectacle of a mob dominating the city for months, when all that was necessary to cow it was to take its leader before a police magistrate for being abusive and insulting. It may be said, of course, that he would not have submitted to arrest quietly if he did not know that the Citizens' Protective Union was behind the police; but this only removes the difficulty one degree further back. The Citizens' Union does not seem to have been a very expensive or complicated organization. In fact, one or two private meetings seem to have put it in motion, and yet it was not thought of until the city had been living for nearly a year under a most degrading tyranny. The one thing which appears clearly in the whole story is the break-down of municipal government by universal suffrage. Somehow or other the law-breakers elected men of their own stamp as mayor and sheriff, who made no secret of their sympathizing with them in designs, and the better class of citizens were unable to prevent it. The formation of the Protective Union was neither more nor less than the assumption of the municipal government over the heads of the mayor and sheriff by a selected constituency; and if peace and prosperity are now to reign it will be because the mayor and sheriff will act under the supervision of a body unknown to the law,

or in fear of it. It cannot be said that this promises much for the permanent security. The new constitution is not doing as much mischief as it was feared it might do; but is not this because it is being systematically evaded? Is an organic law, however, which is made workable by evasion, a good foundation for the lasting prosperity of a State? In fact, from whatever point of view we look at the Californian crisis, it seems as if those who are most interested in the material and moral welfare of the State would have to go down deeper for the foundation of their peace and security than they have yet done. The Chinese apparently are at present by no means the worst danger with which the State is threatened.

THE POLITICAL PROSPECT IN ENGLAND.

THE coming election in England will bring a Parliament into existence which will probably have more important matters to settle than any which has met since the passage of the Reform Bill. First and foremost, it is plain that the crisis of the "Eastern Question," which has hung over Europe like a black cloud ever since 1815, is very near at hand. The Turkish Empire has, of course, long been thought to be in process of dissolution, and it has been in slow process of dissolution for over fifty years, but the process has now become very rapid. The Government has no revenue, and apparently no armed force worthy of the name, and the provinces it still retains are ravaged with impunity by brigands. All departments of the state at Constantinople seem to be in a condition of complete disorganization, and famine is raging over large areas to add fresh horror to the scene. It is, therefore, not certain, but highly probable, that England may have within the next five years to say positively, either alone or in conjunction with other Powers, who is to have Constantinople and the territory around it. That the Tories will get through such a crisis without a war with Russia seems unlikely. They would find a peaceful settlement made difficult, at best, both by their previous attitude of defiant and distrustful rivalry, and by the strong stimulus they have given to the mysterious thing called "imperialism." But in addition to this they have succeeded in making Russia take the place in the mind of a very large portion of the English public of "a natural enemy" which was so long held by France. The "natural enemy" to an average Englishman is not simply a foreign nation which stands in the way of the growth and security of the British Empire, but a thoroughly deceitful and vicious people, whose policy is directed by the basest motives, whose conquests and annexations are prompted by pure lust of power, whose armies butcher and ravish indiscriminately, whose officials all take bribes, and whose government, whatever its form, is a despotism of the meanest kind. It was undoubtedly under the influence of the "natural-enemy" feeling that the London Common Council the other day voted down by a large majority a proposal to congratulate the Czar on his recent escape from assassination. The councillors felt he was too bad a man to be congratulated about anything. During the civil war in this country the North rapidly put on the moral deformity of the "natural enemy" in the Tory newspapers and drawing-rooms, and Lincoln became a more repulsive monster than the Czar, and one more wholly given up to evil. The view died out at the close of the war through influences needless to mention, but it is questionable whether it would have died out if the United States had continued to cross English foreign policy in any field. A more powerful aid to a ministry with an aggressive turn than this tendency to associate moral deformity with political hostility to England it would be impossible to devise, and the Tories are masters in the art of fostering it. It causes everything on which the nation most plumes itself to contribute to make the enemy detestable. It has now acquired such strength with regard to Russia that it is difficult to see how, in case of another collision, the Tories could keep out of a fight which would have all the flavor of a crusade. The prospect is made the more serious by the improbability that the present Premier could stand the strain of a great war. It is said to be as much as he can do to bear the pressure of his present responsibilities, and they are nothing to what they would be if England were engaged in keeping Russia out of Asia Minor, or checking her advance in Central Asia, and trying to prevent anybody but the truly good from getting possession of Constantinople. And yet he may be said to constitute the cement of the Tory majority in the House of Commons. They have no other leader they can trust, and they live by leadership rather than by opinion.

It must not be supposed, however, that even the worst outlook for the Tories makes the prospects of the Liberals altogether bright. There is undoubtedly a division in their ranks which it is impossible even under the pressure of adversity altogether to cover up. Mr. Gladstone is the natural leader of the party, and yet he cannot lead it. The Moderates are a little afraid of him. The impression has spread through the middle class that he is not altogether a "safe man." He writes and talks a great deal, and people love to hear him and read him, but nobody can write and talk so much without saying a great many indiscreet things and suggesting a variety of startling possibilities. He has been a magnificent legislator, and is one of the three or four first-rate financiers the world has produced, and yet he has apparently been overtaken by somewhat the same kind of distrust which made the late Horace Greeley's Presidential candidacy so much of a farce. We say the same kind, not the same degree, because Mr. Gladstone has proved himself a great statesman. But how few of those who accepted Greeley as a political apostle were willing to see him charged with high executive functions. The actual leader of the Liberals—the Marquis of Hartington—only obtains allegiance from the Radical wing of the party by a great sacrifice of feeling on the part of the latter. Radicals have often shown readiness to accept the generalship of an aristocrat and man of pleasure, as Lord Hartington is, but only when, like Fox or Mirabeau, he is a genius. Lord Hartington is anything but a genius, and, in fact, is mainly useful to the Liberals as a sort of guarantee to the cautious and conservative people that the party does not cherish revolutionary designs. It is as much as he can do to serve even this purpose, however. He really likes horses and dogs and game much better than politics, and finds even the function of guaranteeing Liberal respectability, it is said, somewhat tiresome. He has borne his responsibilities very well thus far, but he is clearly not the man to head a party which needs ardor and enthusiasm either to hold its own or to make fresh conquests, even if he were what he cannot be as long as Mr. Gladstone lives—the leader to whom the party looks for its inspiration and its policy.

The most difficult problem of all for the Liberals, however, is the Irish problem, to the solution of which they seem to be fully committed. The Tory theory is that there is no Irish problem or anything Irish to be dealt with except a parcel of turbulent and unreasonable Irishmen, and it seems probable that on this point the bulk of English voters agree with them. The damage done to Lord Ramsay, the Liberal candidate at Liverpool, by his simple promise that he would be willing to enquire into what is termed Home Rule, and the exceeding care the Liberals have since been taking in the House of Commons to clear themselves of any suspicion of sympathizing with what the English constituencies believe Home Rule to be, show very plainly what the state of English opinion on this subject is. In fact, there is probably greater exasperation in the English mind against Ireland than there has been since O'Connell's day, and the Tories have of late been taking some pains to stimulate it. For much of it, it must be said, the Irish themselves are responsible. The Fenian agitation, with its resort to murder and explosion in the hearts of English cities, gave a great impetus to the natural English tendency to take unreasonable views of Irish affairs. The course of the Irish obstructionists in the House of Commons since then has operated powerfully in the same direction. It may be true enough that, as Mr. Sullivan showed in the House of Commons the other day, the Tories were in 1874 guilty themselves of the grossest obstruction, but then there is a difference, which every Englishman feels, between obstruction undertaken for

the purpose of defeating a measure and obstruction undertaken for the purpose of bringing the legislative body itself into contempt; and of the latter the Irish Home-Rulers are not unreasonably suspected. Nevertheless, that something much more radical than anything which has yet been attempted must be done for Ireland is probably plain to many reflecting Englishmen, and it is to the Liberals the task must fall, as representing almost exclusively what may be called the sympathetic power of the English people. That enormous defect of the English mind, which has done so much to dim the splendor of English history—its inability to enter into the social and political ideals of alien or quasi-alien races, and its tendency to contemn what it does not understand—has been cultivated, if we may use the expression, steadily by the Tories, and is one of the forces on which they have always relied when hard-pushed. Many races and communities have suffered from it, but none so severely as the Irish, owing to their nearness to the seat of British power. Such progress as has been made during the past fifty years in securing a recognition of the fact that Irish ideas of how Ireland ought to be governed may have some merit, even if it be not apparent to Englishmen, has been due, on the whole, to the Liberal party.

It must be admitted, however, that it is not a kind of work which is likely to help them with English constituencies, and it will probably burden them heavily for some time to come. Some of the Irish members have of late begun to assist in lightening it by sober-minded argument of Irish grievances in the English press. The *Nineteenth Century* and other monthlies of the same character have recently contained several articles from the pens of prominent Irishmen, which are a far more effective statement of the Irish case than anything that has been heard in the House of Commons. The failure of Mr. Parnell's tactics in this country, which have had a striking resemblance to those of Denis Kearney, by robbing him of much of his influence after he gets back, will probably be useful in the same direction. For there is, after all, an Irish case against English legislation of unanswerable force. There are Irish grievances which cannot be disposed of with a sneer, or by charges of disloyalty against those who produce them. To make their way in the English mind, however, they must be presented with clearness and vigor, and in a form in which Englishmen will not be ashamed to handle and support them. For the follies and indiscretions of Irish agitation at home and abroad there has hitherto been an excuse which Irishmen might offer not only without shame but with a certain pride, but which has now done all the work of which it is capable. These follies and indiscretions are, after all, the excess or overflow of a tenacity in clinging to the sentiment of national life such as probably no people has ever before displayed, and which is one of the most curious phenomena of modern history. It is safe to say that there is no other people whose history had been, on the whole, so barren of stirring incidents and so little marked by epochs of fruitful and glorious toil, and whose yoke has been for ages so heavy, who would not long ago have lost all trace of national feeling or aspiration or tradition, and have accepted absorption and oblivion in dumb despair. The struggle the Irish have continued to make in all lands, and for many generations, against political extinction—a struggle which has been kept up in the main by the very humblest class—ludicrous and even grotesque, turbulent and disorderly as it has been in many of its aspects, undoubtedly indicates the possession by the race of qualities to which another step in civilization may give extraordinary political value, and which it seems little short of madness for English statesmen of this generation to ignore or despise.

THE SEASON AND THE SESSION.

LONDON, Tuesday, March 2, 1880.

THE season has begun with maimed rites. There is now no Holland House, or Cambridge House, or Gore House, because there is no Lady Holland, or Lady Palmerston, or Lady Blessington. The buildings remain, and there is in one case, at least, a wearer of the title. Holland House stands where it did; it is occasionally inhabited; garden parties are given on its historic lawn when weather permits. But the place is merely the ghost of itself, a monument to its own literary and political associations. Strangers visit it as they do the Cluny Museum in Paris. Cambridge House, where Lady Palmerston held those receptions in which the suspicious virtue of Mr. Cobden saw the instrument for the seduction of Radical manufacturers and pliant journalists, has become one of the innumerable military and naval clubs to which every year seems to make an addition. The half-world (to translate the French phrase) which Lady Blessington gathered around her at Gore House has no longer any centre of its own. Indeed, the half-world itself has disappeared. The people who hovered on the dim confines between what is respectable and what is not respectable seem now to choose their side definitively, and to cross the border either way once for all. Clever Bohemianism has sunk to a lower social stratum than that at which Count D'Orsay maintained himself. It is found chiefly among journalists, artists, and novelists of the struggling and out-at-elbows order. Lord Houghton in a recent essay misses the old interchange of social amenities between the great houses which marked his earlier days. There is, perhaps, an explanation if philosophy cared to find it out. All the material conditions survive. There are stately mansions, long suites of spacious and luxurious rooms, staircases which are themselves saloons and lounging places, wealthy hosts unsparing of expense, graceful hostesses willing to die for their party, and to undertake the fatigue of an American President in bowing and shaking hands—and the result is a discordant rabble, and not an organized company. In former days the aristocratic class confined its intercourse to its own order, and to the artists and men of letters whose distinction and social qualities adorned or enlivened these assemblies. People knew each other. Receptions and other entertainments brought together society in organized and living groups. Now the necessity of asking the manufacturer who has won an important borough for his party, and his wife and daughters, with the logical consequence that if you ask him you cannot avoid asking the retired tradesman, with his feminine belongings, who has managed to wrest another constituency from the enemy, makes our great houses on their open days little more than public houses. They are houses of call for the party to which they belong. People are in local contact, closer than is agreeable, without being in social intercourse.

The season opens this year under more than the disadvantages inseparable from existing social and political conditions. There are accidental drawbacks to its efficiency. The traces of the fire which, at the beginning of last year, destroyed or damaged the upper part of Lord Granville's house in Carlton House Terrace have been effaced; and the Liberal leader is restored to it, and is able to make it the scene of the smaller hospitalities of the dinner-table and the drawing-room. But it is not yet in a condition to receive the Liberal party, rank and file, and its camp-followers. The Countess of Cork, with frank and kindly hospitality, has taken up the mantle which for the moment has fallen from Lady Granville's shoulders, and her house in Grafton Street has been, on several occasions, the scene of those receptions at which the members of the Liberal party meet each other and exchange greetings with the smiling faces and cordial hands of friendly antagonists. Lord Derby's secession from the Conservative ranks, and his attitude of benevolent neutrality towards the Liberals, and of a neutrality not quite so benevolent towards his old colleagues and followers, has removed the mansion in St. James's Square from the list of great Conservative houses. Lord Salisbury's long illness has shut his place in Arlington Street to society. Lady Stanhope, whose husband is the son and successor in the earldom of the well-known historian, receives the Conservative party, with a sprinkling of personal and literary friends of no politics, or of opposing politics, in Grosvenor Place. The hereditary intellectual reputation of the Stanhopes seems less likely to be maintained by its titular head than by his younger brother, Mr. Edward Stanhope, at present Under-Secretary of State for India, and probably the ablest of the rising Conservatives in Parliament.

If the season is languid the session has not hitherto been particularly interesting or promising. Both parties have their eyes fixed on the general election, and each is bent on out-manœuvring the other. They pretend to be thinking of public business; but they are really thinking of the cries on which it will be most convenient to go to the country, and the accusations which they can make against each other with most chance of being believed. One great source of perplexity to both is the Irish vote. The leaders, Conservative and Liberal, have had very seriously to consider whether they will be most likely to secure a majority in the new Parliament by courting Irish opinion or by defying it. Their conduct and language have fluctuated according as the one impression or the

other has been predominant. The question for both of them is whether concession to Ireland will gain more Irish than it will lose English and Scotch votes. This is one of those perplexing points on which it is impossible to have assurance in advance. The leaders on both sides, or their followers, with the tacit or more than tacit approval of the chiefs, have tacked and trimmed. When Mr. Gladstone's Irish University Bill broke up the alliance between English Liberals and Irish quasi-Liberals, overtures were made by the Conservatives to the Home-Rulers. A Conservative Home-Ruler was a political being to be as much recognized and tolerated as a Conservative working-man. Irish seats which could not be won by a Conservative without profession of Home-Rule principles were to be purchased by that profession. A leading Conservative Home-Ruler was significantly rewarded with the lord-lieutenancy of his county. The Intermediate Education (Ireland) Bill of 1878 and the Irish University Bill of 1879 were additional overtures to Irish opinion. The Irish vote, however, was not gained by these measures, while stolid English Conservatism and Protestantism were shocked by them. Having tried "concession to the legitimate claims of Ireland" without success, the Conservative leaders bethought them that "resistance to her factious demands" might be a better card to play. The defeat of Lord Ramsay at Liverpool, partly on the false pretence that he had acquiesced, with Lord Hartington's sanction, in Home-Rule principles, gave the Ministers the cue to their future conduct. The Liberals were charged with coquetting with a party bent on dismembering the Empire and entering into relations with men false to their sovereign and their country. This was Lord Beaconsfield's language.

Nothing would be easier than to create an anti-Irish Jingoism throughout England and Scotland, compared with which the anti-Russian Jingoism of the past three years would be as nothing. To the charge against the Liberal party of associating itself with foreign intrigue and aggrandizement abroad would be added the accusation of associating itself with the internal disruption of the Empire. If Liberals could be further inveigled into a position which would lend itself to the imputation of countenancing Irish obstruction in the House of Commons, a good case would be presented for at once appealing to the country. Sir Stafford Northcote's resolution, which has now become a standing order of the House of Commons, was produced with this view. It was hoped that the Liberal leaders, not having been consulted about it—an omission contrary to the courteous usages of Parliament—might oppose it. In that case, as it soon became known to Lord Hartington and his friends, there would have been an immediate dissolution. The Government would have appealed to the country against the Opposition which had shown itself the friend of the foreigner, the patron of a semi-seditious Irish faction, the ally of unscrupulous Irish obstruction. The trap was too openly set and too clumsily baited to be capable of ensnaring anybody. The question whether Parliament shall complete a seventh session of the ordinary length, or whether there shall be a dissolution at any earlier time, is probably once more an open one in Lord Beaconsfield's mind. If he can snatch a victory by surprise he will do so. If the opportunity fails, he will endeavor to go to the country with the credit of a last session of useful and productive work. If to this claim could be added a settlement in Afghanistan and an honorable accommodation with Russia the odds would be in his favor. A little juggling might conceal for a twelvemonth the financial embarrassments of the Government. A last session of Parliament brings into prominence the least worthy arts of management on both sides and the less creditable tricks of the game. They are not, however, the whole of politics in England, and are practically compatible, if not always theoretically consistent, with much that is pure in motive and honorable in conduct. † † †

THE GERMAN SCIENCE.

LEIPZIG, February 7, 1880.

THERE was a time when philosophy was in a peculiar sense the national passion of the German mind, and when every intellectual man, if, indeed, he had no system of his own, was proud to be called a disciple of some great thinker, who had construed the universe to his own mind, and dictated his own terms to every special science. Even Krause planned a congress of philosophers to organize the departments of human knowledge into some solidary encyclopædic form for purposes of both education and research. His plan came to naught only because it was a little too late, and if people laughed it was because they had just begun to realize that philosophy in the sense then current meant individualism sharpened and defined to the utmost, and that if a philosopher would enjoy in peace the full fruition of his own opinions he must keep aloof from other philosophers.

Physiology is not a little indebted to philosophy. Medicine first became a science, according to Helmholtz, with the establishment of the law of the specific energy of the nerves, which he compares in importance to the discovery of the Newtonian law of gravity. For this law, in the wide sense of Johannes Müller, science is unquestionably indebted to the Kantian philosophy; and on the basis of this principle, and led by impulses which are more or less directly traceable to the Herbartian system, men like Lotze, Wundt, and others have been led from physiology back to philosophy again; and, what is far more important, the medical profession is once more slowly gaining a position of influence in the intellectual world such as it never occupied before. In the middle ages physicians were always the *Aufklärer*, and now individuals among them have done work for science which actually recalls to mind the old Hippocratic maxim, "God-like is the doctor who is also a philosopher."

Physiology has been characterized as just now pre-eminently *the* German science. This is probably true, whether it means that German philosophic methods and results are less known in other countries than those of other sciences, or that they reflect more peculiarly the national characteristics. Till Foster's text-book appeared very little was known in England and America of German physiology save by specialists who themselves had studied in Germany. The German observer is no more acute in studying morbid symptoms or anatomical forms of animal life than the English or French. But the former is not satisfied merely to observe: he has a passion for making his own conditions. It is not enough to record the normal functions of a tissue, but it must be made to work under artificial conditions—*in vacuo*, with electrical and thermal stimulation, and under the influence of divers gases and chemical compounds. The action of organs is studied by extirpating, laming, or poisoning them all, with a view to learn how to reproduce normal conditions. If the German observer sometimes forgets that his science is but a part of man's world-old fight against his greatest enemy, disease, and pursues his science merely for love of the strangely fascinating insight it brings him, it is a noble error, more than excusable, even on the ground of the greatest practical utility, in which the pursuit of truth for its own sake has issued so often in the history of science. Again, in England and France a scientific man may be a merely descriptive physicist without much knowledge of mathematics—a thing almost unknown in Germany, where even the physiologist finds it indispensable to understand at least the elements of the higher mathematics, so universal are mechanical ideals, and so needful is it to bring his results into at least approximately exact form.

As an illustration of the scope of these methods we may mention Dr. Lilienfeld's volumes in politico-social science, on the physiology of the state, in which commerce is treated under the rubrics of the circulatory system, schools and printed matter under that of the nervous system, etc., in a way which would have delighted Hobbes himself. And again, to borrow an illustration from Helmholtz, as the microscopist when he reaches the limits of visibility must turn all his attention to the study and improvement of his instrument, so now more than any other the physiologist of the nervous system has reached a point where he must turn the greater part of his attention to the chief instrument with which he works —viz., the human mind. In a peculiar sense true science here can be grounded only on the fundamental laws of psychic processes. Fick terms physiology "the highest and most fruitful generalization of the collective natural sciences," of which Du Bois-Reymond calls it the queen. Czermak, who devoted his wealth to building and equipping a magnificent laboratory and lecture-room, and his time to the end of his life to the popularization of physiology among the general public, was never weary of insisting that it should be taught in every high-school. Once more, evolution in the sense of either Darwin or Haeckel is far from being a finality for the physiologist. It is for him rather a morphological assumption that all animals and men belong to one family, and he defines his science, with Pflüger, as the chemistry and the physics of living matter. Czermak defined its object to be the development of the phenomena of life from the laws of these two sciences by experimentation. Accordingly, most of the younger men devote themselves more or less exclusively to one or the other of these halves of a science which is rapidly growing beyond the possibility of mastery by any single mind; and some laboratories, like those of Heidelberg and Bonn, are pre-eminent in the chemical, others in the physico-mechanical, side of physiology. If a single professor is generally at the head of a laboratory, it is in many if not most cases rather on account of the practical difficulties, such as interference of authority,

etc., of having two professors of co-ordinate rank, than because it is now regarded as a strictly integral science.

About three years ago Professor Hermann, of Zürich, was induced by Vogel's publishing house to edit a brief but comprehensive encyclopædia of physiology. The same thing was undertaken thirty years ago, in the youth of the science, in Wagner's still famous hand-book, where, in the compass of four good-sized volumes, a dozen professors treated most of the leading topics of the science monographically in so thorough a way that the book gives an admirable picture of its condition at that time. The sixth volume, completing the first half (or over 2,300 pages) of Hermann's work, has just appeared.* The first volume is devoted to the contraction, excitation, and fatigue of muscles. It contains an interesting chapter on that most fascinating of all the topics of myology—the electrical current of muscles. This, by Hermann himself, affords him a chance to restate his objections to Du Bois-Reymond's molecular theory, which is becoming more questionable every day. Professor Nasse describes the chemical properties of muscles, and Professor Engelmann, on protoplasmic and ciliary motion, concludes the volume. The larger part of the second volume is taken up by Professor Grützner's physiology of the voice and of language, which shows us among other things how completely the training of the voice, the nature of vowels and consonants, accent, and even perhaps the origin of words, have become matters of physiological science. Professor Fick concludes with a chapter on the mechanics of movement. The third volume is devoted to the general properties of nervous tissue and to the special characteristics of the spinal and cerebral nerves. In the third volume Professor Eckhard discusses reflex action and the other properties of the spinal cord and cerebellum and the cerebral ganglia; and Professor Exner, under the head of physiology of the cortex of the brain, treats sensory and motor impulses, the time of various psychic processes, attention, sleep, localization of functions, etc. The fifth and by far the ablest volume is devoted to the sense of sight. The dioptric and retinal functions of the eye are presented by Professor Fick. Professor Kühne writes a chapter on his famous retinal-purple, or the photographing powers of the retina, and Professor Hering, the great apostle of nativism as opposed to the empiricism of the Helmholtz school, concludes with a psychological chapter on the sense of space and the movement of the eye. The sense of hearing, by Professor Hensen, takes up the first part of the sixth volume; and taste, smell, touch, and the sense of temperature, by different authors, conclude it. The bibliography throughout is very full and valuable, and the work will of course supersede the score of smaller text-books which are still in the market.

In spite of the great merit of the work of Profs. Hermann, Exner, Hering, and Fick, perhaps of Grützner, the book, as a whole, has several grave defects, and does not, as Wagner's 'Handwörterbuch' did in its day, give us, in all respects, an adequate view of the physiology of its time. I will not speak of the occasional repetitions, trifling defects of arrangement, the omissions of the department of development history, the somewhat stultifying effect upon many German investigators of writing pages which cannot by contract be made the vehicle of communicating original researches, but only mention, first, that the names of the four most eminent German physiologists, Ludwig, Brücke, Reymond, and Pflüger, do not appear in the list of authors, and the two large universities of Berlin and Leipzig are not represented at all. The two last professors in particular, and all four to a degree, are representatives of views which have been more or less hotly contested for years, and their antagonists, doubtless with the truest aim to be impartial, have written with a decided *tendance*, if not occasionally with a partisan spirit. There are certainly important phases of the science of which the advocates are still living, and which are very meagrely presented. It would be interesting to go somewhat into details here, but I have left myself no space. The book is often uncritical and not well digested. The most striking instance of this is the work of Professor Eckhard, whose introductory historical sketch is little more than an advertisement of a book he intends to write, with copious citations of authorities which it often seems as if he could not possibly have read, so inadequate is his treatment of their contents. The same may be said, though in much less degree, of Prof. Funke's work, which, it should be observed, however, was finished and reviewed by another hand after his death. Moreover, it will hardly be regarded as a merit by many that the optical part is made supplementary to Helmholtz's Optics, since the latter, valuable as it is, is and will long be out of print. In spite of all this the work is, of course, indispensable to every physiologist, and it is to be hoped that the remaining half, promised before the end of the year, will be still more satisfactory.

Correspondence.

PROGRESSIVE INCOME-TAXES.

To the Editor of The Nation:

Sir: Readers of this week's *Nation* who are also readers of the *North American Review* must be puzzled by two statements which flatly contradict each other. In his article on income taxation in the current issue of the *Review* Mr. D. A. Wells says: "All incomes subject to taxation in any European country are invariably assessed at one and the same rate," and he reiterates this assertion at various places and with increasing emphasis; the *Nation* says, in the leading article on "The Socialistic Legislation in Germany," that "the *Klassen-steuer*, on which the representation in the Prussian Landtag is based, is an income-tax increasing from one-half to two and three-quarters per cent. as the incomes rise." How shall this difference be explained?

Mr. Wells is wholly wrong—inexcusably wrong, one might add, since any enquiry into the practice of Europe ought to have included Prussia, and any enquiry into the Prussian revenues ought at once to have revealed the *Klassen-steuer*, or, more strictly speaking, the *Classificirte Einkommen-steuer*, which you correctly describe as a progressive or graduated income-tax. Indeed, Prussia may be said to have two taxes of this sort, one state or national and one municipal. The cities are authorized for their part also to levy an income-tax, the *Gemeinde Einkommen-steuer*, which is a certain percentage of the state income-tax, the rate being determined in each case by the local authorities. Thus, in Berlin it is now, I believe, seventy per cent., so that a citizen who pays one hundred dollars on this tax to the state, pays also seventy-five dollars to the municipality. No new assessment is, of course, made for this second tax, but the progressive feature in the state assessment is evidently retained.

I have the honor to be, etc., H. T.

March 5.

MR. BAYARD'S AVAILABILITY.

To the Editor of The Nation:

Sir: A place in your columns is solicited for the following observations suggested by the article in your last number relating to the alleged unavailability of Senator Bayard, as a Presidential candidate, by reason of the peace predilections expressed in his Dover speech of June, 1861. Mr. Bayard's entire career since he has entered public life has been so preeminently conscientious, courageous, and patriotic that he has confessedly won the admiration and confidence of all, and been regarded by many as an indispensable candidate. Under these circumstances his exclusion from the list of available candidates would occasion profound regret, and by many would be deemed a national misfortune. It is, therefore, proper to pause and enquire what is the real extent and weight of the objections to Mr. Bayard's availability, and to consider whether, if they exist, they cannot be removed or entirely overcome.

As objections to his candidacy, it has been urged that his nomination would raise the "sectional issue," and also would arouse the prejudices which were entertained by many of the Independent Republican voters of the North against those who believed, in 1861, that the secession problem could be better solved by pacification than by war. But, inasmuch as the nomination of Seymour and Blair in 1868, of Greeley and Brown in 1872, and General Ewing and other "war candidates" in 1879, did not avert the "sectional issue" and banish the "bloody shirt" from the political arena in the campaigns of those years, it does not seem reasonable to claim that a Democratic candidate with a war record will do so in 1880, especially when it is expected that the coming campaign will bring the Democratic party and its independent allies, through the Southern electoral votes alone, within forty-seven votes of the Presidency, as Mr. Conkling has so significantly remarked. Since, therefore, the "sectional issue" is inevitable in 1880, whether the Democrats have a war or peace candidate, such an objection can have no more weight against Mr. Bayard than against any other candidate Indeed it is most probable that it will have little or no weight in the approaching canvass. It was most vehemently urged against the election of even such unwarlike Democratic veterans as Tilden and Hendricks in 1876, and yet, unsuccessfully, because the influence of the sectional issue was counteracted and outweighed

by considerations of graver importance and more vital interest to the welfare of the country.

And so it will be in 1880. For the people are weary of sectional strife, surfeited, *ad nauseam*, with politics and politicians, political issues and partisan legislation, and they long for the return of an enduring era of good feeling and zealous devotion to the public interests instead of to party ends. They want public servants, not political dictators; and the methods of peace, not the measures of war. For President they want a statesman, not a warrior; one who in character, training, and long experience in public affairs is conspicuously qualified for that high office, and who is perfectly in accord and sympathy with the present aspirations and needs of the nation; who is right to-day, and not who was right twenty years ago and wrong now. And they especially demand a man of positive, not negative character; one who will be actually President, and not the dupe or willing tool of corrupt political managers; and who will restore a decent administration of the public service, and courageously and unflinchingly discharge his sworn duty regardless of fear or favor within or without his own party. Utopian as these sentiments may seem, in juxtaposition with present political practices, it will be found that, in the next Presidential election, the people will evince a decisive preference for such a candidate, and especially for such an one as shall have been tried in the ordeal of national affairs and found trustworthy, rather than for a new man whose fitness is untested and uncertain.

Now, if Senator Bayard is such a candidate, if he does realize the popular ideal and is in full accord with the living issues of to-day and the present needs of the country, as the newspapers—Republican, independent, and Democratic alike—have so often confessed, how are the enlightened, patriotic, and independent voters of the country to answer to their consciences and their country if they themselves become the cause of his unavailability?—as they surely will become, if they permit a mere prejudice against his peace opinions in 1861 to defeat his nomination and election, when the reasonably certain consequence will be to give over and continue the control of the Government in the hands of those President-making politicians who will conduct it in the future, as in the past, in a manner detrimental to both the welfare and decent reputation of the country, and contrary to the professed views and wishes of the entire body of independent voters themselves.

Surely, so suicidal and so fatal a prejudice cannot prevail among those who claim the proud title of the enlightened and independent Republican voter. Its existence, therefore, must be an utter assumption, or its extent and influence greatly exaggerated. In the border States, during the war, the passions and resentments were undoubtedly fiercer than in the North, and the prejudices against the advocates of the "peace policy" naturally more lasting. And yet in Delaware more than five thousand voters who were opposed to Mr. Bayard's peace sentiments in 1861 have joined his party since the war, and are now among his stanchest supporters. Indeed, in Delaware, where his whole record is familiar to all, Mr. Bayard is stronger than his party, and can attract to his personal cause a host of voters—particularly the young—who have hitherto voted the Republican ticket, as is shown by their own public avowals of late, and by the spontaneous outpouring of the best elements of all parties during the unprecedented reception given him in November upon his return from Europe.

If these indications demonstrate how little influence can be wrought by "prejudice" even in a "border" State, how insignificant must it be elsewhere, and how little, if any, can it affect Mr. Bayard's availability! In truth, is there not reason to believe that this prejudice is an imaginary political bugbear, and will obtain only with the unreflecting or with those who, from sinister motives, wish Mr. Bayard to be reputed "unavailable"? But even if such an unpatriotic and perilous prejudice be found to exist, what will be the true mission of the independent press which has so often lauded Mr. Bayard as the ideal Presidential candidate, and also the obvious duty of the truly independent citizen at this juncture? Will it be to yield and pander to a baneful popular prejudice, or to utter the voice of warning and strive manfully and zealously to control and dispel it, and in its place create and direct a wholesome public sentiment?

If the independent press, which declares that the people are "perfectly in sympathy" with Mr. Bayard upon all present public questions affecting their dearest interests, as well as those party papers which have so often proclaimed that he, *par excellence*, possesses the qualifications required by the next President, will cordially, vigorously, and persistently unite in reiterating these utterances and in denouncing the suicidal folly of subordinating reason to passion and patriotism to prejudice, it is not at all improbable that the politicians will suddenly become convinced that "sentimental considerations" against Mr. Bayard's availability will promptly and most obligingly yield to the patriotic considerations requiring his election to the Presidency. J. C. G.

March 6, 1880.

RAILROAD COMPANIES AND THEIR EMPLOYEES.

To the Editor of The Nation:

Sir: In a late number of the *Nation* (No. 764) there was published a letter from Charles Francis Adams, jr., on the "Care for Railroad Employees," wherein Mr. Adams endorses and gives the sanction and the influence of his name and reputation to a scheme of which he says he has no doubt "that in itself the plan is not only perfectly practicable, but one dictated by the soundest considerations of pecuniary interest." The plan is that railroads shall obtain the "moral support and political help" of their employees (which are, it is assumed, not paid for by the ordinary wages) by creating a "Special Employee Loan Fund," to be lent to deserving men after three years' service at less than the current rate of interest. The money is to be used by the employees to procure homes, and the rate of interest named is 4 per cent.

The ruling rate of interest in the West being 8 per cent., this plan would in effect establish a special fund from which the company would donate the difference, say $40 a year (4 per cent. on $1,000) for five years, to an indefinite number of men for an indefinite service. It is obvious that anything which will promote *esprit de corps*, zeal, and efficiency among railroad operatives is a good thing for railroad owners; but whether zeal and *esprit de corps* can be promoted by the plan which Mr. Adams recommends, or by any other similar plan, is a fair question. Paternal methods of dealing with large bodies of men are apt to attract the attention and sympathy of philanthropic people, but the wisdom of such methods, especially in this country, may well be doubted. At all events, no step in that direction is safe until the ground has been very carefully and thoroughly surveyed in advance. Many of our great railroad companies employ from ten to twenty thousand men each, and the first thing for the employer to do in dealing with such a body of operatives is to make clear to them the true character of the business relation which exists between him and them, and this is all the more important if the employer be a corporation. Rules of conduct or the absence of rules, which might be safe or even salutary in the case of the individual employer of small numbers of men, might be destructive of discipline and an encouragement to the worst doctrines of communism if adopted by a corporation employing thousands.

Against this particular plan I beg to submit the following suggestions:

I. Making loans of money on favorable terms by an individual to secure to himself personal adherents of especial loyalty, may or may not be considered a success; the result varying with circumstances. This is essentially a personal matter, depending upon personal considerations alone, and the sphere of such operations is always quite limited, and, therefore, easily commanded. But the proposition to make it a branch or department in railway management, and effective as a means of influencing large bodies of employees, is a very different matter.

II. If it is proposed as being a remedy for too low wages, a better remedy can be suggested—namely, to raise the wages. Upon this point any one interested in the principle involved will find it discussed and condemned in the comments of Mr. Mill upon the "allowance" and "allotment" systems of England ('Principles of Polit. Econ.,' book ii. chapter xii. §§ 3 and 4'). Concerning allotments, which are commended as the better plan of the two, he says:

"As affecting the general condition of the laboring class the scheme, as it seems to me, must be either nugatory or mischievous. If only a few laborers have allotments, they are naturally those who could do best without them, and no good is done to the class; while if the system were general, and every or almost every laborer had an allotment, I believe the effect would be much the same as when every or almost every laborer had an allowance in aid of wages."

III. If the wages are high enough, they need not and should not be increased for the purpose of inducing men to do their duty to the company's interests. If not high enough to command the kind of service wanted, raise them. All the fidelity and "political help" which a company desires from employees can be secured by good treatment and the prompt payment of fair wages—that is, wages which will command in the market the services of the kind of men you want.

IV. All employees whose merit and service are the same should have equal reward from the company as such. But this gratuity is only to be

given for the purpose of securing homes, and to those who have already paid one-third in value on the property. If the fund is large enough to be made available to *all* who could buy homes, the number of these would still be comparatively small. Many workingmen do not need homes of their own—have no families and no occasion to buy homes. Of those "in meritorious service over three years" probably not one in ten would go upon the list as a borrower from the fund. Nothing will produce more discontent among employees than a feeling that they are being unequally dealt with in a distribution of this kind. The gratuity should not be restricted to those alone who are able and willing to buy homes. If it is urged that the very object of the plan is to discriminate in favor of those who buy homes, to give them a premium because the possession of homes makes better citizens, and, therefore, better employees, it is nevertheless true that the plan would not tend to promote the zeal and *esprit de corps*, but the reverse, among the nine out of ten or four out of five meritorious employees who, from various causes, would not share in the bounty. Besides it is, to say the least, doubtful if on general principles it would be wise to offer special inducements to employees to run in debt.

V. Under the proposed plan the money will as a rule be given to those who need it the least, which, if not an injustice, is nevertheless not what the plan aims at. As the fund is limited some test for applicants is necessary, and the one named is that the borrower shall be "deserving." But he who is most deserving and meritorious would probably have been the most frugal and saving, and would be least in need of the money.

VI. It is doubtful whether actual experience will demonstrate that the effect upon the few who receive the loans will be to increase their efficiency or devotion as workmen. Shakspere says:

> "Neither a borrower nor a lender be,
> For loan oft loses both itself and friend,
> And borrowing dulls the edge of husbandry."

VII. As the fund is to be provided by the "absentee owners" of Western railroads, so the placing of it must be confided to the local management. Employees will claim that they are interested in the fund, and if the manager fails to divide it fairly and to decide rightly who are *most* "deserving" and "meritorious" in accordance with their ideas of fairness they will think they have just cause for dissatisfaction; this will not promote efficiency in the service.

VIII. Assuming that this is not proposed as being in any sense a remedy for low wages, but in "reward" of merit (as if "merit" were not expected for fair wages), and that an early result of its sincere adoption will be to extend its privileges to *all* deserving workmen of three years' standing, it not only involves the use of very large amounts of money, but it introduces a new element into the relations of employer and employee. The doctrine now generally accepted as sound is that personal service is a commodity worth the market price, good and zealous service always commanding a better price than poor or indifferent service in the long run; that great railroads are peculiarly dependent upon the general labor market for their supply; and that whatever disarranges it is to their detriment. Paternalism, however well meant on the part of railroad companies, will weaken the conviction in the minds of working people that wages are solely dependent upon the law of supply and demand, and there will be substituted the feeling that the owners of the property are adding, can add, will add, and soon that they *should* add something "reasonable" as a reward of merit, as if a man were not employed and paid good wages to do his duty.

IX. Employees who reflect upon the subject will probably prefer to be paid fair wages and receive fair treatment, and then pay the market price for the money they borrow, as they do for other commodities. Gratuities, if not regarded as a right, would put them under obligations to the company independent of their employment. They would prefer that the regular laws of property and values should control the relation, and to feel at liberty to exact higher wages if the wage market justified it.

X. It is a business necessity in the operation of railroads that there shall be on the part of the managers freedom to discharge any employee, without being required to give a reason for it. *Any* paternal arrangements will interfere with that freedom, and to that extent impair the efficiency of the service.

XI. The general object of the plan is to stimulate men to greater zeal and efficiency. But men are stimulated, if at all, by the hope of something of more value to them than the loan of $1,000 at 4 per cent., namely, an advance or promotion in place and pay; and if the hope and desire for these will not make a man work with zeal, the added possibility of getting $40 a year given to him for five years after three years' service, will have no effect. In fact, zeal and efficiency among railroad employees depend on the kind of discipline and management which assures a man that with these qualities he can get ahead in the natural way. No artificial stimulus is needed.

XII. The establishment of hospitals, and of libraries and reading-rooms, at points where large numbers of men congregate, is a somewhat different matter. There is some reason to doubt whether mankind appreciates what it does not have to pay for; but within limits, and rightly managed, it is possible some good may come from this kind of provision for the employees all alike. The writer has had some experience and spent some money in trying the library and reading-room scheme, and while the result is as yet not altogether satisfactory or encouraging, the indications are that in this direction is the best prospect for a satisfactory result.

GRADGRIND.

Notes.

IN token of the centenary of Channing's birth, the Unitarian Association will issue a new edition of his life, by his nephew, Rev. W. H. Channing, compressing it into one volume. Roberts Brothers, also, will publish 'Reminiscences of Dr. Channing,' by Miss Elizabeth P. Peabody, another book about him by the Rev. Charles T. Brooks, and 'Principles and Portraits' by the Rev. Dr. Bartol. The same house, in order to head off an unauthorized edition of Arnold's 'Light of Asia,' will issue a cheap paper edition of their own, with additional matter.——Houghton, Osgood & Co. have in press a 'History of Marblehead,' by Samuel Roads, jr. ——D. Lothrop & Co. will shortly begin publication of a "Library of Entertaining History," edited by Mr. Arthur Gilman. 'India,' by Mrs. Fannie R. Feudge; 'Egypt,' by Mrs. Clement; 'Switzerland,' by Mrs. Julia S. Tutwiler; 'Scandinavia,' by Mr. Chas. E. Hurd; and 'Spain,' by Prof. J. A. Harrison, are among the volumes projected.——'Free Trade and Free Land,' by Representative S. S. Cox, is in the press of G. P. Putnam's Sons.——Austin Dobson's 'Vignettes in Rhyme,' with an introduction by E. C. Stedman; and William Cory's 'Guide to Modern English History—Part I., 1815–30,' will be published at once by Henry Holt & Co.——J. B. Lippincott & Co. have in preparation 'King Lear,' the fourth volume of Mr. Horace Howard Furness's Variorum Edition of Shakspere; the 'Summerland Sketches' of Mr. Felix L. Oswald, which have formed an agreeable feature of their magazine; and 'New England Bygones,' by E. H. Arr.——Mr. John Springer, of Iowa City, is printing by easy stages an expanded edition of his Catalogue of books, etc., in his possession relating to the art of Printing. It will be limited to 85 copies on tinted and as many on plain paper.——Mr. Alexander Mackintosh Shaw, of Chipping Barnet, Herts, England, invites subscriptions at a guinea a volume to his 'Historical Memoirs of the House and Clan of Mackintosh and of the Clan Chattan' (large 8vo, pp. 700). The work has been for several years in MS., and will be published if the cost of printing is assured. It contains separate accounts of the Macphersons, Macgillivrays, Macbeans, Shaws, Farquharsons, and other septs of the Clan Chattan, and has an important relation to the general history of the Highlands.——Robert Clarke & Co., Cincinnati, have just brought out a very useful and timely compilation, by Florien Giauque, of all constitutional provisions and laws of the United States relating to elections, the elective franchise, citizenship, and the naturalization of aliens. It makes a not bulky pamphlet even with the addition of notes of all the United States courts' decisions, and in naturalization cases of the State courts also. There is a full index.——A. Williams & Co., Boston, are about to issue, under the title of 'Our National Domain,' Mr. Edward Atkinson's graphic chart of State and international areas, etc., published at Thanksgiving by the *Herald*. It will be folded within covers.——The fourth annual report of the Boston Museum of Fine Arts shows an attendance during the past year of nearly 160,000 visitors, the free Sunday having an average of more than 300 over the free Saturday, and once (during the exhibition of Mr. Hunt's pictures) attaining the large total of 4,400. The Museum has now "by far the best collection of casts in the United States, and one of the best in the world." Among the more important acquisitions of 1879 were the Tanagra figurines, and casts of some of the Olympian masterpieces. ——From the fourteenth annual report of the Sheffield Scientific School and the fifteenth of the Rutgers it appears that the State scholarships in both these institutions go a-begging.——The *Oriental Church Magazine* enters with the number for this month on its second volume (American News Co.) In addition to the features which give this quarterly a peculiar interest is its aim "to promote the reunion of the divided churches of

Christendom."——The *Bystander*, a monthly review published at Toronto since the beginning of the year by Hunter, Rose & Co., deserves the attention of all who are politically-minded, and who like fresh and vigorous comment on the leading events of the day in both hemispheres. Apparently the entire contents of this periodical are the production of one writer, and he the author of the paper in a recent *Atlantic* "On the Prospect of a Moral Interregnum." To say this is to bestow the highest praise upon the literary style of the *Bystander*, and to indicate its liberal and independent view of public affairs. Imperialism, flunkeyism, and toryism are, when Canada and the mother country are concerned, the editor's chief objects of aversion.——M. Ernest Boysse has recently published (Paris: Vaton; New York: F. W. Christern) 'Le Théâtre des Jésuites,' some chapters of which had previously appeared in the *Revue Contemporaine*. To most readers even his title is a surprise. In the popular mind the principal connection of the Jesuits with the theatre is their having sat as model for *Tartuffe*. As a fact, however, a Jesuit defended Molière against attack after *Tartuffe*. M. Boysse's book is a history of the plays written for acting by the pupils of the Jesuits' College in Paris—at which, as it happened, Molière was a scholar. Most of these plays were original with the worthy fathers, who wrote them for the practice of their pupils. Female parts were omitted as far as possible, and classic and sacred subjects were most frequently treated. The most amusing of M. Boysse's chapters are those describing the ballets (!) in which the scholars appeared.
